Mr. KING. This amendment offered by the committee may be satisfactory, but it does seem to me that it is susceptible of abuse unless there are words of limitation, and yet I confess, with my limited knowledge of these oils, I could not suggest what it should be.

Mr. SMOOT. If the Senator will turn to paragraph 56, he will find exactly the same words there, and this conforms to the language of the bill right through.

Mr. KING. I am aware of that. If my colleague will pardon me a moment, I will explain what I have in mind. The point I have in mind is that under the language, "or mixtures containing essential or distilled oils," the Senator will readily perceive that the introduction of an unimportant oil would be permitted, and the introduction of the words "or mixtures containing" would give to it a different classification, calling for a very different rate of duty. You might introduce a very costly oil into an admixture with a cheap one, and thus give to the costly oil the same rate of duty as the cheaper oil.

Mr. SMOOT. That could not possibly be the case, because the essential oils mentioned in paragraph 56 carry a very much higher rate than those in this paragraph. In other words, this paragraph carries a rate of 5 per cent, and the essential oils in paragraph 56 carry 45 per cent. So that could not possibly happen without working to the detriment of the manufacturer doing it. Following nearly every paragraph where there is an animal, vegetable, or mineral oil named and such a mixture takes place, we provide that the same rate shall be imposed that is provided in the paragraph where there is a mixture of two oils of similar character.

Mr. KING. It seemed to me that the purpose was to compel the admixture of the oils in the United States, where oils were imported, rather than to permit the admixture to come in from abroad, and it might result, for instance, in petroleum, which is free, being mixed with a little rape-seed oil, when it would be subjected to a duty of 25 per cent. Or take mineral oil, and sulphurated castor oil, which is utilized in the lubrication of engines. The admixture of those two oils changes the rate entirely, perhaps to the disadvantage of the Government, measured by a revenue standard, or to the disadvantage of the consumer, who might thereby be compelled to pay a higher rate of duty.

Mr. SMOOT. I can not conceive of any such article really entering into commerce. There may be such a thing, or there may be something discovered in the future where one could use a mineral oil like that referred to by the Senator.

Mr. KING. Take mineral oil and sulphurated castor oil, or, as I stated, petroleum and rape-seed oil. Petroleum is free.

Mr. SMOOT. I do not know what on earth they would ever put it in there for. It would destroy both. Neither one would be fit for anything.

Mr. KING. Mineral oil and sulphurated castor oil are used in marine engines as a lubricating oil. I was challenging the attention of the Senate, and particularly of the members of the committee, to those words.

Mr. SMOOT. I do not see anything in it, because if they did that, it would be a mixture and fall under this paragraph, and all the free oils they put in the mixture would have to pay a 25 per cent ad valorem duty. The only way there could be any advantage in it would be for some one to take an oil with a higher rate of duty on it and mix it with the animal or vegetable oil, and then get the higher rate oil in at 25 per cent. They certainly would not want to take free oil and mix it with a little rape seed and be compelled to pay 25 per cent on the mineral oil that was in it. They would never do that. If they could take an essential oil, with a duty of 45 cents, and mix it with these oils and bring it in at 25 per cent, there would be some advantage, but that can not be done because of the cost of essential oils.

Mr. KING. The Senator knows from his long experience in framing tariff schedules that there are many jokers and that there are shrewd representatives of importers or of the domestic producers who are always alert and vigilant to introduce into the law something which makes for confusion and to their ad-

vantage in the long run, as a result of which there is very much litigation, and frequently the courts have very great difficulty in determining just what construction should be placed upon the law and as to what classification various items should be assigned. I had in mind challenging the attention of the committee to these words with a view to determining whether or not there was any loophole, and if there was, whether or not some language might not be employed which would safeguard the consuming public first, and the Government second.

Mr. SMOOT. My colleague is right as to the shrewdest lawyers being employed by importers to determine whether there can be any kind of a loophole found in the wording of a tariff law. But these words were recommended by the Tariff Commission, as the Senator will find on page 163 of the Summary of Tariff Information.

Mr. KING. Yes; I discovered that.

Mr. SMOOT. Studying the recommendation, I thought it was a very wise provision, and so did the committee.

Mr. KING. I recall the suggestion made. I have said all I care to in respect to those words, but I ask the committee to have their experts, before we finally pass the bill, examine in every possible way and from every angle the situation which I have suggested, and see whether any language may be employed which will clarify the provision.

In my opinion, the rate which has been fixed by the committee is too high. I perceive that the House rate has been followed, so I am not free to offer an amendment, but when we complete the committee amendments I shall offer an amendment to strike out "25" and insert "15."

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment was, on page 23, line 15, before the words "per cent," to strike out the figures "20" and to insert "30"; and in the same line, after the word "eucalyptus," to strike out "peppermint" and to insert "peppermint" and a comma, so as to read:

PAR. 54. Oils, distilled or essential: Lemon and orange, 30 per cent ad valorem; clove, eucalyptus, peppermint, patchouli, sandalwood, and all other essential and distilled oils not specially provided for, 25 per cent ad valorem: *Provided*, That no article mixed or compounded or containing alcohol shall be classified for duty under this paragraph.

Mr. KING. Mr. President, the rate carried by the Senate committee bill greatly increases the rate of the existing law. The act of 1909 placed lemon oils upon the free list. The act of 1913 fixed a rate of 10 per cent ad valorem upon the same oil. The House gave a rate of 20 per cent ad valorem, and the Senate committee proposes to increase that rate to 30 per cent ad valorem.

So that from being upon the free list under the Payne-Aldrich law, 10 per cent under the Underwood law, and 20 per cent in the House bill, we are now confronted with a proposition of imposing a rate of 30 per cent upon lemon and orange oils.

Mr. SMOOT. One is based upon the American valuation and the other upon the foreign valuation.

Mr. KING. I understand. I do not see any justification for increasing it above the rate which is fixed by the act of 1913. I call attention briefly to the Tariff Survey, which states:

Imports of lemon oil prior to the war were constant at a little over 400,000 pounds, but the value shows an increase from about $300,000 in 1911 to nearly $800,000 in 1913. The import decreased somewhat in 1914, but has shown an increase to 577,600 pounds, valued at $404,568, yielding a revenue of $40,456 in 1918.

Imports of orange oil have been much less than those of lemon oil, in 1913 being 79,797 pounds, valued at $155,299, and yielding a revenue of $38,824. In 1918 there was an increase to 196,846 pounds, valued at $330,506, and yielding a revenue of $33,050.

The imports of lemon oil in 1918 were 535,868 pounds, of a value of $387,475, and for the first nine months of 1921 were 483,616 pounds, of a value of $435,444. As to orange oil, the imports were greater in 1918 than they were in the first nine months of 1921. The unit value of the lemon oil which was imported in 1921 was 90 cents a pound and the unit value of orange oil $2.48 per pound as against the foreign price of $1.80.

I move as an amendment to the committee amendment to strike out the numerals "30" and insert in lieu thereof the numerals "10," so that it will read:

Oils, distilled or essential; lemon and orange, 10 per cent ad valorem.

As stated, under the Payne-Aldrich law they were free.

The PRESIDING OFFICER. The proposed amendment to the amendment will be stated.

The ASSISTANT SECRETARY. On page 23, line 15, in lieu of the numerals "30," proposed by the committee, the Senator from Utah moves to insert the numerals "10," so as to read:

Oils, distilled or essential; lemon and orange, 10 per cent ad valorem.

Mr. McCUMBER. Mr. President, the testimony before the committee showed the requirements to be 33 cents per pound on the lemon oil as the necessary differential between the foreign and the American price. That would be equivalent to about 36 per cent ad valorem upon the price of the first nine months of 1921, which was 90 cents per pound. Instead of giving them 36 we gave them but 30, or 6 per cent less than what would measure the difference, according to the testimony.

Mr. WALSH of Montana. Mr. President, before voting upon the amendment to the committee amendment, I desire to say a few words about the discussion precipitated a while ago with reference to olive oil.

I inquired of the Senator from California [Mr. JOHNSON] what particular benefit would come to the people of my State from that particular item and just how I would justify voting for the increase in the duty to the people of my State. I have since been making some figures on the matter which to me are rather startling. I discover by that trifling item in the bill that we have imposed upon the people of my State $14,400 annually, and added to the cost of living of the people of the United States $2,400,000.

The figures are very simple. Take the importations of olive oil into the country during 1917, which were 7,700,000 gallons, which is said to be about 2 per cent of the entire consumption. Two per cent of that figure would be 154,000, making 7,854,000 gallons of olive oil consumed in this country. I do not know that the people of my State consumed their average quota of olive oil. I dare say that within the last two years they would not have done so. While the State of California has been basking in prosperity, and has experienced a growth unprecedented in its history during the last three or four years, the people of Montana have been going through a crisis the like of which they have never known before.

The two great staple products of my State are copper and wheat, both sold in the open markets of the world. There is a duty of 30 cents per bushel on wheat, but I do not want to insult the intelligence of anybody by discussing the proposition that when we are exporting 250,000,000 bushels of wheat annually the duty is of any value to the wheat growers of Montana. Copper is sold in the open market.

The copper mines have been shut down during the greater portion of the last year, so our people have had very hard times. Not only have we suffered the general depression in agriculture which has affected the entire country, but we have suffered a series of most depressing droughts. A large number of our people have been compelled to abandon their farms, sacrificing not only their labor in endeavoring to reduce those homesteads to a state of cultivation but the savings of years in the effort.

As I said, I do not know whether we have consumed our ordinary quota of olive oil in my State. It is a highly palatable food product after one acquires a taste for it and the taste is being rapidly acquired by our people.

The consumption, as was stated this afternoon, is annually increasing. But assuming that they are able to provide themselves with this staple food product to the extent that it is used generally by the people of the country—in other words, that we do not live any better than the average people throughout the country—we would consume individually four-fiftieths of 1 gallon of olive oil annually; that is, either consumed directly or in the preparation of food products into which it enters as a constituent. The tariff being raised to 30 cents a gallon on olive oil and the population of Montana being 576,000 people, would mean $14,400 more for the olive oil they consume in a year than they would, under the existing rates of duty, 20 and 30 per cent, be required to pay.

Mr. WALSH of Massachusetts. Mr. President——

Mr. WALSH of Montana. I yield to the Senator from Massachusetts.

Mr. WALSH of Massachusetts. The Senator's figures are very much more liberal than the figures admitted by the junior Senator from California [Mr. SHORTRIDGE], when he stated that the tax would mean a burden of 4 cents per capita on every person in the United States. That would make the figures on the population of Montana somewhat higher.

Mr. WALSH of Montana. It would make it $20,000 as against $14,400 as I have figured it out. At any rate, here is a situation where by a twist of the hand a tax of at least $14,400 is put upon the people of my State for the benefit of the growers of olives in the State of California, with whatever incidental benefits may come to them.

Now, Mr. President, that amounts to $2,400,000 for the people of the United States as a whole. If the figures now suggested by the Senator from Massachusetts are more correct, it amounts to a tax of $4,000,000 upon the people of the United States upon a trifling item in the tax measure which we have before us for consideration this evening. Any Senator present can

compute the burden which will be laid upon the people of his State by the simple computation of taking 2.5 or 4, whichever figure he chooses, and multiplying by the number of people there are in his State. He will thus get approximately the amount of the burden that is put upon the people of his State by this trifling item in the bill before us, on the item of olive oil.

It was at one time argued, and I think with considerable force, that a protective tariff did not actually increase in the long run the cost of the article upon which it was imposed, because the price was temporarily increased by raising of the duty and others were induced to go into the production or cultivation of a particular article, and thus competition was instituted between the domestic producers which eventually reduced the price of the commodity lower than it otherwise would be.

But, Mr. President, we were told by the Senator from California this afternoon that the producers of olives have a cooperative association and they produce the product cooperatively. I know the capacity of those people for the organization of cooperative associations and how complete their organization becomes, so I assume that all of the producers of California, or substantially all, are in one cooperative association and that there is no competition whatever among the domestic producers so far as the market for olive oil is concerned. So that the thing would not operate in that way.

Besides, Mr. President, we have had a duty upon olive oil, as I understand, for a generation at least, and we now produce only 2 per cent of the total amount consumed in the country. How long it will take to arrive at a point where the domestic production will be so extensive and the competition between the domestic producer and the foreign producer so keen as that the price will be lowered I leave for some one more competent in mathematics than I am; but I venture to say it will be at some remote time in the future, when the domestic production will materially affect the price so far as competition between the local producers is concerned.

Mr. President, I can not understand the logic of representatives of any State situated as is mine advocating a measure of this character. I can understand very well that we might get revenue out of this proposed duty; but for revenue purposes it appears to me as though the rates fixed in the existing law are entirely adequate.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Utah [Mr. KING] to the committee amendment.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. KING. Mr. President, I am not permitted under the parliamentary agreement to move an amendment to the remainder of the paragraph, which I shall do when we return to the bill, striking out the numerals "25" and inserting "15." I wish the chairman of the committee himself would offer an amendment at the proper time. It seems to me that eucalyptus and peppermint oils—oils which it is alleged are made in the United States—should bear a different rate, if protection is what is sought and fairness is what is desired, than some of the imported woods from which oils are made, when those oils are not made in the United States. Therefore I suggest to the Senator from North Dakota that patchouli and sandalwood—at least those two—should be separated from eucalyptus and peppermint and a different rate provided. When we return to the bill I shall move to segregate them, unless the Senator does so, and to provide for those oils different rates.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 23, paragraph 54, line 15, after the word "eucalyptus," to strike out the word "peppermint" and to insert the word "peppermint,".

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 24, paragraph 55, line 4, before the words "per ounce," to strike out "$2" and to insert "$2.60," so as to read:

cocaine, ecgonine, and salts, esters, and other derivatives thereof, $2.60 per ounce.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. KING. I inquire of the chairman of the committee whether the increase in this case is prompted by a desire to secure additional revenue or is aimed at protecting some compounding house or manufacturing concern in the United States?

Mr. McCUMBER. This increase is simply intended to cover the necessary differential, which is due entirely to the tariff bill and to the internal-revenue law. Paragraph 33 of the bill imposes a duty of 10 cents per pound on coca leaves. It takes 10 pounds of coca leaves to produce 1 ounce of cocaine. The tariff of 10 cents per pound, therefore, is equal to $1 per ounce of cocaine itself. Then, in addition to that, we have an internal-revenue tax of 1 cent per ounce on the coca leaves. One hundred and sixty ounces of coca leaves are required to make 1 ounce of cocaine, so that the revenue tax is equivalent to $1.60 an ounce on cocaine. The $1 plus the $1.60 makes $2.60, the duty which we have imposed.

Mr. KING. Let me ask the Senator whether he regards that as a fair method of fixing rates, either upon what might be denominated raw material—that is, the coca leaves—or the finished product? Because we are providing an additional rate upon the coca leaves, the theory now is to give an additional rate upon the product which is used as a medicine. If it were for the purpose of limiting or restricting the use of this poisonous drug, albeit a drug which is so necessary in medical practice, I do not know that there could be any objection; and yet the Senator must know that the drug is indispensable in the hospitals and is used by the most reputable physicians of the country. Unless it is revenue which is sought or it is designed in some manner to regulate the use of this drug—and that can not be done through this bill—it seems to me that the Senator has suggested no justification for this rate, but seems to be interested in protecting some industry.

Mr. McCUMBER. Mr. President, it is quite clear, of course, that the internal revenue law is to provide revenue only, and the revenue law which has been passed by Congress provides a tax of 1 cent per ounce on the coca leaves. One cent per ounce on the coca leaves is equivalent to $1.60 an ounce on cocaine. Now, that, of course, is for revenue only. In addition to that, paragraph 33 imposes a duty of 10 cents per pound on the coca leaves, and that is revenue duty, of course. All of it is simply for the purpose of getting revenue, as we do not produce the article in the United States. Cocaine is such a powerful drug that very little of it goes a good way, and the duty is not going to add very greatly to the cost to the user of it.

Mr. KING. I ask the Senator from North Dakota in good faith is not this increased rate fixed in the bill for the purpose of protecting and aiding some persons in the United States who import coca leaves and manufacture cocaine or the various products derived from it?

Mr. McCUMBER. Certainly; the revenue law as it stands does not protect the manufacturer at all, but this proposed law as it is amended gives the manufacturer an equal opportunity with the foreigner to produce the article. I will say, however, that it gives him no protection other than to compensate for the disadvantages in obtaining the raw material.

Mr. KING. It seems to me, Mr. President, that the plan is to enable the manufacturer of cocaine or other compounds and products of coca leaves to profit as much as possible in the manufacture or in the vending of this important medicine. Perhaps it is a reasonable duty—I make no comment upon that—which is imposed upon the coca leaves; but it seems to me, Mr. President, if we permit the coca leaves to come into the United States and impose a rate which is deemed adequate for revenue there ought to be an effort to make this important drug, which is so important in the hospitals and in the sick rooms of the United States, as cheap as possible to the people. Confessedly, revenue is derived from the duty of 10 cents a pound upon the coca leaves, but the proposed tax on cocaine is for the purpose of carrying a great burden to the ultimate consumer, the sick man and the sick woman, those who are compelled because of their physical ailments to purchase cocaine or other products of coca leaves. I think the House rate was entirely too high, and I shall ask the Senate to disagree to the amendment which has been reported by the Senate committee.

Mr. McCUMBER. Let me again call the Senator's attention to the fact that we are giving the American manufacturer not one penny of protection. We are simply providing a duty to compensate what he must pay for the raw material and not one penny in addition to that.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment of the committee.

The next amendment of the Committee on Finance was, on page 24, paragraph 56, line 15, to strike out "Anethol" and to insert "Ambergris, castoreum, civet, and musk, grained or in pods, 20 per cent ad valorem; anethol," so as to read:

PAR. 56. Perfume materials: Ambergris, castoreum, civet, and musk, grained or in pods, 20 per cent ad valorem; anethol—

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. KING. Mr. President, I understand that ambergris, castoreum, civet, and musk, grained or in pods, were on the free list in the House bill. The committee now propose an amendment providing a 20 per cent ad valorem duty on these articles and transferring them from the free list in the House bill to the dutiable list here. May I ask the Senator from North Dakota whether that was for revenue purposes, or, if not, what was the object?

Mr. McCUMBER. It was for revenue purposes solely. The duty is the same as in the present Underwood law. It is 20 per cent ad valorem under the present law, and we are continuing that 20 per cent ad valorem duty.

Mr. KING. Is the Senator from North Dakota advised as to the reason the House of Representatives had for placing those items on the free list?

Mr. McCUMBER. I can not pass judgment for the House of Representatives as to why they did that. I simply say it was the judgment of the majority of the Finance Committee that the articles should have a small duty of 20 per cent ad valorem imposed upon them.

Mr. KING. Of course, the Senator knows that those particular items become the basis of a considerable industry in the United States. Has the Senator taken into account the impediment which this duty would offer to the prosecution or development or extension of the industry now existing?

Mr. McCUMBER. I do not think it will add very much of an impediment, because I think there is sufficient profit in the manufacture of perfumes to enable the manufacturer to absorb the small duty which is provided here.

Mr. KING. I am willing to have a vote on the amendment.

The PRESIDING OFFICER. The question is on the committee amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment of the committee.

The ASSISTANT SECRETARY. On line 20 it is proposed to strike out "35" and insert "45."

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

Mr. KING. Mr. President, that means an increase of 10 per cent. Of course, I appreciate what my friend will say—that the House fixed their rate upon the American valuation and the Senate fixed theirs upon the foreign valuation.

Mr. McCUMBER. And therefore I think it is a decrease rather than an increase.

Mr. KING. It is possible, Mr. President, that it may be somewhat of a decrease, but I wanted to call attention to that item and to another item in line 23; and I ask the Senator's attention to this language, commencing in line 21:

all mixtures or combinations containing essential or distilled oils, or natural or synthetic odoriferous or aromatic substances, 40 cents per pound and 50 per cent ad valorem.

Mr. President, it seems to me there is a very grave discrimination in the rates thus established. This is a compound rate. There might not be any complaint at the ad valorem rate, but certainly there is ground for complaint when the compound rate is applied to some of these products.

For instance, take safrol. The present domestic price of safrol is 60 to 65 cents, as I recall; the domestic price of rhodinol is $18 per pound; the foreign value is $20 per pound; the domestic price of citral is $3.25 to $3.50 per pound. Then there are some other items here which I think come within this same category. One item was over $300 a pound; but waiving that and calling attention to the ones to which I directed the Senator's attention a moment ago, if you attach a 50 per cent ad valorem duty to safrol and 50 cents per pound, it seems to me that that would bear unduly, measured by the same rate applied to a product that was worth $18 a pound in this market, such as rhodinol, and with a foreign value of $20 per pound. I should like to ask the Senator how he justifies any such discrimination as that.

Mr. McCUMBER. Mr. President, all of the first duties that the Senator mentioned are simply ad valorem duties. They are not levied upon the double method at all, and we do not have the double or the combined method of attaching the duties until we reach "all mixtures or combinations containing essential or distilled oils, or natural or synthetic odoriferous or aromatic substances." Then the House fixed the duty at 40 cents per pound and 40 per cent ad valorem upon the American valuation. We allowed the 40 cents per pound to remain, but placed a 50 per cent ad valorem duty upon the foreign valuation, which would probably be somewhat less than the duty carried by the House bill.

Now, I want to read from the Tariff Commission information.

Mr. KING. Mr. President, before the Senator proceeds may I make a suggestion? I am advised that in the second category, the one to which the Senator has just referred, there are grades of oil that would show approximately the same disparity or difference in prices as those to which I called the attention of the Senator; that is, 60 cents and $18 to $20.

Mr. McCUMBER. Does the Senator have reference to the last class I mentioned?

Mr. KING. Yes; the last class; where the ad valorem is 50 per cent and the specific rate per pound 40 cents.

Mr. McCUMBER. Of course, upon those particular nearly finished products 40 cents per pound is not high. The Senator understands that these are nearly or practically finished products. They come into this country in a finished state, and all that is done to them is to add the requisite amount of alcohol, and then they have the finished product.

Forty cents per pound is a low duty upon any of them; but as there are so many different kinds and characters, and the prices range from a few dollars per pound up to forty or fifty dollars per pound, it was necessary, of course, to have an ad valorem duty to cover them; and the committee fixed the 50 per cent ad valorem in addition to the small specific duty of 40 cents a pound. Of course we could have stricken out the House provision of 40 cents per pound and put them all upon an ad valorem basis; but I think on the whole, wherever we can have a specific duty that is not too high, and can maintain that, we ought to do so.

Mr. KING. I should like to ask the Senator why it was that these high rates of duty were sought by various representatives of manufacturing concerns in the United States, unless it was for the purpose of aiding them in advancing the prices here? In other words, is it not a fact that the primary object was not revenue, but was in the interest of certain concerns in the United States, among them being Antoine Chris & Co., Van Dyk & Co., and others represented by Mr. Isermann?

Mr. McCUMBER. I think in the case of most of the articles that are mentioned in the last clause they are new industries that have been established in this country since the war, and perhaps that is true of the greater portion of the article included under that particular paragraph. The real purpose, I suppose, of those who seek to hold the duty this high is to prevent importations being brought in which will cut the price below that at which it is possible for them to manufacture and sell at a profit.

Mr. KING. Has not the Senator fixed the rate so high that it gives these concerns a monopoly, so that instead of this being a revenue provision, instead of giving to the Government a few thousand dollars of revenue, we are merely putting many thousands of dollars into the pockets of the beneficiaries of this rate?

Mr. McCUMBER. No, Mr. President; I think nothing of the kind. I think there will be importations, and I believe they will increase very much over what we are now receiving. I think the production of the foreign countries will become cheaper rather than increase in value, and that they will be able to import into this country at even lower rates than the present importations, and I simply want to see a duty that will be sufficiently high to enable our people to maintain the production in the United States.

Mr. KING. Mr. President, the Senator will keep in mind the fact that a number of these items, such as heliotropin, vanillin, and terpineol, are already interdicted by the provisions of the emergency tariff act.

Mr. McCUMBER. Yes; but that only lasts one year, and can not last longer than two years at most, even if the President himself shall continue it for another year, and of course the bill is drawn with the idea that it will not be extended longer than a year.

Mr. KING. Mr. President, it seems to me that there is no justification for these high rates. I should be glad if the Government could obtain revenue from these articles, particularly perfumes. I think that is a legitimate subject upon which very heavy duties may well be laid; but the difficulty here is that the duties imposed are going to be prohibitive and are calculated to give to the domestic producers a monopoly. Moreover, as will be observed from reading the language of this paragraph, synthetic compounds are embraced, so that it looks as though the object in part was to protect the Du Ponts, the Allied Chemical Co., and other corporations that are engaged in the production of synthetic compounds of various kinds. We know from the demands which they have made, not only for tariff walls that prohibit importations, but for embargoes, that they would be glad to see these synthetic compounds which they are engaged

in manufacturing, or which they may engage in manufacturing, embargoed by the high rates that are found in this bill.

Mr. McCUMBER. Do I understand the Senator to say that the Du Ponts manufacture any of this material?

Mr. KING. No; what I meant to say was that synthetic compounds are manufactured by the Du Ponts, the Allied Chemical Co., and others.

Mr. McCUMBER. But none of the things in this paragraph are manufactured by the Du Ponts.

Mr. KING. I did not think so, although I am not sure. Their synthetic compounds relate to dyes and coal-tar products, and so forth; but the Senator knows that there may be made in a synthetic way many fine perfumes, and in view of the fact that the term "synthetic odoriferous or aromatic chemicals," and so forth, was employed, I was not sure but that it was intended to cover not only the products of the companies whose names I have mentioned, but the products of these other great corporations, in the event that they entered into the synthetic production of these odoriferous and aromatic perfumes.

Mr. McCUMBER. It was simply intended to secure what revenue we could secure upon these luxurious perfumes, some of which are exceedingly expensive, and all of which may be regarded as luxuries.

Mr. KING. I call the Senator's attention to the fact that vanillin ought to be differentiated, in my opinion, and I appeal to the Senator with a view to having him accept my view. For instance, vanillin is used for flavoring extracts and is in quite common use by a very large number of people. Take, for instance, vanilla extract, which is a common household commodity used, as the Senator knows, very largely in drug stores, in the manufacture of ice cream, and for other purposes. I can not quite comprehend why vanillin, used for the purposes which I have indicated, should be classed with these other more expensive perfumes and compounds.

In the act of 1913 vanillin bore a duty of only 10 cents per ounce. In the Payne-Aldrich law it was 20 cents per ounce. I appeal to the Senator to consider the propriety and the justice of differentiating vanillin from these other compounds, which, perhaps, in justice, might bear, and indeed should bear, a higher rate of duty.

Mr. McCUMBER. Mr. President, I know that vanilla is made from the vanilla bean. It may be that they produce from coal tar something which will take its place and is similar, and that may have some bearing upon the duty upon vanilla, but I really do not think it is so very important.

Mr. KING. It is a little difficult to frame a motion. I move to amend the committee amendment, if I may do so, by striking out the word "vanillin" on the eighteenth line and inserting it after the semicolon on the twenty-first line, making it read, "vanillin, 10 cents per ounce."

The PRESIDING OFFICER. If the Senator will permit, the Chair suggests that at this point that would scarcely be in order, because of the rule under which we are proceeding. Does not the Senator think that his amendment should come later? We are now considering the committee amendment at the end of line 20.

Mr. KING. I invite the attention of the Chair to the fact that the amendment tendered by the committee does affect vanillin, and if the Senate accepts the Senate committee amendment now, then I shall be precluded from offering it as an original motion, so to speak, to the unamended text of the House.

Mr. McCUMBER. I do not think there is anything which prevents the Senator from moving to insert "vanillin" after the word "pods" on line 16, because that would be an amendment to the committee amendment. Of course, we would have to deal with the same word where it appears on the eighteenth line, and if the Senator should succeed in putting it there, of course I would have to ask that it be stricken out on line 18.

Mr. KING. If the Senator will pardon me, if I place it at the point indicated by the Senator, it would bear a rate of duty which I have not suggested, namely, 20 per cent. I suggested 10 per cent.

Mr. SMOOT. It is 50 cents to-day, and that would be just 20 per cent.

Mr. FLETCHER. Ad valorem?

Mr. SMOOT. Yes; ad valorem.

Mr. KING. That is approximately correct. I have no objection to that. I would have to move, then, to reconsider the vote by which the first amendment was agreed to.

The PRESIDING OFFICER. In the absence of objection, that vote will be reconsidered. The Secretary will state the amendment to the amendment.

The ASSISTANT SECRETARY. After the word "civet" on line 16, page 24, and the comma, insert the word "vanillin" and a comma.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment on lines 15 and 16.

The amendment was agreed to.

The PRESIDING OFFICER. The question now is on agreeing to the committee amendment at the end of line 20, to strike out "35" and insert "45," so as to read:

Perfume materials: Ambergris, castoreum, civet, and musk grained or in pods, 20 per cent ad valorem; anethol, citral, geraniol, heliotropin, ionone, rhodinol, safrol, terpineol, vanillin, and all natural or synthetic odoriferous or aromatic chemicals, all the foregoing not mixed and not compounded, and not specially provided for, 45 per cent ad valorem.

The amendment was agreed to.

The next amendment of the committee was, on page 24, line 23, to strike out "pound, and 40" and insert in lieu thereof "pound and 50," so as to read:

All mixtures or combinations containing essential or distilled oils, or natural or synthetic odoriferous or aromatic substances, 40 cents per pound and 50 per cent ad valorem.

Mr. KING. Believing, as I do, that these particular commodities should bear a heavy rate, but convinced that the rate fixed is almost equivalent to an exclusion, and therefore to the establishment of a monopoly in the domestic market, I move to amend, on line 23, by striking out "40" and inserting "20." On many of those items the domestic price is only 40 or 50 or 60 cents per pound.

The PRESIDING OFFICER. The Chair is of the opinion that the amendment offered by the Senator from Utah would not be in order at this time, because that is not a committee amendment. The committee amendent is in line 24. According to the rule under which we are proceeding the Chair would hold that the amendment would not be in order where the Senator proposes it.

Mr. KING. I think the Chair is in error. It seems to me that where an item bears a certain rate per pound, say 40 cents, with no ad valorem, and the committee reports the same 40 cents a pound, but with an ad valorem, an amendment may be offered either attacking the ad valorem or attacking the specific rate. When by adding to the House provision an ad valorem rate, leaving the House specific to stand, manifestly they have augmented the House rate.

Mr. SMOOT. The House rate is an ad valorem rate, 40 per cent ad valorem.

Mr. KING. It would be immaterial. There has been an increase in the ad valorem.

The PRESIDING OFFICER. The Chair was so holding only in the interest of orderly procedure. The Chair thinks to rule otherwise might lead to confusion.

Mr. KING. If the Chair will just permit me a moment, it seems to me it would lead to confusion to pass upon these amendments now. Suppose we accepted the Senate committee amendment. Many might accept it upon the theory that there might be a reduction of the House specific, but in dealing with the entire subject, as we are dealing with it here, it occurred to me that it is immaterial whether it comes as a specific, covering the entire rate, or as an ad valorem, covering the entire duty, or specific and ad valorem, and if the Senate has changed either the specific or the ad valorem, or both, then either or both are subject to amendment.

Mr. FLETCHER. May I suggest to the Senator, Mr. President, that he might attain his purpose by amending the ad valorem? For instance, the 50 per cent ad valorem is in question.

Mr. KING. Undoubtedly that could be done; but I call the Senator's attention to the fact that that is not what I seek to do.

Mr. FLETCHER. I suppose the Senator might accomplish the same purpose by changing the ad valorem.

Mr. KING. Many of these prefumes range from 40, 50, or 60 cents to $10 or $15, and I am perfectly willing that there should be an ad valorem, because the higher priced ought to pay a higher ad valorem, and if the Senator's plan were followed, then you would perpetuate the injustice, so the only way is to reduce the specific and to permit the ad valorem to remain.

Mr. FLETCHER. I was just trying to bring the motion within the rule as to the committee amendments.

Mr. SMOOT. May I call my colleague's attention to the fact that the specific duty in this case amounts to very little, indeed. Some of these oils run from $25 to $250 a pound. The ad valorem is not much. If you want to reduce the rate, reduce the ad valorem, because 40 cents a pound on a $250 article does not amount to much.

I do not want to take the time of the Senate now to explain why this was done, but it is more of an administrative feature than anything else, with this combination rate that is put in. I do not like to refer to the manufacturers of France at this particular time, but as these perfumes come in nobody can tell

just what they are. They are sent here to the French agents, they are compounded here, and we must have some ad valorem rate to catch these different kinds of goods, running all the way from $25 a pound up to $250 a pound. The imposition of specifics will not accomplish the purpose.

Mr. KING. I call my colleague's attention to the fact that a number of these articles sell for very small sums per ounce or per pound.

Mr. SMOOT. Yes; and we put that in because we wanted to find out, on the entrance of those goods into this country, really what was claimed as to their valuation. Sometimes it is less than 40 cents per pound, and then the question arises as to whether we should make an investigation into it, and my colleague knows very well that the ad valorem duty is the duty to impose on these articles.

Mr. KING. I admit that the ad valorem is the one, and where there are these various very costly grades they ought to pay a very high rate of duty. However, I call attention to the fact that these rates will be prohibitive, as to many of these items, that they are in the interest of the local manufacturers, and will give them a monopoly of the market.

Mr. SMOOT. The Tariff Commission itself says that 40 cents per pound and 40 per cent ad valorem is only slightly less than the duty on the finished perfume. That is true, and it makes very little difference so far as the trade in these articles in the United States is concerned.

The women who buy these expensive perfumes do not care whether the price is $1 a bottle or $2 a bottle or $5 or $10; they are going to have them. When they go into a drug store and buy a little bottle about 2 inches tall holding about a quarter of an ounce, and the price is $5, of course they are not particular whether it is $5.01 or $4.99; and it is a question as to how much money we want to raise from these articles. As far as I am concerned I want to raise every dollar we can.

Mr. FLETCHER. My view about the matter is that if there are any such things as luxuries this is one of the items. I think it is good sound Democratic doctrine to tax these luxuries.

Mr. SMOOT. I think so, too.

Mr. FLETCHER. I am in favor of putting on a duty that will produce the greatest amount of revenue.

Mr. SMOOT. That is exactly the way the committee decided, and that is the reason why they raised the rate from 40 to 50 per cent. The Tariff Commission says the rate is nearly the same as upon the finished articles, and that is what we intended, because they are not made in this country. If they were made as good in this country as in France, the French label would sell the foreign articles to the people who buy them in this country.

Mr. KING. I agree entirely with what my colleague has said as to imposing a high rate of duty, and I called the attention of the chairman of the committee to that fact; but I disagree with my colleague in his prediction that they will all be imported from France. In my opinion, with this provision for synthetic chemicals, many of these perfumes will be made here. What I fear is that there will be a monopoly and imports will be so restricted that the revenue will be reduced to the vanishing point.

The PRESIDING OFFICER. The amendment offered by the Senator from Utah not being an amendment to the amendment of the committee, the Chair will be obliged to hold that it is not in order. The question is, therefore, on agreeing to the Senate committee amendment, in line 24, striking out "pound and 40" and making the rate 40 cents per pound and 50 per cent ad valorem.

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 25, line 5, after the word "paragraph," to strike out the numerals "58" and insert the numerals "57," so as to make the additional proviso read:

Provided further, That all of the foregoing materials containing more than 10 per cent of alcohol shall be classified for duty under paragraph 57 as toilet preparations.

The amendment was agreed to.

The next amendment of the committee was, on page 25, line 18, to strike out "15 per cent ad valorem" and insert in lieu thereof "2 cents per pound," so as to read:

PAR. 59. Paris green and London purple, 2 cents per pound.

Mr. WALSH of Montana. Mr. President, I suppose that is merely a compensatory duty to take care of the duty of 2 cents per pound imposed upon white arsenic.

Mr. SMOOT. Really, I am a little fearful that this rate is not sufficient because of the fact that it is virtually the rate which was put on by the House before we had any duty upon white arsenic. We have 2 cents a pound on white arsenic, as the Senator knows; and the rate on Paris green is 2 cents. I presume it is a compensatory rate.

Mr. WALSH of Montana. The rate on white arsenic is 2 cents and the rate on Paris green is 2 cents, so I presume it is a compensatory duty.

Mr. SMOOT. Really it was not intended for that, I will say to the Senator. In Paris green there is 50 or 60 per cent of arsenic used. I know that the manufacturers of Paris green have filed within the last two days a bitter complaint against the rate of 2 cents a pound, because they claim that is little enough if they have the free arsenic; but with the 2-cent duty upon white arsenic, they claim that they need 4 cents on Paris green, and really there seems to be some justification for their claim.

Mr. WALSH of Montana. Of course, there being only a 50 or 60 per cent of arsenic in the Paris green, 2 cents would not only be compensatory but would also afford some additional protection. But that is a matter of no great consequence. The information of the Tariff Commission does not give the total consumption of Paris green. Can the Senator supply that?

Mr. SMOOT. I notice it is not given in the Tariff Survey. I thought it was, but it is not. I have not the production, unless I can find it in a letter which I may have here.

Mr. WALSH of Montana. Possibly the Senator from North Dakota can give us the information.

Mr. SMOOT. The production is not available, I will say to the Senator.

Mr. WALSH of Montana. I notice that the imports are negligible.

Mr. SMOOT. That is true. The Payne-Aldrich law had a rate of 15 per cent ad valorem on Paris green, with free arsenic. The present law has Paris green on the free list, and arsenic likewise on the free list.

Mr. WALSH of Montana. Paris green under the present law is free?

Mr. SMOOT. Yes; and the present price is 20 cents a pound.

Mr. WALSH of Montana. I was merely desirous of figuring out, if I could, what the effect would be. I observe the junior Senator from Kansas [Mr. CAPPER], the chairman of the agricultural bloc, is here, and I commend this particular item to his careful, not to say prayerful, consideration, so that he may notice it imposes a duty upon the agricultural States of the country.

Perhaps the junior Senator from Kansas can give us some information as to the consumption of Paris green in the country and just exactly what the extent of the burden upon the agricultural States of the country would be by having a duty of 2 cents on Paris green.

Mr. SMOOT. Let me ask the Senator from Montana if he thinks 2 cents a pound on Paris green is excessive, with 2 cents a pound duty on white arsenic?

Mr. WALSH of Montana. Assuming that there is a duty of 2 cents a pound on white arsenic, I am not quite certain that the manufacturers of Paris green ought not to have a compensatory duty.

Mr. SMOOT. There is no need to assume it, because that has already been agreed to.

Mr. WALSH of Montana. Yes; that has been agreed to by the Senate. I wanted to figure out if I could just about the extent to which the smelter trust is going to profit off of the agricultural interests.

Mr. SMOOT. I do not think this will amount to very much. The House gave 3 cents a pound, with free arsenic. The Senate committee proposes 2 cents a pound, with 2 cents on arsenic. Really I do not think the Senator can object to that if we are going to keep 2 cents a pound on arsenic.

Mr. WALSH of Montana. I do not believe there would be any serious objection to 2 cents a pound on Paris green in view of the fact that we put 2 cents a pound on arsenic; but by the time the bill gets into the Senate, the attention of the agricultural bloc now having been called to the item, we may possibly have a different result upon it and the interest of the agricultural sections may be aroused and further consideration be given to it. I think it will be a little difficult for the junior Senator from Kansas, for instance, to explain to the potato growers of the State of Kansas just exactly why there should be a duty of 2 cents a pound on white arsenic.

I said a little while ago that I was not quite sure that the people of the State of Montana consumed their proportionate share of the olive oil consumed in the country, but we are a great potato producing State. I am sure we produce very much more than our proportionate share of the total product of potatoes in the United States. In fact, it was the Montana potato that made famous the great "big potato route" for travel

across the country. I was a little desirous of figuring out about how much the tax upon the people of my State would be from this little item of 2 cents a pound on Paris green.

I would not think of taking the time of the Senate to discuss these two comparatively insignificant items except for the purpose of illustrating how even a tariff has been given upon items here which bear heavily in the aggregate upon the producing masses of the country simply because somebody has asked for it. I think that is the case with reference to white arsenic and I think that is the case with reference to olive oil.

Mr. McLEAN. I will say to the Senator from Montana that my impression is that the expert figures that it would add about 16 cents an acre to the cost of raising potatoes.

Mr. WALSH of Montana. Can the Senator give the source of his information?

Mr. McLEAN. The expert.

Mr. WALSH of Montana. What expert?

Mr. McLEAN. The same expert, I think, who acted for the committee in 1913.

Mr. WALSH of Montana. Can the Senator give his name, so that I may find out the actual facts from him?

Mr. McLEAN. I think it was Mr. McCoy, but I am not certain.

Mr. WALSH of Montana. The Senator remembers the information he gave much more accurately than the name of the informant.

Mr. McLEAN. It was a matter in which I did not take particular interest, but I think I asked him the question as to about how much extra the expense would be by using this insecticide on an acre of potatoes, and my impression is he said about 15 or 16 cents.

Mr. WALSH of Montana. The Senator has given us one of the factors entering into the total problem, and perhaps he will now be able to give us the number of acres cultivated in potatoes in the United States.

Mr. McLEAN. I can not do that.

Mr. WALSH of Montana. No; so we do not get anywhere.

Mr. McLEAN. Nor can I give the Senator the number of potatoes.

Mr. FLETCHER. Mr. President, has the Senator anything here to indicate that there will be any revenue derived from this source? There is nothing before us to show what the importations have been in the past, and certainly not what they may be when this duty is imposed. Just putting a duty on because it is fashionable to do so or because we get in the habit of doing it, it seems to me is little short of absurd. Here is a tax, even if it is only 10 or 15 cents per acre, which amounts to quite a little to the potato growers of the country. There are other uses for arsenic besides spraying potatoes. Nearly all the plants, trees—fruit trees and other trees—and all kinds of vegetables require this sort of treatment in order to get rid of insects and plant enemies. Paris green is used all over the country.

The people who use it are the producers of our food, and they will be required to be taxed even 10 or 15 cents per acre under this item just simply because some manufacturer of arsenic or something of the sort proposes to have it done, without showing any benefit to the Government or to anybody except to the people who make the Paris green. I think the item ought to go on the free list, where it has been all the while. When it was on the free list there were no importations to amount to anything.

Mr. SMOOT. Before the war there was 15 per cent ad valorem duty upon it, and the importations——

Mr. FLETCHER. Under the act of 1913 it was free.

Mr. SMOOT. But under the Payne-Aldrich law it had a 15 per cent ad valorem rate, and the importations averaged, while that law was in force, about 200,000 pounds a year.

Mr. WALSH of Montana. The information which I have is that the imports of Paris green and London purple in 1914 were 33,373 pounds, more than two-thirds from England and the remainder from Germany. The imports decreased during the war and since 1916 have been negligible. The maximum was 772 pounds in 1920.

Mr. SMOOT. Of course, and I will give the figures to the Senator if he really wants to know. The imports were as follows: In 1908 there were 195,573 pounds; in 1909, 211,856 pounds; in 1910, 192,647 pounds; in 1911, 22,193 pounds; in 1912, 183,089 pounds; and in 1913 there were 165,820 pounds.

Mr. WALSH of Montana. The Senator is as fully advised as I am concerning the reason for those conditions. We began to produce arsenic in the West only within the last 10 years, and prior to that time it was an expensive commodity. Now it is a drug. We can manufacture Paris green in this country in competition with the world simply because we can buy arsenic for almost any figure.

Mr. SMOOT. Oh, well, Mr. President, arsenic was on the free list. The manufacturers of this country made Paris green; we are now talking about Paris green; there was a 15 per cent duty on Paris green which was manufactured in the United States, and while being manufactured in the United States under a rate of duty of 15 per cent there was imported into this country the number of pounds that I have stated during the years I have indicated.

The PRESIDING OFFICER (Mr. LENROOT in the chair). The question is on agreeing to the committee amendment.

Mr. KING. My colleague might have given two years more. The Senator from Montana has just stated that the imports in 1920 were 33,000 pounds.

Mr. WALSH of Montana. Not in 1920. The imports were 33,000 pounds in 1914, but they have decreased since that time, and in 1920 were only 770 pounds.

Mr. SMOOT. I read the figures up to the time of the war.

Mr. WALSH of Montana. No doubt the Senator's figures are correct, and the importations have been decreasing simply because we have been producing white arsenic in this country at such a figure as that the importations are insignificant.

Mr. KING. The statistics of commerce and navigation gives the imports in 1914 at 15,476 pounds and in 1921 as only 325 pounds, so that the imports have been reduced to the vanishing point. As the Senator from Montana [Mr. WALSH] has stated, in view of the enormous production of arsenic by the smelters of the West, where it is a waste product, obviously the price has gone down and the necessity of importing that existed years ago ceased when there was such an enormous domestic production of arsenic in the United States.

Mr. McLEAN. Of course, if that were true, domestic competition would regulate the price of the article, especially in Montana, which is so near to the source of production.

Mr. KING. No; it does not regulate the price, unfortunately, as the Senator must know. It ought to regulate the price; but the Senator from Connecticut is a business man, the Senator is a statesman, and he knows conditions in the United States. He knows as well as anybody that there are combinations in the United States for the purpose of controlling prices.

Mr. McLEAN. But, as the Senator from Utah has stated, the production in this country has become so large that it has resulted in decreasing the price, and I assume that the decrease in price has been due to the fact that there has been competition in this country; and, of course, the Senator knows there is very active competition in the production of this article.

Mr. KING. I do not know that there is competition in its production. The article is produced because the smelters can not help themselves. In the reduction of sulphide ore the smelters are bound to emit arsenic. The arsenic is in the ores; when the ores are smelted the arsenic passes off, and unless it is intercepted by bag houses or some other contrivance it will go up through the high smokestacks out into the air and be deposited upon vegetation. The result is that animals eating the hay and the lucerne and the other grasses are killed and human beings sometimes either lose their lives or their health is impaired.

Mr. McLEAN. If it is a by-product——

Mr. KING. It is a by-product.

Mr. McLEAN. It will be sold for what the trade will bear, of course; and if, then, there is a large by-product it will be sold for what may be secured.

Mr. KING. Then, why did the Senator from Connecticut vote for a tariff on arsenic when it is a by-product and when thousands if not tens of thousands of tons are produced in the United States in the process of smelting of sulphide ores?

Mr. McLEAN. I do not think the tariff on this article makes a particle of difference in its price in this country.

Mr. KING. Then, why did not the Senator from Connecticut vote against it; for now the Senator is urging a compensatory duty on Paris green because we have imposed a 2-cent specific duty upon arsenic?

Mr. McLEAN. If we did not have the duty, there might be large importations. There are large smelters in Europe, and I assume that it is a by-product there, as it is here. I do not think it is a matter of enough consequence to waste any time in discussing it, but it does not seem to me, if the statement of the Senator from Utah is correct, that the tariff can make any difference as to its price in this country.

Mr. KING. If it be true that the tariff does not make any difference in the price of this product, the Senator from Connecticut has no right to ask us to vote a tariff of 2 cents a pound on arsenic, or for any tariff whatever, and then turn around and say, "We have already a specific tariff on arsenic; now we must put a compensatory tariff upon Paris green." The Sena-

tor's position is illogical and can not, with all due respect to him, be justified, in my opinion.

Mr. McLEAN. Paris green is manufactured in this country, but there is active competition in its production.

Mr. KING. Mr. President, let us briefly consider the situation. The distinguished Senator from Connecticut, although, perhaps, not openly, supported the committee the other day when they advocated a tariff upon arsenic. The able Senator from Montana and others opposed a tariff on arsenic, calling attention to the fact that in smelting the sulphide ores of the West arsenic passed off as a waste product until a few years ago, when by court decrees in some of the Western States smelters were compelled to arrest, by the introduction of bag houses into their metallurgical works, the expulsion of the arsenic and other solids into the air, where it would be diffused and dispersed by the winds and deposited upon vegetation, where it worked disaster to animal life.

The Republican majority succeeded in putting in the Senate a tariff upon this product. Who wanted it? Obviously it must have been the smelters; and yet it is a by-product which they are compelled to dispose of in the smelting of their sulphide ores. Those sulphide ores are smelted because of their copper content and, possibly, because of a little gold or silver or other valuable metal; but not because of the arsenical content; that is not a consideration; indeed, arsenic has always been regarded as a base metal, and the ores carrying arsenic have been penalized at the smelter; in other words, ores that do not carry arsenic are accorded a better rate by the smelters than ores that do carry arsenic. So the smelters, because of the injury to animal life in the passing off into the atmosphere of arsenic, were compelled to collect it. They had it upon their hands, did not know what disposition to make of it, and doubtless, it was sold for the manufacture of Paris green and other insecticides.

Some prudent and thrifty representative of those who produced this by-product comes here to the Republican Senate and the Republican Congress and says he wants a tariff on arsenic, and the Republican Congress puts a tariff upon arsenic. Now they want a compensatory duty on Paris green because arsenic is the base of Paris green, and the able Senator from Connecticut says he does not think the tariff put upon arsenic cuts any figure in the price of arsenic. Then I ask the Senator to take the tariff off of arsenic, and when we take it off, if we do, will the Senator consent to take off the tariff upon Paris green? Manifestly not.

Mr. McLEAN. No; and I will tell the Senator why.

Mr. KING. I knew the Senator would not.

Mr. McLEAN. I will tell the Senator why.

Mr. KING. I can tell the Senator from Connecticut why.

Mr. McLEAN. If the Senator's position is correct and this is a by-product in Europe and in this country and is produced for almost nothing, it must be evident that on the arsenic that is imported the duty will not be charged to the American consumer; it will have to be paid by the exporter; he will have to reduce his price to meet the American price, and we might just as well get a little revenue out of it as not.

Mr. FLETCHER. Only 700 pounds came in in 1921, when it was free. How can we expect to get any revenue from it when it is placed on the dutiable list?

Mr. HITCHCOCK. Mr. President, will the Senator submit to a question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Nebraska?

Mr. KING. I yield.

Mr. HITCHCOCK. The Senator from Connecticut says that the proposed tariff on Paris green, which heretofore has been on the free list, has been made necessary or excusable because of the increased tariff on arsenic. Now, I want to ask him whether there will also be called forth a compensatory duty on potatoes, because, of course, the duty upon arsenic makes necessary the putting of a duty on Paris green; and as the farmers must use Paris green on their potatoes, I suppose the Republican Party will hand them a gold brick in the shape of a duty on potatoes as a compensation for the increased cost of Paris green.

Mr. KING. Mr. President, I commend the suggestion of my able friend, the Senator from Nebraska, to the distinguished chairman of the agricultural bloc, and I suggest when we come to the consideration of the agricultural schedule that the distinguished Senator from Kansas, the chairman or president—I do not know what his official title is; the Pooh-Bah of the bloc—arise here in his seat and say, "Gentlemen, you have imposed a tariff upon arsenic and a tariff upon Paris green; we have to buy the Paris green as an insecticide to sprinkle over our trees and our vegetation and our potatoes, and therefore we must have a higher tariff upon potatoes and upon all the products of the field and farm." That is a logical argument.

Mr. HITCHCOCK. Mr. President, it has been suggested by the Senator from Alabama that that does not end the compensatory duty program, because potatoes are used in the manufacture of yeast it will be necessary to have a compensatory duty upon yeast.

Mr. KING. And upon starch.

Mr. HITCHCOCK. And as yeast is used in the making of bread, there will have to be a compensatory tariff duty upon bread.

Mr. KING. That merely illustrates how fearfully and wonderfully constructed our tariff schedules are when drafted by our Republican friends.

I know why the Senator from Connecticut, even if we should strike down the tariff on arsenic, would not consent to take off the tariff on Paris green. It is because it is manufactured by a large number of important corporations in the United States, chief among which is the Sherwin-Williams Co., of Chicago, Ill.; Devoe & Raynolds, Chicago, Ill.; Glidden Co., Cleveland, Ohio; A. B. Ansbacher & Co., New York City; Fred L. Lavanburg Co., New York City; Pfeiffer Color Co., New York City; James Blanchard, Brooklyn, N. Y.; Bristol, Myers Co., Elizabeth, N. J.; Nitrate Agencies, Bayonne, N. J.; and Detroit White Lead Co., Detroit, Mich.

Before this debate is over, Mr. President, I shall put into the RECORD the names of every corporation whose representatives appeared before the committee and who gave testimony upon this schedule, their capital stock, their subsidiary organizations, the names of their directors, and the dividends which they have paid in cash and in stock during the past 10 or 15 years. We will then see who are the beneficiaries, who have been the power behind the demand for these extortionate rates which we find expressed upon page after page of the pending bill.

Just a word from the surveys:

> Paris green, a compound containing both copper and arsenic, is light green in color, insoluble in water, and very poisonous. It is manufactured from salts of copper and arsenic, and is used principally as an insecticide, but not as much as formerly, being replaced to a great extent by arsenate of lead. It is employed also as a pigment. London purple, a by-product of the arsenic-acid method for the manufacture of fuchsine, is essentially calcium arsenite and arsenate colored by fuchsine, and is insoluble in water and poisonous. * * *
>
> Imports of Paris green and London purple in 1914 were 33,373 pounds, more than two-thirds from England, the remainder from Germany. Imports decreased during the war, and since 1916 have been negligible.

And, as I have stated, in 1921 the imports were only 323 pounds.

Mr. President, nothing more need be said. This is simply giving a sop to some corporation, and in so doing you are imposing a burden upon the farmers of the United States. What is the reason for it? I ask the Senators upon the other side who exhibit so much solicitude for the farmer to show their real friendship for the agricultural interests now by voting against this rate which has been suggested by the committee.

Mr. President, when we reach the free list I shall ask to transfer this item to the free list; but in the meantime I move to strike out the numeral "2" and to insert in lieu thereof "one-tenth," so that it will read "one-tenth of 1 cent per pound."

The PRESIDING OFFICER. The Senator from Utah offers an amendment to the amendment of the committee, which will be stated.

The ASSISTANT SECRETARY. On page 25, line 19, it is proposed to strike out "2 cents" and in lieu thereof to insert "one-tenth of 1 cent."

Mr. SMOOT. Mr. President, I simply want the record to show that the Senate committee amendment is a reduction of 33⅓ per cent from the rate of the House bill. The House bill was made with free arsenic. The Senate committee put a duty of 2 cents on arsenic, but they did not put a compensatory duty on Paris green. The rate of 2 cents a pound on Paris green is equal to 10 per cent on the price of arsenic to-day. All this criticism is based upon that outrageous rate of 10 per cent ad valorem. Not only is it 10 per cent ad valorem but the manufacturer in America, 50 per cent of whose raw product is arsenic, is compelled to pay 2 cents a pound. If that is an outrageous tariff rate, I do not so understand.

Mr. HITCHCOCK. Mr. President, while the record is being made up, let me put in the record the fact that Paris green was one of a large number of items which were put into the farmers' free list in the so-called Underwood bill, passed in 1913, and still the law of the land. That is worth making a record of—that an effort was made at that time to create a farmers' free list, and now a deliberate purpose is pursued of

taking articles on the farmers' free list and subjecting them to a duty.

Mr. McCUMBER. Mr. President, at this time I ask unanimous consent that when the Senate closes its session to-day it recess until to-morrow at 10 o'clock. I am asking that we shall meet at 10 o'clock to-morrow morning with the idea of not holding an evening session to-morrow. I hope that will be satisfactory.

The PRESIDING OFFICER. Is there objection to the request of the Senator from North Dakota?

Mr. UNDERWOOD. Mr. President, I do not rise to make any objection. As I said the other day, I think the Senator in charge of the bill has a difficult task before him, not by reason of any opposition on this side, but by reason of the machinery that is necessary to pass the bill, and I think he should use his own discretion in the time that he desires the Senate to work; but I should be glad if he could arrange to have daylight hours in which we could work, instead of night hours. I am not objecting, however, to the course he pursues.

Mr. McCUMBER. I am going to try daylight hours to-morrow, and see how it works, if it is agreeable.

Mr. HARRISON. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Mississippi?

Mr. McCUMBER. I yield.

Mr. HARRISON. I will suggest to the Senator that under the President's order we have put the time up one hour. Could we not meet at 9 o'clock to-morrow?

Mr. McCUMBER. I could.

Mr. SMOOT. Yes; I should like the Senator to change that request and make it 9 o'clock.

Mr. McCUMBER. I should not desire to meet at 9 o'clock and then spend an hour trying to get a quorum, and therefore at the present time I will select 10 o'clock, if I can get unanimous consent.

Mr. SMOOT. I know that the Senator from Mississippi would like to meet at 8, and I am perfectly willing to meet at 8.

Mr. HARRISON. I think if we are going to get any time on this side to talk to-morrow we will have to start about 9 o'clock, because practically all the time to-day has been taken up by speeches on the other side.

Mr. McCUMBER. I noticed that.

Mr. SMOOT. The Senator is mistaken there.

The PRESIDING OFFICER. Is there objection to the request of the Senator from North Dakota? The Chair hears none, and it is so ordered.

Mr. WALSH of Montana. Mr. President, I am obliged to the Senator from Connecticut [Mr. McLEAN] for the information he gave us a few minutes ago that this little tax on Paris green amounts to the trifling sum of 15 cents an acre. I have meanwhile secured the information concerning the acreage devoted to this very necessary food product. I find that something like 5,000,000 acres are cultivated to potatoes in this country—3,929,000 acres to Irish or white potatoes, and 1,085,000 acres to sweet potatoes. Fifteen cents an acre, which we are cheerfully adding to the burden of agriculture in this country, amounts to a trifle of $750,000—three-quarters of a million dollars by this little item of 2 cents a pound on arsenic. Just a few minutes ago we subsidized the olive growers of southern California by imposing a burden upon the householders of the country annually of $2,500,000 to $4,000,000; and now we impose an additional burden upon the agricultural interests of the country so gladly advocated by the estimable Senator from Connecticut of a little trifle of three-quarters of a million more.

Mr. McLEAN. Mr. Presdent——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Connecticut?

Mr. WALSH of Montana. I do.

Mr. McLEAN. Of course, that is assuming that the grower of potatoes pays this tax.

Mr. WALSH of Montana. Who does the Senator think pays it?

Mr. McLEAN. If it is true that the competition in this country has reduced the price to a cent or 2 cents a pound, and it can be produced across the water at the same price, it must be evident that the exporter can not get into this country unless he fixes his price to meet the domestic price, and in that event he must pay the tax.

Mr. WALSH of Montana. The argument of the Senator is that there is no occasion whatever for a duty on arsenic. I agree with him about that proposition.

Mr. McLEAN. I do not agree to that. I think we may as well get a little money out of the proportion of it that comes into this country, as long as the exporter pays it.

Mr. WALSH of Montana. And permit the domestic producer to raise his price by the amount of the tax, of course.

Mr. McLEAN. The statement of the Senator from Utah demonstrates that competition in this country has been so fierce that the result has been to reduce the price of arsenic to almost nothing.

Mr. WALSH of Montana. I have not heard the Senator say that there was any competition at all in this country in the production of arsenic.

Mr. McLEAN. The facts which he stated demonstrate that, if he did not admit it himself.

Mr. WALSH of Montana. The facts are, Mr. President, that arsenic is a by-product of the smelting industry; and the Senator ought to know, and probably does know, that the smelting industry of this country is controlled by not to exceed one-half dozen corporations, all of whom manage to keep their prices just about the same, even upon their main products.

Mr. DIAL. Mr. President——

Mr. WALSH of Montana. I have called your attention to the acreage devoted to the production of potatoes; but, of course, Paris green is used in the destruction of insects that attack other vegetables besides potatoes.

Mr. DIAL. I just wanted to call the Senator's attention to that fact.

Mr. WALSH of Montana. My understanding is that it is used extensively in the warfare upon the boll weevil of the South.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Utah [Mr. KING] to the amendment of the committee.

Mr. HITCHCOCK. I call for the yeas and nays.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. DIAL (when his name was called). I have a pair with the Senator from Colorado [Mr. PHIPPS]. I transfer that pair to the Senator from Nevada [Mr. PITTMAN] and will vote. I vote "yea."

Mr. HARRIS (when his name was called). I transfer my pair with the Senator from New York [Mr. CALDER] to the Senator from Texas [Mr. CULBERSON] and will vote. I vote "yea."

Mr. HARRISON (when his name was called). I have a general pair with the junior Senator from West Virginia [Mr. ELKINS]. I transfer that pair to the senior Senator from Ohio [Mr. POMERENE] and will vote. I vote "yea."

Mr. JONES of New Mexico (when his name was called). I transfer my pair with the Senator from Maine [Mr. FERNALD] to the Senator from Missouri [Mr. REED], and will vote. I vote "yea."

Mr. NEW (when his name was called). Transferring my pair with the junior Senator from Tennessee [Mr. McKELLAR] to the junior Senator from Washington [Mr. POINDEXTER], I vote "nay."

Mr. OVERMAN (when his name was called). I have a general pair with the senior Senator from Wyoming [Mr. WARREN]. I transfer that pair to the junior Senator from Alabama [Mr. HEFLIN], and will vote. I vote "yea."

Mr. ROBINSON (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Tennessee [Mr. SHIELDS], and will vote. I vote "yea."

Mr. OVERMAN (when Mr. SIMMONS's name was called). My colleague [Mr. SIMMONS] is unavoidably detained. He has a general pair with the Senator from Minnesota [Mr. KELLOGG].

Mr. STERLING (when his name was called). Transferring my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Oregon [Mr. STANFIELD] I vote "nay."

Mr. McKINLEY (when his name was called). I transfer my pair with the Senator from Arkansas [Mr. CARAWAY] to the senior Senator from Minnesota [Mr. NELSON] and vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "nay."

The roll call was concluded.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The junior Senator from Kentucky [Mr. ERNST] with the senior Senator from Kentucky [Mr. STANLEY];

The Senator from Rhode Island [Mr. COLT] with the Senator from Florida [Mr. TRAMMELL]; and

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS].

Mr. EDGE. I transfer my pair with the senior Senator from Oklahoma [Mr. OWEN] to the junior Senator from Pennsylvania [Mr. PEPPER], and vote "nay."

The result was announced—yeas 17, nays 35, as follows:

YEAS—17.

Ashurst	Harrison	Overman	Walsh, Mass.
Dial	Hitchcock	Robinson	Walsh, Mont.
Fletcher	Jones, N. Mex.	Sheppard	
Gerry	La Follette	Swanson	
Harris	Myers	Underwood	

NAYS—35.

Ball	Keyes	Moses	Smoot
Brandegee	Ladd	New	Spencer
Bursum	Lenroot	Newberry	Sterling
Capper	Lodge	Nicholson	Townsend
Curtis	McCormick	Norbeck	Wadsworth
Edge	McCumber	Oddie	Watson, Ind.
Frelinghuysen	McKinley	Page	Weller
Hale	McLean	Rawson	Willis
Jones, Wash.	McNary	Shortridge	

NOT VOTING—44.

Borah	Elkins	King	Reed
Broussard	Ernst	McKellar	Shields
Calder	Fernald	Nelson	Simmons
Cameron	France	Norris	Smith
Caraway	Glass	Owen	Stanfield
Colt	Gooding	Pepper	Stanley
Crow	Harreld	Phipps	Sutherland
Culberson	Heflin	Pittman	Trammell
Cummins	Johnson	Poindexter	Warren
Dillingham	Kellogg	Pomerene	Watson, Ga.
du Pont	Kendrick	Ransdell	Williams

So Mr. KING's amendment to the committee amendment was rejected.

The PRESIDING OFFICER. The question now recurs on the committee amendment.

The amendment was agreed to.

The next amendment of the committee was, on page 25, line 20, to strike out "10" and insert "8," so as to read:

Paragraph 60. Phosphorus, 8 cents per pound.

Mr. JONES of New Mexico. Mr. President, I realize that the amendment proposed by the Finance Committee reduces the duty on phosphorus, but as this is a very important article, and it has been on the free list, I desire to say just a little on this item. Phosphorus has a very useful purpose. Among other things, it is used for killing rats, and unless there is some very good reason for it I do not see why we should increase the cost of killing rats. So I would like to have some one explain why there is a duty put on phosphorus at all. It is on the free list at the present time.

Formerly it was used in the making of matches, which has been prohibited on account of its poisonous character; but there was some special insistence on the duty on phosphorus, and I should like to know about it.

The only evidence I have been able to find on the subject is from the representative of the Diamond Match Co., and he said they did not really need any duty on phosphorus at all. He said he did not object to a small duty, but he thought that 10 cents a pound was too much, and suggested 5 cents a pound. That is the only testimony I have found. I do not happen to have here to-night the hearings of the Ways and Means Committee on this particular article.

Mr. SMOOT. Of course, Mr. Becker, who testified for the Diamond Match Co., wants it free. When he wrote to me about it, I wrote and asked him if he did not want matches free, and his answer was quite different from what he had suggested ought to be done with phosphorus. The statement of Charles W. Asbury, representing the American Phosphorus Co., follows Mr. Becker's testimony.

Mr. JONES of New Mexico. I have not reached that in the examination of this question, but I will just call attention to it. He is the president of the American Phosphorus Co., with general offices in Philadelphia. I do not know what he said, but I think I can anticipate what it will appear that he said. It is just what a great many other witnesses who appeared before the Finance Committee did say.

Mr. SMOOT. He quoted General Fries, of the War Department.

Mr. JONES of New Mexico. He said:

First, I would like, Mr. Chairman and gentlemen, to outline to you very briefly the commercial status of the business. Ours is the only American owned and operated plant in the United States. There is an English owned and operated plant in Niagara Falls, United States, with which plant we compete. Our plant has been closed since November of last year.

Senator WATSON. Why?

Mr. ASBURY. Because of the importations of phosphorus.

Senator WATSON. From where?

Mr. ASBURY. From Germany and France.

Senator MCCUMBER. Is the other one closed of which you speak.

Mr. ASBURY. The other one is operating on compounds of phosphorus. They have facilities for manufacturing compounds using phosphorus as a basis, but we make the phosphorus only.

Senator WATSON. How much have they shipped in?

Mr. ASBURY. They shipped in last year nearly 300,000 pounds.

Senator WATSON. What is the American consumption?

Mr. ASBURY. The American consumption in peace time is a little over a million pounds a year.

Senator WATSON. How much do you make?

Mr. ASBURY. We make about 400,000 pounds when we are running.

Senator WATSON. Your plant is closed down?

Mr. ASBURY. Our plant is closed down entirely and has been closed down since November last.

Senator WATSON. And the foreigners are supplying the demand.

Mr. ASBURY. The foreigners are supplying the demand.

Senator WATSON. What is the difference in cost of production in your factory and in France or Germany?

Mr. ASBURY. I can answer that perhaps a little more concretely, Senator, in this way: That the importations in the last quarter of last year were valued at 17 cents a pound. Our average cost of production is 38 cents a pound.

The present status of the duty is this: I appeared before the Ways and Means Committee of the House and asked that the rate provided in the Payne-Aldrich bill should be restored. It was 18 cents a pound.

Senator SMOOT. Before you go into that, the production in 1914 in this country was 1,315,000 pounds. The importations in 1914 were 605 pounds?

Mr. ASBURY. Yes, sir; in 1914, that is true.

Senator SMOOT. In 1917 the importations were 4,010 pounds?

Mr. ASBURY. Yes, sir.

Senator SMOOT. Have you got the information as to importations?

Mr. ASBURY. I have, sir—that is, I have not the intervening years, but I have 1919 and 1920, from the Department of Commerce.

Senator SMOOT. I will see what it is here.

Mr. ASBURY. For the year of 1919 there were 54,916 pounds.

Senator SMOOT. Is that all?

Mr. ASBURY. That is all in the year 1919. But when we come to 1920, divided by quarters, we have the first quarter, 23,971; the second quarter, 29,962; the third quarter, 202,369; for the fourth quarter, 35,447.

Senator DILLINGHAM. And that aggregates how much?

Mr. ASBURY. That aggregated over 300,000 pounds in 1920.

I also have for the first six months of 1921, as reported by the Department of Commerce, though not yet published, 123,518 pounds.

Senator LA FOLLETTE. For six months?

Mr. ASBURY. For six months.

Senator LA FOLLETTE. That is less than 10 per cent of our consumption.

Mr. ASBURY. Yes.

Mr. President, that is a sample of what this committee are recommending to the Senate. Upon such testimony as that they come and ask us to put a tariff of 8 cents a pound upon phosphorus, when it is on the free list now. I want to read to the Senate just what the Tariff Commission have to say about it. In describing it they say:

Production in 1914 was approximately 1,315,000 pounds. Phosphorus is a product of the electric furnace, the raw materials being calcium phosphate, sand, and carbon. During the war production in this country, as well as in Europe, multiplied four or five times, but since the war-time demand has abated output has declined, leaving idle a large productive capacity.

Let me call attention further to the fact that there are only these two concerns which have been manufacturing phosphorus at all, and one of them is an agent for the English concern. Here is just what happened: During the war, and for war purposes, all these countries which manufacture phosphorus accumulated a surplus, which was not needed after the war was over. It appears from the Tariff Information that prior to the war, prior to this increased demand, the factories in the United States were supplying the home consumption, and they were doing it on a free basis. They did not have any duty. They did not want any tariff. They supplied this whole consumption in competition with the world, and now, simply because some concern comes in here and says there are some importations coming in and they want a tariff—and that is the only evidence presented before the Finance Committee—they recommend this rate.

Some witness interested comes before the committee and says, "My God! There is some phosphorus coming into this country. Give me a tariff rate." And the committee very generously give the tariff. They are doling out the dollars of the people of this country simply because somebody wants a tariff.

That is what they have done regarding not only this article but hundreds of articles in this bill. Upon that flimsy testimony they put a tariff of 8 cents a pound on it. The House put a tariff of 10 cents a pound on it. The Finance Committee very generously reduced it to 8 cents. Why it became so considerate of the public welfare as to reduce from 10 to 8, the Lord only knows; I do not. There is nothing in this record which would point the way to make the discrimination, but somehow or other I imagine they got an idea that they were filching the public a little too much, and that they would take off a little. What it was that happened to the majority of the Finance Committee at that time I do not know, but this is the only evidence they have. Somebody comes in who is interested in the manufacture of phosphorus and says, "There are some importations coming in." They did not stop to inquire why. They did not stop to inquire as to the cause, but it does appear that it costs about twice what it cost before the war, and they want a tariff to keep up that price.

I do not want anybody to get mad at what I have said, because I did not mean any offense at all, but I would like to have some good-natured member of the Finance Committee explain to me this acrobatic performance, mental or otherwise. I would like to know why it is.

Mr. McCUMBER. Mr. President, both sides of the question were heard, the importer's side and the manufacturer's side. The evidence on the part of the manufacturer was that it was imported into this country for 17 cents a pound. He claimed that it cost his company 38 cents a pound. Whether his claim was well founded or not, the fact appeared to be well founded that 300,000 pounds coming in during the course of a year, against a consumption of about 1,000,000 pounds a year, closed the business of that concern which was producing 400,000 pounds a year.

They asked for 18 cents a pound. The committee, hearing both sides and recognizing that the cost of production was probably excessively high in the United States at the present time, gave 8 cents a pound protection and not 18 cents. I do not regard it as a heavy protection. Under the circumstances, even when we get our production to a point where we can open these mills again, we shall probably be producing at 25 or possibly 20 cents a pound instead of 38 cents.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The next amendment of the committee was on page 25, line 22, before the words "per centum," to strike out "15" and insert "25," so as to read:

Par. 61. Plasters, healing or curative, of all kinds, and court-plaster, 25 per cent ad valorem.

Mr. McCUMBER. Is it agreeable to have a vote on this amendment at the present time?

Mr. JONES of New Mexico. The junior Senator from Utah [Mr. KING] understood that after taking a vote upon the preceding amendment there would be a recess of the Senate.

Mr. McCUMBER. Very well; that was my understanding.

EXECUTIVE SESSION.

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened and the Senate (at 10 o'clock and 7 minutes p. m.), under the order previously entered, took a recess until to-morrow, Tuesday, May 16, 1922, at 10 o'clock a. m.

CONFIRMATIONS.

Executive nominations confirmed by the Senate May 15 (legislative day of April 20), 1922.

REGISTER OF THE LAND OFFICE.

Bartlett Sinclair to be register of the land office at Boise, Idaho.

PROMOTIONS IN THE ARMY.

ADJUTANT GENERAL'S DEPARTMENT.

To be lieutenant colonels.

Jennings Benjamin Wilson.
George Michael Holley.
Milton Artells Elliott, jr.
Harry Davis Mitchell.
William Weston Bessell.
Frank C. Burnett.

To be majors.

Emory Sherwood Adams.
Edward Aloysius Brown.
William Augustus Beach.
Henry Balding Lewis.
John Grant MacDonnell.
Chauncey St. Claire McNeill.
Ralph Samuel Kimball.

COAST ARTILLERY.

Maj. Gen. Frank Winston Coe to be Chief of Coast Artillery, with rank of major general.

AIR SERVICE.

Richard Henry Ballard to be captain.

POSTMASTERS.

OHIO.

Harold A. Carson, Bergholz.
James C. Kelley, Clarksville.
Hilton C. Hart, New Waterford.

ALABAMA.

Edward C. Barnes, Evergreen.
William C. Starke, Troy.

FLORIDA.

Jennie L. Cooley, Lynn Haven.

GEORGIA.

Ibbie G. Pearce, Sumner.

ILLINOIS.

Harley L. Miles, Elburn.
Charles O. Selfridge, Good Hope.
Norman Jefferson, Hinsdale.
William J. Dobberstein, Lombard.
J. Mac. Duncan, Mackinaw.
Henry Snow, Maquon.
Glenn W. Weeks, Tremont.
H. Malcolm Leighty, Vermont.

INDIANA.

Winona Newsom, Carthage.
Charles F. Porter, Hagerstown.
Herbert A. Milburn, Patoka.

MICHIGAN.

William Wolz, Three Oaks.
Florence C. Curtis, Whittemore.

NEW YORK.

Jul Johnson, Kinderhook.
Eugene H. Ireland, Palatine Bridge.
Albert D. Ritchie, Saratoga Springs.
Harry C. McNamara, Valatie.

OHIO.

Albert D. Owen, Austinburg.
Edgar R. Holmes, Millersport.

PENNSYLVANIA.

John H. Ammon, Beaver.
Sylvester D. R. Hill, Charleroi.
Harvey J. Hertzog, Mertztown.
George S. J. Keen, Wiconisco.

TENNESSEE.

Alexander C. Austin, Ardmore.
Woodford C. Monroe, Celina.
William R. Robinson, Charlotte.
Hugh B. Nunn, Ripley.
Irene M. Cheairs, Spring Hill.

HOUSE OF REPRESENTATIVES.

MONDAY, *May 15, 1922.*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

O Lord, our God, unto Thee we lift our grateful hearts. We are still moving in the pathway of Thy providence, full of love and mercy. It fills and overflows every thought and conception of human need. Truly Thou art a wonder-making God, and all things are working together for our good. Give wisdom to this assembly in the solution of the problems of state. Look with compassion upon any who may be bearing burdens caused by others. Bless to us our silent sufferings, and make rich the experiences of the troubled life. O may the kingdom of peace, good will, and fraternity prevail wherever man is found. Through Christ. Amen.

The Journal of the proceedings of Saturday, May 13, 1922, was read and approved.

INSPECTION TRIP TO QUANTICO.

Mr. HICKS. Mr. Speaker, I ask unanimous consent to address the House for three minutes.

The SPEAKER. The gentleman from New York asks unanimous consent to address the House for three minutes. Is there objection?

There was no objection.

Mr. HICKS. Mr. Speaker, on Saturday afternoon there was read to the House a letter in reference to the trip to Quantico, which unfortunately had to be postponed a couple of weeks ago. The announcement was read rather late, and so I desire to direct the attention of Members to the new schedule. The trip has now been arranged to take place this coming Thursday. The *Mayflower* will leave the navy yard at 8.30, standard time, and will return from Quantico leaving there at 8 o'clock p. m., and should be back here in Washington by 10.30 p. m. Members who desire to return earlier will find a convenient railroad service. If those gentlemen who obtained tickets for the other trip still have them, they will be good for the Thursday trip.

Those who have not yet procured tickets should go to the room of the Naval Affairs Committee of the House, on the third floor of the House Office Building, and there sign up and get their tickets and present them by 8.30 in the morning next Thursday at the navy yard when they board the ship. As announced before, the accommodations both on the ship and at the mess halls, where the Members will be guests of the officers and men, will not permit of this invitation being extended to other than Members of Congress. The program has been enlarged and includes a review of the troops, inspection of barracks and schools, airplane flights, a presentation of trench warfare, concert by the enlisted men, and an outdoor vaudeville performance.

On behalf of Secretary Denby and Generals Lejeune and Butler, I urge all Members to take the trip, and can promise them an enjoyable as well as a profitable experience.

Mr. RAKER. Will the gentleman yield for a question?

Mr. HICKS. Certainly.

Mr. RAKER. Can the gentleman inform us whether there will be any roll calls on Thursday?

Mr. HICKS. The gentleman from Wyoming [Mr. MONDELL] is present and able to answer questions as to the program for that day.

Mr. STAFFORD. Why should there not be roll calls? We ought to be in session.

Mr. RAKER. There ought not to be any roll calls when the Members are absent from the House on official business, inspecting a public institution.

Mr. GARNER. Mr. Speaker, let us have the regular order if we are going into this——

The SPEAKER. The gentleman demands the regular order. To-day is the day when the unanimous-consent calendar is in order.

MOTHER'S DAY.

Mr. JEFFERS of Alabama. Mr. Speaker, I ask recognition for a moment to call attention very briefly to the observance on yesterday of Mother's Day, especially to the ceremony held beside the tomb of the unknown American soldier at Arlington Cemetery, in which ceremony the Gold Star Mothers of America and the American Legion Auxiliary and the American Legion united in doing honor both to the unknown American hero and to the mothers of the unknown American dead.

In this connection, Mr. Speaker, I ask unanimous consent to extend these remarks in the RECORD by inserting in 8-point type an address delivered on that occasion by a Member of the House, Hon. WALTER F. LINEBERGER, of California.

The SPEAKER. The gentleman asks unanimous consent to extend his remarks in the RECORD for the purpose indicated. Is there objection?

There was no objection.

The address referred to is as follows:

ADDRESS OF HON. WALTER F. LINEBERGER, OF CALIFORNIA, AT THE TOMB OF THE UNKNOWN AMERICAN SOLDIER, ARLINGTON NATIONAL CEMETERY, ON MOTHER'S DAY, SUNDAY, MAY 14, 1922.

Mr. LINEBERGER. Mr. Department Commander, ladies of the War Mothers, American Legion Auxiliary, and other patriotic organizations and comrades of the World War, half a year ago, on November 11, 1921, to be exact, in commemoration of Armistice Day and in tribute to the unknown soldier, whose last mortal remains lie within these sacred precincts, His Excellency, Hon. Warren G. Harding, President of the United States, delivered an address so memorable in character, so American in its perfect diction and idealism, that it will go down in history ranking with Lincoln's immortal Gettysburg Address, which was the greatest oration ever delivered by our martyred President.

We are gathered to-day in these same hallowed premises not only to pay homage to the unknown hero here, but to the unknown mother who gave him birth and to whom President Harding referred in his speech in the following touching terms:

> Some mother gave him in her love and tenderness, and with him her most cherished hopes. Hundreds of mothers are wondering to-day, finding a touch of solace in the possibility that the Nation bows in grief over the body of one she bore to live and die, if need be, for the Republic.

What more appropriate date could have been selected for paying this impersonal dual tribute to mother and son than Mother's Day, when millions of mothers throughout the land are receiving the merited gratitude of the sons and daughters of the generation which they have contributed to posterity? Well may it be that amidst this vast throng, in some American home, lives the mother who gave to the Nation our unknown soldier. At least we know that there are millions of her prototype, who, like her, gave their sons to fight for the Nation in its hour of peril that the cause of humanity and civilization might not perish, and because of this we are gathered here to-day to pay the impersonal tribute in the name of all. No word that we may utter, no deed that we may perform, can add to the imperishable glory of this unknown mother and her hero son, but we come in all humility to worship at this shrine of patriotism that we and not they may be exalted.

If the inspiration which we gather here to-day shall make us better Americans and enhance our love for our country, the country for which they have sacrificed, then these heroes shall not have faced their Calvary in vain.

From the very dawn of history it has been the custom to hold in high esteem those mothers who have given their sons for the defense of their country. In ancient Sparta the mothers of this historic fighting clan of ancient Greece crowned their victorious soldier sons with wreaths of laurel, emblematic of victory, as they returned from the field of battle. The fighting qualities of the sons of Sparta have been sung in song and story down through the intervening ages, and there are none who question that these legionnaires of old received their inspiration from the mothers who gave them birth and who sent them forth with a smile to meet the hosts of the enemy.

The American soldier, through his endurance and dauntless bravery, is to modern times what the soldier of Sparta was to the nations of antiquity, and the fortitude and courage of the American mother of our soldier sons shall go down in history as the peer of that of the Grecian mother of the heroic age of which the poets sing.

Since the very birth of the Nation we Americans have treasured in our hearts a devotion almost amounting to veneration for those of our departed heroes who have shed their life's blood in defense of our Nation and its institutions, so it is no new impulse which brings us here to-day, with simple homage and with simple words, to lay a wreath in the name of the unknown soldier's mother upon the bier of her unknown American soldier son, who gave up his life on the fields of France that we who survive might enjoy the freedom and security for which he fought.

We are not unmindful that his sacrifice and those of his like—whom he personifies to the Nation—have again confirmed to us that life, liberty, and happiness, inalienable to freemen, and which is the legacy of that glorious array of Americans of other wars, many of whom, like the one who lies here, went down to nameless graves and unknown to posterity, but whose deeds shall forever stand as an imperishable monument to their patriotic achievements.

Let us pledge here to-day renewed allegiance to the flag and institutions for which these hallowed dead have given their lives. Let us pass on to the generations which shall come after us, untarnished and unstained, the escutcheon of ideals which these young heroes held on high. Let us remember that in carrying out these ideals they made the last supreme sacrifice of devotion.

In paying tribute to the unknown and through him to all the unknown of the American forces in the great World War let it not escape us that the great national mind, or conscience, perhaps I should say, has long since and with unerring and delicate perception reached out into that great mass of patriotic womanhood of the Nation and lifted from humble complacency to the highest pedestal of national veneration that tried and true friend of the unknown hero, his unknown mother.

Enshrined in our hearts and chiseled with indelible trace in our memories is the image of the one who gave him birth, nurtured him in infancy, shared his joys and troubles in youth, and smilingly sent him forth with a mother's kiss and a mother's whispered prayer to meet the fate which the God of battles had in store for him. Thus inspired with her high faith and indomitable courage he crossed the threshold and faced the unknown future.

Those who were his comrades in the great adventure, where death rode on the wings of the morn and where men's souls were uplifted and purified in the crucible of sacrifice, know how ineradicably fixed in his mind and heart was this last picture of the parting hour. In the camp, in the billet, in the trench, and in the attack, through the hell of no man's land, in life's last fleeting moment itself, how oft have we heard, comrades, the whispered word of "mother." Sweet was the gentle thought this word entwined.

I wish to pause here to quote a few lines of verse scribbled by some unknown soldier in France, somewhere along the smoky battle line in 1917–18. For these excerpts from this untitled poem I am indebted to by colleague and comrade in the House of Representatives, Hon. LAMAR JEFFERS of Alabama, a distinguished veteran of the World War. The lines breathe something of the experiences through which the unknown hero to whom we pay homage must have passed, because they were

written by one who had been very near death, if indeed later he did not himself make the supreme sacrifice.

He has seen a summer day
That you have never dreamed,
He has seen flesh turn to clay,
While affronted Heaven screamed;
He has seen the shattered trench,
He has seen the twisted wire,
He has seen strong, living men
Charred and black in molten fire;
He has seen beneath his feet
Flesh of comrades turn to clay;
As you never could have dreamed
He has seen a summer day.

He has seen an autumn night
That you could never bear,
With hell's flare his only light
Pointing out hell's angel there;
He has known a single hour
When cold steel, red hail, and gas
Ceased and left a holy calm
Such as come when angels pass;
He has seen his comrades stand,
Half transfigured in release,
Knighted, spurred, and panoplied
By their liege, the Prince of Peace.

I need not hark back further to those dark days and experiences which are yet all too vivid to many within the sound of my voice, but we know that our unknown's mother was ever present with our unknown hero, and it is safe to say that, in spirit at least, she accompanied him with a smile through the valley, where he passed from worldly existence to life eternal and where he stands to-day "knighted, spurred, and panoplied by his liege, the Prince of Peace." May we not repeat the words of the Apostle Paul, "O death, where is thy sting; O grave, where is thy victory," for in losing mortality he has achieved immortality.

So it is, my friends, that in paying tribute to-day to the unknown we also pay tribute to his mother by placing her on a basis of equality, on the same pedestal of national veneration, as the unknown himself. In doing this we are only according to her that peculiar position of motherly preeminence which we know she occupied in his heart and life and which he, no doubt, bespoke for her in his last thoughts as he passed from beyond this earthly sphere.

May these flowers, sweet with the breath of spring, which in her name we are to lay upon his bier, carry to him across the vale which separates us some sweet reminder of her unselfish devotion, some recompense for the momentary sacrifice of that fleeting instant of transition when his soul took its flight.

We know that the patriotic womanhood of America, and particularly the War Mothers and the American Legion Auxiliary, will faithful vigil keep and see that the fires of patriotism are kept ever burning brightly before this shrine of Americanism.

In the years to come I prophesy that the day will arrive when unborn generations of Americans will come to view this spot as sacred ground and the devotion and reverence which we pay to-day will have been expanded into a cult of patriotism which will be the firm foundation stone of our national existence, against which storms may beat and tempests may rage but which shall in nowise be shaken.

We know that this labor of love which we men of the American Legion and other organizations of veterans of the World War gathered here to-day are honored to witness can best be performed by our heroic women, the mothers, wives, sisters, and sweethearts, who suffered all that their men might go forth to give all for our common country, so we shall leave the tender rites of placing the flowery tokens which we bring in the hands of the Gold Star War Mothers. Mrs. Mary E. Killeen, mother of George E. Killeen, a District of Columbia boy killed in the World War, will lay a wreath on the tomb of the unknown in the name of the unknown's mother; Mrs. George Seibold, whose son, Lieut. George Vaughn Seibold, is still listed among the unidentified dead of the American Expeditionary Forces, will also place a wreath on the grave in the name of the Gold Star Mothers of America. As the past unfolds before us our hearts are filled with deepest emotion and our thoughts go back to scenes of other days.

Looking out on this concourse of upturned faces I see among them heads of mothers whose silver strands have displaced the gold. The Women's Relief Corps, notable among women's patriotic organizations, is here. No tribute that humble tongue can pay could voice the praise to which this noble body of women is entitled. After sending forth their fathers, sons, brothers, husbands, and sweethearts to battle that our Nation might remain one and indivisible, they have kept the faith for nearly threescore years, and not only have they helped to keep this beautiful bivouac of the dead here at Arlington—this eternal camping ground of the Nation's departed heroes—green with grass and laden with flowers, but they have done more; they have kept the fields of memory green and have passed on to us of succeeding generations the history of the wonderful achievements of those whose memory a united Nation is proud to honor. With equal patriotic fervor, the Daughters of the Confederacy have accomplished a similar work in the South. With all trace of sectionalism long since obliterated we Americans of to-day look back upon Grant and Lee as the common heritage of a united people and face the future with confidence, knowing that where yon starry flag waves to the breezes is liberty and justice, and that the Nation of which it is the emblem and symbol is the greatest on earth. What pride of nationality is ours when we realize that the admiration of the world is centered on the United States of America! To this flag of our country we give undivided allegiance in life, and when the last note of taps is sounded for us over our final resting place we hope to be wrapped in its folds and to sleep in the assurance that it will continue to wave over unborn generations of Americans until the end of time.

In closing I desire to say a few words to my comrades of the American Legion. It has been said that the problems of peace are greater than those of war, and at no time in the Nation's history have we had this fact brought home to us with greater force than by the responsibilities of the day. The heartrending sacrifices of yesterday should cause us to fervently strive to avoid the horrors of war to-morrow. The world is clamoring for peace, and the spirits of tens of thousands who passed on in the "war to end wars" admonish us to keep faith with all who sleep in Flanders field. Without sacrificing the security and defense of the Nation we love and for which we are still willing to shed our life's blood if need be, can not we veterans of the World War, who have known war and all the misery that armed conflict entails, lend our best efforts and influence to soothe the nerves of a war-weary world and thus help to fulfill the aspirations of a sorely tried and long-suffering humanity? Let our slogan be that of one of our most famous soldier Presidents, who said "Let us have peace."

While standing watch against aggression from without we must be none the less mindful of dangers from within, remembering always that "eternal vigilance is the price of safety" and that this applies to nations as well as individuals. Let us respect and demand respect for the laws of our land and uphold with firm hand its Constitution. This solemn obligation is ours if we are to be worthy of the heritage which we have helped to preserve and which we are charged, above all others, with passing on as a birthright to our posterity.

No higher destiny, my comrades, could be assigned to us than that of safeguarding our Nation's laws, security, and honor, thereby giving vibrant, living fulfillment to Washington's farewell injunction to his countrymen, "to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence."

If we do these things the unknown, whom to-day we honor, shall truly not have died in vain.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Craven, its Chief Clerk, announced that the Senate had passed bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 651. An act for the relief of Ethel Williams.

SENATE BILL REFERRED.

Under clause 2, Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee as indicated below:

S. 651. An act for the relief of Ethel Williams; to the Committee on Claims.

CALENDAR FOR UNANIMOUS CONSENT.

The SPEAKER. The Clerk will call the first bill on the Calendar for Unanimous Consent.

LAKE GEORGE, YAZOO COUNTY, MISS.

The first business on the Calendar for Unanimous Consent was the bill (S. 1162) declaring Lake George, Yazoo County, Miss., to be a nonnavigable stream.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of this bill?

Mr. WALSH. Mr. Speaker, reserving the right to object, when this bill came up before the gentleman from Illinois [Mr. MANN] raised some question about it and directed the attention of the gentleman from Mississippi [Mr. COLLIER] to some features of the measure.

Mr. COLLIER. Mr. Speaker, all I have to say about the matter is that this is a Senate bill asking that Lake George, Yazoo County, Miss., be declared nonnavigable. Lake George flows into Sunflower River. It is about 17 miles long. It is more like a bayou than a lake, though I understand it is wide in some places. It never has been considered by anyone to be a navigable stream. It can not be navigated except during an overflow of the river or during the high-water stage. I have photographs here, which I can show to the Members of the House, showing that at the mouth of this so-called navigable stream the water during part of the year is only 14, 15, or 16 inches in depth. In fact, I have a number of copies of affidavits here showing that ordinarily the stream near the mouth is only about 6 or 7 feet wide and 5 or 6 inches deep. Farther up there are some large pockets of water, but there is no way of getting there, because there is only one mouth, opening into Sunflower River. I have here copies of affidavits of nearly all of the landowners living there. These affidavits show that the body of this lake is fenced and has been fenced since 1897; that there are crops raised nearly every year on that lake. The fact is that these people want to build some bridges there. There has never been any commerce on that lake.

Mr. WALSH. Will the gentleman allow me to ask him a question?

Mr. COLLIER. I will yield in a moment.

Mr. WALSH. I have yielded to the gentleman. I want to ask the gentleman what he has to say with reference to this language of the Assistant Secretary of War:

As the waterway in question is evidently a navigable water of the United States which may at some future day usefully serve commerce, it is my view that the proposed legislation is unnecessary, and that from the standpoint of public interests the passage of the bill for such a purpose and under such circumstances would be a harmful precedent and should be opposed.

Mr. COLLIER. All I have to say to that is that I do not see how any Army engineer or any one familiar with the facts can say that it will be a dangerous precedent to declare nonnavigable a body of water that most of the year is from 6 to 8 to 12 inches deep. There has never been a public line on that stream. There has never been a dollar asked for or expected to be spent by the Federal Government in making it navigable. Nobody should ever expect it to do so. In the old days, before they had a railroad there, and before we had the roads that we have now, during the period of high water the riparian owners could get certain commerce in the way of supplies brought up from Vicksburg and Yazoo City. But I understand from affidavits that there has never been any commerce except that which was by a boat making special trips. There are no schedule boats or schedule trips.

Mr. WALSH. What length is the lake that has only 14 inches of water?

Mr. COLLIER. Right at the mouth; the big water is up back of the entrance of the lake. The bridge that is to be built there is of such a nature by reason of its approaches that in a condition where the water is within 2 or 3 feet of what it is to-day the boats can go over the ends of the bridge. The lake is only navigable when all the surrounding country is navigable.

Mr. MONDELL. Mr. Speaker, reserving the right to object, under our laws very great stretches of rivers, bayous, swamps, sloughs, and lakes that can not be made actually navigable at any reasonable cost are technically navigable—legally navigable; they always and continuously present a temptation for the people of the locality to pester Members of Congress to secure an appropriation for their improvement. The history of the country has been that in many cases Members under such local pressure have urged and have secured appropriations of very questionable character. I am of the opinion that when a Member having a stream of that character, which clearly is not navigable, clearly should never be improved at the public expense, desires to have the fact of its nonnavigability declared he should be encouraged in doing it. I think legislation of this character is in the public interest; it reduces by that amount the rivers or waterways that we might some time be called upon or invited or urged to improve. [Applause.]

Mr. STAFFORD. As I understand, there is no real navigable stream above the lake; its source of water supply is the Sunflower River.

Mr. COLLIER. Yes; and it extends up 18 or 20 miles, within 3 miles of the Yazoo River. When the water is up, I understand, it runs into the Yazoo River, and when it is low it flows the other way into the Sunflower. But I am not certain about that.

Mr. STAFFORD. As a practical proposition, would it be possible to make it navigable into the Yazoo River?

Mr. COLLIER. It might if you built a canal.

Mr. STAFFORD. Has that ever been proposed?

Mr. COLLIER. Never that I have heard of.

Mr. STAFFORD. Can we have the gentleman's assurance that he will never ask for an improvement of this stream in connection with the Yazoo River, or is that too strong a request to make?

Mr. COLLIER. I want to say that that part of the Sunflower River has had a Representative in Congress since Mississippi became a State. I do not think during that 105 years there has been asked any improvement for Lake George. I think it will be 105 years more before there is any request.

Mr. WALSH. Better wait until we get through with the Tombigbee.

Mr. STAFFORD. But they have been here requesting improvements for Sunflower River to make it navigable.

Mr. COLLIER. Sunflower River is a great river, and money spent on it is spent wisely.

Mr. WALSH. Mr. Speaker, in view of the explanation of the gentleman from Mississippi, supplemented by the observation and enunciation of principles on the part of the distinguished majority leader, based, I take it, upon some plank in the Republican platform somewhere which I have overlooked, I withdraw my objection. [Laughter.]

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That Lake George, in Yazoo County, in the State of Mississippi, be, and the same is hereby, declared to be a nonnavigable stream within the meaning of the Constitution and laws of the United States, and jurisdiction over said lake is hereby declared to be vested in the State of Mississippi.

SEC. 2. That the right of Congress to alter, amend, or repeal this act is hereby expressly reserved.

With the following committee amendments:

In line 6 change the comma after the words "United States" to a period and strike out the balance of the sentence down to and including the word "Mississippi," in line 7. After the word "the," in line 5, eliminate the following language appearing in lines 5 and 6, "Constitution and laws of the United States" and insert "laws enacted by the Congress for the preservation and protection of such waters." Also, in line 4, after the second word "be," insert the word "not," and in lines 4 and 5 eliminate the words "nonnavigable stream" and insert the words "navigable water of the United States."

The SPEAKER. The question is on agreeing to the committee amendments.

The committee amendments were agreed to.

The bill as amended was ordered to be read a third time, was read the third time, and passed.

On motion of Mr. COLLIER, a motion to reconsider the vote whereby the bill was passed was laid on the table.

APPROPRIATION FOR THE PROSECUTION OF WAR FRAUDS.

Mr. MADDEN. Mr. Speaker, I ask unanimous consent for the present consideration of the bill (H. R. 11645) making an appropriation to enable the Department of Justice to investigate and prosecute war frauds.

The Clerk read the bill, as follows:

A bill (H. R. 11645) making an appropriation to enable the Department of Justice to investigate and prosecute war frauds.

Be it enacted, etc., That for the investigation and prosecution of alleged frauds, either civil or criminal, or other crimes or offenses against the United States growing out of or arising in connection with the preparation for or prosecution of the late war, to be available for the employment of counsel and other assistants, rent, and all other purposes in connection therewith, whether in the District of Columbia or elsewhere, there is appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $500,000, to be expended in the discretion of the Attorney General, and to remain available until June 30, 1923: *Provided*, That this appropriation shall not be available for rent of buildings in the District of Columbia if suitable space is provided by the Public Buildings Commission: *Provided further*, That not more than one person shall be employed hereunder at a rate of compensation exceeding $10,000 per annum.

The SPEAKER. Is there objection?

Mr. LONDON. I object.

Mr. MADDEN. Mr. Speaker, I move to suspend the rules and pass the bill.

The SPEAKER. The gentleman from Illinois moves to suspend the rules and pass the bill. Is a second demanded?

Mr. BYRNS of Tennessee. I demand a second.

Mr. LONDON. Mr. Speaker, if I withdraw my objection, can there be an opportunity for debate on the bill?

The SPEAKER. Of course there can be.

Mr. LONDON. Then I withdraw my objection.

Mr. DYER. Then I object, Mr. Speaker.

The SPEAKER. The gentleman from New York is too late.

Mr. MADDEN. Mr. Speaker, I ask unanimous consent that a second may be considered as ordered.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The gentleman from Illinois is entitled to 20 minutes and the gentleman from Tennessee [Mr. BYRNS] to 20 minutes.

Mr. MADDEN: Mr. Speaker, the Committee on Appropriations had referred to it by the President of the United States a recommendation for an appropriation of $500,000 for the Department of Justice to enable that department to organize a division in the Department of Justice to try pending cases in which there are disputes as to whether or not the terms of contracts entered into during the war were carried out, and to authorize the Department of Justice to prosecute these cases civilly and criminally wherever criminal prosecution was found to be necessary. It happened that during the war 150,000 contracts were let by the War Department. Fifteen thousand of these contracts and the payments made by the department under the contracts have been audited. As a result of the audit of the 15,000 contracts, the War Department has been able to collect $13,000,000 from those who have contracts and were overpaid. Two hundred and seventy-six cases, if I recollect correctly, indicate either very large excess payments, which the War Department was unable to collect and about which there was considerable dispute, or evidences of fraud in connection with the contracts, and sometimes both. For instance, take the Lincoln Motor Car Co., of Detroit. That company was overpaid something like $9,000,000. The Lincoln Motor Co., of course, dispute the amount. I do not think that they contend that there is not a large amount of overpayment, and a controversy exists between the department and the Lincoln Motor Co. as to what the amount is. It has been said, with what truth, of course, I do not know, that there is even some possibility of fraud in connection with this contract. The matter has been turned over to the Department of Justice. The Lincoln Motor Co. went into the hands of a receiver. They had some $6,000,000 in cash in the treasury of the Lincoln Motor Co. and it was about to be distributed to the creditors. The Department of Justice had an order of court issued to withhold the distribution until the case can be finally settled.

There is another case in respect to which considerable dispute arises—the Wright-Martin case. I understand that $5,000,000 is involved in that case. This matter is in controversy and could not be adjusted between the parties in interest and the War Department. In all cases such as these the War Department has turned the matter over to the Department of Justice for final adjudication and prosecution, if prosecution is found to be necessary. In all, they have 276 cases pending in the Department of Justice such as these which I have described, although not involving as large sums in many cases, but the aggregate so far indicated as due to the Government from the contractors in the 276 cases now pending amounts to $192,000,000.

The War Department is auditing all of the 150,000 contracts. They have 135,000 of these contracts yet to audit. As they make the audits, wherever they can they make settlements with the parties on the other side, in which event the matter is not referred to the Department of Justice. Wherever they find any indication of fraud or are unable to make settlement, they refer the case to the Department of Justice.

The Department of Justice has had during the year about 70,000 cases of one kind and another pending, a large percentage of which has been disposed of. Their ordinary working force is unable to cope with the work involved in the cases I have just described, and it is proposed by this appropriation to authorize the Attorney General, and he proposes, if the appropriation is granted, to organize a division particularly charged with the responsibility of following up these cases. The Attorney General indicated to the Committee on Appropriations that he would very much like to have such a division housed in one place, so that the men charged with the consideration of particular cases might be able to consult with men charged with the consideration of other particular cases and that all of the work might be under one roof, so that confidential relations might exist in respect to the various cases. As it is now, where the work is scattered about, he said that it frequently happens that they are unable to maintain the secrecy that ought to be maintained in respect to the evidence which they are endeavoring to accumulate. The Committee on Appropriations have recommended a limitation on the amount that may be paid to any one man in this activity to $10,000. The hope of the Attorney General is that he will be able to place the active work of this division in charge of some high-class lawyer, and he may be compelled to pay that man a sum greater than that proposed in the limitation. I suppose it is no secret—because I have seen it published in the newspapers, and otherwise I would not mention it, but the Attorney General is very much in hopes that he may be able to get former Secretary of War Stimson to head this division, not only because of his knowledge of the War Department but because of his eminence as a lawyer. I hope he will be able to get such a man.

Mr. KNUTSON. Mr. Speaker, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. KNUTSON. It is fair to assume that these war profiteers whom it is proposed to prosecute will employ the best counsel that money can hire.

Mr. MADDEN. There is no doubt about that.

Mr. KNUTSON. Will the Government's interests be amply safeguarded by $10,000 men?

Mr. MADDEN. I do not think the Attorney General will want to pay more than $10,000 a year to anyone except the man in charge, because as a matter of fact the Attorney General proposes to be in supreme charge, although he would like some one man to assemble the organization and keep in close touch with it and be from day to day in consultation with the Attorney General in respect to the work that is hoped to be done under this appropriation.

I reserve the remainder of my time.

The SPEAKER. The Chair will recognize the gentleman from Tennessee [Mr. BYRNS].

Mr. BYRNS of Tennessee. Mr. Speaker, so far as I know there is no objection to the passage of this resolution and the making of this appropriation. The Attorney General has stated that he must have this appropriation in order to prosecute, both civilly and criminally, the war-fraud cases.

Mr. LONDON. Mr. Speaker, a parliamentary inquiry. I object to this appropriation, and I think that I am entitled to 20 minutes. The gentleman from Tennessee has just said that he does not think that there is any opposition to it. I object to the entire bill, and I ask for 20 minutes.

The SPEAKER. If the gentleman had stated that at the time the Chair made the recognition the Chair would have recognized him.

Mr. LONDON. I was under the impression that the gentleman from Tennessee was opposed to the bill.

Mr. BYRNS of Tennessee. The gentleman did not get that impression from anything I said.

The SPEAKER. No one raised the point, and it is too late now.

Mr. BYRNS of Tennessee. Mr. Speaker, as I have said, the Attorney General has stated that he needs this appropriation in order to prosecute, both civilly and criminally, those who have been guilty of fraud and profiteering on the Government during the war.

In view of his statement that he must have this appropriation for this current year, or these fraud cases can not be vigorously prosecuted, I favor the appropriation, although there are some of us who feel that he has had appropriations for the present fiscal year sufficient to have enabled him to proceed with those cases and prosecute them in the courts. But I am not willing by a failure to appropriate this sum, to give the Attorney General or any officer of the Government any excuse whatsoever for a failure to vigorously prosecute these cases and recover the money due the Government and put the malefactors in jail.

Mr. KNUTSON. Will the gentleman yield?

Mr. BYRNS of Tennessee. I have not the time, I am sorry. For the present fiscal year the total appropriations for the Department of Justice were a little more than $17,000,000. That includes, of course, the expenses for the district attorneys, their assistants, marshals, clerks, and so forth, and other costs of running the courts and the department. The Department of Justice now has on its statutory roll 47 special attorneys, ranging in salaries from $9,000 to $2,400 per annum, as is shown by the following statement:

1	assistant to the Attorney General	$9,000
6	Assistant Attorneys General, at $7,500 each	45,000
4	attorneys at $5,000 each	20,000
1	attorney	4,500
1	attorney	3,750
4	attorneys at $3,500 each	14,000
1	attorney	3,250
14	attorneys at $3,000 each	42,000
2	attorneys at $2,500 each	5,000
1	assistant attorney	3,500
2	assistant attorneys at $3,000 each	6,000
2	assistant attorneys at $2,750 each	5,500
5	assistant attorneys at $2,500 each	12,500
1	assistant attorney	2,400
2	assistant attorneys at $2,400 each	4,800
47	Total	181,200

In addition to these attorneys the Department of Justice now has on its rolls 170 special assistant attorneys, who are paid

from a fund of $850,000 which was appropriated by Congress for that purpose.

He had, in addition to all these, district attorneys for whom and their offices an appropriation was made for the fiscal year of $900,000. There are also regular assistants to district attorneys for whom appropriation was made in the sum of $550,000. And yet he says the department was seriously handicapped in the prosecution of these cases on account of a lack of funds. In addition to that he had $2,000,000 appropriated for this fiscal year for the employment of special agents to detect and prosecute crime against the United States, with no salary limit except the chief investigator restricted to $7,500. So those of us who take the position that the Attorney General has had sufficient funds during this year to have prosecuted these cases with dispatch, it seems to me, are amply justified by the record. In my judgment there is no excuse for the situation in which the Department of Justice finds itself to-day. I asked the Attorney General before the committee how many of these special war-fraud cases he was investigating July 1 of last year, and I was told by him and also by one of his assistants who came to the committee with him that they had no record of cases on July 1, 1921, although the present administration had been in charge for four months. This shows that there was an indifference and a lack of activity in the Department of Justice which thoroughly justified those two highly respected Members of the majority—the gentleman from Michigan [Mr. WOODRUFF] and the gentleman from South Dakota [Mr. JOHNSON]—in arising from their seats in the performance of what they considered to be their official duty and arraigning the Secretary of War and the Attorney General for their failure to prosecute these cases.

One of them actually threatened impeachment proceedings unless the Attorney General proceeded with dispatch in the conduct of those cases. As the result of those charges the Attorney General comes at this late day and says he must have $500,000 for this purpose. He has had three different opportunities to make this request, but he never saw fit to do so until a resolution of inquiry as to the cause of the delay was introduced. He now rushes in and asks for an appropriation, and we are told that Republican leaders see no necessity for the resolution. Why not? Why should we not find out just what has been delaying these prosecutions during all these months? There was a deficiency bill passed in August of last year. In November of last year there was an estimate submitted for a supplemental deficiency for this year covering 10 departments and 17 independent establishments, aggregating $187,000,000, and in the list the department asked $945,900, but it did not include a request for an appropriation to pay the expenses of prosecuting these war-fraud cases, nor was there even a suggestion that such an appropriation would be needed. One hundred thousand dollars was given in that bill for salaries of the district attorneys and expenses of their offices, making a total for that particular purpose for 1922 of $900,000, instead of $800,000 which theretofore had been appropriated. Again in February Congress received estimates for deficiency and supplemental appropriations from the executive departments. No request was made in those estimates for appropriations for this particular purpose; although the Department of Justice did ask $729,000, nothing was specifically asked for prosecution of cases involving frauds in war contracts. Three hundred thousand dollars was asked for assistants to the Attorney General and United States district attorneys to aid in special cases. Of this estimate $250,000 was granted in the deficiency act which was approved as late as March 20 of this year.

This brought the appropriation for special assistants for 1922 up to $850,000. For pay of special assistants, 1923, the Budget asked a million dollars, and practically that sum was allowed. I fail to find in the hearings conducted in the preparation of the regular bill for next year any specific request upon the part of any representative from the Department of Justice for a specific appropriation or an additional appropriation in order to provide a fund to employ special attorneys to prosecute these special cases. So I do say there is no justification for the statement which has been made by the Attorney General that the reason he has not been able to vigorously prosecute these cases during the past 14 months of his administration is because the Congress had not given him the funds.

Mr. RAKER. Will the gentleman yield just for one question?

Mr. BYRNS of Tennessee. I have not the time. If he had not the funds, why did he not come before the Congress when the deficiency appropriation bills were under consideration and ask for a sufficient appropriation?

He undertakes to excuse his failure to ask for this money on the ground of economy, in the face of the fact that in the letter which he submitted, and which was read at the desk, he stated that $100,000,000 were involved in these claims. Before the committee he stated that those claims would aggregate $192,000,000. Yet he says that on the ground of economy he did not ask for an appropriation which he now says is necessary to recover on behalf of the Government $192,000,000 from those who profiteered upon the Government through fraud and in other ways during the conduct of the war. He hesitated for 14 months on the ground of economy. Why, a year's interest at 4 per cent on the sums claimed by the Government would amount to nearly $8,000,000.

Mr. MONDELL. Will the gentleman yield?

Mr. BYRNS of Tennessee. I have not the time. I would like to know why it is that the Director of the Budget, who is so anxious to conserve the public funds, has not discovered this, and why he did not come forward in the absence of a request from the Attorney General and ask for this $500,000 for this particular purpose in order that the Treasury might recover at least a portion of the $192,000,000, which would have gone far toward taking care of the deficit of more than half a billion dollars which we are told is going to occur during the next fiscal year. [Applause.]

The making of this appropriation should not interfere with the resolution of inquiry as to these cases and just why they have not been prosecuted. That resolution has been favorably reported out and is now presumably resting quietly in the pocket of the chairman of that committee. We are told that Republican leaders see no necessity for its passage, and that the passage of this appropriation will obviate the necessity for action on it. Let us hope that this is not true and that the resolution will be passed, for no administration can afford to object to an investigation or permit its friends to stifle one. If it should be done, then the Attorney General can not avoid the suspicion that he hastened to ask for an appropriation in order to forestall the proposed investigation.

The SPEAKER. The time of the gentleman from Tennessee has expired.

Mr. MADDEN. Mr. Speaker, I yield five minutes to the gentleman from Michigan [Mr. WOODRUFF]. [Applause.]

Mr. WOODRUFF. Mr. Speaker, I ask unanimous consent to extend and revise my remarks.

The SPEAKER. The gentleman from Michigan asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. WOODRUFF. Mr. Speaker, I propose to discuss certain things contained in the letter of the Attorney General to the President, which was read in the House the other day. I propose, for instance, to discuss the organization within the Department of Justice which the Attorney General has perfected during his 14 months in office. I will take up different individuals in the department; I will show their duties in connection with the prosecution of war frauds, and comment upon the same. Whatever comments I make are made only for the purpose of disclosing to the House the hopelessness of attempting to do anything worth while with these war-fraud cases while the present personnel of the Department of Justice is directing affairs. I have no personal feeling either for or against any man I shall mention.

I believe, and I shall attempt to show, Mr. Speaker, that the only way in which the Department of Justice can secure results is to either replace the men I shall mention with men of known integrity and ability or to establish in the department another branch, the sole duty of which shall be the handling of these cases.

Mr. Speaker, the Attorney General, in his letter to the President, stated, among other things, that notwithstanding the serious handicap of lack of funds the Department of Justice has made gratifying progress in these war-fraud cases. That the work has thus far been largely in the way of organization and investigation. Let us see just what has been accomplished along these lines. We will discuss, first, the wonderful progress in organization. The Assistant Attorney General, who has direct charge of all these war-fraud cases, is Col. Guy D. Goff. Just what his peculiar qualities are which so eminently fit him for this important work no one seems to know. His time, when he is around the Department of Justice, seems about equally divided in proclaiming in loud and certainly unladylike language the wonderful things he has done before he came into the department and the wonderful things he is going to do. If he has ever spent a day's time looking into the merits of any of the various war-fraud cases presented to the Department of Justice he must have done so when every one else about the

department was fast asleep, for no one there seems to know of such activity on his part.

The Attorney General complains that lack of funds has held up the work on these cases and clearly intimates that the personnel of his department have been engaged at all times upon the public business in that department. I direct his attention to work which has been under way there for the past six or seven months which has nothing whatsoever to do with the public business. This work has been and is now being done at public expense. It is a compilation of the briefs of the cases which Colonel Goff and his friends have had in the courts and is known in and around the Department of Justice as the "Vanity Case." This work is being directed by Mr. Lenihan, one of the Attorney General's war-fraud organization attorneys, and of whom I shall have more to say later. The work now consists of 11 volumes, each volume consisting of from 300 to 400 pages. As many as five stenographers have been employed upon the "Vanity Case" at one time. This work covers a period of months and every line written has been written at the public expense. Mr. Lenihan is very kindly directing this work in order that his superior, Colonel Goff, may not be criticized in case the circumstances reach the ears of the unbelievers. However, Colonel Goff, with great condescension, has let it be known to a few of his favorites that upon the completion of this monumental work they shall "have a copy." To say that this work has up to this date cost the Government several thousand dollars is putting it conservatively. To say, further, that the "Vanity Case" when completed will be of no use to the department whatsoever is unnecessary. I refer to these details only for the purpose of exposing to the public view the wonderful way in which the Department of Justice organization for handling the war-fraud cases is operating under the able management of Colonel Goff.

The colonel's time being so taken up with his declamations upon the importance of the work he has done in the past and is going to do in the future—although he is strangely silent as to the work he is now doing—he has found it necessary to provide an assistant to whom he could turn over the direct charge of all these tremendously important cases. It would seem, even to the casual observer, that the dictates of duty to the public interest would demand that an attorney of known standing be assigned to a position of this character. Was this done? It was not. This work was given to Mr. Abraham F. Myers, a former law clerk of the department. Mr. Myers has been reported to me as being opposed to the prosecution of these war-fraud cases, and, judging from his activities as Colonel Goff's assistant, I am inclined to believe my informants were entirely correct as to his attitude in these matters. In a letter to me of recent date he stated he was a friend of and had the confidence of Mr. George W. Wickersham. Mr. Wickersham was at one time Attorney General, and now is one of the recognized British propagandists of the country, and also a member of the firm of Cadwalader, Wickersham & Taft, attorneys for Mitsui & Co., Japanese bankers, who financed the Standard Aircraft Corporation and Standard Aero Co. in their dealings with the Government on their aircraft contracts. Mr. Wickersham is very active in protecting his Japanese clients and apparently to date has prevented the Department of Justice from presenting to the courts the Government's claim of from six to ten millions of dollars, notwithstanding the fact that months ago the department was notified that these two concerns were undergoing liquidation and their assets were being rapidly dissipated. It is either a significant fact or a coincidence that within a few days after Mr. Wickersham had been retained by Mitsui & Co., Mr. Myers was placed in direct charge of these cases, and no action has been taken by the Department of Justice to protect the public's interest in either case, although neglect to do so has unquestionably cost the Treasury from six to ten millions of dollars.

The Attorney General, in his letter to the President, says that these cases as they come to his department from the Government auditors constitute only claims against these different concerns. This, of course, is true. But, Mr. Speaker, is there any statute which prohibits the presentation of a claim to the courts, especially where such claim is presented for the purpose of tying up such assets as are in the process of liquidation until such time as the courts have the opportunity of passing upon the legality of such claims? I do not believe there is such a statute, Mr. Speaker; and if there is none, can the Attorney General or Colonel Goff or Mr. Myers advance an explanation which could justify their very plain neglect of duty in these two cases? A sum approximating $10,000,000 in the aggregate is involved, and the Government stands to lose this amount as a direct result of the inactivity or neglect of duty of some one in the Department of Justice. Who is responsible for this reprehensible condition of affairs? Is it the Attorney General? Is it Colonel Goff, or is it Mr. Myers, the man who has direct charge of these matters and who is the friend and confident of Mr. Wickersham, the attorney of these Japanese interests? Mr. Myers is one of the very important cogs in the wonderful machine the Attorney General is perfecting for the prosecution of these war-fraud cases.

Again, I wish to call the attention of the House to certain other activities of this same Mr. Myers in regard to the cantonment cases. Months ago he informed the investigators working on these cases that they had been closed; that there was nothing to them, and all investigations were stopped. This was supposed to have closed these cases for all time, but recently, without further investigation, mind you, and since April 11, the day when I made my attack in the House upon the mismanagement of affairs in the Department of Justice, these cases have once more come to life.

The Attorney General announces with great gusto that he has asked Mr. McCullough, ex-Member of the House and a most active, able, and sincere member of the subcommittee of the House Graham Committee which investigated the cantonment contracts, had been asked to handle the prosecution of these cases, and I understand the gentleman will have a number of these cases ready for the grand jury in the immediate future. I understand also that sufficient information was found in the files of the Department of Justice to justify immediate prosecution. And yet, Mr. Myers months ago, when the department files contained all the information they contain to-day, and in face of the fact that the House by a vote of 299 to 4, after a thorough investigation requested the Attorney General to act, calmly announced there was nothing to the cases, and they were closed. Truly, Mr. Myers is a valuable acquisition to the Attorney General's organization for dealing out justice to war grafters.

This same Mr. Myers is the man who directed that the investigators working on the aircraft cases secure all information through him. If an investigator wished a certain file in the aircraft or other division of the Government, he must submit his request to Mr. Myers. If this gentleman approved of the investigator receiving such information, it was produced. If he did not approve, some good excuse was found as to why it was not available, as the following extract of a memorandum of January 4, 1922, from Mr. Myers to Capt. H. L. Scaife, an investigator of the Department of Justice, will show. The records will further show that the call made upon Mr. Myers by Captain Volandt in reference to this matter was inspired by Mr. Myers and not by General Patrick, as the memorandum would indicate:

> By direction of General Patrick, Captain Volandt called on me this morning in reference to your request for a copy of the audit of cost records of the Glenn L. Martin Co. The audit in question was conducted under a clause in the contract with that company which provided that its cost records would be available for the information of the "contracting officer." The Martin Co. and the Chief of Air Service both construe this provision to mean that as to all others, including other branches and officers of the Government, the records are to be treated as confidential.

Another very important part of the Attorney General's organization for the prosecution of these frauds is one Mr. Lenihan. This gentleman has often openly stated he is opposed to the prosecution of these cases. To show his enthusiasm for this work and his fidelity to his oath of office and the interests of the public, I will again quote from a memorandum of Maj. W. O. Watts to Mr. W. J. Burns, his superior officer in the department and Chief of the Bureau of Investigation:

> About the middle of September, 1921, the Secretary of War referred to the Department of Justice the War Department's report on lumber contract with Phillips & Stephens, showing alleged irregularities exceeding $1,800,000. This contract had been under investigation by the department for some time by Agents Borchardt and Ward, under the jurisdiction of Attorney Ramsay, so Mr. Lenihan informed me. Mr. Lenihan manipulated matters so as to get this case assigned to him, together with Agents Borchardt and Ward. Within a few days after the lumber case had been assigned to Mr. Lenihan, Mr. Phillips, of Phillips & Stephens, the contractors, called on Mr. Lenihan. Mr. Phillips introduced himself to Mr. Lenihan as of Phillips & Stephens, lumber contractors. He then proceeded to state that he had just come from the Attorney General, with whom he said he was arranging appointment of Federal judges in his district. He said he was the leader of the Republican Party in his district, and that the negro attorney (Anderson) claiming local leadership had no status as a political leader. He went on to state that President Harding had sent for him as the accredited party leader and discussed with him the local political situation and patronage.
>
> After an animated discussion of politics and public policies, Mr. Phillips impressed upon Mr. Lenihan his virtues and importance as a party leader. He said to Mr. Lenihan, in effect: "You are in charge of the lumber case concerning Phillips & Stephens. I want to say that there is nothing to this case and to get permission to destroy a lot of old records which are in the way; that Mr. Borchardt has been going over these papers for some time, and I want to close up the case." Mr. Lenihan said that he did have charge of the case; that he had not had

time to analyze it, but would go into it at once, and would see Mr. Phillips at a later date.

When this case was assigned to Mr. Lenihan I informed him that I could give him some information of value and put him in touch with a certain party (naming the man) who claimed to have extremely important information or access to such, pertaining to the lumber contract. Mr. Lenihan ignored this proffer of assistance and has never indicated to me a desire to obtain this information, although I subsequently repeated my previous offer and called his attention to the fact that the statute of limitation would soon expire, as the contract was dated February 26, 1919. On January 11 a representative of the War Department made inquiry relative to the status of the lumber case and as to when the War Department may expect formal action against the principals involved.

It is suggested that this case be inquired into.

7. At the time of Mr. Phillips's visit Mr. Lenihan expressed his views very freely to me regarding the inadvisability of the administration proceeding against the war contractors generally. As to do so, he contended, would upset business conditions, and was contrary to good policy.

He held the view that these alleged frauds had been committed during the stress of war and were a matter of past history which should be generally left alone. From my observation of Mr. Lenihan's work this attitude has been found to almost inherently characterize his action on all War Department matters. In my opinion, Mr. Lenihan lacks that sympathetic and faithful loyalty to the Government's interests which is always accorded as a fundamental duty by officials of integrity and ability, and is so necessary to the successful prosecution of these fraud cases.

8. He has stated to me that he was not interested in keeping his job in the Department of Justice for any great length of time, but would play the game for all it was worth while here with Frank Hogan and other men of influence and power, who would be of use to him in the future.

9. Mr. Hogan was and has been unquestionably oversolicitous in cultivating the friendship and association of Mr. Lenihan almost from the beginning of the latter attorney's association with the Harness case. Mr. Hogan is undoubtedly a very clever and cunning attorney, who is not averse to resorting to unethical and unscrupulous methods to gain the ends sought.

Mr. Hogan arranged an early luncheon at the "Round Table" for Mr. Lenihan, at which the latter attorney informed me some men of prominence were present. Mr. Lenihan stated that drinks were served in Mr. Hogan's office before going to luncheon.

These luncheons subsequently became common affairs. I can conceive of nothing but ulterior motives in Mr. Hogan's design. Certainly, it is improbable that a man of Mr. Hogan's accredited standing as a jurist was in the least interested in Mr. Lenihan, a young and comparatively inexperienced attorney, for purely platonic reasons.

Mr. Lenihan is a man of free conversation, little versed in worldly affairs, of mediocre ability, and in no sense equipped to contend with this masterful opponent.

Major Watts in his memorandum fully states the opinions of those people in the Department of Justice who really have the interests of the public at heart as to the importance and desirability of Mr. Lenihan as a part of the machine or organization of which the Attorney General speaks so highly.

Still another cog in this wonderful machine is one Rush L. Holland. He is another who has on numerous occasions declared his lack of sympathy in the prosecution of the war-fraud cases. I am not sure whether his recommendation for this important work is his ability to deliver votes in his home State or the facility with which he can and does, at the direction of the Attorney General, discharge faithful Government employees with an utter disregard of the law. His pathway in the Department of Justice is strewn with the remains of patriotic employees whose only dereliction has been their fidelity to the public interest. Some time, Mr. Speaker, I shall if conditions warrant call the roll on this gentleman and place in the RECORD the names of the employees discharged, the excuses advanced for such action, and last but not by any means least the facts in the case and the real reasons for the discharge of these faithful public employees.

Mr. Daugherty, in his letter to the President, also laid stress upon the fact that the Graham reports had been carefully examined and digested. Let us see about that. About November last Mr. Myers assigned to this work Mr. Paul Mullen, a young and inexperienced clerk in the department. The Graham reports comprise some 20 large volumes. Within the past month Mr. Mullen has stated that he had worked on only six cases and that he had been unable to determine the facts in any of them. His work consisted only of a study of the hearings and reports and did not extend to any further investigation of records or to the questioning of witnesses. There has been no real attempt in the Department of Justice to go into the Graham hearings, unless it has been done within the past month, and no attorney or employee in the department will state under oath that he had done so, in any case, the United States Harness Co. case and the "Old Hickory" case excepted.

I now come, Mr. Speaker, to another gentleman who is not an employee of the Department of Justice. A man who has taken no oath of office. A man who is not obligated under the law to conduct affairs in the interest solely of the public. A man who is not on the pay roll of the Government, and yet a man who for months has had an office for his personal use in the department, who has had at all times stenographers and other employees at his beck and call, and who has utilized their services. I now speak of Jess Smith. Just what is his function in the department? What reason has he had for being there? Why has he, not an employee of the department, had at all times access to the most confidential files in the department when at the same time faithful employees of the department have been discharged for disclosing to Members of Congress information relative to the public business, which the law says they may do without interference by anyone whomsoever? I understand that since an investigating committee has become an imminent possibility this gentleman has suddenly found the climate of Washington does not agree with him. That he has suddenly developed an acute case of diabetes, Bright's disease, lumbago, or is it croup? Anyway, Mr. Speaker, it is reliably reported that his indisposition is such as to compel his absence from Washington at least until all danger of a congressional investigation is past. Whether Mr. Smith is one of the "few able and conscientious officers and attorneys who have devoted themselves with untiring energy" to the work of prosecuting the ·ar grafters I do not know, but I am quite sure the work will go on as rapidly during his absence as it has heretofore.

My position, Mr. Speaker, has been and is that the Department of Justice has not functioned in these cases. I maintain that so long as the Goffs, the Myers, the Lenihans, and the Hollands in the Department of Justice remain and have anything whatsoever to do with these cases it will not function. The Attorney General has, after 14 long months, come to Congress with a request for an appropriation with which to prosecute this work. He should have made this request more than a year ago. He would have made this request at that time had he been alive to the situation. Every Member of the House knows he was urged months ago by the gentleman from Illinois [Mr. GRAHAM] to submit such a request, and that he failed to act upon that suggestion, notwithstanding the fact that the statute of limitations were operating against everyone of these cases in which fraud was involved. Three and a half years have passed since the armistice was signed and not a prosecution. What a record.

The Attorney General's letter to the President, together with his request for this appropriation, is a direct invitation to the House to ignore the request of the gentleman from South Dakota [Mr. JOHNSON] and myself for a committee of investigation. Notwithstanding this, I am for the appropriation. And I will say further, Mr. Speaker, if he is in earnest in these matters and pushes them in the way he should he will be back again for other appropriations for this purpose. He stated to the committee that from the 276 cases he now has in his department he will, if the Government is fully sustained, recover to the Treasury the stupendous sum of $192,000,000. Surely the Congress will not prove niggardly with the department under the circumstances. There are 150,000 war contracts. The audit of the air contracts develops the fact that in every case there has been fraud or overpayment. Few of the larger ordnance or other contracts have been audited, and when they have all been covered by the audit sections I believe you will find that billions instead of millions can be recovered to the Treasury.

But it is one thing to make appropriations and quite another to expend them properly and efficiently. I believe the Congress and the people will be, and should be, rather critical as to just how this $500,000 is expended. If results are shown, we will all applaud. If not, even a greater condemnation will be heaped upon the Department of Justice.

In closing I just wish to add that this request for funds in no way affects my determination to press for action upon the Woodruff-Johnson resolution. The newspapers and the Members of the House seem to have lost sight of the fact that an investigation of more than the Department of Justice was called for in that resolution. There is the Alien Property Custodian's office, the War Department, and the Navy Department expenditures to be considered, and I do not believe the House can justify failure to pass favorably upon our resolution. [Applause.]

The SPEAKER. The time of the gentleman has expired.

Mr. BYRNS of Tennessee. Mr. Speaker, I yield one minute more to the gentleman from Michigan.

Mr. WOODRUFF. I thank the gentleman.

Mr. Speaker, some days ago I received the letter which I will print below. Captain Scaife, the writer, is the gentleman who was engaged by the Department of Justice to investigate the aircraft contracts, and who resigned when he discovered he was being blocked by men in the Department of Justice in his efforts to clean up these cases. It is he who has supplied me with much of the information I have used in my attempt to compel the Department of Justice to function. The letter is self-explanatory, and I shall not comment upon its contents further than to say I have seen the original Felder letter and

am informed the retainer to be given Captain Scaife was very substantial, indeed:

MAY 5, 1922.

Hon. ROY O. WOODRUFF,
House of Representatives, Washington, D. C.

MY DEAR MR. WOODRUFF: Before bringing to your attention my memorandum to Col. Guy D. Goff, Acting Attorney General, dated March 18, 1922, and incorporated in your speech to Congress on April 11, I desired to be sure that Hon. H. M. Daugherty, the Attorney General, was personally acquainted with and fully informed as to all matters involved in the situation at the Department of Justice, in order that he might act in the premises if he desired to do so.

I was informed that Col. T. B. Felder was a very close personal friend of Mr. Daugherty, and I was brought in contact with Colonel Felder and explained the situation to him and requested him to call the attention of the Attorney General to the reports that I had filed and to inform him that unless he acted I would pursue the course indicated in the memorandum referred to. The next day I was called to the office of the Attorney General and he stated to me that he had my reports before him, and I then ascertained that he had been personally acquainted with the situation.

The Attorney General stated to me that he would call me into conference on the following Tuesday, but I heard nothing further from him, and after waiting a sufficient time to give him every opportunity to act, I formally transmitted the matter to you, as is now well known. I might add that I had never known Colonel Felder before meeting him on this occasion and for the purpose stated, and subsequent thereto have only seen him casually until last night.

Yesterday I had a message from Colonel Felder to meet him in his room at the Shoreham Hotel, which I did last night, and in the presence of a witness I engaged with him in an extended discussion of conditions in the Department of Justice, of which I had complained. I stated to him that I had no animus against the Attorney General, but that I felt most bitter against the conditions which he was permitting in the Department of Justice. During the course of the conversation Colonel Felder stated that he had been retained as counsel for the Bosch Magneto Co. and that he desired to associate me with him in the case. He told me that he had been with the Attorney General during the afternoon and had gone into the matter with him fully and that the Attorney General wanted him to see me. He stated that the Attorney General had agreed to cooperate with us and that he had also talked with Col. Guy D. Goff for an hour and a half during the afternoon and that everything had been arranged for us to proceed.

Before leaving his room in the Shoreham Hotel Colonel Felder stated that he was going to spend the night with the Attorney General at the Wardman Park Hotel and that they would talk about the matter until 3 o'clock that night. Each time Colonel Felder broached the subject of my employment I shifted the subject, and when we parted he asked me to do nothing in my fight until he could see me next day. When we parted Colonel Felder took a taxi for the Wardman Park Hotel and asked me to join him that far out on my way home, but I declined. This morning I received a letter from Colonel Felder notifying me that I had been retained in the Bosch Magneto case, a copy of which is hereto attached.

While I think it is eminently proper that a suit should be brought to set aside the Bosch Magneto sale, and while under ordinary circumstances I would have had no hesitation in being employed in the case, when Colonel Felder disclosed the fact that he had come to me from the Attorney General and with the arrangements that had been suggested, the impropriety of the proposal I consider reprehensible, and I desire that you be acquainted with the facts.

In order that there may be no misconception of my true position and intentions in the matter in case I am further approached, I am reducing the foregoing statement to writing and will have this letter duly witnessed.

Very truly yours,

H. L. SCAIFE.

SHOREHAM HOTEL,
Washington.

DEAR CAPTAIN SCAIFE: Am obliged to return to New York to-night. Sorry I did not see you before my departure. I expect to return on Monday or Tuesday next, when I will complete our tentative arrangements. You may consider yourself retained in the Bosch Magneto case. We will discuss the details on my return.

Very truly yours,

THOS. B. FELDER.

The above letter was undated, but bears postmark of May 5, 1922.

Mr. BYRNS of Tennessee. Mr. Speaker, I yield five minutes to the gentleman from Virginia [Mr. MOORE].

Mr. MOORE of Virginia. Mr. Speaker, it is evident that the Woodruff-Johnson resolution, which was introduced on April 11, at which time Messrs. WOODRUFF and JOHNSON made elaborate speeches presenting the most serious charges against the Attorney General in connection with the so-called war-fraud cases, is responsible for the course pursued by that official since that date, and those gentlemen are to be congratulated.

On May 9, less than a month after the resolution was introduced, the Attorney General addressed a letter to the President, which was read in the House on the same date. It was not written for the purpose or urging that the resolution be adopted and the investigation had, and there is no assurance now given the House by the friends of the Attorney General, the leaders of the majority, the gentleman from Wyoming [Mr. MONDELL] and the gentleman from Kansas [Mr. CAMPBELL], that they will permit the resolution to come to a vote, and the investigation brought about. If the Woodruff-Johnson charges of misconduct are untrue, the Attorney General and his friends should desire an investigation to be made. If, however, they are true, it is easy to understand why there should be a desire to stifle an investigation.

In his letter of May 9 the Attorney General seems to hold Congress accountable for his inaction. He states, first, that he has not been given funds sufficient to enable him to employ a force of competent counsel in addition to those already serving in his department. He asks for an appropriation of $500,000 for the employment of additional counsel, and that appropriation the House is about to vote for. This is a belated complaint and request, as shown by what occurred while the House Committee on Appropriations and the House and Senate were considering the bill carrying appropriations for the Department of Justice for the next fiscal year, which, of course, begins July 1. The Attorney General appeared before the Subcommittee of the House Appropriations Committee on March 6 and explained the needs of his department. He discussed the necessity of employing additional counsel, but the specific duties that were to be intrusted to them had relation not to war-fraud cases but to cases growing out of the violation of the prohibition laws, patent interference cases, and cases in the Court of Claims. He did not then stress, and I do not think he even mentioned, the cases a little later elaborately discussed by Messrs. WOODRUFF and JOHNSON. Whoever examines the figures will hardly doubt that the appropriations in the bill as finally acted on, from the point of view of the Bureau of the Budget and from the point of view of the Attorney General, as indicated to the subcommittee, were fairly satisfactory. The material question now is why was not the subcommittee in March, and why was not Congress in April, advised of the alleged conditions set forth in the letter of the Attorney General, which so quickly followed the introduction of the Woodruff-Johnson resolution?

In his letter the Attorney General states, second, that he has been embarrassed by the failure of Congress to provide for the appointment of additional district judges. The bill for the creation of new judges is still pending. But the significant fact is that when the Attorney General appeared before the Judiciary Committee not long ago to discuss the bill, so far as I can ascertain, he did not mention any court in the country where business is so congested as to prevent the consideration of war-fraud cases.

I do not think he made any reference whatever to those cases, while he did refer elaborately to the volume of prohibition cases. The question may now be asked as to whether there is such congestion in the Detroit court and in the New York and New Jersey courts and other localities as to have made it impossible for those courts to handle the class of cases mentioned by Messrs. WOODRUFF and JOHNSON, developments in which, they declare, attach more than a suspicion to the good faith of the Attorney General. The truth is that the Attorney General in his statement to the Judiciary Committee made a most unsatisfactory showing with reference to the necessity for new judges. In the main, he seemed to take naked statistics drawn from the dockets of the court, which, as all lawyers know, import very little. For example, he deduced from these statistics that a new judge should be appointed for the District Court for the Eastern District of Virginia, and later some of us developed the fact that not only was another judge not needed but the appointment of another judge would serve to produce complications that would retard the judicial work.

In his letter, the Attorney General, in the third place, claims that he has been held back by the lack of grand-jury facilities in the District of Columbia, where he admits most of such prosecutions as are had will have to be brought. Now, the facts are these: That he has been in office for more than 14 months, and, so far as the war-fraud cases are concerned, he has had the benefit of the elaborate investigation and findings of the Graham Committee, and he could have brought any of the cases that are cognizable in the District of Columbia before the grand jury in the District at almost any time. In his letter he speaks of the Knickerbocker case having taken up a large part of the time of the grand jury here. But the Knickerbocker disaster did not occur until this year. The men charged with the responsibility for that disaster were not held for the grand jury until February 14 of the present year and indictments were returned by the grand jury on April 3. He did take one alleged war-fraud case before the grand jury, the Morse case, which the grand jury began to consider on or after January 3 of this year, and in which it returned an indictment on February 27. The question may be asked as to why he could not have submitted other cases to the grand jury in the interval between March 4, 1921, and January 3, when the Morse matter was taken up, and whether in reality the grand jury has been so occupied with important cases since January 1 as to have precluded serious war-fraud cases being considered.

The SPEAKER. The time of the gentleman from Virginia has expired.

Mr. BYRNS of Tennessee. I yield one more minute to the gentleman, Mr. Speaker.

Mr. MOORE of Virginia. I thank the gentleman.

Of course, the statistics will show that a large number of cases are dealt with by the grand jury of the Supreme Court of the District of Columbia, but that is no reply to the assertion which I now confidently make that there was no more reason why other war-fraud cases should not have been submitted to the grand jury instead of confining the inquiry to the Morse case.

Until his letter of May 9, the Attorney General does not seem to have complained of the grand-jury situation in the District of Columbia, except that on April 22 he addressed a brief communication to two committees of Congress on that subject. But April 22 was after the introduction of the Woodruff-Johnson resolution, which was offered on April 11.

The Attorney General may now be speeded in handling the war-fraud cases, but that will not dispose of the resolution. The resolution is designed not to provide for proceedings against war-fraud malefactors but to enable Congress and the country to know whether the charges brought against the Attorney General are or are not well founded. [Applause.]

Mr. BYRNS of Tennessee. Mr. Speaker, I yield three minutes to the gentleman from Illinois [Mr. KING].

Mr. KING. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

Mr. KING. Mr. Speaker, when Attorney General Harry M. Daugherty permitted himself to be persuaded by the misrepresentations of two of his subordinates, Mr. Abraham F. Myers and Mr. J. L. Lenihan, to dismiss from the service of the Department of Justice Maj. W. O. Watts he performed two far-reaching and important deeds.

First, he deprived his department of the efforts of a modest, effective, and patriotic servant who had a sincere desire to be of service to his people and his country by helping to unearth and bring to light the most powerful group of grafting apaches that ever infested and threatened the life of any Government since history began.

Second, he raised the curtain upon what promises to be, if justice prevails, the greatest exhibition that ever obtained of thievery, peculation, and exploitation of a patient people and their Government, surrounded by a scene as black as hell and as rotten as the ancient State of Denmark.

If this resolution is passed, and I hope it will be, and does not go the way of the peace leak with its high-priced attorneys, in addition to enacting laws creating more grand juries in the District of Columbia, Congress will have to pass additional legislation creating a multitude of new jail apartments for their coming occupants.

Although great obstacles will be thrown in its way and many faithless men will have to be removed from positions of influence, nevertheless this is the people's movement, and its momentum now well started can not be permanently delayed.

As the Philadelphia Record says:

> Millions are in the loot; millions will be freely spent to protect not only the loot but the reputation of the looters. The public has no conception as to where the ramifications of guilt may lead. They may involve and bring to ruin men now leaders in high finance, leaders in national politics, leaders in society. Exposure may send a shudder through the body politic of the Nation; it may shake the foundations of Congress itself. Prosecution must meet legal talent of the most formidable character. Everything from blackmail to murder may be undertaken in desperate defense.

There is not a man here on the floor of the House, I am sure, who was here during the war and who, while entirely without proof—and Congress had no time to investigate—but did not feel that peculation was going on here and there and everywhere.

To me it seemed prophetic when I heard a great Senator in stentorian tones make announcement on the floor of the Senate that "the millionaires are mobilizing in the Munsey Building."

It is usual and customary to charge Congress with all the crimes in the calendar and to continually charge us with leaving undone the things that should be done and doing the things which should not be done. Graduates of all journalistic schools come out well grounded in the following ideas: That no libelous articles must be written on which damage suits can be brought against the publication, but that it is not reprehensible or libelous, but indeed highly laudatory, at all times to safely charge three different bodies of public servants with whatever they see fit to write: First, the city council; second, the State legislature; and, third, the Congress.

I believe I have never failed to stand in defense of the Congress, and particularly of the House of Representatives, and the fact should be recorded that from the very start of the late war on up to the present time no blot appears upon its escutcheon nor stains upon the "high robe" of its membership. [Applause.]

Therefore it is particularly pleasing that a Member of this House—and, in fact, the distinguished gentleman who is now chairman of the committee which brings in this resolution and a man who is the personification of honesty itself—first called attention to the permeation of dishonesty and irregularities when on the 16th day of April, 1920, on the floor of this House the gentleman to whom I am referring, the Hon. MARTIN B. MADDEN, of Illinois, said in an earnest, clear voice and in unmistakable words:

> Mr. Chairman, we have heard a great deal of talk here to-day about what the Secretary of War ought to do and why he does not do it and what this committee ought to do and why it has not done it. I am going to submit what I have heard and believe to be true. The War Department has a number of men in charge of the sale of surplus supplies of all kinds, and they have a combination of men to whom they are selling those supplies when they are declared to be surplus, and it is said they never make a declaration of surplus on certain supplies until they find that the men to whom they sell them have found a market for them; and the next day after these men report that they have sold the goods, whatever they may be, these goods are declared to be surplus.
>
> The result is that these men who are in the business of selling war surplus supplies on the market are making millions of dollars. Now, I make this statement as the result of information which comes to me. I make the charge that the War Department has not, except in instances where they have a large quantity of a particular supply that they can not dispose of in this way, declared a surplus until these favorites, if I may so state it, have reported to them that they have made the sale.
>
> I hope I make myself clear.
>
> I want to be distinctly understood as saying that the men in charge of the sale of war surplus supplies are playing favorites with men on the outside to whom an advantage is given, and that in no case, except such as I have mentioned, is anybody advised that war supplies are declared as surplus. (See CONGRESSIONAL RECORD, April 16, 1920, p. 5755.)

About the time of this statement by Mr. MADDEN, and prior thereto, there was an Army officer at work in the Munitions Building in this city as executive officer in the surplus property division of the Quartermaster Corps, the duties of which brought him in close touch with the sale of surplus property of the War Department.

This man was Maj. W. O. Watts.

It is for him and in his defense and in his praise that I rise to speak to-day.

I had the pleasure of meeting Major Watts in July, 1919, in a French railway coach on the way from Paris to Brest, and afterwards traveled home with him from Brest to New York. During this time we became very good friends and I learned to regard him as a most able, just, and upright officer.

In conversation with him I learned that in 1898 he had enlisted in the First Tennessee Volunteers and went to the Philippines. When his regiment returned he remained in the Philippines, serving in the Quartermaster Corps and in Treasury Department work until 1904, when as a chief clerk of the War Department, Quartermaster Corps, he was transferred to Nagasaki, Japan, where he remained until 1911.

In 1911 he was transferred back to the United States for duty and a year later resigned to enter business, having served 14 years. At the outbreak of the World War he received a commission as captain and was assigned to Camp Pike, Ark., as assistant camp quartermaster in charge of all purchases, inspection of supplies, road building, and construction work.

His work was so satisfactory that in July, 1918, he was ordered to France, where he organized and established Quartermaster Depot No. 3 at Montierchaume, which was one of the largest depots in France, serving as executive officer until June 28, 1919, when he returned to the United States and was detailed, because of his wide experience, knowledge, and executive ability, as executive officer, surplus property division, August 3, 1919, serving until May 20, 1920, when, because of his refusal to approve certain irregular sales, he was detailed on investigative work, which ended September 27, 1920, with an enforced honorable discharge.

Among the sales which Major Watts particularly objected to were "under cover" sales, made without publicity or solicitation of bids, at which an agreeable price was reached privately between buyer and seller without regard to market price, other purchasers, or the public.

While in the service Major Watts continued to object to each irregularity as it came up, and continued to call the attention of his superior officers to the same. He directed the attention of Col. A. W. Yates, chief of the surplus property division, to the sale of duck, such as is used in tarpaulins, wagon covers, and so forth, to H. Miller & Co., 59 White Street, New York City, who had an alleged claim approximating $69,000, and he was given material valued at more than $483,000 at less than one-half what the same material was being sold to other con-

cerns. The Government in these transactions alone lost more than $250,000.

Finally Colonel Yates suggested that Major Watts make a report in writing, and on June 22, 1920, the major made a partial report, which I am here inserting:

WAR DEPARTMENT,
OFFICE OF THE QUARTERMASTER GENERAL,
DIRECTOR OF PURCHASE AND STORAGE,
Washington, June 22, 1920.

From: Maj. W. O. Watts, Quartermaster Corps.
To: Col. A. W. Yates, Quartermaster Corps, Chief Surplus Property Division.
Subject: Report on alleged irregularities.

1. Complying with instructions contained in your letter dated June 2, 1920, subject, "Report on alleged irregularities," in which you state that it has come to your attention that I hold the opinion that certain proceedings or transactions involving the official conduct of certain ex-employees, ex-officers, and possibly an officer still connected with the Surplus Property Division were irregular, and that I have suggested verbally to you that I felt that I was possibly being relieved from duty in the executive branch of the division because of my efforts to investigate these matters and because of my opinions, and directing that I place in writing with the least practicable delay such allegations and support them by direct reference to specific instances in order that a complete investigation of all such matters may be had, and your verbal orders of this morning to submit this report to-day, the following is submitted:

2. Since June 3 I have devoted my time almost exclusively during office hours and in the evening to the investigation of records of the Surplus Property Division, with a view to submitting you a comprehensive report at the earliest possible time in this connection, but it will be a physical impossibility to render such a report within a period of less than three or four days. However, a partial report has been prepared, consisting of certain sales relating to duck and mosquito bars, which are transmitted herewith as Exhibits A, B, and C, which will be followed by supplemental reports covering other cases at the earliest possible date.

3. In order to bring out the desired facts it will be necessary to review to some extent the situation as it existed in the Surplus Property Division when you relieved Col. L. M. Purcell as chief of the division on April 15, 1920, as amplified by new matter subsequently developed by a hurried and superficial investigation of certain sales records made under difficult circumstances.

4. At the time you assumed charge of the division there was more or less general discussion about alleged favoritism shown certain buyers of surplus War Department material, bitter charges having been made by Representative MADDEN in the House of Representatives on April 16 that collusion existed between War Department officers in charge of the sale of surplus supplies and a combination of outside favorites to whom an advantage was given. (Exhibit A, pp. 17, 19.)

5. In this connection you will recall a number of matters I will later recite under specific subjects which arose and were discussed at that time. Conditions relating to sales were reported to you as being considered unsatisfactory for the reason that in some cases awards were not made in accordance with the policy authorized by the director of sales; that bids received in response to advertisements had been rejected and awards made in a number of instances at much lower prices fixed within the division, without the required approval of the director of sales; that on M and V list No. 2 bids on 25,000 wagon covers ranging as high as $12 had been rejected and awards made on the entire lot at $7.50 each, while a similar course was pursued in the case of M and E M and lists No. 5 and other lists; that adjustment of claims were improperly made without reference to the governing sales board and exceeded the authority granted that board; that favoritism was actually shown certain purchasers, etc.

6. These matters were brought to your attention solely in the interest of the service in order that corrective measures might be taken by you at the inception of your administration, and in this connection you were prompt to institute corrections as questions arose from day to day. This, however, was a most difficult task, owing to the enormous volume of business transacted daily, rendering necessary for the time being that you accept in a large measure the statements of and sign documents prepared by your subordinates. It was apparent from the start that you were being imposed upon, as it was observed that matters were placed before you in an incorrect or misleading manner. My efforts to offset this deception and bring about an improvement met with strong opposition from the forces whose actions and powers I deemed it necessary to restrict in the interest of the Government and of fair and equitable dealings with all purchasers alike; therefore, when I was relieved as executive officer on May 20, without being given another assignment, and having the previous day been instructed to apply for a 30-day leave of absence, which I had not requested, I felt that these efforts had proved ineffective.

7. Regarding my relief as executive officer, I desire to correct the erroneous impression you gathered from my remarks of June 1, when you instructed me to file an application for 14 days' leave the following morning. I did not raise the question as to my relief as executive officer, but renewed my inquiry of May 19, when I was first instructed to apply for leave, as to whether or not a position would exist for me upon the expiration of such leave, and restating my desire to apply for a transfer elsewhere in the event that my presence in the division in any way embarrassed you.

8. I am also inclosing photostat copy of a letter dated March 16, 1920, from Capt. Charles N. Neal, former chief of subsistence and retail stores branch, to Maj. Charles E. Jones, surplus property officer, Twenty-first and Oregon Avenue, Philadelphia, Pa., which indicates extreme irregularities, since this officer suggests to the surplus property officer at Philadelphia that he confuse his official records and have them lose their identity, etc. This communication may have some relation to subsequent reports, which I will make as promptly as possible.

W. O. WATTS,
Major, Quartermaster Corps.

This shows the difficulty Major Watts was in at that time with his superior officer because he insisted on reporting to him day after day the numerous irregularities which were going on.

It was about this time that Major Watts called on me at my office and reviewed some of these improprieties to me as his friend. He stated to me that he was in this delicate position: If he desired to retain his commission in the Army it was apparent to him that it would be necessary for him to cease to observe these irregularities, passing over them and even ratifying them. On the other hand, he was aware that if he persisted in what seemed his plain duty of complaining against these irregularities, he would soon lose his commission, as ways would be found to make it necessary for him to resign.

He persisted that he should pursue the course he had mapped out for himself of serving the Government according to the oath he had taken. This course, he knew, would mean the stoppage of the only income he had and the heaping of hardships upon himself, on his wife, and his two little daughters.

How few men would have taken this brave stand. No man in the surplus property division had more knowledge than he of the kind, quality, and amount of surplus Government supplies. He could easily have resigned and set up a corporation of his own, as did Col. George B. Goetz, Maj. Jos. C. Byron, Capt. Azel F. Cochran, Capt. Henry W. Benke, E. C. Morse, former director of sales, and others.

He could have made a fortune out of selling Government property purchased at a fraudulently low price, and he would have been worth a million to-day.

He objected to the sale of some 52,000,000 pounds of sugar at approximately 9 cents per pound when the market price was 23½ cents per pound, although the Government was conducting retail stores authorized by Congress at the time and the public was clamoring for sugar.

He protested when $8,000,000 worth of mosquito bar was sold to a former officer for $1,500,000 without bids and with 10 months' time allowed for payment.

He objected to the sale of Old Hickory plant, worth more than $100,000,000, of which no inventory was available, to a hastily organized corporation for $3,300,000 on time, and his efforts resulted in legal proceedings being instituted by the Attorney General in the case. These proceedings are now pending.

He exposed the infamous leather contract whereby the United States Harness Co. was to obtain from the Government approximately $150,000,000 in surplus supplies at from 1 to 10 per cent of its value. The contract was executed by Army officers who later resigned to enter the harness company. This contract was so rank that the President of the United States, when he heard of it, voided it for fraud on June 14, 1921, and the case is now pending in the courts.

Major Watts saved the Government millions of dollars in the harness contract alone, as the sales of this material since the voiding of the contract have brought greatly increased prices.

After his separation from the service on September 27, 1920, and for many months, he was practically without employment, and while he continued his patriotic work in endeavoring to bring to the attention of those in authority the manner in which the Government was being defrauded of millions of dollars he was without any means of income and lived wholly on meager credit and such small loans as his friends could advance him.

In December, 1920, he appeared before the Graham investigating committee at its request and gave the committee the benefit of his knowledge and investigations. It is a well-known fact that a large part of the genuine substance in the Graham investigation is based on the evidence and work of this same Major Watts. He served unstintingly and for meager remuneration, working night and day, for the benefit of this committee and the work it was doing.

To obtain the benefit of his work and knowledge he was called to the Department of Justice to assist in getting the matter, as he supposed, ready for lawyers who would take it to court. Evidently he made a great mistake here. If he had only realized that it was not his duty to "reason why," but simply to "do and die," he probably would be in the Department of Justice to-day.

He labored, as I did, under the hallucination that one or two at least of the big grafters of the war and after were to be placed behind the bars.

Realizing after futile attempts to reach the ear of the Attorney General himself and to place before him the voluminous and damning evidence of many plain cases of peculation and graft, he became disheartened and proceeded to Congress with his case and handed his evidence to Hon ROYAL C. JOHNSON and Hon. ROY O. WOODRUFF, who ably presented but a small portion of it for our consideration on April 11, the same appearing in the RECORD of that date.

Who should he take this information to if not to Congress? Whom should he consult if not the representatives of the people?

Yet this was regarded as reprehensible on his part and he was discharged, which event he well knew would take place after he had visited the offices of the Representatives above mentioned.

Judging from the fact that while he was in the Department of Justice at work that he was permitted to have access to a few files and to be continually watched over by that heavily twinned pair, Myers and Lenihan, I am surprised and gratified to know that he got safely away with his papers, records, and photostat copies for future use in behalf of the people. I congratulate him.

His position put me in mind of a conversation between two burglars on a dark corner at 4 o'clock one morning. One had been waiting on the corner while his pal made the inside round of an adjacent home. As the burglar emerged from the house the pal greeted him with "Hey, Bill, did you get anything?" "No," said Bill, "a bloke of a lawyer lives there." The anxious partner queried, "Did you lose anything?"

In the year 1780 three Americans by the names of Williams, Paulding, and Van Wart were playing cards under a tree near the Hudson. Suddenly Van Wart said, "Here comes a stranger, a fine gentleman; had we not better stop him?" Paulding sprang to his feet. He beheld the young traveler riding slowly on horseback. He placed a rifle to his heart.

"Dismount," said Paulding.

The stranger was searched and found to be, as you know, John Andre, the British spy, on his way from Benedict Arnold to General Clinton with the details of West Point and the plans for Washington's campaign in his stockings.

All methods of escape failing, Andre resorted to the modern plan of bribery to attain his end.

Laying his hand on Paulding's arm, he said, "Take my watch, my purse—all I have—only let me go."

This was a terrible temptation for three poor men who, living in a land demoralized by war, when neither property nor life was safe for an hour, had never in all their lives owned such a fine horse, elegant gold watch, or purse of yellow guineas.

"Yes," said Andre, "I will make each man of you rich for life—land, dry goods, money—to enable you to live independent of the world—anything—only let me go."

Deep silence prevailed for a moment. Then Andre said, "Will you accept my offer, gentlemen?"

Paulding turned to him and said, "No; if you would offer me 10,000 guineas I could not—I would not let you go."

You all know the story—Andre died a spy and the name of the patriots, Williams, Paulding, and Van Wart, are engraven in the hearts of their countrymen forever.

Had that event happened in these days, with the late faithfulness of Major Watts to the people rewarded with a charge of "disloyalty to the department," the patriots, Williams, Paulding, and Van Wart, would have been hung for disloyalty to the department of Gen. Benedict Arnold.

Major Watts has made every sacrifice in order that justice might be done not only to the people but to the malefactors who have plundered us. Instead of an attempt to assassinate his character, he should have received honor and promotion.

Some day this will be done.

For it shall not be forever written:

Right forever on the scaffold,
Wrong forever on the throne.

Mr. MADDEN. Mr. Speaker, will the gentleman from Tennessee use his time?

Mr. LONDON. Mr. Speaker, I renew my request. I am the only one opposed to this bill. All of the speakers who were given time by the gentleman from Tennessee spoke in misapprehension of the situation. May I——

The SPEAKER. The Chair can not rule on the question raised by the gentleman. He did not make the motion at the proper time.

Mr. LONDON. Mr. Speaker, I ask unanimous consent to address the House for five minutes.

The SPEAKER. The gentleman from New York asks unanimous consent to address the House for five minutes. Is there objection?

Mr. MURPHY. I object.

Mr. BYRNS of Tennessee. Mr. Speaker, in justice to myself I will say that the gentleman did not ask me for any time.

Mr. MADDEN. Mr. Speaker, it is to be regretted that all the gentlemen who have spoken are heartily in favor of the appropriation we are granting, and yet at the same time they are criticizing the department to which they are granting the appropriation. Everybody must realize that the Department of Justice can not try cases until they come into the possession of the department. Everybody must realize that these cases come from the War Department after the audits are made, and you gentlemen who are criticizing the Department of Justice because it is not prosecuting these war profiteers may have another story to tell before the prosecutions are ended. They will prosecute more vigorously perhaps than you would like to see them prosecuted. [Applause.] I have not any doubt about that. It is very easy to criticize men in the department who are prosecuting cases. Of course, they make enemies, and if they do something that should be done against somebody who committed a crime or violated a contract that he had with the Government, of course, these men are going to criticize the men who prosecuted them. Those who criticize the department ought to be in better business. [Applause.]

I regret very much, indeed, that my friend from Michigan [Mr. WOODRUFF] felt called upon to criticize men in the Department of Justice by name—assistants to the Attorney General. I do not know these men. But I believe they are honorable men. They have no chance whatever to answer on the floor, and it is not fair to state a case against them where they have no chance to reply. [Applause.] I have no fear but that Harry Daugherty will prosecute the cases that come before him unrelentingly, and some who may think they have power in the Nation to-day will find themselves behind bars as the result of his activity. It takes time to prepare these cases. They must have accountants; they must have auditors; they must have investigators; they must have witnesses. They must prepare all the cases for trial before they can go to trial. It takes time. There is not a thing on earth that could be done by outsiders to prevent the prosecution of the cases now in the hands of the Attorney General that up to this time has not been done. The Attorney General has shown his sincerity by asking that the statute of limitations be extended so that there can be no possibility of their escape. Do not be afraid, gentlemen. The Attorney General will do his duty. [Applause.]

The SPEAKER. The question is on suspending the rules and passing the bill.

The question was taken; and the Speaker announced that two-thirds having voted in the affirmative, the rules were suspended and the bill was passed.

UNANIMOUS-CONSENT CALENDAR.

The SPEAKER. The Chair will state that there are two matters on the Calendar for Unanimous Consent, numbers 278 and 286, the Chair is informed should be passed to-day, and the Chair accordingly has agreed to recognize motions for suspension of the rules in case objection is made to their consideration by unanimous consent, so that the Chair will direct the Clerk to call them for unanimous consent first in order to save time.

EXTENSION OF REMARKS.

Mr. SISSON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the $500,000 appropriation bill just passed.

The SPEAKER. The gentleman from Mississippi asks unanimous consent to extend his remarks in the RECORD on the bill just passed. Is there objection?

There was no objection.

UNANIMOUS-CONSENT CALENDAR.

Mr. STAFFORD. Mr. Speaker, I question whether it is good practice on the part of the House to call up bills out of their order.

The SPEAKER. The Chair agrees with the gentleman, but the Chair has the right to recognize at any moment for suspension, otherwise the Chair would not call bills up out of order. But since the Chair is authorized to recognize them for suspension, the Chair thinks it will save the time of the House to allow first an opportunity for them to be considered by unanimous consent.

Mr. MONDELL. I think the Chair is entirely right on that.

Mr. STAFFORD. If they are not to be contested, it will not take up the time of the House; but to take up a bill out of order is not good practice, and it is not in conformity with the best practice of the House.

The SPEAKER. The Chair finds nothing in the rules to prevent taking them up out of order. The Chair would not suggest it except that inasmuch as the Chair was going to recognize for suspension anyway, the Chair thinks it might save the time of the House to first try for unanimous consent, and then, if that is refused, to let them be called up for suspension.

Mr. STAFFORD. The rule says that they shall be called up in their order.

The SPEAKER. The Chair thinks the gentleman is mistaken.

Mr. MONDELL. In any event, there being on the Unanimous Consent Calendar two bills in regard to which the Speaker intends to recognize a request for suspension of the rules if they are objected to, it is highly important to have those bills disposed of in order that, when disposed of, we may then proceed in an orderly way to the consideration of the remaining bills on the calendar. There is always danger, if there is a bill well down on the calendar on which suspension has been promised in event of objection, that some one interested in that bill may be tempted to try to hurry the House along in regard to the consideration of other measures in order to reach it. It is well to dispose of these matters on which the rules are to be suspended, if objection is made, in order that we may then proceed in an orderly way to the consideration of the remainder of the calendar.

Mr. GARNER. Mr. Speaker, will the gentleman yield for a question?

Mr. MONDELL. I will, if I have the floor.

Mr. GARNER. If the Speaker should hold that he has the right to skip a certain number of bills and recognize a Member to ask unanimous consent for the consideration of a bill lower down on the calendar than those on the regular order, then you would have the Unanimous Consent Calendar in this attitude, *that* the Speaker would control it entirely rather than the House itself. Now, I understood that the object of the adoption of the Unanimous Consent Calendar was that a Member could have a right to have a bill called, and that unanimous consent should be asked without his going to the Speaker to get that permission. The gentleman from Wyoming will recall that a number of Members—I do not know whether he did or not, but I know that I did—spoke of having to crawl on their knees in the Speaker's room, when the gentleman from Illinois [Mr. CANNON] was Speaker, in order to get unanimous consent.

Mr. CANNON. That is very old. [Laughter.]

Mr. GARNER. Yes; that is very old, as the gentleman has properly said. But if the Speaker should adopt the policy, and it should be the rule of the House that bills are not to be called in their regular order, then it would be necessary to go to the Speaker and get his consent to have them called by unanimous consent.

The SPEAKER. The gentleman forgets a fact which the Chair thinks contradicts the logic of the gentleman, that the Chair has said he would not interfere with the regular order except in a case where he would recognize for suspension if unanimous consent was refused. The Chair has the right to recognize for suspension at any moment.

Mr. GARNER. Let me show what would be the result if that were the rule of the House. The Chair could on every unanimous-consent day say, "There are two or three bills on the calendar which I propose to recognize for suspension," so that we never would get the opportunity to call that calendar.

The SPEAKER. Does the gentleman dispute that the Chair has that right now?

Mr. GARNER. He has not that right.

The SPEAKER. The rule originally was interpreted to mean that the Chair had not the right to recognize for suspension on unanimous-consent days, but it was found in practice that that interfered with the business of the House and the rule was changed so that the Chair should have the right to recognize for suspension.

Mr. GARNER. I admit that he has, on unanimous-consent day, the right to recognize some one for suspension of the rules, but this is an innovation. While I do not object to the procedure to-day, I think the Chair should state that only on account of the particular conditions existing this method will be pursued to-day, but that it should not be the rule of the House.

The SPEAKER. The Chair stated that the Chair would direct the Clerk to call up bills on the Unanimous Consent Calendar in their order unless there was a bill which the Chair would allow to be called up under suspension. In these cases where, as the gentleman from Wyoming has stated, there are reasons which make it desirable that those motions should come early in the day, inasmuch as the Chair has the right to recognize for suspension, the Chair thinks it would save the time of the House first to call the bills for unanimous consent; and if there is no objection, that will save the necessity of recognizing for suspension, and thus save the time of the House.

Mr. WALSH. If the Chair will permit, that might be true unless consent were given, and in that event we might have two hours of debate upon a bill to which there was no objection but which people might want to talk about, whereas under suspension we would have only 40 minutes' debate, so that we would not be saving very much time.

The SPEAKER. While that is possible, of course, the House could end the debate at any moment that it desired to do so. The Clerk will report the Joint Resolution No. 278 on the Calendar for Unanimous Consent.

UNITED STATES COMMISSION TO RIO DE JANEIRO EXPOSITION.

The Clerk read the title of the joint resolution (S. J. Res. 173) authorizing the President to appoint a commission to represent the Government of the United States at the centennial celebration of the independence of Brazil, to be held at Rio de Janeiro in September next.

The SPEAKER. Is there objection to the present consideration of the joint resolution?

Mr. BLAND of Indiana. Mr. Speaker, reserving the right to object——

Mr. STAFFORD. I object, Mr. Speaker.

The SPEAKER. The gentleman from Wisconsin objects.

Mr. ROGERS. Mr. Speaker, I move to suspend the rules and pass Senate Joint Resolution 173 as amended, and including in the motion to amend the title and the preamble.

Mr. BLAND of Indiana. Mr. Speaker, I demand a second.

The SPEAKER. The gentleman from Massachusetts moves to suspend the rules and pass the Senate joint resolution as amended, which the Clerk will report.

The Clerk read as follows:

Whereas the Government of Brazil has invited the Government of the United States to be represented at the centennial celebration of the independence of Brazil, to be held in September, 1922, at Rio de Janeiro: Be it

Resolved, etc., That the President is hereby authorized to appoint and send to Brazil a special mission of friendship, good will, and congratulation not to exceed five members to represent the Government and people of the United States at the celebration of the independence of Brazil, to be held in September, 1922, at Rio de Janeiro.

SEC. 2. That the expenses of the said special mission shall be paid, under the direction and subject to the approval of the Secretary of State, from the appropriation for the expenses of taking part in said international exposition as provided for in the deficiency appropriation act of Congress approved December 15, 1921.

Amend the title so as to read:

"Joint resolution authorizing the President to appoint a special mission of friendship, good will, and congratulation to represent the Government and people of the United States at the centennial celebration of the independence of Brazil."

Mr. BLAND of Indiana. Mr. Speaker, I demand a second.

Mr. ROGERS. Mr. Speaker, I ask unanimous consent that a second be considered as ordered.

The SPEAKER. The gentleman from Massachusetts asks unanimous consent that a second be considered as ordered. Is there objection?

There was no objection.

The SPEAKER. The gentleman from Massachusetts [Mr. ROGERS] has 20 minutes, and the gentleman from Indiana [Mr. BLAND] has 20 minutes.

Mr. ROGERS. Mr. Speaker, on the 2d day of last November Congress approved a resolution under which the United States is to be represented at the Centennial Exposition of the Republic of Brazil which begins on the 7th day of next September. That same resolution authorized the appointment of a commissioner general and five commissioners, whose function should be to erect a building, to arrange for exhibits, and generally to act as the agents of the United States throughout the life of the exposition. The resolution authorized the appropriation of $1,000,000 for the expenses which should grow out of our suitable representation in accordance with the terms of the law.

By the deficiency appropriation act approved December 15, 1921, the actual appropriation of the $1,000,000 was made. By the passage of those two acts that phase of the participation of the United States was complete and the commission is now functioning and is preparing the necessary exhibits in Rio de Janeiro.

It has always been the custom of the United States, however, to send to these centennial expositions, as they have come along in the several Republics of South America, a special mission of felicitation and congratulation which has been primarily an honorary commission. Such a commission would probably not remain in Rio for more than a few days, a week at the most, and the members of that commission would serve without compensation.

There have been at least four centennial celebrations in the Republics of Latin America within the past 10 or 15 years. I think at the moment of the celebration in Argentina, the celebration in Chile, and only last year the celebration in Peru. The United States has invariably appointed and sent to those countries a commission for this limited purpose. The Secretary of State and the President have concurred in requesting Congress to authorize the appointment of such a commission in the case of Brazil. On the 6th day of March the Senate

passed the necessary resolution. The measure was then referred to the Committee on Foreign Affairs of the House, and hearings were held, at which the Secretary of State testified as to his belief in the importance of this mission, and consequently of this resolution authorizing the mission. The Committee on Foreign Affairs unanimously recommended the reporting of a resolution differing somewhat, but in no essential feature, from the form in which the resolution had already passed the Senate.

Perhaps I need add very little more. I think it would be extremely unfortunate from the standpoint of the material interests of this country, as well as from the sentimental viewpoint, if the United States were not suitably represented on this great occasion, which is intended to be, and I think bids fair to be, one of the most noteworthy ever held on the continent of South America.

Mr. STAFFORD. Mr. Speaker, will the gentleman yield?

Mr. ROGERS. In a moment I shall be glad to yield. It is rather interesting—and this was brought out in connection with the discussion of the law passed last November—it is interesting to recall that the Republic of Brazil has participated in eight different expositions held at different times by the United States. She has expended, according to the best figures which are available, from $3,000,000 to $5,000,000 in these several exhibitions. Many of the Members who were at St. Louis in 1904 will recall the edifice which was erected by Brazil, and which was deemed by many competent persons to be the finest foreign building on the entire grounds. At the end of the exposition that building was transported in pieces to Rio, where it was reerected and rededicated. It now bears the honorable name of the Monroe Palace, and is one of the principal buildings in connection with the governmental activities of the Republic of Brazil. Under these circumstances it would seem particularly unfortunate if the United States should not thus evidence its friendship for Brazil. It is certainly most desirable that we thus recognize the spirit in which Brazil has herself responded to our overtures in the same direction.

Mr. STAFFORD. Will the gentleman yield?

Mr. ROGERS. I will.

Mr. STAFFORD. As I recall, in the case of Argentina, Peru, and Chile, to which we sent special delegations to represent our Government, our Government did not provide any exhibit or any commission, as provided in the act authorizing the establishment of a commission to and an exhibit at the forthcoming exhibition at Rio de Janeiro.

Mr. ROGERS. My impression is—and I think it is true of all three of the cases I alluded to—that there was no exposition at any one of them.

Mr. STAFFORD. We have in the act authorizing an exhibit at the international exposition at Rio de Janeiro an appointment of five commissioners, two of whom are to be honorary. In the other centennials the American Government had no representation—no commission—and, naturally, Congress passed an authorization for the President to appoint a commission to represent the Government. With a commission of five, two of whom are to be honorary, what is the necessity of providing a superhonorary commission to use up some of the money that heretofore has been appropriated. The letter of the President states that there is considerable money left over from the $1,000,000 appropriated for the exhibition commission.

Mr. ROGERS. The commission created by the act of November 2 was a working commission. It is true, as the gentleman says, that two of the commissioners are to serve without compensation, but it is not my understanding that that makes them "honorary" commissioners in any sense or that it makes them any different in respect to duties and functions from the others.

The fact is that the Secretary of State has testified that these two unpaid commissioners are to be American citizens who reside temporarily in Brazil. Thus they do not have to give up their business and go from the United States to Brazil, but can cooperate and participate on the spot. Consequently they do not receive compensation as would those who went from the United States for a period of many months. The honorary commission, the commission contemplated in the present resolution, is a commission which shall go down there composed of 16-inch-gun citizens of the United States. Gentlemen will remember that when our Centennial Exhibition was held at Philadelphia in 1876, the great Republic of Brazil was represented by its President, Dom Pedro, which was the most distinguished honor that a South American country could pay to this country. Secretary Hughes has said that it would be the hope and purpose of the administration to appoint upon this honorary commission the most distinguished and the most complimentary delegation that the entire citizenship of the United States can produce.

Mr. WALSH. Will the gentleman yield?

Mr. ROGERS. I will.

Mr. WALSH. If the gentleman knows, why was not this included when we appropriated $1,000,000?

Mr. ROGERS. I do not know. I think it would have been desirable if we had included it.

Mr. WALSH. I did not know but that the gentleman's committee had some reason given it why it was not brought in.

Mr. ROGERS. There was no reason given, but the gentleman from California, who introduced the original resolution, can perhaps state.

Mr. LINEBERGER. No such recommendation was made by the Secretary of State at that time. However, I presume that since the other resolution was passed he has looked into the matter, and it appears that they now think it is desirable.

Mr. ROACH. Will the gentleman yield?

Mr. ROGERS. Yes.

Mr. ROACH. I would like to inquire whether these commissioners are paid a salary.

Mr. ROGERS. Which commissioners does the gentleman mean—those provided by the former act or by the pending resolution?

Mr. ROACH. Under the pending resolution.

Mr. ROGERS. They receive no salary. They will receive no compensation of any kind; they will receive only their expenses, as the Secretary of State said in the hearings.

Mr. ROACH. I am trying to find out what the expense of the entire arrangement would be on the Government.

Mr. ROGERS. It certainly will not exceed $50,000. Probably it will not exceed $30,000 or $35,000; and this resolution involves no additional appropriation. The sum found to be requisite will be diverted from the appropriation already made.

Mr. BLAND of Indiana. Mr. Speaker and gentlemen, I never saw a clearer case of larceny in my life than that which is being attempted here in the consideration of this bill. I condemn severely, and I think the House will condemn, the tactics which are being pursued in attempting to take away from the Committee on Industrial Arts and Expositions its right to consider a bill which clearly belongs to it.

Mr. CONNALLY of Texas. Will the gentleman yield?

Mr. BLAND of Indiana. Not now. Some time ago the Committee on Industrial Arts and Exhibitions was informed that there was to be a bill referred to the Committee on Foreign Affairs with reference to an exposition in Brazil. The chairman of the Industrial Arts and Expositions Committee immediately entered a protest and stated that the Industrial Arts and Exposition Committee had jurisdiction of this question and was ready to function, and if bills were not referred to it he wanted the committee abolished. As a result there was referred to the committee that bill in relation to the exposition in Brazil. Representatives of the Secretary of State came before the committee and asked us to put on two members on the commission without pay. They said that they were specially requested in the diplomatic interest, because we needed some one who did not receive pay that would go at their own expense and represent this Nation in a diplomatic way.

We put that in the bill. We authorized an appropriation of $1,000,000 for it. We were the ones who considered the legislation, and our people are down there now getting ready to construct the buildings out of the funds which we appropriated. They have a good number of men employed, in connection with the whole enterprise. Considerable interest has been stirred up all over the country. This legislation came from the Committee on Industrial Arts and Expositions. Over in the Senate the Senator from Massachusetts introduced the resolution which we have here before us. They have no committee on expositions in the Senate. Exposition affairs are handled by the Committee on Foreign Relations. The main Brazilian exposition bill was handled by the Committee on Foreign Relations of the Senate. When this bill from the Committee on Foreign Relations of the Senate came over here the parliamentary clerk inadvertently referred it to the Committee on Foreign Affairs. That committee immediately reported it out.

The minute the chairman of the Committee on Industrial Arts and Expositions found it out, he undertook to ascertain if it could not be referred to the Committee on Industrial Arts and Expositions. The chairman of the Committee on Foreign Affairs said that other members of his committee were opposed to its leaving the committee, and insisted upon maintaining jurisdiction. I looked the matter up to see what rights I had, and I determined that under the rules I had no rights until the bill came up for consideration, at which time I would have the right to move to rerefer the matter to the proper committee; but, behold, the gentleman from Massachusetts [Mr. ROGERS], who is in charge of the bill—the chairman is not here

to-day—obtained permission from the Speaker to bring the matter up under suspension of the rules, and now no motion to rerefer is possible. If that is not hog-tying a fellow, I do not know anything about it. If that is not larceny, either petty or grand, I am not familiar with the terms. I wonder if the House is going to agree to having the jurisdiction of a committee taken away from it in this manner? It is absolutely wrong. I think the Speaker will tell the Members of the House that I am correct, and I yield to the Speaker at this time to tell the House whether or not he believes this bill ought to have been referred to the Committee on Industrial Arts and Expositions. I would like to have the Speaker say.

The SPEAKER. The Chair is perfectly willing to state that he thinks the reference to the Committee on Foreign Affairs was a mistake, and that the resolution ought to have been referred to the Committee on Industrial Arts and Expositions.

Mr. BLAND of Indiana. I thank the Chair. What rights have I? The resolution was reported out. I have talked to some members of the Committee on Foreign Affairs, who say they are not in favor of their committee claiming jurisdiction of the resolution. I want to say to you now that if the House is willing to take away bills within the jurisdiction of the Committee on Industrial Arts and Expositions, then I want the House to abolish the committee. My committee has been criticized on the floor of this House for having nothing to do. If it had not anything to do it is partially because it has been robbed of its jurisdiction, and if you continue to take its jurisdiction away, then I want you to do away with the committee altogether. That is a fair proposition.

This bill provides for a mission of five men, to be appointed by the President, whose expenses are to be paid out of the funds we authorized to be appropriated in our committee. Yet the Committee on Foreign Affairs comes in here brazenly and takes the position that they ought to have the right to consider the matter, and in order to prevent a motion to rerefer the bill to the Committee on Industrial Arts and Expositions they get the consent of the Speaker to bring the matter up under suspension of the rules, when under the rules they know that I can not make that motion. I say to you that the protest of the House ought to go to the passage of this resolution.

I am for the principle of sending a mission down there. I thought we had sent enough when we put the two extra men on the committee; and, more than that, I felt that it would take every penny of the million dollars to put on a proper display down there, and I believe it will. When he wrote the long letter in favor of the Brazilian exposition the President of the United States did not say anything about wanting the extra five men to go down there, but the Secretary of State said they wanted somebody down there aside from the men who are the business men in charge of the business end of the exposition. He said that we wanted some men who would give international diplomatic matters some consideration. We gave them two men. Now, somebody is back here wanting five.

I do not know why it did not come to our committee in the form of a request when we were first considering the matter. I am inclined to think that the Speaker is not to be blamed for it, because I think the parliamentary clerk referred it without consulting the Speaker. I think the Speaker is fair in his attitude in stating publicly to the House that it was wrongly referred.

Mr. TINCHER. Mr. Speaker, will the gentleman yield?

Mr. BLAND of Indiana. Yes.

Mr. TINCHER. If the gentleman's statement is true, is it not rather an amazing thing for a committee to do this? If what the gentleman has stated is true, then what must be the attitude of the committee that tries to bring up the resolution in this way? What excuse is there for it?

Mr. BLAND of Indiana. Nothing, except that they want to steal the resolution.

Mr. TINCHER. If a mistake has been made, I am sure the committee would want to have the proper committee consider it. I am sure that I can state for the Committee on Agriculture that that committee would not want to try to steal a bill, but would want it referred to the proper committee.

Mr. BLAND of Indiana. That is not the attitude of this committee at the present time.

Mr. TINCHER. Does the gentleman know whether the chairman of this committee, who happens to be a good friend of mine, countenances this?

Mr. BLAND of Indiana. I think if he were very much interested in it and wanted to stand for this sort of thing, he would want to be here to-day.

Mr. TINCHER. Oh, I doubt if he would want to be here to-day under any circumstances, because this is his primary day. Did the gentleman talk with the chairman of the committee about this?

Mr. BLAND of Indiana. Yes.

Mr. TINCHER. Did he tell the gentleman to take the bill away from his committee?

Mr. BLAND of Indiana. The longer he considered the matter, I think, the more doubtful he was, although the chairman did say that he thought he had jurisdiction under certain precedents, but those precedents were ones that happened just like this; for instance, the mission to Peru came from the Committee on Foreign Relations of the Senate to the House and went to the Committee on Foreign Affairs of the House. It was the natural thing to do if not well considered. Nobody raised any objection, but I am here raising an objection, and I have tried to raise an objection at all times since I learned of the fact that the bill was in the wrong committee.

The SPEAKER. If the gentleman will permit, perhaps the Chair ought in fairness to state that there are unquestionably precedents which point to both the Committee on Foreign Affairs and the Committee on Industrial Arts and Expositions, and it is a question of some doubt which committee has jurisdiction. However, the Chair is of opinion that the weight of argument and the merits of the matter point to the Committee on Industrial Arts and Expositions.

Mr. BLAND of Indiana. There is no precedent where one committee handled the legislation which established the exposition and another committee handled the matter of the personnel to go to the exposition, is there?

The SPEAKER. The Chair does not remember any such thing.

Mr. BLAND of Indiana. More than that, as far as I know there is no precedent for any committee other than the expositions committee to handle a bill sending anybody to represent the United States where there is an exposition participated in by the United States.

Mr. LONGWORTH. Will the gentleman yield?

Mr. BLAND of Indiana. I will.

Mr. LONGWORTH. Assuming the gentleman is correct as to the proprieties as to the reference to his committee of this bill, the question is, Are we justified, when a bill is already before us under suspension of the rules, which is otherwise unobjectionable, in voting against it merely because a mistake was made in regard to the original reference? What is the position of the gentleman?

Mr. BLAND of Indiana. I take this position: If I felt for a minute I could get consideration promptly for the bill coming from the other committee I think the House ought to reject it. There is no other way to protect ourselves. There is no other way in the world if the Speaker wants to recognize the gentleman from Massachusetts to suspend the rules and forbid the right to send it to my committee, there is no other way on earth that I know of to rectify the wrong but to vote down the motion to suspend the rules. Are we going to acquiesce in it and establish the precedent here? Is there any other way except by defeating the motion?

Mr. ROACH. Will the gentleman yield?

Mr. BLAND of Indiana. I will.

Mr. ROACH. The gentleman from Ohio asked the question, and suppose he has made good the case, how are you going to correct the matter at this time without defeating the bill?

Mr. BLAND of Indiana. If it is sent to our committee it will come back a different kind of a bill, that is my judgment about it, and as to what the gentleman from Massachusetts says about trouble from delay——

Mr. ROACH. When does the gentleman anticipate that the bill will be brought up for consideration if it be referred to his committee?

Mr. BLAND of Indiana. I think before the Congress recesses; in two weeks anyway, probably sooner. Now, gentlemen, I do not want to take the position that I am standing in the way of needful legislation merely because the rights of my committee have been transgressed. I do not feel like being an obstructionist to legislation, but if we were considering this in the Committee of the Whole I would offer amendments to it, improving it in my judgment, and I think it could be much improved, and I believe if referred to the committee or another bill introduced, that we can improve the legislation. I know of no way by which this high-handed method and procedure of the Committee on Foreign Affairs, which seems to be determined to make a precedent of this proposition, can be corrected except by defeating the motion to suspend the rules, and I ask unanimous consent to insert in the RECORD at this point in extension of my remarks all the precedents I have on this subject.

The SPEAKER. The gentleman from Indiana asks unanimous consent to extend his remarks for the purpose indicated. Is there objection? [After a pause.] The Chair hears none.

Mr. REED of New York. Will the gentleman yield?

Mr. BLAND of Indiana. I will.

Mr. REED of New York. Does the gentleman question the merits at all?

Mr. BLAND of Indiana. I question the sending of five when we have already provided for two.

Mr. REED of New York. If the gentleman does not question the merits of the bill, this is coming on very soon, September 22, and whoever is appointed will have to make plans——

Mr. BLAND of Indiana. They do not have to go until September. We have already provided the machinery, and we have already provided for the commissioners to work to get up the exhibits and all those things—perhaps the gentleman would like to go——

Mr. REED of New York. I have no desire to go, but I am very anxious to see our Government participate. I am fearful if it was referred back to another committee that there might be danger of its failing.

Mr. BLAND of Indiana. We could get to it and pass it in two weeks.

The precedents are as follows:

PRECEDENTS IN THE HOUSE.

JURISDICTION OF INTERNATIONAL EXPOSITIONS.

58–3. Select Committee on Industrial Arts and Expositions reported the bill (H. R. 15591) providing for the Jamestown Exposition; also the bill H. R. 19203, which became the law.

Lewis and Clark Exposition concurrent resolution. Industrial Arts and Expositions. Reported.

Liege Exposition. Select Committee on Industrial Arts and Expositions.

Louisiana Purchase Exposition. Select Committee on Industrial Arts.

59–1. Jamestown Tercentennial. The bill (H. R. 12610) to authorize United States to participate. Industrial Arts and Expositions.

Tampa, Fla.; House Concurrent Resolution 28. Industrial Arts and Expositions.

Milan, Italy; appropriation to enable United States to participate; also the bill H. R. 17458. Industrial Arts and Expositions; and also the bill H. R. 18079. Industrial Arts and Expositions.

San Francisco. The bill H. R. 10698. Industrial Arts and Expositions.

59–2. House Joint Resolution 213; special commission to investigate feasibility of proposed exposition. Industrial Arts and Expositions.

International Maritime Exposition at Bordeaux, France; President's message referred to Merchant Marine and Fisheries. Item carried in an appropriation bill.

60–1. Alaska-Yukon Exposition. The bill H. R. 10530. Select Committee on Industrial Arts and Expositions.

Tokyo Exposition. House Joint Resolution 81, accepting invitation to participate. Industrial Arts and Expositions; also the bill (H. R. 16511) providing for participation. Industrial Arts and Expositions.

International Mining Exposition at New York. The bill H. R. 7659. Industrial Arts and Expositions.

Exposition at Quito, Ecuador. The bill S. 4633. Referred to Appropriations Committee.

60–2. Alaska-Yukon Exposition. The bills H. R. 27603 and 27931. Industrial Arts and Expositions.

House Joint Resolutions 243 and 257, to invite Great Britain and France to participate in proposed tercentenary celebration of discovery of Lake Champlain. Foreign Affairs.

H. R. 27882. Participation of United States in exposition at Tokyo. Industrial Arts and Expositions.

H. R. 27818. Participation of United States in exposition at Brussels, Belgium, reported by Foreign Affairs. (RECORD, p. 3814.) The bill H. R. 27824, regarding Brussels, Belgium. Industrial Arts and Expositions.

61–1. Alaska-Yukon Pacific Exposition. House Concurrent Resolutions 13, 16, and 17, accepting invitation to attend. Industrial Arts and Expositions.

The bill H. R. 10435, for participation in Universal and International Exposition at Brussels in 1910. Foreign Affairs.

61–2. Commission to attend celebration of centennial of Republic of Mexico. House Joint Resolutions 205, 208, and 232. Foreign Affairs.

House Joint Resolution 88. Commission to investigate advisability of holding a Negro centennial. Reported by Industrial Arts and Expositions.

Panama-California Exposition, 1915. House Joint Resolution 73, to invite foreign nations to attend and participate. Foreign Affairs.

61–3. Authorizing President to invite nations to send ships to an exposition. House Joint Resolution 265. Foreign Affairs.

Perry's Victory Centennial Celebration. The bill H. R. 29503. Industrial Arts and Expositions.

World's Panama Exposition. The bill H. R. 29362. Industrial Arts and Expositions.

Panama-Pacific Exposition. House Joint Resolution 213, authorizing President to invite nations to participate in. Foreign Affairs.

62–1. Florida East Coast Railway Co.; requesting President to invite nations to participate in celebration of the completion of. Industrial Arts and Expositions.

House Joint Resolution 99, authorizing President to invite nations to participate in Panama-California Exposition. Industrial Arts and Expositions.

62–1. House Joint Resolution 119, authorizing President to appoint Panama-Pacific International Exposition commissioners. Industrial Arts and Expositions.

62–2. Fifth National Corn Exposition at Columbia, S. C. Industrial Arts and Expositions.

House Joint Resolution 224, authorizing acceptance of invitation to participate in a universal and international exhibition at Ghent, Belgium. Foreign Affairs.

62–3. National Conservation Exposition at Knoxville, Tenn. The bill H. R. 26190. Industrial Arts and Expositions.

Committee to attend unveiling of statue of Jefferson at St. Louis. House Resolution 799. Industrial Arts and Expositions.

Panama-Pacific Exposition. The bill H. R. 27876. Industrial Arts and Expositions.

The bill H. R. 19224. Permanent exhibit of resources of United States at Washington, D. C. Industrial Arts and Expositions. (Reported.)

63–2. House Joint Resolution 204, authorizing Secretary of Agriculture to make exhibits at Forest Products Expositions to be held in Chicago and New York. FORDNEY, from Foreign Affairs. (Reported.)

The bill H. R. 15732, to install Government irrigation exhibit at Panama-California Exposition. Industrial Arts and Expositions. Panama-Pacific Exposition.

The bill H. R. 18663. Installation of exhibits. Industrial Arts and Expositions.

The bill S. 6454. Installation of exhibits. Industrial Arts and Expositions.

The bill H. R. 16327. Appropriation for erection of building. Industrial Arts and Expositions.

The bill H. R. 10737. Protection of copyrights. Patents.

The bill H. R. 16828. Coins for. Coinage, Weights, and Measures.

Sixth National Corn Exposition. House Concurrent Resolution 17. Industrial Arts and Expositions.

House Joint Resolution 302, to invite nations to participate in Washington navel orange industry celebration. Foreign Affairs.

House Joint Resolution 292, authorizing the President to accept an invitation to participate in City of Panama Exposition. Foreign Affairs.

63–2. Senate Joint Resolution 151, authorizing President to accept invitation to participate in international exposition of sea-fishery industries. Foreign Affairs.

House Joint Resolution 264, authorizing President to accept invitation to participate in Sixth International Congress of Chambers of Commerce and Commercial and Industrial Associations. Foreign Affairs.

63–3. Panama-California Exposition. House Joint Resolution 329, to detail officer of Army at. Military Affairs.

64–1. House Joint Resolution 252, authorizing transfer of Government exhibit from Panama-California Exposition at San Diego to Mississippi Centennial Exposition. Industrial Arts and Expositions.

House Joint Resolution 253, authorizing President to invite Latin-American nations to participate in exposition. Foreign Affairs.

Panama-California Exposition. House Joint Resolution 3 and Senate Joint Resolution 38. To transfer Government exhibit from Panama-Pacific to Panama-California. Industrial Arts and Expositions.

Panama-Pacific Exposition. The bill H. R. 6855. Free importation of articles for. Ways and Means.

Senate Joint Resolution 133 and House Joint Resolution 235. Thanking foreign Governments for participating in. Foreign Affairs.

67–1. Senate Joint Resolution 34, authorizing the President to appoint commission to attend first centennial of Republic of Peru. Foreign Affairs.

House Joint Resolution 200 and Senate Joint Resolution 114. Accepting invitation to participate in exposition at Rio de Janeiro in 1922. Industrial Arts and Expositions.

Mr. STEVENSON. Mr. Speaker, I make the point of order there is no quorum present. This is an important bill.

The SPEAKER. It is clear there is no quorum present——

Mr. ROGERS. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

Ansorge	Driver	Knight	Rosenbloom
Aswell	Dupré	Kreider	Rossdale
Atkeson	Edmonds	Kunz	Rouse
Bacharach	Elliott	Lampert	Ryan
Bankhead	Ellis	Langley	Sanders, Ind.
Beck	Evans	Lee, N. Y.	Sears

Drane	Kline, Pa.	Rose	

The SPEAKER pro tempore (Mr. WALSH). On this call 255 Members have answered to their names. A quorum is present.

Mr. ROGERS. Mr. Speaker, I move to dispense with further proceedings under the call.

The motion was agreed to.

The SPEAKER pro tempore. The Doorkeeper will open the doors. The gentleman from Indiana has six minutes and the gentleman from Massachusetts has six minutes.

Mr. ROGERS. Is the gentleman from Indiana going to use any further time?

Mr. BLAND of Indiana. I prefer the gentleman from Massachusetts to use some more time.

Mr. ROGERS. There is only one more speech on my side.

Mr. BLAND of Indiana. That is all I have. I have just spoken. [Cries of "Vote!"]

The SPEAKER pro tempore. The question is on the motion to suspend the rules and pass Senate Joint Resolution 173.

The question was taken, and the Speaker pro tempore announced that in the opinion of the Chair two-thirds had not voted in favor thereof.

Mr. ROGERS. Mr. Speaker, I ask for a division.

The House again divided; and there were—ayes 49, noes 73.

So, two-thirds not having voted in favor thereof, the House refused to suspend the rules and pass the joint resolution.

ADDITIONAL GRAND JURY FOR THE DISTRICT OF COLUMBIA.

Mr. VOLSTEAD. Mr. Speaker, I move to suspend the rules and pass the bill (S. 3505) with the amendments recommended by the Committee on the Judiciary.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

An act (S. 3505) in reference to the summoning of grand juries in the District of Columbia.

Be it enacted, etc., That the Code of Law for the District of Columbia be amended by adding a new section to read as follows:

"SEC. 204a. That whenever the United States attorney for the District of Columbia shall certify in writing to the Chief Justice of the Supreme Court of said District, or, in his absence, to the senior associate justice of said court, that the exigencies of the public service require it, said chief justice or senior associate justice may, in his discretion, order an additional grand jury summoned, which additional grand jury shall be drawn at such time as he may designate in the manner now provided by law for the drawing of grand jurors in the District of Columbia, and unless sooner discharged by order of said chief justice or, in his absence, senior associate justice, said additional grand jury shall serve during and until the end of the term in and for which it shall have been drawn."

Amend the title so as to read: "An act to amend the Code of Law for the District of Columbia."

The SPEAKER pro tempore. Is a second demanded?

Mr. CONNALLY of Texas. Mr. Speaker, I demand a second.

Mr. VOLSTEAD. Mr. Speaker, I ask unanimous consent that a second may be considered as ordered.

The SPEAKER pro tempore. The gentleman from Minnesota asks unanimous consent that a second may be considered as ordered. Is there objection? [After a pause.] The Chair hears none. The gentleman from Minnesota [Mr. VOLSTEAD] is entitled to 20 minutes and the gentleman from Texas [Mr. CONNALLY] to 20 minutes.

Mr. VOLSTEAD. Mr. Speaker, some time ago the Attorney General sent a bill, of which this is substantially a copy, to the Judiciary Committee, asking that provision be made authorizing an additional grand jury for the District of Columbia. There are a number of cases that ought to be presented, especially cases that have originated during the war. So far as I know, there is no objection to the bill. It was unanimously reported by the Committee on the Judiciary. It has been passed by the Senate, but we concluded, after looking it over and consulting with the district attorney of this District, that it ought to be slightly amended, and the committee has recommended the amendments which I have asked to be incorporated in the bill. We have made one change, which does not affect its operation. We have made it a section of the District Code, so that whenever it is printed it may be embodied in the code and be found under the proper index.

Mr. Speaker, I reserve the balance of my time.

Mr. SISSON. Will the gentleman yield for a question?

Mr. VOLSTEAD. I will.

Mr. SISSON. The question I desire to ask is this: Would this result in having two grand juries sitting at the same time in the District of Columbia?

Mr. VOLSTEAD. I think it would. I understand that is the purpose.

Mr. SISSON. And they would have jurisdiction, both of them, over the whole District, and the same kind and character of crime?

Mr. VOLSTEAD. Surely, but that is not an uncommon thing in different States.

Mr. SISSON. It is not common anywhere that I know of.

Mr. VOLSTEAD. To have an extra grand jury sitting at the same time as a regular grand jury is not novel.

Mr. SISSON. I do not know of any State where two grand juries, sitting at the same time, have the same jurisdiction. Now, if you divide this District into two judicial districts, so that one grand jury may sit for one section of the District and one for the other, it would be all right. But otherwise you would have confusion of all kinds.

Mr. VOLSTEAD. I can not see any confusion that would arise, because the court could determine what matter might be submitted.

Mr. SISSON. I do not think that. I think the grand jury ought to have the doors open all the time, so that men may know where to go. If I desire to go before one grand jury and carry my witnesses and fail, I would immediately pole out to another grand jury.

Mr. VOLSTEAD. You naturally could consult with the district attorney first, and he would tell you where to go.

Mr. SISSON. That would make a peculiar situation.

Mr. VOLSTEAD. I have acted as attorney for the State in many instances where we had grand juries, and I always found that people had to come and see me when I was in charge in order to determine what to do.

Mr. SISSON. Before they went to the grand jury?

Mr. VOLSTEAD. Before they got to the grand jury, and the district attorney generally controls the business before grand juries.

Mr. SISSON. I do not think the district attorney should be permitted to determine what case should or should not go before the grand jury.

Mr. VOLSTEAD. He is a sworn officer of the State, and it is his duty to present matters to the grand jury. Of course, if the grand jury wishes, it can brush him aside and investigate, as they see fit.

Mr. SISSON. I think there is underlying the whole judicial system the thought that when you take a body of men from a community whose duty it is to begin the prosecution in a certain character of cases it is their absolute right, unless you intrench upon the grand-jury system, so sacred among English-speaking people, to investigate, and they ought not to be in any wise prevented by the Federal district attorney.

Mr. VOLSTEAD. I am only calling attention to what I believe is the general practice everywhere. The district attorney usually has control of the matters that go before the grand jury.

Mr. SISSON. I think the matter of practice would be—because I have been prosecuting attorney myself—that they would come and consult with you about the kind and character of cases you may have, what witnesses you might need, but so far as the grand jury being told by the Federal district attorney of the State, it is a new and novel proposition.

Mr. VOLSTEAD. It is not. My experience has been that the district attorney controls the disposition of the matters before the grand jury. Now, I understand that in the Federal courts they even employ a stenographer, and he is present and takes down the testimony. The proceeding is very much the same as in a trial court except that usually only one side is presented.

Mr. JOHNSON of Mississippi. I will ask the gentleman if the grand jury is not given the exclusive right to control, and under that law the grand jury can exclude the district attorney, which was done in the last few weeks in one of the New England States?

Mr. VOLSTEAD. That is true, but that is not the general practice.

Mr. Speaker, I reserve the balance of my time.

The SPEAKER pro tempore. The gentleman from Minnesota reserves the balance of his time. The gentleman from Texas [Mr. CONNALLY] is recognized for 20 minutes.

Mr. SUMNERS of Texas. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state it.

Mr. SUMNERS of Texas. I would like to ask how much time the gentleman on the other side has remaining?

The SPEAKER pro tempore. The gentleman has 14 minutes remaining, and the gentleman from Texas [Mr. CONNALLY] has 20 minutes remaining.

Mr. CONNALLY of Texas. Mr. Speaker and gentlemen of the House, in demanding a second for this legislation I did not desire to indicate opposition to the passage of the measure. I have no objection to the chairman of the Judiciary Committee or his committee bringing in a bill providing for an additional grand jury in the District of Columbia. I congratulate them and the Attorney General on finally coming to the conclusion that the only way in which to prosecute war-fraud cases is in the grand jury room and in the court room rather than in the public prints and in the political forum. Of course, some critical and

supersensitive people may say they have been a long time about it, but they have been as prompt as could be expected.

While considering the $500,000 appropriation for assistants to the Attorney General we were told this morning that there are thousands of war grafters. One gentleman stated that perhaps there were many thousands of them. And I am anxious that in all of this riot of lawlessness the Attorney General shall be able to at least get one of them before the grand jury and indict him and prosecute him and convict him. Thousands of war grafters, but not one in jail, where he ought to be! On that statement the House appropriated $500,000 this morning to hire some new lawyers to help the Attorney General. I am in favor of that, because I think we need some new ones. I do not think the ones that are already on the job are functioning, according to the gentleman from Michigan [Mr. WOODRUFF]. But when did we find out we needed additional lawyers?

On the 7th of April, 1922, the Department of Justice and the State Department appropriation bill was before the House, and the gentleman from South Dakota [Mr. JOHNSON] offered an amendment to appropriate $500,000 to provide additional employees in the Attorney General's department. I suppose that is the same $500 you appropriated this morning.

A MEMBER. Five hundred thousand dollars.

Mr. CONNALLY of Texas. Yes; $500,000. When you get to talking about war grafters and war contracts and Republican campaign promises about them your mind is apt to expand under the influence of talking about them from hundreds to thousands and from thousands to millions, because there are lots of them. [Laughter.] Yes; $500,000. Let us see what the committee said at that time, and I hope the gentleman from New York [Mr. HUSTED] is here. I hold the RECORD in my hand.

Mr. JOHNSON of South Dakota said:

I will say that I have not consulted the Attorney General.

Some one had asked him if he had talked to the Attorney General as to whether he needed the $500,000 to prosecute war grafters, that now seem as thick as hair on a dog's back, and he said:

I have not talked to the Attorney General.

Mr. HUSTED said:

Mr. Speaker, I think I can say to the gentleman from South Dakota that he is out in his estimate just the amount carried in his amendment. The Department of Justice has not asked for this item. The Department of Justice is engaged in this work and has ample funds to carry it on at this time. It does not need an additional dollar for that purpose, and if this money were appropriated it would simply add $500,000 to the amount carried in the bill which we would have to raise by taxation and which the department could put to no good purpose.

That is the language of the gentleman from New York [Mr. HUSTED], having charge of the Department of Justice appropriation bill. When? Not last year; not in 1920; not in 1919; but on April 7, 1922, a month ago. The Attorney General then did not need another dollar. The Attorney General, if he got $500,000 additional, would be taking that much money out of the pockets of the taxpayers and appropriating it to no good purpose. But to-day, under some strange inspiration; to-day, irritated perhaps by something which the gentleman from Michigan [Mr. WOODRUFF] started, or the gentleman from South Dakota [Mr. JOHNSON] originated; to-day, under some strange influence, the gentleman from Illinois [Mr. MADDEN], that economist who stands ever with blazing eyes and shining sword at the door of the Treasury [laughter], comes here and says that the Attorney General must have $500,000 to employ new Assistant Attorneys General. To do what? Why, to go out on the trail of swarming hordes of thieving war profiteers. [Applause.]

Oh, Mr. Speaker, we have provided for the lawyers; we are now providing for a grand jury, and I suppose to-morrow we shall have a bill appropriating several million dollars to get some witnesses for the grand jury.

Mr. MONDELL. Mr. Speaker, will the gentleman yield?

Mr. CONNALLY of Texas. How much time have I, Mr. Speaker? It takes some time to answer the gentleman.

The SPEAKER pro tempore (Mr. WALSH). Fourteen minutes.

Mr. MONDELL. Is the gentleman opposed to this bill?

Mr. CONNALLY of Texas. Oh, no.

Mr. MONDELL. Why, then, complain?

Mr. CONNALLY of Texas. I am not complaining about it.

Mr. MONDELL. Oh, the gentleman is really wailing about it.

Mr. CONNALLY of Texas. Oh, no; I am not wailing about it; I want to put a little stimulant on the gentleman's administration. I may say that for three years the gentleman from Wyoming himself has walked down the aisles of Congress; yes, as leader of his party on this floor, for three long years the gentleman from Wyoming has walked with stately tread down the aisles of Congress and before the country and hurled his righteous indignation against these thousands of war profiteers and fraudulent war contractors.

I believe that they are not perhaps as numerous as the imagination of the gentleman from Wyoming has led you to believe; I believe there were frauds, however, and I believe there were misdeeds committed, and I want to see the guilty parties punished. I believe that any man who, in the hour of his country's peril—when the sons of America were mustering in camp and on the front were fighting the enemies of the Republic—would rob his Government of one dollar should be in the penitentiary. [Applause.]

What I am talking about is this: Why did they not, a month ago, need the money? Why, a month ago, were they saying, "This money would be wasted if appropriated"; $500,000 would be wasted. And now unless you give them $500,000 and a new grand jury the Republic will go on the rocks.

I hope the grand jury will call as witnesses some of the gentlemen on the Republican side, because they know all about the guilty parties in the war-fraud cases. They know who they are. They told the people during the campaign in 1920 that there were thousands of them going up and down the country, out of the penitentiary, after having robbed and defrauded the Government of the United States. I think many do exist.

Now, the gentleman from Wyoming and other gentlemen would not have made the statement that there were war grafters and war-contract frauds unless there were, would they? Everybody knows these gentlemen would not have made misrepresentations; that these gentlemen would not have told the country that there were war-contract frauds and war grafters unless they actually existed. We all grant that. We also know that these gentlemen would not have made charges that men were guilty of fraud and dishonesty in dealing with the Government unless they knew who they were, would they?

No. So, knowing that such frauds existed, knowing who the perpetrators of such frauds are, those who made the charges will make good witnesses. I want to see this grand jury appointed. I would like to be a member of it; I would like to be a member of it when these gentlemen are called before the grand jury to be sworn as witnesses. "Mr. MONDELL, hold up your hand." "Wait a minute, Mr. Foreman of the grand jury." "Well, Mr. MONDELL, did you not say back in 1920 that there were thousands of these war-contract grafters and these frauds?" And the gentleman from Wyoming would make the same excuse that a lawyer friend of mine tells about a witness in the courthouse. The attorney had consulted him on the outside before he was sworn, and the witness told him one tale favorable and satisfying, and then when he got him on the witness stand he told a wholly different tale, damaging and distressing. Greatly surprised, the lawyer reminded him of the prior conversation and inquired as to the reason for the variance in his testimony. With an air of triumph he said, "Tom, I was talking then; I am swearing now." [Laughter.]

Now, the gentleman from Wyoming was only talking in 1920 when telling about these thousands and thousands of frauds, but when he gets before the grand jury and goes to swearing he will not know much about it. But I hope he will. I am for this grand jury. If the gentleman's administration and his Attorney General say they need a dozen grand juries I shall vote for them. If he says they need a million dollars, I shall vote for that. But I want to say that we shall expect something to be done. We have had enough bluster. We have had enough talk. We have had enough promises. Why not secure some convictions?

I do not care whether the trail leads to your party or whether it leads to my party, I want war-fraud criminals, wherever they may be and whoever they may be, put in the penitentiary, where they ought to be. [Applause.] This ought not to be a partisan question and it is not a partisan question. I am not seeking to take part in the controversy that is going on on that side between the gentleman from Michigan [Mr. WOODRUFF] and the gentleman from South Dakota [Mr. JOHNSON] on the one side and the accredited leaders of the Republican Party and the Attorney General on the other. I have no disposition to criticize the one or the other. I believe you ought to be able to settle that row in your own ranks; but as an American citizen, as a representative of the taxpayers, while I am willing to pay out of the Treasury every dollar which the Attorney General needs for the prosecution of these frauds, while I am willing to give you every grand jury which the Attorney General says he needs, we, as representatives of the people, expect him to get some criminals in the flesh and not in the imagination. We think it is about time, after three years of control of both branches of the Government——

SEVERAL MEMBERS. How many?

Mr. CONNALLY of Texas. Three, I said.

Mr. MONDELL. The gentleman is using his imagination.

Mr. CONNALLY of Texas. It is not such a very long time. It just seems long, and it seems a great deal longer to the American people than it does to me. We hope that at least by the time of the next campaign you will have at least one of these fellows, at least one war fraud contractor to offer as an exhibit in the congressional elections this fall. Find one of them and put him in a cage and haul him around over the country and point to him and say, "Here is that grafter that we caught. Here is the one that we convicted out of 150,000 cases." I congratulate the gentleman from Wyoming [Mr. MONDELL] upon his large and ambitious program. I congratulate his party on at least finding out that in order to get anybody into the penitentiary you have got first to indict him, and in order to indict him you have got to have a grand jury. I congratulate the gentleman and his party on finding out since the 7th of April last that the Attorney General does need this $500,000. He said he did not need it then. I believe he was honest about that, but he did not know. He just did not know that he did need it. But when he comes to Congress and asks for it I believe that he ought to have it. I am not willing to give him any excuse for failing to act.

Now, there has been some criticism of the Attorney General here by the gentleman from South Dakota [Mr. JOHNSON] and the gentleman from Michigan [Mr. WOODRUFF] that some one should resent. I refer to the charges that the Attorney General has not been diligent about this matter.

The Attorney General has a great many things to do besides running the Attorney General's office. He has been engaged for some time past in making suggestions about the revision of the civil service laws, rules, and regulations. [Laughter.] He has, perhaps, been engrossed in that matter for a great while. I understand the President has called on him to settle a great many unofficial matters in the way of the distribution of patronage and things of that kind. I think he deserves the sympathy and not the condemnation of gentlemen of his party. Why, the Attorney General, outside of his prosecutions, has pardons to pass on. The trouble about the present Attorney General is that he has a dual capacity. In his capacity of passing on pardons he has to pass on getting people out of the penitentiary and in his other capacity he has to pass on the question of getting people into the penitentiary. One complaint seems to be that the Attorney General has been devoting himself to getting people out of the penitentiary rather than to putting them into the penitentiary. Perhaps he has now closed the door—at least temporarily—to that side of his personality and that he is going to turn his attention to putting them into the penitentiary.

Mr. BARKLEY. And it occupies a good deal of his time when he is acting in different capacities with reference to the same person, and when he is acting in the same capacity with reference to different persons.

Mr. CONNALLY of Texas. Yes. I know to what the gentleman from Kentucky refers. He evidently refers to the case of Charles W. Morse. I want to say to the gentleman, however, that I think he is inconsistent in that criticism of the Attorney General. Mr. Morse was in the penitentiary. In order to get him back into the penitentiary the Attorney General had first to get him out of the penitentiary. [Laughter.]

Mr. BARKLEY. Is the gentleman assured that if the Attorney General gets Mr. Morse back into the penitentiary he will not get him out again?

Mr. CONNALLY of Texas. That is simple enough. In order to save all of the annoyance of getting him in and then getting him out, he just will not put him in. [Laughter.]

Mr. Speaker, I want to congratulate gentlemen in the House who have aroused the Attorney General.

I am gratified to know that the House wants something done. Since the Republicans came into power I have voted for every resolution that was presented to investigate any department of the Government under Democratic administration. I was a member of one of those committees of investigation and served with the present presiding officer, the gentleman from Massachusetts [Mr. WALSH], and he will testify that never once did I throw any impediment in the way of the deliberations of that committee nor endeavor to stifle any inquiry by it or its members. And I want to say, if there was anything unlawful, or fraudulent, or improper that was done during the Democratic administration, let the Attorney General bring it out and prosecute the offenders; but do not fill the papers and the press and the public platforms and the halls of this House and the CONGRESSIONAL RECORD with your vapid, stale rantings about such things unless you mean to make good, and unless you intend to put those men in the penitentiary. The majority of this House will have my support in all measures to punish the guilty. What I object to is having thousands upon thousands of war grafters and war fraud contractors, if imaginary, walking through your political speeches and the columns of the press; if real, I do not want them walking the streets under your administration and not one of them in jail. [Applause.]

Mr. KINCHELOE. Will the gentleman yield?

Mr. CONNALLY of Texas. If I have time.

Mr. KINCHELOE. If the gentleman will remember, after the investigating committees were appointed and made their report, at a cost of $2,000,000 of the taxpayers' money, the now majority Members complained that there was plenty of evidence for the prosecution and the Attorney General would not prosecute them, and they said when the Republicans got into power they were going to put these grafters in the penitentiary, because they had sufficient proof.

The SPEAKER pro tempore. The time of the gentleman from Texas has expired. The gentleman from Minnesota has 15 minutes remaining.

Mr. VOLSTEAD. Mr. Speaker, I yield five minutes to the gentleman from Kansas [Mr. CAMPBELL].

Mr. CAMPBELL of Kansas. Mr. Speaker, it is easy to find fault and to criticize. I was a little surprised this morning that a good lawyer would make captious criticism of another lawyer about the details of whose business he has no knowledge. The gentleman from Virginia is a good lawyer, but this morning his criticisms of the Attorney General indicated that he was acting in the capacity of a politician rather than indulging in the criticism generally indulged in by lawyers.

It will not be forgotten that the Attorney General took charge of the Department of Justice after three years of inactivity upon war frauds and war crimes by his predecessor. The musty records in that office were in the files where they had been for three years unacted upon. Evidence had been scattering, witnesses had been leaving. When the Attorney General took charge of the office he found these three-year-old records with the witnesses gone, with evidence wanting upon which to ask indictments before a grand jury, or upon which he could go before a petit jury and ask for conviction in criminal cases or recovery in civil actions. It takes more than a mere charge on the floor of this House or in the columns of the newspapers to convict a man of a crime or to recover money fraudulently or wrongfully obtained by a war contractor. It takes time and care to prepare a criminal case for trial, even when the case is prepared immediately following the commission of the crime; but let three years pass without attempting to collect the evidence and have it assembled for presentation to juries and you quadruple the difficulty in making a case, and that is exactly the difficulty the Attorney General has been dealing with.

Mr. MOORE of Virginia. Will the gentleman yield?

Mr. CAMPBELL of Kansas. I can not yield; I am sorry. When you undertake to convict you must furnish evidence that satisfies the jury beyond a reasonable doubt. That is known to the gentleman from Virginia and to every lawyer in the House and should be known to every Member of the House. In order to prevail in a civil action for the recovery of money or property you must have a preponderance of the testimony. The Attorney General's office has been endeavoring to prepare the Government's cases in criminal and civil actions for the past 14 months.

That he has had difficulty no one will deny; that he has undertaken a colossal task no one will question; that the crimes he is now called upon to prosecute were committed by men who knew the importance and the art of concealing the steps by which they consummated their crimes or perpetrated their frauds will not be questioned. In addition to that, the evidence has been disappearing and witnesses have been going away for three years.

But the Attorney General has not been derelict in his duty. The Attorney General saw, after he went into the Department of Justice, the colossal task that confronted him in both civil and criminal cases. I think I can satisfy the gentleman from Virginia that the Attorney General knew from the beginning that he had more than a year's work on hand when he entered that office. Congress, at his request, on the 17th day of last November, 1921, amended section 1044 of the Revised Statutes of the United States so as to make the statute of limitation on crimes such as are alleged to have been perpetrated by the war contractors six years instead of three years. The Attorney General made that request of Congress, and it is now the law, and the Attorney General is operating under it. It may be that the Attorney General should have notified the gentleman from Virginia and other gentlemen of the steps he was pursuing in order to run down the evidence upon which he would take cases

before grand juries or upon which he would bring civil actions; but the Attorney General is so much of a lawyer that he knows he must conceal from defendants, both civil and criminal, every step he has taken to land them as convicts or secure judgment against them for the recovery of money or property. The Attorney General has asked for $500,000 to enable him to prosecute these cases, and the House has allowed the amount. He has asked, and asked some time ago, and the bill has long been on the calendar, that an additional grand jury be created in the District of Columbia, where jurisdiction is had over crimes growing out of war-graft contracts. The Attorney General asked for the creation of an additional grand jury so that he could have a forum before whom to take such evidence as he may be able to get. Gentlemen ought not to show impatience and say that the Attorney General has been derelict in his duty. He has simply been pursuing the way of a great lawyer, a cautious lawyer, as the representative of our country. He is endeavoring to do his duty. He can not try these cases through his friends in the House or through the columns of the newspapers, or in any other way except in the courts, civil and criminal. No one who has any information or knowledge about the prosecution of such cases as are in question, either on the civil or the criminal side of the court, will question the magnitude of the great work that confronts the Department of Justice at this time. Already great recoveries have been made on the civil side of the court.

Mr. GOODYKOONTZ. Will the gentleman yield?

Mr. CAMPBELL of Kansas. Yes.

Mr. GOODYKOONTZ. I understand that one of the impediments has been that when the Attorney General came in he found the files in many important cases had been abstracted from the office and he had to start de novo.

Mr. CAMPBELL of Kansas. That is true, and they have been abstracting from the files of his office almost down to the present hour. He took over an organization that was created by his predecessor under the bureaucracy now existing in this country—men whom he could not change, an organization that was not of his creation, and some of them have been untrue to the Government of the United States, untrue to the Department of Justice.

Mr. MOORE of Virginia. Mr. Speaker, will the gentleman yield?

Mr. CAMPBELL of Kansas. For a question.

Mr. MOORE of Virginia. The gentleman's statement, as far as I am concerned, is entirely irrelevant to the proposition that I discussed this morning.

Mr. CAMPBELL of Kansas. I yielded for a question merely.

Mr. MOORE of Virginia. Then the question is this: Does the gentleman propose to bring before the House and ask the House to vote upon the resolution that has been introduced here by Messrs. JOHNSON and WOODRUFF?

Mr. CAMPBELL of Kansas. Does the gentleman from Virginia, lawyer that he is, think that a congressional investigation is of more importance now than civil and criminal prosecutions?

Mr. MOORE of Virginia. I think both are important.

Mr. CAMPBELL of Kansas. Does he not think, then, that a congressional investigation would hinder and hamper both the civil and criminal prosecutions?

Mr. MOORE of Virginia. As a lawyer standing here, if I were in the office of the Attorney General and were charged by Messrs. WOODRUFF and JOHNSON, I would court and challenge an investigation.

Mr. CAMPBELL of Kansas. And the Attorney General and the Secretary of War both court and challenge an investigation.

Mr. MOORE of Virginia. Will the gentleman give it to him?

Mr. CAMPBELL of Kansas. Just as soon as I think——

Mr. MOORE of Virginia. As the gentleman thinks?

Mr. CAMPBELL of Kansas. Just as soon as I think it will do more good to pursue a resolution of inquiry in the newspapers and elsewhere than it will do to prosecute criminal and civil actions in the courts that the Attorney General is preparing, the gentleman from Virginia will have an opportunity to vote on the resolution.

Mr. MOORE of Virginia. The gentleman has the resolution in his pocket. Will he bring it before the House?

Mr. CAMPBELL of Kansas. I deem it more important at this time to proceed with the serious matter of recovery in civil actions and of securing convictions in criminal cases than I do to fill the sewers of the newspapers with a lot of irrelevant matter upon which you could neither recover in civil action nor convict in criminal cases. [Applause on the Republican side.]

I am not afraid the Attorney General will not do his duty. I believe in Harry Daugherty as a man, and I believe in the Secretary of War. John Weeks is known to the membership of this House, and as Secretary of War John Weeks has their confidence; and the aspersions upon the character of either of these Cabinet officers is unworthy the membership of this House. [Applause on the Republican side.] They have both courted and they court to-day the fullest investigation of every act of theirs since they have assumed charge in their respective offices. [Applause on the Republican side.]

The SPEAKER. The time of the gentleman from Kansas has expired. All time has expired. The question is on suspending the rules and passing S. 3505.

The question was taken, and, in the opinion of the Chair, two-thirds having voted in favor thereof, the rules were suspended and the bill was passed.

CALENDAR FOR UNANIMOUS CONSENT.

The SPEAKER. The Clerk will call the next bill on the Calendar for Unanimous Consent.

INDIANS ON THE MESCALERO RESERVATION, N. MEX.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 6294) promoting civilization and self-support among the Indians of the Mescalero Reservation, N. Mex.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, when this bill was last under consideration, the suggestion was made that there should be some limitation of time when this money would remain available for the use of the Indians. Has the gentleman from Missouri any suggestion to make?

Mr. ROACH. Mr. Speaker, I have an amendment prepared which will conform to the suggestion the gentleman made that I am sure will be satisfactory.

Mr. STAFFORD. Mr. Speaker, I withdraw the reservation of the objection.

The SPEAKER. Is there objection?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That there is hereby appropriated, out of any funds in the Treasury not otherwise appropriated, the sum of $250,000 for the purpose of promoting civilization and self-support among the Indians of the Mescalero Reservation, in New Mexico, to be expended or distributed in the discretion of the Secretary of the Interior, under such regulations as he may prescribe; to remain available until used, and to be reimbursed to the United States from the sale of timber on said reservation.

With the following committee amendment:

Page 1, line 3, after the word "hereby" insert the words "authorized to the."

The SPEAKER. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

Mr. ROACH. Mr. Speaker, I offer the following amendment which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. ROACH: Page 1, line 9, after the word "available" strike out the words "until used" in lines 9 and 10 and insert the following in lieu thereof: "for a period of five years from the date of the enactment of this act."

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. ROACH, a motion to reconsider the vote by which the bill was passed was laid on the table.

UNITED STATES COMMISSION TO ATTEND THE RIO JANEIRO EXPOSITION.

Mr. BLAND of Indiana. Mr. Speaker, I offer the following motion, which I send to the desk and ask to have read.

The Clerk read as follows:

Mr. BLAND of Indiana moves to suspend the rules, discharge the Committee of the Whole House on the state of the Union and the Committee on Foreign Affairs from further consideration of Senate Joint Resolution 173, House Joint Resolution 286, and House Joint Resolution 292, and refer the same to the Committee on Industrial Arts and Expositions.

The SPEAKER. Is a second demanded?

Mr. STAFFORD. Mr. Speaker, I demand a second.

Mr. BLAND of Indiana. Mr. Speaker, I ask unanimous consent that the second be considered as ordered.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The gentleman from Indiana is entitled to 20 minutes and the gentleman from Wisconsin to 20 minutes,

Mr. BLAND of Indiana. Mr. Speaker, I take it that the gentleman from Wisconsin is seeking information upon this subject. The motion seeks to send Senate Joint Resolution 173, which we considered a moment ago, to a committee. It is apparent that the defeat of the resolution under the motion to suspend the rules leaves it in such a position that we would not get any action on it very soon. I think it is unanimously conceded that the resolution belongs to the Committee on Industrial Arts and Expositions. This motion seeks to discharge the Committee of the Whole House on the state of the Union and the Committee on Foreign Affairs from further consideration of the resolution and refer it to the committee to which it belongs.

Mr. STAFFORD. In the motion the gentleman has incorporated also House Joint Resolution 286 and House Joint Resolution 292. Would the gentleman inform the House to what subjects they relate?

Mr. BLAND of Indiana. They are all on the same subject. One was introduced prior to the Senate resolution. They are all on the same subject.

Mr. STAFFORD. Mr. Speaker, I have no desire to use the time at my disposal.

The SPEAKER. The question is on the motion to suspend the rules and pass the motion offered by the gentleman from Indiana.

The question was taken; and, in the opinion of the Speaker, two-thirds having voted in favor thereof, the rules were suspended and the motion was agreed to.

TRANSFER OF PROPERTY KNOWN AS FORT HALE, CONN.

The next business in order on the Calendar for Unanimous Consent was the bill (H. R. 11347) authorizing the Secretary of War to transfer and convey to the State of Connecticut all right and title now vested in the United States to lands and buildings thereon known as Fort Hale.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of this bill?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, I have not had an opportunity to refer to Twenty-sixth Statutes, page 419, which was the former act of Congress granting this tract of land to the city of New Haven for park purposes. Has the gentleman referred to that act before reporting this bill and can he give us his opinion as to its necessity?

Mr. FROTHINGHAM. Mr. Speaker, that act passed in 1890 gave permission for the use of this land, and it is now merely a question of the Government divesting itself of the title as well as the use of it. Now, the city of New Haven has spent $74,000 since 1890 on this park. There is a provision in the bill with all proper safeguards that it shall revert to the United States, and is like all other bills which have gone through here granting lands, and the only difference is in reference to the fact that the local people have spent so much money on it.

Mr. STAFFORD. The thought occurring to my mind when reading the bill and report was whether there would be any conflict by reason of the prior enactment conveying the use or title to this tract to the city of New Haven. If we have heretofore conveyed the use of this tract of land for park purposes to the city of New Haven, what is the need now to convey title to the State of Connecticut?

Mr. FROTHINGHAM. We have not conveyed——

Mr. MERRITT. It is a defeasible license.

Mr. FROTHINGHAM. They gave the use of it, and the gentleman from Connecticut [Mr. TILSON], who is interested in this bill and brought it in, thought he would get it before the House better, as I understand, if he had it made over to the State of Connecticut instead of the city, because he could get it up on this calendar instead of on the Private Calendar. That is my understanding.

Mr. STAFFORD. Under the original act approved by Congress September 1, 1890, we granted to the town of New Haven the right to occupy, improve, and control for the purpose of a park this tract of land. Now, what more can be desired? In that act we reserved the right to use it for governmental purposes in case exigency arose. What is the necessity now of passing this act conveying title to the State of Connecticut? Is there any conflict between the city of New Haven and the State of Connecticut about it?

Mr. MERRITT. No; the State, as such, has never tried to use the land at all. It is a public park in the city of New Haven, and, as I understand it, in the absence of my colleague [Mr. TILSON], the whole idea is to give the State a title subject to defeasance in case the United States wants to use it. Now, my recollection of the situation is that the Secretary of War had listed this property for sale, and now we propose the State of Connecticut shall have the fee subject to defeasance in case the Government of the United States wants to use this. There is only a very small amount involved, only about three acres of land and 30 acres of salt marsh.

Mr. GARNER. If the gentleman will yield, in view of the act of 1890 referred to, why does the Secretary of War threaten to advertise this property for sale?

Mr. MERRITT. My understanding is, we have all through the country what he calls useless pieces of public property which he desires to turn into cash.

Mr. GARNER. This bill you propose here is going right in the face of the desire of the Secretary of War.

Mr. STAFFORD. Oh, no; the Secretary of War is going in the face of a positive enactment of Congress.

Mr. FROTHINGHAM. Oh, no; the question is not that. He advises it because the letter of the Secretary of War shows that he is in favor of this.

Mr. GARNER. Why does he not keep quiet on this piece of land?

Mr. MONDELL. Is not this the fact, the Committee on Military Affairs, perhaps some Member more familiar than I am——

Mr. STAFFORD. The gentleman from Massachusetts reported it.

Mr. MONDELL. Then he knows the facts—the Committee on Military Affairs called upon the Secretary of War for a statement as to the property now held by the War Department where the War Department did not need it for its purposes, and, of course, that included, among other tracts, this particular tract. It was necessary for the Secretary to report that to the Congress. The Secretary of War immediately was called upon to sell it, and this procedure is for the purpose of placing the tract in such condition that it will not be sold, I assume.

Mr. BEGG. Will the gentleman yield?

Mr. MONDELL. Yes.

Mr. BEGG. Is it not a fact that under this statute, if the Secretary of War so desired, he could sell it? Now, if this bill protects the city of New Haven in the possession——

Mr. MONDELL. There is no conflict with the War Department. Let us get that out of our minds.

Mr. BEGG. It is not a question of conflict. It is a question of satisfying the people of the town of New Haven.

Mr. FROTHINGHAM. They are afraid this will be sold from over their heads.

Mr. MERRITT. The city of New Haven has expended $75,000 on it, and expects to spend more.

Mr. GARNER. Here is a case where the city has gotten alarmed for fear the Secretary of War may sell this property. He could not sell it as long as this act of 1890 is on the statute books. I do not assume that any Secretary of War would undertake to sell a piece of property with that statute in existence. If he did he would not get any price for it, because he would not get any title. It is an unnecessary alarm, I think. The city of New Haven has had it for 22 years, and will probably have it for many years more.

Mr. MERRITT. Under the circumstances it would do no harm by this act to quiet the mind of the city of New Haven and allow the council there to make further provisions to improve this park.

Mr. STAFFORD. The gentleman will realize that under the third paragraph of the original act the Secretary of War could not dispose of this property without action of Congress.

Mr. FROTHINGHAM. That is quite right with any of this land.

Mr. STAFFORD. As I understand, it is merely to relieve some of the fears and alarms of the people of that collegiate town of New Haven.

Having heretofore passed an act, we are just duplicating it by taking it away from the jurisdiction of the city of New Haven and transferring it to the State of Connecticut. They want to transfer it to some State authority, I suppose——

Mr. MERRITT. They want to have congressional recognition of their rights in this park.

Mr. STAFFORD. They have that to-day under the former enactment.

Mr. MERRITT. I disagree with the gentleman.

Mr. BEGG. Congress could terminate that to-morrow if they wanted to do so?

Mr. STAFFORD. Congress could. They reserve the right here to terminate the title also.

Mr. BEGG. Not without cause.

Mr. STAFFORD. Yes; without cause. This bill does not contain the customary clause of the right to repeal.

Mr. MERRITT. It provides that the United States can take it only in case they want to use it for military, naval, or lighthouse purposes. Under the old act they could sell it.

Mr. STAFFORD. Sell it?

Mr. MERRITT. Yes.

Mr. STAFFORD. They could not sell it. I beg to differ with the gentleman.

Mr. MERRITT. The United States can sell it to-day under this bill——

Mr. STAFFORD. The United States to-day can not sell it without some authoritative act of Congress.

Mr. MERRITT. Precisely; but under this bill it provides the United States shall not resume control except for naval, military, or lighthouse purposes. That alters the statute.

Mr. GREENE of Vermont. Will the gentleman yield?

It came to the attention of the Committee on Military Affairs at a time when that committee was preparing a list of properties owned or controlled in the name of the War Department all over the country, with the idea of sifting out those parcels of real estate which it was not desirable to retain in the name of the Government and then bring out to the floor of the House a bill that would authorize the Secretary of War to dispose of them. At that time, when we were preparing this general law, the request came for the exclusion of this particular piece of property, so that it could go into this park at New Haven, and so that the odd parcels of land which the city has for a long time owned and maintained could be put together in order to make a complete extension of land and thereby complete the park.

Now, it was feared that general authorization of an indiscriminate sale of property, I imagine——

Mr. STAFFORD. Has the gentleman examined the original act granting this property to the town of New Haven?

Mr. GREENE of Vermont. I did not handle this matter. I am speaking as a matter of general information now.

Mr. STAFFORD. There is no necessity for this bill.

Mr. GREENE of Vermont. There may be if the Committee on Military Affairs brings in a blanket authorization to the Secretary of War to dispose of unused property now in the name of the War Department.

Mr. MONDELL. Will not the committee consider the situation in regard to this tract?

Mr. GREENE of Vermont. If you are going to consider exceptions, it will be exceptions and nothing else. In this instance we are trying to lay down some broad, general plan of an affirmative kind and not exceptions.

Mr. MERRITT. I wish to say that the Chief Justice of the United States appeared also in favor of the bill.

Mr. STAFFORD. That was when he was a resident of New Haven.

Mr. MERRITT. Oh, no.

Mr. STAFFORD. He has not given up his residence in New Haven?

Mr. MERRITT. I hope not.

But this is a matter very much desired by the city, and I think, even if the gentleman contends that there is no necessity for this, it can do no harm.

Mr. STAFFORD. Will the gentleman have any objection to substituting, in place of "lighthouse," "or other governmental"?

Mr. FROTHINGHAM. This is the Fort Hale bill.

Mr. STAFFORD. Mr. Speaker, though I do not see much need for this bill——

Mr. CHALMERS. Will the gentleman from Wisconsin yield for a question?

Mr. STAFFORD. Yes.

Mr. CHALMERS. I would like to ask the gentleman from Vermont [Mr. GREENE] if his committee has under consideration such a blanket bill as he refers to?

Mr. GREENE of Vermont. The committee was engaged in preparing such a general bill when we were interrupted by the question of fertilizer making at Muscle Shoals by Henry Ford.

Mr. STAFFORD. Mr. Speaker, although I do not see much use in passing this bill, in view of the former enactment, I will not object, with the understanding that the gentleman has no objection to the amendment I have suggested?

Mr. MERRITT. I have no objection.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of War be, and he is hereby, authorized to transfer and convey to the State of Connecticut all right and title now vested in the United States to land and buildings in New Haven, Conn., known as Fort Hale: *Provided*, That the State of Connecticut shall agree to preserve the said land forever as a public park, to be known as Nathan Hale Park: *Provided further*, That in the event the said lands are not used for the purposes specified in this act the same shall revert to the Government of the United States: *And provided further*, That the land shall be subject to the right of the United States to at any and all times and in any manner assume control of, hold, use, and occupy without license, consent, or leave from said State any or all of said lands for any and all military, naval, or lighthouse purposes, free from any conveyances, charges, encumbrances, or liens made, created, permitted, or sanctioned thereon by said State.

Mr. STAFFORD. Mr. Speaker, I offer the following amendment: Page 2, line 8, strike out "lighthouse" and substitute therefor the words "other governmental."

The SPEAKER. The Clerk will report the amendment offered by the gentleman from Wisconsin.

The Clerk read as follows:

Amendment offered by Mr. STAFFORD: Amend, page 2, line 8, by striking out the word "lighthouse" and substituting therefor "other governmental."

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. MERRITT, a motion to reconsider the vote whereby the bill was passed was laid on the table.

TRANSFER OF PROPERTY AT LIGHTHOUSE POINT, CONN.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 11346) authorizing the Secretary of War to transfer and convey to the State of Connecticut all right and title now vested in the United States to land and buildings thereon known as the old lighthouse property at Lighthouse Point, in the city of New Haven.

The title of the bill was read.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, unless the chiarman has some additional information to that embodied in the report, I shall feel constrained to object.

Mr. MERRITT. I do not know that I have any additional information; but this is a piece of land at the end of the point on which the lighthouse stands, and it is desired by the city to complete a chain of parks around the harbor.

Mr. STAFFORD. Here is the Secretary of War stating that—

The reservation is now under a five-year lease from January 1, 1922, at an annual rental of $1,212, which is considered a very reasonable compensation to the Government for the use of this property. There is also located on this small tract a ferry landing, at which boats which are operated in the New Haven Harbor stop.

Adjoining Lighthouse Point, and almost completely surrounding it, is an amusement park operated by the East Shore Amusement Co., which company presumably receives much of its patronage from persons arriving by boat at the lighthouse ferry landing. It is interesting in this connection to note, and it may be regarded as a significant fact, that this company was recently an unsuccessful bidder for the lease of the Government property at Lighthouse Point.

In view of the location of this property (5 miles from the city of New Haven) and its size, only about 1 acre, and considering the circumstances attending its present surroundings, it would appear to me that it possesses no value to the city of New Haven as a public park and should therefore not be turned over to that community.

Mr. MERRITT. Who says this?

Mr. STAFFORD. The Secretary of War.

Mr. MERRITT. That statement, I think, is in some respects erroneous.

Mr. STAFFORD. He goes on to say further:

It is my belief that the War Department should be authorized to dispose of this property by sale, as was originally intended when it was reported to Congress for disposition.

That is an authoritative statement from the administrative officer of the Government.

Mr. MERRITT. I will state to the gentleman, in order to have the record straight, that since that letter was written that lease has been canceled and now the Government is receiving instead of $1,212 of revenue only $100 a year. What the city of New Haven is concerned about in this connection is to have this property become a public park, so that the city can control it, and so that it can not be sold to a private party who will make of it an objectionable resort, possibly, and interfere with the chain of parks around New Haven Harbor. This is an acre of land on the tip end of the eastern point of New Haven Harbor.

Mr. STAFFORD. Some years ago it was proposed to abandon the National Soldiers' Home grounds in the environs of Milwaukee. I would not have had the nerve to come before Congress and ask, because it was no longer of use for a national home, to have it donated to the city. Here is a piece of land that has a saleable value. If New Haven wishes it, why not purchase it? I should certainly give a preference to the city, but it ought to be put up for sale.

Mr. MERRITT. That is a matter of opinion. I think it might well be turned over to the city.

The SPEAKER. Is there objection?

Mr. STAFFORD. I object.

The SPEAKER. Objection is made. The Clerk will report the next bill.

TRANSFER OF CERTAIN LANDS IN THE STATE OF LOUISIANA.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 5224) to authorize the Secretary of the Navy to certify to the Secretary of the Interior, for restoration to the public domain, lands in the State of Louisiana not needed for naval purposes.

The title of the bill was read.

The SPEAKER. Is there objection to the present consideration of this bill?

Mr. STAFFORD. Reserving the right to object, two weeks ago I asked unanimous consent to have this bill passed over without prejudice so as to give opportunity for further consideration of the bill. Will the gentleman from Georgia [Mr. LARSEN] explain what is intended by the phraseology "with other lands"? I direct the gentleman's attention to page 4, line 9 and line 11, "Lot 5, section 28 (with other lands)."

Mr. LARSEN of Georgia. I understand it includes all the land within this reservation.

Mr. STAFFORD. On page 4, line 9, is one instance, and another instance is on line 11.

Mr. LARSEN of Georgia. I am not in a position to say just exactly what land this is, but it is this whole lot of land set aside for naval purposes. It does not include any other land than this in Louisiana that was set aside in 1820 for naval purposes.

Mr. STAFFORD. It is rather nebulous phraseology, and I could not understand from reading the bill or the report just what was meant by that language. The committee, following the suggestion of the Acting Secretary of the Interior, struck out the language, "That so much of said lands as are subject to overflow shall be by the Secretary of the Interior certified to the State of Louisiana under the swamp land grant act of the United States." The gentleman will not object to eliminating that?

Mr. LARSEN of Georgia. No; certainly not.

Mr. STAFFORD. Mr. Speaker, I withdraw the reservation of the objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Navy be, and he is hereby, authorized to cause to be certified to the Secretary of the Interior, for restoration to the public domain, the whole or such portion or portions of the several tracts of land in the State of Louisiana heretofore set apart and reserved for naval uses as are no longer required for the purpose for which they were reserved or for any purposes connected with the naval service, and upon such certification the tracts of land described herein shall be duly restored to and become a part of the public lands of the United States; and a preference-right entry for a period of six months from the date of this act shall be given all bona fide settlers who are qualified to enter under the homestead law and have made improvements and are now residing upon any agricultural lands in said reservations, and for a period of six months from the date of settlement, when that shall occur, after the date of this act: *Provided,* That persons who enter under the homestead law shall pay for such lands the value heretofore or hereafter determined by appraisement, not less than the price of the land at the time of entry; and such payment may, at the option of the purchaser, be made in five equal installments, at times and at rates of interest to be fixed by the Secretary of the Interior: *Provided further,* That so much of said lands as are subject to overflow shall be by the Secretary of the Interior certified to the State of Louisiana under the swamp land grant acts of the United States: *And provided further,* That the certification of lands hereby authorized by the Secretary of the Navy and the Secretary of the Interior shall be subject to confirmation of title, as follows:

Title is hereby confirmed to the original entrymen, their heirs, assigns, or legal representatives to the lands upon which entries were made at the United States land office at Opelousas, La., paid for at the legal rate at the time of entry for Government lands in that locality, and for which lands the said land office issued certificates of purchase to the original entrymen, as follows, to wit:

In township 14 south, range 11 east, on Cypress Island—

Fractional sections 31 and 32, Joseph T. Hawkins, August 7, 1844; certificate No. 4184.

In township 15 south, range 11 east, on Cypress Island—

Lot 1 of section 6 and lots 1 and 2, section 5, John Dawson, December 26, 1843; certificate No. 4115.

Lots 3, 4, and 5, section 5, and lots 2, 3, 4, and 5, section 6, John D. Alston, December 26, 1834; certificate No. 4114.

In township 15 south, range 12 east, on Navy Commissioners Island—

Fractional section 38 and lots 1 and 2, section 36, Henry Bradley, April 29, 1843; certificate No. 4081.

Lots 3 and 4, section 36, John L. Baize, September 5, 1838; certificate No. 1998.

In township 14 south, range 11 east—

Lot 3, section 27 (with other lands), John Brownson and Daniel Fisher, May 27, 1839; certificate No. 2604.

East half of southeast quarter section 27 (with other lands), Daniel Fisher, October 27, 1840; certificate No. 2799.

Lot 5, section 28 (with other lands), John Brownson and Daniel Fisher, May 27, 1839; certificate No. 2607.

Lots 3 and 4 and southwest quarter of southwest quarter section 28, Daniel Fisher, September 15, 1840; certificate No. 2759.

Fractional section 29, Daniel Fisher, September 16, 1840; certificate No. 2760.

Fractional section 32, Daniel Fisher, September 16, 1840; certificate No. 2762.

Northeast quarter section 33, John Fowler, May 10, 1839; certificate No. 2581.

West half and southeast quarter section 33, Daniel Fisher, September 16, 1840; certificate No. 2763.

East half of northeast quarter section 34, Daniel Fisher, October 27, 1840; certificate No. 2802.

Lots 3 and 4, section 34 (with other lands), Pierre Jupiter, May 10, 1839; certificate No. 2582.

Southwest quarter section 34, Daniel Fisher, September 16, 1840; certificate No. 2761.

Southeast quarter section 34 (or lots 5 and 7 and south half of southeast quarter), John Brownson and Daniel Fisher, May 27, 1839; certificate No. 2603.

West half or northwest quarter section 35, Daniel Fisher, October 27, 1840; certificate No. 2800.

Southwest quarter and west half of southeast quarter section 35, John Brownson and Daniel Fisher, May 27, 1839; certificate No. 2605.

With a committee amendment as follows:

Page 2, line 18, after the word "further," strike out "That so much of said lands as are subject to overflow shall be by the Secretary of the Interior certified to the State of Louisiana under the swamp land grant acts of the United States: *And provided further.*"

The SPEAKER. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. LARSEN of Georgia, a motion to reconsider the vote whereby the bill was passed was laid on the table.

DESERT-LAND ENTRIES IN SAN BERNARDINO COUNTY, CALIF.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 10767) to exempt from cancellation certain desert-land entries in San Bernardino County, Calif.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. WALSH. Reserving the right to object, I should like to know why this land should be exempted from cancellation. This is one of the bills on the calendar as to which I have not had an opportunity to examine the report.

Mr. SWING. This land can be reclaimed under the public land laws by digging wells and installing pumping plants, of which there should be at least one on every 80 acres. These wells, with the installation of the pumping plant, cost about $8,000 per well, or $16,000 for the average filing. The land has been organized into a public irrigation district, and they are seeking to acquire water rights and storage rights in a reservoir property at the headwaters of the Mojave River, which flows through the valley. If they get this reservoir, they will then have gravity flow water, which will be much cheaper than the digging of wells. They have now pending in the Federal court, for hearing in October of this year, a condemnation suit to fix the valuation of the property which they desire to take over. If they dig the wells, they will then have the wells and still have to pay for the reservoir property. There is ample water in this reservoir which they are seeking to acquire to supply the land involved in this bill, as well as the other lands in the district. Then the wells, which they had dug at a cost of $16,000 for each filing, would only be useful for domestic water. It is to obviate the necessity for doing this, or else losing their filings, that we are asking for this postponement until they can acquire water from a much more desirable and economical source.

Mr. STAFFORD. Will the gentleman yield?

Mr. SWING. Yes.

Mr. STAFFORD. What additional rights do these entrymen secure by the exemption from cancellation as carried in this bill?

Mr. SWING. They acquire no additional rights. This simply preserves their entries from being lost to them while they are concluding the purchase of this property, which will supply water to all of this land.

Mr. STAFFORD. When they transfer their rights to the lands which they have entered, will they subsequently receive from the irrigation district the same quantity of land?

Mr. SWING. They do not assign their lands to the district.

Mr. STAFFORD. I thought that was the method whereby they entered into the irrigation district proposal.

Mr. SWING. No; under the laws of California the irrigation district is simply a method of taxation to pay for bonds issued by the district. What the gentleman has in mind is a reclama-

tion project. There they would have to transfer the title to the land. In this way there is no transfer of title.

Mr. STAFFORD. So they retain title to what they have originally entered?

Mr. SWING. They retain that title, and they are under the same obligation to comply with the public land laws in other respects as they are to-day. This simply gives them one year in which to conclude their negotiations and acquire this reservoir property.

Mr. ARENTZ. Mr. Speaker, I may say that I know this territory pretty well, in San Bernardino County, at the headwaters of the Mojave River. When an entryman takes up 320 acres under one of these locations he has to put one-eighth of the land under cultivation, and the only way in which he can do it is to put down wells which are very costly. I know that they have water stored in the reservoir on the headwaters on the summit of the San Bernardino Mountains, where the snow is deep. They have organized themselves into an irrigation district, and the idea is to hold these lands intact, keep the original settlers on the land, and see if they can place a sufficient amount of water in storage to irrigate the land instead of sinking costly wells.

Mr. MONDELL. Will the gentleman yield?

Mr. SWING. Certainly.

Mr. MONDELL. It is a fact, as we all know, that where settlers are holding lands under the desert land law in good faith and endeavoring to reclaim them, we have always extended the time where there was any hope of reclamation. The only possible way in which you can secure the reclamation and improvement of these lands is by giving the opportunity, such as these people are seeking, to irrigate the land. We are simply giving them a little more time than the law now gives them in which to do the work and to expend the money necessary to reclaim the lands.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The bill was read, as follows:

Be it enacted, etc., That no desert-land entry heretofore made in good faith under the public land laws for land in sections 1, 2, 3, 4, inclusive, all; section 5, east half, northwest quarter, east half southwest quarter, section 8, east half, township 4 north, range 3 west, San Bernardino meridian; sections 9, 10, 11, inclusive, all, section 12, northwest quarter, section 15, north half and southwest quarter, section 16, all, section 17, east half, section 20, east half, section 21, all, township 4 north, range 3 west, San Bernardino meridian; section 2, southeast quarter and west half, sections 3 and 4, all; section 5, east half, section 7, south half; sections 8, 9, 10, 11, all; section 12, west half, southeast quarter; sections 13, 14, 15, 16, 17, 18, all; section 19, north half, southeast quarter, north half, southwest quarter, southeast quarter, southwest quarter; sections 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, all; section 30, east half, east half, northwest quarter, northwest quarter, northwest quarter and east half southwest quarter; sections 32, 33, 34, 35, 36, all; township 5 north, range 3 west, San Bernardino meridian, in San Bernardino County, State of California, shall be canceled prior to March 1, 1923, because of failure on the part of the entrymen to make any annual or final proof falling due upon any such entry prior to said date. The requirements of law as to annual assessments and final proof shall become operative from said date as though no suspension had been had. If the said entrymen are unable to procure water to irrigate the said lands above described through no fault of theirs, after using due diligence, or the legal questions as to their right to acquire water, water rights, and storage rights for the irrigation of said lands are still pending and undetermined by said March 1, 1923, the Secretary of the Interior is hereby authorized to grant such further extension as in his opinion may be proper for an additional period of not exceeding two years.

Mr. STAFFORD. Mr. Speaker, I think in line 5, of page 1, instead of a semicolon after the word "all" there should be a comma.

Mr. SWING. I ask unanimous consent that that change be made, a comma instead of a semicolon in line 5, page 1, after the word "all."

The SPEAKER. Without objection, the correction will be made.

There was no objection.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

On motion of Mr. SWING, a motion to reconsider the vote by which the bill was passed was laid on the table.

VALIDATING THE TITLE OF LANDS IN FORT SABINE MILITARY RESERVATION, LA.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 10517) providing for the confirmation and validation of title to certain lands situated in Cameron Parish, State of Louisiana.

Mr. STAFFORD. Mr. Speaker, I ask unanimous consent that this bill may be passed over without prejudice.

Mr. LAZARO. Will the gentleman withhold that for a moment?

This bill is designed to validate titles to certain lands in Cameron Parish, La. The bill was submitted to the Secretary of the Interior. The gentlemen who requested me to introduce the bill called on the Secretary of the Interior, and he went over with them very carefully the matter and suggested the form in which it was introduced. After that the committee held hearings, and after a thorough consideration the committee reported the bill unanimously.

Mr. STAFFORD. It is rather an important bill. I have gone over it thoroughly, went over the original act in which the State of Louisiana without authority at law transferred these lands to these persons whose claims it is sought to validate, and I think the bill ought to go over for another two weeks.

The SPEAKER. The gentleman from Wisconsin asks unanimous consent that the bill be passed without prejudice. Is there objection?

There was no objection.

SPECIAL CANCELING STAMPS.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 11379) authorizing the Postmaster General to permit the use of special canceling stamps in the post offices of the first class in the State of Arkansas bearing the words and figures "Visit Ark. State Fair and Exposition Oct 4–14, 1922."

The SPEAKER. Is there objection?

Mr. WALSH. Observing the right to object, I notice a rather important amendment to this bill. Is there any other gathering for amusement or enterprise going to take place in the great West during the coming fall that has not thus far been provided for by special canceling stamps?

Mr. STEENERSON. I do not know of any.

Mr. WALSH. Why not start in by having a stamp reading "Reelect STEENERSON to Congress"?

Mr. STEENERSON. That would be superfluous. [Laughter.]

Mr. WALSH. I am glad to have that information, for I can see some gentlemen around me that I think would be glad to have that sort of advertising. Has the gentleman any other bills for this character of stamp?

Mr. STEENERSON. No; there is an amendment consolidating several similar bills, and there is expected to be offered by the gentleman from Wyoming or some one else an item including one canceling stamp at Cheyenne, Wyo.

Mr. STAFFORD. I thought when the last omnibus bill was passed that the gentleman gave assurance that would be the last time he would offend.

Mr. STEENERSON. Not in that language. I said I hoped that a general bill would be passed. That bill has been passed by the Senate and has been signed by the President and is the law now; but there is a request to let this bill go through because, to comply with the general law which was embodied in House bill 10941, it is necessary to make a certain showing to the Postmaster General; that it is a matter of general importance to the community and is not to be conducted for private gain. They have already shown that to my committee, and if this bill was not passed, which was introduced before the new law was passed and reported, they would have to go back home and furnish the evidence.

Mr. WALSH. What is the amendment that the gentleman refers to in reference to Wyoming?

Mr. STEENERSON. It is a canceling stamp for the post office at Cheyenne for the frontier celebration which is to take place July 25 to 28.

Mr. MONDELL. I suppose the gentleman knows that the Frontier celebration at Cheyenne is really to be the finest and most important celebration of that character in the country.

Mr. WALSH. Well, I accept the gentleman's invitation, and I have no objection.

Mr. BLANTON. Mr. Speaker, I ask for the regular order.

The SPEAKER. The gentleman from Texas demands the regular order, and the Clerk will report the bill.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Postmaster General be, and he hereby is, authorized and directed to permit the use in the post offices of the first class in the State of Arkansas special canceling stamps bearing the words and figures "Visit Arkansas State Fair and Exposition, October 4–14, 1922."

With the following committee amendment:

Strike out the title of the bill and insert in lieu thereof the following: "Authorizing the use of special canceling stamps in certain post offices."

Strike out everything after the enacting clause and insert in lieu thereof the following:

"That the Postmaster General be, and he is hereby, authorized and directed, under rules and regulations to be prescribed by him, to permit the use of special canceling stamps as follows: In post offices of the first class in the State of Arkansas, special canceling stamps bearing the words and figures 'Visit Arkansas State Fair and Exposition, October 4–14, 1922.' In first-class post offices in the States of Oregon and Idaho, special canceling stamps bearing the words and figures 'Old

Oregon Trail Pageant, Baker, July 4, 1922.' In the post office at Wichita, Kans., special canceling stamps bearing the words and figures 'Reunion Thirty-fifth Division at Wichita, Kansas, September 25–27, 1922.' In the post office at Sacramento, Calif., special canceling stamps bearing the words and figures 'Come to the Days of '49 Celebration, Sacramento, California, May 23–29, 1922': *Provided*, That no permit shall be granted for a longer period than six months and the duration of the event to be advertised: *Provided further*, That nothing in this act shall be construed to authorize the expenditure of any postal funds or appropriation either for the purchase of special canceling stamps or postmarking dies or for adapting canceling machines for the use of such stamps or dies, or for installing the same, but all expense shall be prepaid by the permittee.

"SEC. 2. That any permission granted under this act is hereby revoked in the event the Government shall find it expedient or necessary to use special canceling stamps or postmarking dies for its own purposes."

Mr. STEENERSON. Mr. Speaker, I offer the following amendment to the committee amendment.

The Clerk read as follows:

Mr. STEENERSON moves to amend the committee amendment as follows: Page 2, line 7, strike out the figures "4" and "14" where they occur, and insert the figures "9" and "15" in lieu thereof.

Mr. RAKER. Mr. Speaker, I want to be heard on this matter. In addition to what has been said about Arkansas and Idaho and the old Oregon trail and the forty-nine celebration at Sacramento, I want to say that the Sacramento celebration will be one of the greatest in the history of the world when the old campaigners gather and bring back the recollections of the old days.

However, I am wondering whether or not many of the people here in Washington will not be compelled to hit the trail on or about the 23d day of this month unless we are going to get down to No. 287 on the calendar, S. 2919, a bill to extend the provisions of the rent act here. If that is not done, there will be here a real example of the old trail, when these people will be thrown out of their places of occupancy, and the advice that has been given by some of the Members, to the effect that the realtors and landlords will be kind and nice to them, will prove to be nothing but a dream. If they are going to be nice and kind, then what is the objection to passing this bill, that will give these people contentment and satisfaction when they pay their rent bills. I hope the House will get to the consideration of this bill, and if somebody should be so unfortunate as to object, then that the gentleman having charge of the bill will ask recognition of the Speaker to suspend the rules and pass the bill to-day. Do it now. Do not delay until it is too late. I hope that that will be done before the House adjourns to-day.

Mr. STEENERSON. Mr. Speaker, will the gentleman yield?

Mr. RAKER. I yield for a question.

Mr. STEENERSON. There is an item in this committee amendment providing for a "Come to the days of forty-nine celebration." That is to be celebrated from May 23 to May 29, 1922. It seems to me impossible for this bill to become a law by that time.

Mr. RAKER. I think that we can get at it in another way. The celebration is all right, it is fine, but it does not meet the situation of the poor unfortunate people living in this District of Columbia who are going to be kicked out unless we pass the bill extending the rent law. Both bills can get through.

Mr. STEENERSON. Oh, I refuse to yield further. I was going to ask the gentleman if he had any objection to striking out that item.

Mr. RAKER. The gentleman can strike out the whole bill or pass it. I would like to see the bill passed, but it could well go over until later in the day, after we have passed the rent law.

Mr. Speaker, I ask unanimous consent to extend and revise my remarks in the RECORD on this bill.

The SPEAKER. The gentleman from California asks unanimous consent to extend his remarks in the RECORD on this bill. Is there objection?

Mr. WALSH. Which bill?

Mr. RAKER. The remarks that I have just made in regard to it.

Mr. WALSH. But the gentleman's remarks were not on the bill under consideration. He was talking about some poor tenants in the District of Columbia.

Mr. RAKER. I can extend them in regard to the forty-nine celebration.

Mr. WALSH. If that is what the gentleman intends to do, very well.

Mr. STAFFORD. Are they to be the gentleman's own remarks?

Mr. RAKER. Yes, sir. They will be when I get them into the RECORD.

The SPEAKER. Is there objection?

There was no objection.

Mr. STEENERSON. Mr. Speaker, I offer the following amendment to the committee amendment which I send to the desk and ask to have read.

The SPEAKER. First the vote will be taken upon the amendment to the amendment that is now pending, offered by the gentleman from Minnesota.

The amendment to the amendment was agreed to.

Mr. STEENERSON. Mr. Speaker, I now offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. STEENERSON to the committee amendment: Page 2, line 16, after the figures "1922," insert the following: "in the post office at Cheyenne, Wyo., of a special canceling stamp bearing the following words and figures: 'Frontier Days, July 25–29, 1922.'"

The SPEAKER. The question is on agreeing to the amendment to the amendment.

The amendment was agreed to.

The SPEAKER. The question now is on the committee amendment as amended.

The committee amendment as amended was agreed to.

Mr. LONDON. Mr. Speaker, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. LONDON: Page 2, line 16, after the figures "1922," insert "and the post office at the city of New York, special canceling stamps bearing the words 'We demand general amnesty for political offenders.'"

Mr. BLANTON. Mr. Speaker, I make the point of order against the amendment that it is not germane.

Mr. STEENERSON. Mr. Speaker, this is contrary to the express purpose of the bill. It is not in order; it is not germane. I make the point of order.

The SPEAKER. The gentleman from Minnesota makes the point of order that the amendment is not germane.

Mr. STAFFORD. Does the gentleman mean that the only canceling stamps to be recognized are canceling stamps relating to cowboy-punching affairs?

Mr. STEENERSON. The purpose is defined in the bill.

The SPEAKER. The trouble the Chair sees is that the gentleman offers this as an amendment to the bill. Where does the gentleman mean that it should go. The committee amendment has already been agreed to.

Mr. LONDON. I offer it on page 2, line 16, after the figures "1922."

The SPEAKER. But that has already been agreed to.

Mr. LONDON. An amendment to any part of the bill is in order.

The SPEAKER. An amendment to the amendment is not in order after the amendment has been agreed to.

Mr. LONDON. But my amendment is an amendment to the bill.

The SPEAKER. Section 1 of the bill has been amended by an amendment. What the gentleman is reading is an amendment. The difficulty is that that amendment has already been agreed to, and therefore it is not subject to any further amendment.

Mr. LONDON. Is not section 1 of the bill subject to amendment?

The SPEAKER. Section 1 has been stricken out and a substitute has been adopted for it.

Mr. LONDON. Then my amendment is an amendment to the substitute.

The SPEAKER. But the substitute has been adopted. It is too late. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill authorizing the use of special canceling stamps in certain post offices."

FREE TRANSMISSION THROUGH THE MAILS OF PUBLICATIONS FOR THE BLIND.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 10496) to provide for the free transmission through the mails of certain publications for the blind.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. WALSH. Mr. Speaker, I ask unanimous consent that the bill may be passed over without prejudice.

The SPEAKER. Is there objection?

Mr. STEENERSON. Has the gentleman any particular objection to it?

Mr. WALSH. Yes. The Member who introduced the bill is unavoidably detained, and I do not want to object in her absence.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts that the bill be passed over without prejudice?

There was no objection.

The SPEAKER. The Clerk will report the next bill.

WOMEN'S OVERSEAS SERVICE LEAGUE.

The next business in order on the Calendar for Unanimous Consent was the bill (H. R. 7299) to incorporate the Women's Overseas Service League.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of this bill?

Mr. STAFFORD. Mr. Speaker, the gentleman who introduced and reported this bill is out of the city. I wish to suggest an amendment that would more or less require the gentleman's attendance, and I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. The gentleman from Wisconsin asks unanimous consent that the bill go over without prejudice. Is there objection? [After a pause.] The Chair hears none.

HOSPITAL SERVICES AND SUPPLIES FOR VETERANS OF THE WORLD WAR.

The next business in order on the Calendar for Unanimous Consent was the joint resolution (H. J. Res. 313) providing for the disposal of articles produced by patients in the United States Veterans' Bureau.

The Clerk read the title of the joint resolution.

The SPEAKER. Is there objection to the present consideration of this joint resolution?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, would the gentleman having charge of this bill have any objection to a provision extending it to governmental institutions housing war veterans? For instance, these war veterans are housed in Army and Navy hospitals and in certain of the soldiers' homes. Why should not the heads of these institutions have the same privilege which it is now attempted to confer upon the Director of the Veterans' Bureau?

Mr. PARKER of New York. Mr. Speaker, the hospitals, of course, as the gentleman knows, have just been turned over from the Public Health Service to the Veterans' Bureau. I am speaking now of the ex-soldiers in hospitals, and they are practically now under the control of the Veterans' Bureau, whereas before they were under the control of the Public Health Service.

Mr. STAFFORD. If the gentleman will yield in that particular. I want to get clear in mind as to the facts. Does the gentleman contend the hospitals authorized by the first hospitalization bill, by which some of the money was transferred to the Board of Managers of the National Home for a hospital, as at Milwaukee, have been transferred over to the Veterans' Bureau?

Mr. PARKER of New York. Some of them have and some of them have not.

Mr. STAFFORD. Which ones under control of the Board of Managers of the Soldiers' Home have been transferred to the Veterans' Bureau? What classes have been transferred?

Mr. PARKER of New York. They have only been transferred as far as they deal with this particular class of inmates. The general control of the Army, navy, and soldiers' home hospitals has not been turned over. We appropriated some $17,000,000 to build hospitals, and those hospitals were started under the Public Health Department.

Mr. STAFFORD. Some were.

Mr. PARKER of New York. Now, in the recent bill those hospitals have been all taken out from under the control of the Public Health Service and put under the Veterans' Bureau. Now, this bill seeks to give the Veterans' Bureau the same rights and the same privilege of disposing of these articles that the Public Health Service Department had.

Mr. STAFFORD. I am in hearty sympathy with the purpose of the bill, but I am asking the gentleman's opinion of the fact that the inmates housed in the hospitals under the control of the Board of Managers of the Soldiers' Home are in hospitals under the control of the Veterans' Bureau.

Mr. PARKER of New York. There is no question. I will answer the gentleman's question this way: I am very much inclined to think under the hospitals the gentleman mentions they have that right now, because they are under the control of the Public Health Service.

Mr. STAFFORD. I beg the gentleman's pardon, they are not under the control of the Public Health Service, they are under the control of the Board of Managers of the National Soldiers' Home. The hospitals that are under the control of the Public Health Service are independent entirely of the hospitals which are erected on National Soldiers' Home grounds.

I have an amendment extending that and in no wise destroying the purpose of the bill and the amendment is that instead of the Director of the United States Veterans' Bureau substitute the heads of Government institutions where the veterans of the World War are domiciled are authorized to make regulations, and so forth. So far as the Board of Managers of the Soldiers' Home or so far as the hospitals where the war veterans are housed are concerned there are many; there is one at Johnson City, Tenn.; there is one at Marion, Ind.; and there is a hospital at Milwaukee shortly to be completed, given over exclusively to war veterans.

Mr. PARKER of New York. Are they not under the control of the Veterans' Bureau?

Mr. STAFFORD. No; they are under the control of the Board of Managers of the National Soldiers' Home. This is a character of legislation you should extend to the heads of all these hospitals rather than limit it to the Veterans' Bureau. I am trying to find out what objection there could be to extending it to the heads of all of these governmental institutions.

Mr. PARKER of New York. I would like to say to the gentleman that before accepting that amendment I would want to know what effect it would have on the hospitals he mentioned.

Mr. STAFFORD. What possible effect could it have but good? The gentleman's report shows that the Public Health Service has this privilege to-day. The Veterans' Bureau does not have it to-day but is rather assuming to take jurisdiction over these hospitals. Why should not the heads of these other institutions have the same privilege? It will redound to the benefit of the war veterans.

Mr. PARKER of New York. We are only giving one man the right to do this; we are not giving blanket authority to everybody.

Mr. STAFFORD. If it is good, as far as one individual is concerned, having jurisdiction of one character of hospital, why is it not good for the hospitals under the control of these other activities which house these veterans?

Mr. FESS. Will the gentleman yield?

Mr. STAFFORD. I will.

Mr. FESS. Has the gentleman made an investigation whether this privilege is not already extended to the board of managers of the Soldiers' Home at Dayton, for example?

Mr. STAFFORD. I have not. The report only shows that the Public Health Service has it.

Mr. SISSON. Will the gentleman yield?

Mr. STAFFORD. Yes.

Mr. SISSON. Do you not believe that all of these people should be treated just alike?

Mr. STAFFORD. It is an urgent condition, where the World War veterans should have this privilege and the heads of the hospitals having them in charge should have that authority.

Mr. SISSON. I agree with the gentleman.

Mr. STAFFORD. This is for the benefit of the World War veterans.

Mr. SISSON. I think the bill ought to be objected to unless you can treat them all alike.

Mr. McLAUGHLIN of Michigan. Does the gentleman think the authorities of the soldiers' homes have not this power now?

Mr. STAFFORD. I do not think they have.

Mr. McLAUGHLIN of Michigan. I think they have, and have exercised it.

Mr. STAFFORD. What is the basis of the gentleman's opinion?

Mr. McLAUGHLIN of Michigan. I do not know just where I got my information. I am not sure that I am correct.

Mr. STAFFORD. The report of the director only refers to the authority so far as the Public Health Service is concerned.

Mr. RAYBURN. Will the gentleman yield?

Mr. STAFFORD. I will.

Mr. RAYBURN. Does not the gentleman think it risky to put on an amendment of that sort when nobody seems to have information as to whether the other department should be included in this?

Mr. STAFFORD. Risky, when it comes to having jurisdiction for the good of those in the institutions? It is all to the World War veterans' advantage. We are legislating on one subject. What harm can come?

Mr. RAYBURN. After investigation it may be determined that it ought not to apply to some of the institutions.

Mr. STAFFORD. How can the gentleman conceive of that condition?

Mr. RAYBURN. I can not conceive of that condition, because I do not know anything about it. I think there is but little information to act upon in amending a bill like this.

Mr. ANDREWS of Nebraska. This subject of management was discussed at considerable length when the question was before the Committee on Public Buildings and Grounds, and the assignment of space in the soldiers' homes for the care of the veterans of the World War. We tried to reach an agreement by means of which the Public Health Service could have control of the medical side of the question, and the board of managers to have the general control of the institutions.

That agreement could not be arrived at. Finally it was decided by the committee that the Director of the Veterans' Bureau, then the Bureau of War Risk Insurance, could make the assignment of patients to these homes, but the soldiers so placed should be under the management of the institution itself. We did not take out of the hands of the board of managers of soldiers' homes any authority that belonged to them. We found it impossible to reach an agreement by means of which cooperation on the part of these various agencies could be secured, and we were obliged to make practically an arbitrary decision in our own action in order to make that space available for some 7,000 or 8,000 people. And so in that action it was not contemplated at all that the authority of the board of managers of these homes should be abrogated in any particular whatever.

Mr. RAYBURN. I know; but is it not the policy that we are going to follow in any hospital to take care of the veterans of this war, and that the soldiers' homes will have no jurisdiction in any wise?

Mr. STAFFORD. Oh, no. It is not attempted to supersede the jurisdiction of the hospitals now under construction on soldiers' homes grounds that are under the jurisdiction of the board of managers of national homes. This applies to one in Milwaukee nearing completion, a 500-bed hospital for tubercular patients, and jurisdiction of those patients is under the exclusive control, as the gentleman from Nebraska [Mr. ANDREWS] has stated, of the board of managers of national homes.

Mr. ANDREWS of Nebraska. Will the gentleman yield once more?

Mr. STAFFORD. Yes.

Mr. ANDREWS of Nebraska. I am in order, I judge, according to the ruling of the gentleman from Kansas.

We understood that in the method of procedure the director of the bureau had full authority under the law to assign any number of World War veterans to these homes that their facilities there would accommodate. He could leave them there at his own discretion for such length of time as he deemed proper. If he should have under his control at a subsequent time hospitals of sufficient capacity so that he could withdraw the men from the soldiers' homes and place them in hospitals under his own independent jurisdiction, he had the authority to do so, and that was the basis on which the whole proposition was settled in the Committee on Public Buildings and Grounds as to allotting space.

Mr. HUSTED. Will the gentleman yield?

Mr. STAFFORD. Yes; if I have the floor.

Mr. HUSTED. Mr. Speaker, under the act creating the Veterans' Bureau, all of the World War veterans receiving hospitalization were placed under the jurisdiction of the Director of the Veterans' Bureau. Now, the Director of the Veterans' Bureau was allowed to use various facilities, among others, the National Soldiers' Home, and, as a matter of fact, he did make contracts with some of these outside hospitals for the care of sick ex-service men. But this bill provides that the Director of the Veterans' Bureau may make such regulations as he deems fit and proper for the disposition of articles produced by these men who are in the hospitals. Now, notwithstanding these men may be in the National Soldiers' Home, or wherever they may be, they are still under the jurisdiction of the Director of the Veterans' Bureau. And when you pass an act of Congress which vests in the Director of the Veterans' Bureau the power to make rules and regulations for the disposition of these articles which are produced in hospitals by sick ex-service men, that act applies everywhere, to every hospital, whether it is a hospital under the jurisdiction of the Public Health Service or of the managers of the National Soldiers' Home, or of the Veterans' Bureau. This act is of general application and applies everywhere. So that it gives the Director of the Veterans' Bureau power to make these rules applicable in the National Soldiers' Home or in a hospital under the Public Health Service or in a hospital under the direct supervision of the Veterans' Bureau. In my opinion, the amendment suggested by the gentleman from Wisconsin would not broaden the scope of the bill one iota.

Mr. SISSON. Then there could be no objection to an amendment that would remove all doubt. There is some doubt about the jurisdiction.

Mr. STAFFORD. In reply to the position stated by the gentleman from New York [Mr. HUSTED], I wish to direct his attention to the provision of the pending bill which authorizes the director to either dispose of these articles that the war veteran makes, by allowing the money to go for his benefit or depositing the money received to the credit of the appropriation from which materials for making the articles are purchased.

Now under the actual operation of the hospitals under the control of the Board of Managers of the National Soldiers' Home the Director of the Veterans' Bureau allots a certain amount of money for each war veteran received into the soldiers' home, and it is for the purpose of enabling the heads of those homes to determine whether the money should be granted for the benefit of the war veterans, or whether it should go to the appropriation received by the Veterans' Bureau. There should not be any objection to the proposed amendment.

Mr. PARKER of New York. I hope the gentleman will not insist on his objection to the bill. This amendment came from the Veterans' Bureau. I have no personal objection to the amendment offered by the gentleman from Wisconsin, but I would certainly like to know what the objection of the Veterans' Bureau is.

Mr. STAFFORD. Then I will ask unanimous consent that the bill be passed over without prejudice for two weeks.

Mr. PARKER of New York. Wait a minute.

Mr. STAFFORD. I thought the gentleman had finished.

Mr. PARKER of New York. No. I wish the gentleman would let this bill go through now, and let it be amended in the Senate. I will help him do it. The Veterans' Bureau are particularly anxious that this bill be passed.

Mr. SISSON. Mr. Speaker, if that is the course to be pursued, I shall object; but if the suggestion of the gentleman from Wisconsin is carried out I shall have no desire to oppose it.

Mr. PARKER of New York. I accept the amendment, Mr. Speaker.

Mr. STAFFORD. I withdraw the reservation of an objection with the understanding that this amendment be adopted.

Mr. HAYDEN. Let us have a vote on it.

Mr. STAFFORD. I ask unanimous consent that the bill be passed over without prejudice.

Mr. RAKER. I object.

The SPEAKER. Is there objection to the consideration of the bill?

Mr. STAFFORD. I object.

Mr. CAMPBELL of Kansas. The gentleman from California objected. The effect of the gentleman's objection is to strike the bill from the calendar.

Mr. RAKER. The gentleman from Wisconsin asked that it be passed over for two weeks?

The SPEAKER. The gentleman asked that it be passed over without prejudice. Is there objection to the request of the gentleman from Wisconsin, that it be passed over without prejudice? [There was no objection.]

The SPEAKER. The Clerk will report the next bill.

RURAL DELIVERY SERVICE.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 7544) authorizing the Postmaster General to temporarily reduce the pay of rural carriers for disciplinary purposes instead of suspending them without pay.

The title of the bill was read.

The SPEAKER. Is there objection to the present consideration of this bill?

Mr. RAYBURN. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER. The gentleman from Texas makes the point of order that there is no quorum present.

Mr. STEENERSON. I hope the gentleman will withhold that until we can consider this bill.

The SPEAKER. The Chair will count. [After counting.] It is quite clear that there is no quorum present.

Mr. RAYBURN. I withdraw that.

The SPEAKER. It is too late. The Chair was quite slow in counting.

Mr. STEENERSON. Mr. Speaker, I demand a call of the House.

ADJOURNMENT.

Mr. MONDELL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 15 minutes p. m.) the House adjourned until to-morrow, Tuesday, May 16, 1922, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

612. Under clause 2 of Rule XXIV, a letter from the Secretary of the Navy, transmitting a tentative draft of a bill to credit the general account of advances to the midshipmen's store fund at the United States Naval Academy, was taken from the Speaker's table and referred to the Committee on Naval Affairs.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. HAYDEN: Committee on the Public Lands. S. 2556. An act for the relief of Edwin Gantner; without amendment (Rept. No. 1009). Referred to the Committee of the Whole House.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A joint resolution (S. J. Res. 173) authorizing the President to appoint a commission to represent the Government of the United States at the centennial celebration of the independence of Brazil, to be held at Rio de Janeiro in September next; Committee of the Whole House on the state of the Union discharged, and referred to the Committee on Industrial Arts and Expositions.

A joint resolution (H. J. Res. 286) authorizing the President to appoint a commission to represent the Government of the United States at the centennial celebration of the independence of Brazil, to be held at Rio de Janeiro in September next; Committee on Foreign Affairs discharged, and referred to the Committee on Industrial Arts and Expositions.

A joint resolution (H. J. Res. 292) authorizing the President to appoint a special commission of friendship, good will, and congratulation to represent the Government and people of the United States at the centennial celebration of the independence of Brazil; Committee on Foreign Affairs discharged, and referred to the Committee on Industrial Arts and Expositions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. MONTOYA: A bill (H. R. 11655) to continue the land offices at Clayton, Tucumcari, and Fort Sumner, in the State of New Mexico, and for other purposes; to the Committee on the Public Lands.

By Mr. TINKHAM: A bill (H. R. 11656) to provide for a census of the population of the United States as of 1922; to the Committee on the Census.

By Mr. EDMONDS: A bill (H. R. 11657) to amend section 190 of the Revised Statutes of the United States; to the Committee on the Judiciary.

By Mr. FREE: A bill (H. R. 11658) making it unlawful to require the attendance of children under the age of 14 years at any school, kindergarten, or academy in the District of Columbia before the hour of 9 o'clock a. m. standard time; to the Committee on the District of Columbia.

By Mr. OLDFIELD (by request): A bill (H. R. 11659) authorizing and directing the Secretary of the Interior to issue certain placer-mining patents, and for other purposes; to the Committee on the Public Lands.

By Mr. WINSLOW: A bill (H. R. 11660) to provide for the construction of a vessel for the Coast Guard; to the Committee on Interstate and Foreign Commerce.

By Mr. RHODES: Joint resolution (H. J. Res. 325) appropriating $2,000,000 to be expended by the Secretary of Agriculture in furnishing free seed for the relief of destitute flood sufferers on the Mississippi River, its tributaries, and other rivers within the United States; to the Committee on Appropriations.

By Mr. DENISON: Joint resolution (H. J. Res. 326) appropriating $1,000,000 for repairing and restoring the levees on the Mississippi River that have been destroyed or seriously injured by recent floods, and for other purposes; to the Committee on Appropriations.

By Mr. STINESS: Memorial of the Legislature of the State of Rhode Island relative to the recognition of Palestine as the homeland of the Jewish people; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BENHAM: A bill (H. R. 11661) granting an increase of pension to Nancy Ralston; to the Committee on Invalid Pensions.

By Mr. FAUST: A bill (H. R. 11662) granting a pension to David Housel; to the Committee on Invalid Pensions.

By Mr. FITZGERALD: A bill (H. R. 11663) granting a pension to Henry C. Williams; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11664) granting a pension to Sylvester Haus; to the Committee on Invalid Pensions.

By Mr. JEFFERIS of Nebraska: A bill (H. R. 11665) for the relief of William Quinlan; to the Committee on the Public Lands.

By Mr. KINKAID: A bill (H. R. 11666) granting a pension to Henry C. Bagley; to the Committee on Invalid Pensions.

By Mr. LINEBERGER: A bill (H. R. 11667) granting a pension to Sarah E. Young; to the Committee on Invalid Pensions.

By Mr. MOTT: A bill (H. R. 11668) granting a pension to Margaret Newell; to the Committee on Invalid Pensions.

By Mr. PAIGE: A bill (H. R. 11669) granting a pension to Albert Goldthwaite; to the Committee on Invalid Pensions.

By Mr. SNELL: A bill (H. R. 11670) granting a pension to Frances Laport; to the Committee on Invalid Pensions.

By Mr. TREADWAY: A bill (H. R. 11671) granting an increase of pension to Margaret A. Bryant; to the Committee on Invalid Pensions.

By Mr. TYSON: A bill (H. R. 11672) for the relief of William H. Armstrong; to the Committee on Military Affairs.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5607. By the SPEAKER (by request): Resolution adopted by the Richard J. Harden Camp, No. 2, Department of the District of Columbia, United Spanish War Veterans, indorsing the alien-registration provisions incorporated in H. R. 10860; to the Committee on Immigration and Naturalization.

5608. By Mr. BENHAM: Petition of the Presbytery of Indianapolis, at Columbus, Ind., indorsing House bill 9753, to secure Sunday as a day of rest in the District of Columbia; to the Committee on the District of Columbia.

5609. Also, petition of the Presbytery of Indianapolis, at Columbus, Ind., indorsing House Joint Resolution 131, relative to prohibiting polygamy and polygamous cohabitation in the United States; to the Committee on the Judiciary.

5610. Also, petition of the Presbytery of Indianapolis, at Columbus, Ind., indorsing Senate Joint Resolution 31, relative to uniform laws on the subject of marriage and divorce; to the Committee on the Judiciary.

5611. By Mr. FRENCH: Petition indorsing House bill 9753 and other Sunday bills; to the Committee on the District of of Columbia.

5612. By Mr. GALLIVAN: Resolution adopted by the Council of the Appalachian Mountain Club at a meeting held April 11, 1922, protesting the transfer of the administration of the national forests from the Department of Agriculture to the Department of the Interior; to the Committee on Agriculture.

5613. Also, petition of the New England Conference for Protection of National Parks, urging early passage of Barbour bill, providing for the establishment of the Roosevelt-Sequoia National Park; to the Committee on the Public Lands.

5614. By Mr. KISSEL: Petition of Rover Legion, No. 2, Private Soldiers and Sailors' Legion, of the United States of America, Washington, D. C., relative to House bill 6309; to the Committee on the District of Columbia.

5615. Also, petition of the Southern Tariff Association, Fort Worth, Tex., relative to the pending tariff bill; to the Committee on Ways and Means.

5616. Also, petition of the Chamber of Commerce of the State of New York urging the passage of the Greene-Jones shipping bills; to the Committee on the Merchant Marine and Fisheries.

5617. By Mr. LINEBERGER: Petition of 50 members of the Junior Order of United American Mechanics of the State of California, favoring the Sterling-Towner bill; to the Committee on Education.

5618. Also, petition of citizens of Hibbing, Minn., favoring House bill 7; to the Committee on Education.

5619. Also, petition of residents of Pasadena, Calif., to pass House bill 9753 or any other Sunday bill; to the Committee on the District of Columbia.

5620. Also, petition of the Presbytery of Los Angeles, Calif., favoring House bill 9753, for the observance of Sunday as a day of rest; to the Committee on the District of Columbia.

5621. Also, petition of citizens of Los Angeles County, Calif., opposing H. R. 9753, H. R. 4388, and S. 1948, regarding proposed compulsory Sunday observance bills; to the Committee on the District of Columbia.

5622. By Mr. RADCLIFFE: Petition of citizens of Paterson, N. J., protesting against H. R. 9753, or any other Sunday bill such as H. R. 4388 or S. 1948; to the Committee on the District of Columbia.

5623. By Mr. STINESS: Memorial of Roger Williams Council, No. 29, Sons and Daughters of Liberty, Wickford, R. I., urging the passage of the Sterling-Towner bill; to the Committee on Education.

5624. Also, memorial of Providence and Vicinity (R. I.) Methodist Ministers' Association, protesting any encroachment of a railroad on the property or in the vicinity of the Sibley Memorial Hospital; to the Committee on the District of Columbia.

5625. Also, petition of 229 citizens of Providence, East Providence, North Providence, East Greenwich, and other parts of Rhode Island, protesting against the enactment of H. R. 9753, H. R. 4388, and S. 1948, or other similar Sunday legislation; to the Committee on the District of Columbia.

5626. Also, petition of 76 citizens of East Greenwich, R. I., protesting against the enactment of H. R. 9753, H. R. 4388, and S. 1948, or other similar Sunday legislation; to the Committee on the District of Columbia.

5627. By Mr. TOWNER: Petition of Mr. C. E. Williams, of Nenah, Wash., and 25 other citizens of the State of Washington, asking for the passage of the Towner-Sterling educational bill; to the Committee on Education.

5628. Also, petition of Mr. Bennett Hayes, of Melford, Nebr., and nine other citizens of the State of Nebraska, asking for the passage of the Towner-Sterling educational bill; to the Committee on Education.

5629. Also, petition of Mr. J. A. Baxley and 20 other citizens, of Savannah, Ga., for the passage of the Towner-Sterling educational bill; to the Committee on Education.

SENATE.

TUESDAY, *May 16, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 10 o'clock a. m., on the expiration of the recess.

PETITIONS.

Mr. NICHOLSON presented petitions of sundry citizens of the State of Colorado, praying that only a moderate duty be imposed in the pending tariff bill on imported kid gloves, which were referred to the Committee on Finance.

GOVERNMENT OF THE PHILIPPINE ISLANDS.

Mr. NEW, from the Committee on Territories and Insular Possessions, to which was referred the bill (H. R. 10442) to amend an act entitled "An act to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for these islands," approved August 29, 1916, as amended by an act to amend said act approved July 21, 1921, reported it with an amendment and submitted a report (No. 718) thereon.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WILLIS:

A bill (S. 3610) authorizing the construction of a bridge across the Ohio River near Steubenville, Ohio; and

A bill (S. 3611) authorizing and directing the Secretary of War to abrogate a contract lease of land and water power on the Muskingum River; to the Committee on Commerce.

By Mr. DU PONT:

A bill (S. 3612) to purchase a site for a United States post-office building for the city of Wilmington, Del.; to the Committee on Public Buildings and Grounds.

By Mr. GLASS:

A bill (S. 3613) to amend the first paragraph of section 14 of the merchant marine act of June 5, 1920 (with an accompanying paper); to the Committee on Commerce.

By Mr. NELSON:

A bill (S. 3614) relating to the official bond of the United States marshal for the southern judicial district of the State of New York; to the Committee on the Judiciary.

By Mr. NORRIS:

A bill (S. 3615) for the relief of Joseph F. Becker; to the Committee on Naval Affairs.

A bill (S. 3616) to encourage public, quasi-public, and co-operative associations to conduct or operate stockyards, and to slaughter, process, preserve, or store live-stock products or perishable foodstuffs; to the Committee on Agriculture and Forestry.

By Mr. NEW:

A bill (S. 3617) to fix the salaries of the auditor and deputy auditor of the Philippine Islands; to the Committee on Territories and Insular Possessions.

By Mr. McKINLEY:

A joint resolution (S. J. Res. 198) appropriating $1,000,000 for repairing and restoring levees on the Mississippi River that have been destroyed or seriously injured by recent floods, and for other purposes; to the Committee on Appropriations.

TARIFF BILL AMENDMENT.

Mr. LADD submitted an amendment, intended to be proposed by him to House bill 7456, the tariff bill, which was ordered to lie on the table and to be printed.

VISIT OF 1881 NAVAL CLASS TO JAPAN.

Mr. McCORMICK. Mr. President, I offer and ask unanimous consent for the immediate consideration of a resolution to which I am certain there will be no opposition.

The resolution (S. Res. 296) was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That it is the sense of the Senate of the United States that the transport *Henderson* should not proceed to Japan to convey thither certain former midshipmen of the United States.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. Overhue, its enrolling clerk, announced that the House had passed the following bills, each with amendments, in which it requested the concurrence of the Senate:

S. 1162. An act declaring Lake George, Yazoo County, Miss., to be a nonnavigable stream; and

S. 3505. An act in reference to the summoning of grand juries in the District of Columbia.

The message also announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 5224. An act to authorize the Secretary of the Navy to certify to the Secretary of the Interior, for restoration to the public domain, lands in the State of Louisiana not needed for naval purposes;

H. R. 6294. An act promoting civilization and self-support among the Indians of the Mescalero Reservation, in New Mexico;

H. R. 10767. An act to exempt from cancellation certain desert-land entries in San Bernardino County, Calif.;

H. R. 11347. An act authorizing the Secretary of War to transfer and convey to the State of Connecticut all right and title now vested in the United States to land and buildings thereon known as Fort Hale;

H. R. 11379. An act authorizing the use of special canceling stamps in certain post offices; and

H. R. 11645. An act making an appropriation to enable the Department of Justice to investigate and prosecute war frauds.

PRESIDENTIAL APPROVALS.

A message from the President of the United States, by Mr. Latta, one of his secretaries, announced that May 15, 1922, the President approved and signed the following acts:

S. 1813. An act for the relief of the owner of the steamer *Mayflower;*

S. 1814. An act for the relief of the owner of the steam lighter *Cornelia;* and

S. 1817. An act for the relief of the owners of the schooner *Horatio G. Foss.*

HOUSE BILLS REFERRED.

The following bills were severally read twice by their titles and referred as indicated below:

H. R. 5224. An act to authorize the Secretary of the Navy to certify to the Secretary of the Interior, for restoration to the public domain, lands in the State of Louisiana not needed for naval purposes; to the Committee on Naval Affairs.

H. R. 6294. An act promoting civilization and self-support among the Indians of the Mescalero Reservation, in New Mexico; to the Committee on Indian Affairs.

H. R. 10767. An act to exempt from cancellation certain desert-land entries in San Bernardino County, Calif.; to the Committee on Public Lands and Surveys.

H. R. 11347. An act authorizing the Secretary of War to transfer and convey to the State of Connecticut all right and title now vested in the United States to land and buildings thereon known as Fort Hale; to the Committee on Military Affairs.

H. R. 11379. An act authorizing the use of special canceling stamps in certain post offices; to the Committee on Post Offices and Post Roads.

H. R. 11645. An act making an appropriation to enable the Department of Justice to investigate and prosecute war frauds; to the Committee on Appropriations.

LAKE GEORGE, YAZOO COUNTY, MISS.

The PRESIDING OFFICER (Mr. JONES of Washington in the chair) laid before the Senate the amendments of the House of Representatives to the bill (S. 1162) declaring Lake George, Yazoo County, Miss., to be a nonnavigable stream, which were, on page 1, lines 4 and 5, to strike out "a nonnavigable stream" and to insert "not a navigable water of the United States"; and, on page 1, line 5, to strike out all after "the" where it occurs the second time, down to and including "Mississippi," in line 7, and insert "laws enacted by the Congress for the preservation and protection of such waters."

Mr. HARRISON. Mr. President, the amendments are of small moment, and I am sure there is no opposition to the bill as amended by the House. I move that the Senate concur in the House amendments. There will be no discussion of the matter.

The amendments were concurred in.

SUMMONING GRAND JURIES IN THE DISTRICT OF COLUMBIA.

Mr. NELSON. I ask the Chair to lay before the Senate the amendments of the House of Representatives on Senate bill 3505.

The PRESIDING OFFICER (Mr. LADD in the chair) laid before the Senate the amendments of the House to the bill (S. 3505) in reference to the summoning of grand juries in the District of Columbia, which were, on page 1, after line 2, to insert "That the Code of Law for the District of Columbia be amended by adding a new section to read as follows"; on page 1, begin line 3 as a paragraph, and before "That," to insert "Sec. 204a"; on page 1, line 7, after "or," to insert "senior"; on page 1, line 8, to strike out the article "a" and insert "an additional"; on page 1, line 9, to strike out "at such time as he may designate, which" and insert "which additional grand"; on page 2, line 1, after "drawn," to insert "at such time as he may designate"; on page 2, line 2, after "Columbia," to insert "and unless sooner discharged by order of said chief justice or, in his absence, senior associate justice, said additional grand jury shall serve during and until the end of the term in and for which it shall have been drawn"; and to amend the title so as to read: "An act to amend the Code of Law for the District of Columbia."

Mr. NELSON. I wish to state that the only change is that as we passed the bill it was an independent measure prepared by the Attorney General; the House has made it a section of the Code of the District of Columbia.

Mr. KING. Making it a permanent law?

Mr. NELSON. It will be a part of the Code of the District of Columbia.

Mr. KING. And to that extent it is a permanent law?

Mr. NELSON. Yes.

Mr. KING. Incorporated in the code so that the grand juries in the future——

Mr. NELSON. It will be section 204a. That is the substantial change, so that a lawyer looking at the code can find the law right there.

Mr. KING. The purpose is to permit special grand juries to be summoned in the future as therein provided?

Mr. NELSON. Yes; as provided in the act. The Senator will remember that it was explained when we passed the bill.

I move that the Senate concur in the amendments of the House.

The motion was agreed to.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. McCUMBER. I ask that we may go back to paragraph 33a, page 18, line 3. We agreed some days ago that we would bring up that item this morning.

The PRESIDENT pro tempore. Without objection, that will be done. The amendment at that point will be stated.

The READING CLERK. On page 18, after line 2, the committee proposes to insert:

PAR. 33a. Cyanide: Potassium cyanide, sodium cyanide, all cyanide salts and cyanide mixtures, combinations, and compounds containing cyanide, not specially provided for, 10 per cent ad valorem.

Mr. McNARY. Mr. President, the junior Senator from Nevada [Mr. ODDIE] and other Senators not now here are especially interested in this paragraph. I do not see the junior Senator from Nevada present at the moment, and I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Gooding	McLean	Simmons
Ball	Hale	McNary	Smoot
Brandegee	Harreld	Moses	Spencer
Broussard	Harris	Myers	Stanley
Bursum	Harrison	Nelson	Sterling
Capper	Hitchcock	New	Sutherland
Caraway	Johnson	Newberry	Swanson
Culberson	Jones, N. Mex.	Nicholson	Townsend
Cummins	Jones, Wash.	Norris	Underwood
Curtis	Keyes	Oddie	Wadsworth
Dial	King	Overman	Walsh, Mass.
Dillingham	Ladd	Page	Walsh, Mont.
du Pont	Lenroot	Pomerene	Watson, Ga.
Edge	Lodge	Ransdell	Watson, Ind.
Fletcher	McCormick	Rawson	Willis
France	McCumber	Robinson	
Frelinghuysen	McKinley	Sheppard	

Mr. DIAL. I wish to announce that my colleague [Mr. SMITH] is unavoidably absent. I ask that this announcement may continue through the day.

The PRESIDENT pro tempore. Sixty-six Senators have answered to their names. There is a quorum present.

Mr. GOODING. Mr. President, continuing my remarks at this time on the tariff bill, I am going to take up the Underwood-Simmons Act and make a comparison of other laws passed by the Democratic Party with the McCumber bill, which is now before the Senate, beginning with the compromise act of 1832, the Walker Act of 1846, and the Democratic tariff measure known as the Wilson-Gorman Act, passed during Grover Cleveland's second administration. I shall use the Underwood-Simmons law as the basis for comparison of duties which these different tariff measures gave to agriculture.

I am not going to charge that the Underwood-Simmons law is the most infamous or the most iniquitous tariff measure ever passed or that it placed practically all of the farm products on the free list in order to exploit the farmers in the interest of the manufacturers. Nor am I going to charge that in the enactment of that law the leaders of the Democratic Party tried to bunco the American people and hand them a gold brick. I have too much confidence in the men who drafted the Underwood-Simmons law to make any such serious indictment. Some of those things have been charged by a few Senators against the emergency tariff bill. They have all been charged against the McCumber bill or the Finance Committee bill now before the Senate.

All the talk we hear on the other side about the pending bill being framed behind closed doors is without a shadow of foundation. I was in attendance at the open meetings held by the Finance Committee almost as much as were the members of the committee, and very much more than were some of the Democratic members of the committee, and I wish to say that I never saw men who labored harder or who were more serious in their work than were the members of the Finance Committee in drafting the bill which is now before the Senate. Weeks and months of time were consumed; sessions were held sometimes late into the night. When the doors were closed and public hearings ceased, every Senator—and I think the Democratic Senators know that as well as Republicans on this side of the Chamber—would have been welcome to have gone before the Finance Committee if he had any matter to present to the committee. I was there on several occasions with a large number of farmers, some representing dairy products and some other agricultural products; other Republican Senators were there, as were also Democratic Senators. The doors were always open, and any Senator who cared to appear at any time was welcome. I repeat that all this talk about the pending bill being framed behind closed doors and in the interest of predatory wealth has no foundation. There is no basis for such a statement at all.

Mr. President, if it is the purpose of the Democratic Party to brand this bill as an infamous measure, which has been

framed entirely in favor of the selfish interests of the country, let me say to Members of that party who are on the other side of the Chamber that they are making a mistake, because the farmers of the country understand and know that this is the first tariff bill which has ever been presented to Congress which gives the agricultural interests of the country a square deal. About all there is back of the campaign being conducted by the minority to delay the bill at the present time is an effort to mold public opinion into the conviction that it is an infamous tariff measure; that it is unfair and unjust to the country and to the people at large. When the Democratic Senators make up their mind that they are not going to succeed in giving the American people that impression, they will be ready to permit the tariff bill to pass, and I think it will not take very long to pass it.

Taking the Underwood-Simmons bill, which was passed in 1913, I find that in that bill 39 farm products were put on the dutiable list, while 52 farm products were put on the free list. An average duty of 4.9 per cent was given to the 91 farm products and 11.4 per cent to 39 products which were placed on the dutiable list; not enough on an average really to be a revenue duty.

The act of 1832 placed 11 farm products on the dutiable list, and 10 farm products were placed on the free list. The average duty provided for in that bill was 14.05 per cent. Taking the Underwood bill as the basis and rating it at 100 per cent, the act of 1832 gave to the farmers 285 per cent more protection than did that bill. If the Democrats want to call it protection, very possibly those duties were protective in those days.

The act of 1832 gave to 11 farm products placed on the dutiable list an average of 26 per cent, which is a higher average duty than is imposed on farm products under the Finance Committee bill.

The act of 1846, which is known as the Walker Act, placed 48 farm products on the dutiable list and 9 on the free list. It gave to the 57 farm products an average duty of 24 per cent, while those on the protective list—and the duties on farm commodities in that act afforded high protection compared to the duties in the present bill—received an average duty of 28 per cent. The relative protection which was afforded by the Walker bill was 495 per cent greater than that which was afforded under the Underwood-Simmons law.

The Wilson-Gorman Act placed 37 farm products on the protective list and 13 on the free list. It gave to the 50 farm products covered by the bill a little over 13 per cent, or 270 per cent more than the rates imposed in the Underwood-Simmons law.

The Finance Committee bill which is now before the Senate puts 92 farm products on the protective list and none on the free list. If there is any farm product that is not on the protective list I do not know what it is; and if we find that any have been omitted we are going to place them on the dutiable list, if they need protection. The pending bill gives an average duty as to 92 farm products of 21.3 per cent.

I wish to say, Mr. President, that all the agricultural interests of the country and those who have been representing the agricultural interests in an effort properly to present their needs before the Finance Committee have been very moderate, and, I might say modest, in their requests for proper protection to the farm products of the country, the average duty imposed in the pending bill on agricultural products, as I have said, being 21.3 per cent.

I have a table here showing the farm products which were placed on the dutiable list and the free list, respectively, under the act of 1832, the act of 1846, the act of 1894, the act of 1913, and the pending bill reported by the Committee on Finance and now before the Senate. I have reduced the duties to an ad valorem basis in each instance. The act of 1832 imposed on wheat a duty of 17 per cent; the act of 1846 also imposed a duty of 17 per cent; the act of 1894, 20 per cent; under the Underwood-Simmons law wheat was on the free list; and in the bill reported by the Finance Committee a duty of 28 per cent is provided.

I have a record of the wheat prices in Minneapolis and in Winnipeg. I understand the market value of wheat, so far as freight rates are concerned from those points to Liverpool, is about the same. The information which I am about to give has been furnished me by the Tariff Board, and shows that No. 1 northern in the month of November, 1920, sold, on an average, in Minneapolis for $1.77 a bushel and in Winnipeg for $1.83 a bushel, or 6 cents more than the price for which it sold in Minneapolis. Wheat was then on the free list under the Underwood-Simmons law. In the month of November, 1921, No. 1 northern sold for a monthly average of $1.30 a bushel in Minneapolis and for $1.01 a bushel in Winnipeg, or a difference of 29 cents a bushel in favor of the American wheat. On April 25 of this year No. 1 northern was quoted in Minneapolis at $1.65 and in Winnipeg $1.45, or a difference of 20 cents a bushel in favor of the American wheat. It is very evident, Mr. President, that the emergency tariff bill has been a factor in giving the wheat growers of this country a little better price for their wheat.

I believe, Mr. President, it is just as important to protect the wheat grower when there is an overproduction in this country as it is to protect the woolgrower when there is an underproduction; in fact, I think it is more important, if anything. I think we ought pretty nearly to close our ports to farm products of which there is an overproduction in this country. If we are going to apply the Democratic doctrine of supply and demand, I want to tell the Senate that when there is an overproduction, when our markets in this country are flooded and millions of bushels of foreign wheat are forced in, as was the case in the fall of 1920, it can have but one result, as it only had one result in that instance, and that was to smash the American market. The farmers at that time lost hundreds of millions of dollars simply because Canada tried to market all of her wheat in this country. Every elevator, every railroad, every avenue was jammed with Canadian wheat which the Canadian producer was trying to rush into our market at exactly the same time the American farmers were trying to market their wheat; and at that time, if you please, wheat was 6 cents lower in Minneapolis than it was in Winnipeg, simply because they had overcrowded the market in this country and swamped it.

Mr. WALSH of Massachusetts. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Idaho yield to the Senator from Massachusetts?

Mr. GOODING. I yield.

Mr. WALSH of Massachusetts. Does the Senator apply the principle just enunciated by him to overproduction in manufactured products?

Mr. GOODING. I will be very glad to make that comparison. When there is an overproduction of manufactured products, the manufacturers close down their mills, and public opinion sustains them in their action. If you want to drive the American farmer to close down his farm and stop production, just continue the policy of free trade for the farmer and that is what you will force him to do.

Mr. WALSH of Massachusetts. An overproduction of manufactured products can destroy a manufacturing industry as well as an overproduction of farm products can destroy the farmer's business.

Mr. GOODING. I beg to differ with the Senator. The manufacturer has the remedy in his own hands, and public opinion sustains him in employing it, and I think very properly so. If we continue the policy of free trade for agricultural products and protection for manufactures, we will have the condition that has prevailed in the South when the tobacco growers became "night riders" and controlled production in that way. There is no comparison at all. We want to encourage the farmers all the time to till the soil. Anything less than that will be a crime, and he will never falter in his efforts unless he is driven to do so, and your policy will drive him to do it.

The Democrats in the Underwood-Simmons law imposed a revenue duty on barley. It was free in the act of 1832 and in the act of 1846; the act of 1894 placed a 30 per cent ad valorem duty on barley, and the Underwood-Simmons law provided an ad valorem duty of 30 per cent. In the opinion of the framers of that measure, I presume, barley was a good revenue item, and so they put it on the dutiable list. The farmers were very glad to have it there. The Finance Committee bill puts a duty of 40 per cent ad valorem on barley.

I am making this comparison to show that the Democratic Party, as far as the agricultural interests are concerned, is nearer a free-trade party to-day than it has been at any time in its history, and there is plenty of proof of it, too.

Oats had an ad valorem duty in 1832 of 26 per cent; in 1846, 20 per cent; in 1894, 20 per cent; in 1913, 16 per cent; in the Finance Committee bill there is an ad valorem duty of 39 per cent.

Rye was on the free list in 1832. In 1846 it had a 20 per cent duty, in 1894 it had a 20 per cent duty, it is free in the Underwood bill, and it has a 20 per cent duty in the Finance Committee bill.

Corn was free in 1832, had a 20 per cent duty in the act of 1846, a 20 per cent duty in 1894, was free in the Underwood bill, and has a 33 per cent duty in the Finance Committee bill.

Cattle were free in 1832, free in 1846, free in 1894, free in 1913, and have an ad valorem duty now of 23 per cent.

Beef and veal had a duty in the act of 1832 of 13 per cent, in 1846 of 40 per cent, in 1894 of 20 per cent, were free in the Underwood bill, and have a duty of 22 per cent in the Finance Committee bill.

Fresh mutton was free in 1832, had a duty of 40 per cent in 1846, 20 per cent in 1894, is free in the Underwood bill, and has a duty of 25 per cent ad valorem in the Finance Committee bill.

Lamb was free in 1832, had a duty of 40 per cent in 1846, was not specially provided for in the Wilson bill, was free in the Underwood bill, and has a duty of 33 per cent in the Finance Committee bill.

Swine were free in the act of 1832, were free in 1846, were not specially provided for in 1894, were free in the act of 1913, and have a 17 per cent ad valorem duty in the Finance Committee bill.

Bacon and ham had a duty of 13 per cent in the act of 1832, of 20 per cent in the act of 1846, were not specially provided for in 1894, were free in the Underwood bill, and have a duty of 9 per cent in the Finance Committee bill.

Milk was free in all the bills, and cream was free in all the bills, prior to the Finance Committee bill. The Finance Committee bill gives milk a duty of 6 per cent, and cream a duty of 9 per cent.

Eggs in the shell were free in 1832, free in 1846, had a duty of 7½ per cent ad valorem in the act of 1894, were free in the Underwood bill, and have a duty of 20 per cent in the Finance Committee bill. I will say that these prices were taken some time in last October. They have a duty of 8 cents a dozen, or an ad valorem duty of 20 per cent, in the Finance Committee bill.

Dried eggs were free in all the bills until the act of 1909, when they were given a duty of 30 per cent. The act of 1913 reduced this duty to 20 per cent. The present Finance Committee bill gives them a duty of 33 per cent, and we are asking a duty of 24 cents a pound on dried eggs.

There is a sad story connected with the dried-egg industry in America. The Democratic Party reduced the duty on dried eggs, and every manufacturing institution in the business of drying eggs in America, with the exception of one, moved to China; and to-day a large part, practically all the dried eggs that we use in America, come from China. The bakers have made a terrific fight against a great industry, if you please, which has been wiped out and has gone to China. American capital has gone to China and built its factories there and is furnishing this country with dried eggs. I have very little respect and regard for the American who makes his money in this country as a citizen of this country and then goes to China or any other Asiatic or European country where labor costs nothing at all, takes the money that he had made here from the American people, sets up an establishment, and then comes back here and fights for American markets. He is the most undesirable citizen in the world, without any exception; and any law that permits that to be done is wrong and an outrage, not only in drying eggs but in other things. Take American capital and go abroad, and you can supply the American people with practically everything they need. There is no lack of soil in the world. We have not commenced tilling it yet.

Onions were free in 1832 and 1846, had a duty of 20 cents a bushel in the act of 1894, which was equivalent to an ad valorem duty of 7 per cent, and the same duty is in the act of 1913, the Underwood bill. I think I will call these bills by their proper names; it will be very much easier. Onions have an ad valorem duty of 20 per cent in the McCumber bill.

Potatoes had a 12 per cent duty in the compromise act, the act of 1832, a 12 per cent duty in the Walker bill, an 18 per cent duty in the Wilson bill, were free in the Underwood bill, and have a duty of 29 per cent in the McCumber bill.

Millet was free in all the bills down to the present one, including the Underwood bill, and has a duty of 27 per cent in the McCumber bill.

Flaxseed had a duty of 20 cents a bushel, equivalent to an ad valorem duty of 11 per cent in the Wilson bill, 11 per cent ad valorem in the Underwood bill, and 23 per cent in the McCumber bill.

Green hides had a duty of 5 per cent in the Walker bill, were free in the Wilson bill, free in the Underwood bill, and have a duty of 13 per cent in the McCumber bill.

Linseed oil had a duty of 14 per cent in the act of 1832, 20 per cent in the Walker bill, 11 per cent in the Wilson bill, was free in the Underwood bill, and has a duty of 14 per cent in the McCumber bill.

Rice had a 20 per cent duty in the Walker bill, 32 per cent in the Wilson bill, 15 per cent in the Underwood bill, and 15 per cent in the McCumber bill. I have introduced a resolution, which is going to pass, too, giving the southern rice growers proper protection. There is not any doubt about that. They ought to have it. I do not care where the farm product is grown or where it is produced; I am going to do the best I can to see that every industry is properly protected.

Almonds, unshelled, were free in the act of 1832, had a duty of 40 per cent in the Walker bill, 20 per cent in the Wilson bill, 20 per cent in the Underwood bill, and 25 per cent in the McCumber bill.

Almonds, shelled, had a duty of 40 per cent in the Walker bill, 14 per cent in the Wilson bill, 11 per cent in the Underwood bill, and 40 per cent in the McCumber bill.

Walnuts, unshelled, were free until the Wilson bill, when they were given a duty of 8 per cent, 8 per cent in the Underwood bill, and 17 per cent in the McCumber bill.

Now we come down to vegetable oils—coconut oil, soya-bean oil, cottonseed oil, peanut oil, and olive oil. Coconut oil, soya-bean oil, and cottonseed oil are free under all the bills until we reach the McCumber bill, when there is a duty of 50 per cent on coconut oil, 27 per cent on soya-bean oil, and 42 per cent on cottonseed oil.

Long-staple cotton was free under all the bills until we reach the emergency bill, when there is an ad valorem duty of 14 per cent on long-staple cotton. We are asking for a duty of 10 cents a pound instead of 7 cents a pound. We believe that long-staple cotton ought to be developed in this country; that we can produce all the long-staple cotton that we need. There is not any doubt about that. It is an infant industry and ought to be encouraged, and I have never been much of an infant-industry protectionist. I think building up an industry in this country and then tearing it down is nothing less than a crime. After we have encouraged an industry and established it, if there is ever a time when it ought to be protected it is then. Keep it going. It can not be a going concern unless you do give it protection. Surely every Senator understands that there is a wide difference between the cost of production in this country and the cost of production in any other country on earth, and it is a great deal wider to-day than it has ever been before in the history of our Government.

Peanuts were free in all the bills until the act of 1894 was passed, which gave them a 20 per cent ad valorem. The Underwood bill gave them 6 per cent. The Finance Committee in this bill has given them 12 per cent. This is another article on which the duty must be raised in order to give them proper protection, and this industry is going to have the support of that group of Senators who have been trying to get fair protection for the agricultural interests of the country, and I think we will succeed in getting the peanut growers of the country a protective duty, not a revenue duty.

The next is alfalfa, alsike clover, and other grass seeds. They were free in all the bills until we reach the McCumber bill, in which alfalfa is given a duty of 22 per cent, alsike clover 13 per cent, crimson clover 13 per cent, red clover 20 per cent, and white clover 6 per cent.

Timothy was free in all the bills until we reach the McCumber bill, where it is given a duty of 28 per cent.

Wool had a duty in the act of 1832 of 75 per cent, in the Walker Act of 75 per cent; was free, of course, in the act of 1894 and in the Underwood law. It has a duty in this bill of 35 per cent. I am going to discuss this wool schedule when I take up the duty the Democratic Party has given to the manufacturers.

Sugar had a duty of 90 per cent in the act of 1832, and an ad valorem duty of 90 per cent in the act of 1846. I say it is free in the Underwood bill, because if it had not been for the war, it would have been free. It was only a question of time when it would have been free, and if it had been, the great sugar industry of this country would have been absolutely destroyed.

Enough sugar is grown in Cuba to-day to feed practically all the American people. American capital has gone down there and spent a billion or more, and this year's crop will be something over 3,500,000 tons of sugar. I think our consumption is something like 4,000,000 tons of sugar. Is that correct?

Mr. McNARY. That is right.

Mr. GOODING. Their production is over 3,500,000 tons this year, as against a consumption of 4,000,000 tons of sugar in the United States.

In the hearings I heard one of the witnesses make this statement in giving his evidence before the committee, that the capital invested in Cuba had gone to China and brought coolie

labor in, under a contract for five years, to work on the sugar plantations of Cuba, brought that coolie labor from China through this country in bond, and the Cuban sugar growers have a freight rate of about 12 cents a hundred into New York City, while the sugar growers of Louisiana must pay a freight rate of 58 cents to carry their sugar to Chicago, where their sugar is marketed. With a freight rate on the Cuban sugar growers of about one-fifth our rate, and labor that practically costs nothing at all compared with what we have to pay in America, tell me, if you please, what chance the cane growers of Louisiana and the beet growers of the West have in competing with the conditions of that kind. American capital pays it, too, if you please; Americans owning the plantations to a very large extent.

There is no necessity of our growing any sugar in America. We can go out of the sugar industry very quickly, and we are going out of it unless the sugar industry of this country is given proper protection.

A report from the Bureau of Labor Statistics this morning gives the average wages of to-day at 205 per cent, taking those paid in 1913 at 100 per cent. In other words, the price of labor in this country to-day is 105 per cent more than it was in 1913. Freight rates are somewhere near 57 per cent more, possibly a little higher than that. I do not believe we are going to have any great reduction in the price of labor, and I hope there will not be any decrease in some lines of labor. It is possible that in some lines the scale is too high; but in other lines it is too low. I think it would be most regrettable if labor were forced back to pre-war conditions, and I am sure the wages of labor will not be reduced to those levels. While I think in some instances freight rates are too high and could properly be reduced, there will not be any great reduction in freight rates. When the American producers have to meet a condition of that kind, what is the use of talking about producing in this country as cheaply as we did before the war?

I submitted figures showing the price of labor, given by a member of Parliament, the number of hours an ounce of gold purchases in the six great countries of the world. Then I gave some other figures of production in this country, and I have here a table which I received from the Tariff Commission giving the average prices paid for labor in 1913 in the large cities in Germany, and I will read only the averages and the prices paid in Germany at the present time.

The average wage to bakers in 1913 was $6.14 a week. The wage paid on December 31, 1921, was $2.52 a week.

The average wage paid for brewery workers in 1913 was $7.73 a week. The average on December 31, 1921, was $2.43 a week.

The average paid for common unskilled brewery workers in 1913 was $5.83 a week, and on December 31, 1921, it was $2.39 a week.

The average wage paid to tailors in 1913 was $11.17 a week, and the average on December 31, 1921, was $2.78 a week.

Painters received an average of $14.38 a week in 1913. In 1921 they received $2.58 on an average.

Stone cutters received in 1913 an average of $17.41 a week, and in 1921 they received an average of $2.56 a week.

Stone masons received $7.22 in 1913 on an average, and $3 a week in 1921.

Bookbinders in 1913 received an average of $6.69 a week, and in 1921 they received an average of $2.59.

Printers—I suppose, newspaper printers—received in 1913 an average of $7.71 a week, and in 1921 an average of $2.74 a week.

Joiners received in 1913 an average of $13 a week, and in 1921 an average of $2.59 a week.

This is the weekly average all the way through. Transport workers received in 1913 an average of $6.57 a week, and in 1921 an average of $2.30 in our money.

The average pre-war weekly wage of the different classes I have read was $10.08, and on December 31, 1921, it was $2.59, or about one-tenth the wages we have to pay in America. So, with 105 per cent of an increase in this country and 75 per cent of a decrease in Germany over pre-war wages, what chance is there in America for us to compete at all?

Let us not forget that before the war one-half of all the people in Germany were employed in getting ready for a great struggle in the World War, and had been for half a century, supporting standing armies, manufacturing munitions of war. Half of all her people were getting ready for the greatest struggle civilization has ever known. Now they are all back in industrial life bending their backs. It is said they are working 12 hours a day. Germany can manufacture for the world in many lines. She has developed in the last 20 years. Just open your ports to Germany and she will do the rest.

Mr. President, I am not going to charge those who framed the Underwood-Simmons bill with being unfair at all. The Underwood-Simmons law represents very truly Democratic policy, for which they have been fighting for a hundred years—free trade in the farm products of America. There is no question about that, and those products which have been given duties are so nearly free that they are not even revenue bearers. While they put the farmers' products practically all on the free list they have given the manufacturers high protective duties, I venture to say, as to some things, although I do not think they will plead guilty of giving protection to the manufacturers while they put the farmer on the free list, forcing him to compete with Asiatic labor and all the labor of the world.

You might just as well open your ports and repeal the Chinese exclusion act as to let them bring their products in free of duty, which they were doing before the emergency tariff bill was passed and are doing now to some extent. I think I would prefer to have that labor here, as far as that is concerned, and I believe every laboring man would rather the foreigner would come in and compete with him in his own market, than to ship his products from foreign markets and compete in that way. The American laborer would be one hundred times better off.

I am going to discuss this tariff question from a laboring man's standpoint, because it is his question, and nobody else's. I do not care where the laboring man of America is working, whether it is on a printing press or on a farm or in the mine, all must stand together on the protective tariff question as a principle or all will go down in a crash. You can not protect one industry in America and force the others to compete with the peons of foreign countries.

There is too much independence in America for all that. We have fought for our freedom once, but I do not think we will have to fight for it again, because we have too much intelligence in America for that. This question is going to be settled some day and is going to be settled right. I think the greatest crime in America to-day is the fact that the largest interests of the country are the political football, to be kicked about by the political parties.

Henry Clay said the question would never be settled until it was settled on the line of protection, and that is where it is going to be settled. Every industry in the country that needs protection is some day going to be given proper protection, and that is going to be our fixed and permanent policy. We are going to fight it out along that line until it comes. All we have to do is to bring the South back to it, and they are coming back slowly. There is where all our free trade came from, in the interest of slavery, and that is what it means to the laboring man of America to-day—slavery, or a condition that is not better than slavery—if American labor is forced to compete with foreign countries, considering the freight rates which we have in America as compared with those abroad, which are less than half what some of our States have to pay to get their products to market. This is the unfair part of it. It is forcing the farmer of the country to compete with that condition, to compete in a free-trade market with what he produces, and then have to buy in a protected market.

In the matter of wool blankets the Underwood law gave a duty of 25 per cent ad valorem. The McCumber bill gives a duty of from 20 cents to 40 cents per pound plus 20 to 40 per cent ad valorem. That is a manifest protection, and then there is properly a compensatory duty. Of course, there is a duty on wool that has been given the manufacturer because he is expected to and will of course pay more for his wool than he would if it were on the free list. But the difference is a 25 per cent ad valorem duty on blankets with wool on the free list and a 20 to 40 per cent ad valorem protective duty.

I am going to submit a proposition to my Democratic friends. I am going to make the statement now that when they take into consideration the cost of production, with labor 105 per cent above the price in 1913, when the Underwood bill was passed, that Underwood tariff law gives a higher duty in favor of manufactures than does the McCumber bill—a higher duty, if you please. Those were only revenue duties. Do not forget that. They are not protective duties. The minority leader, the Senator from Alabama [Mr. UNDERWOOD], will not admit that he gave the manufacturer a protective duty, not a single one, although some of the duties are pretty high. They are revenue duties, however, and not protection duties.

The Underwood law gives ready-made clothing a duty of 35 per cent ad valorem. The McCumber bill gives it a duty of 40 to 55 per cent ad valorem, with labor 105 per cent higher than

when the Underwood law was enacted, and labor in Germany 25 per cent of what it was when the Underwood bill was passed. I do not think the duties are high enough. I have not agreed with the senior Senator from Utah [Mr. SMOOT] that we do not dare adopt the American plan because the duties are too high. I think the people would accept any duty that would save the life of an industry in America regardless of what policy must be adopted to save it. I think we are passing through the most crucial period in the history of America and we will not start the mills to work again until we have proper protection in America.

On cotton quilts a 25 per cent duty was levied in the Underwood law and a 45 per cent duty is levied in the McCumber bill, with labor 105 per cent higher, with freight rates 57 per cent higher—and I think they are little higher than that now—and labor in Germany 25 per cent of what it was when the Underwood bill was passed.

The Underwood law puts a duty of from 20 to 50 per cent on wool carpets and puts wool on the free list. The McCumber bill puts a duty of 30 to 55 per cent on wool carpets, and carpet wool is on the free list. Which is the highest? I will let the Senator from Alabama [Mr. UNDERWOOD] answer the question, which is the highest duty so far as wool and woolens are concerned? All through the schedule it runs high.

Mr. UNDERWOOD. Mr. President, I do not like to interrupt the Senator. I will endeavor, when he is through, if I get recognition, to say something in reference to what he has said.

Mr. GOODING. It will not interrupt me at all any time the Senator desires to answer the questions I am propounding.

Mr. UNDERWOOD. I do not care to interrupt the Senator because I usually prefer to speak myself without interruption, and therefore do not trespass upon the time of other Senators. But the Senator asks which is the highest duty. Will the Senator tell me which requires the American people to pay the most in taxes? That is the issue with me.

Mr. GOODING. We are talking about the tariff question. We have had a Democratic administration for eight years, and it is not strange that taxes are high.

Mr. UNDERWOOD. But the Senator must not overlook the question that a tariff is a tax, and the issue involved in my thought is, which makes the American people pay the greatest taxes? That is the standpoint from which I approach the subject.

Mr. GOODING. The Senator's position has been made very clear and the Democratic position has been made very clear through him. They put the farmers' products on the free list to give the American people cheaper living at the expense of the American farmer. If I have not stated the Senator's position correctly, I hope the Senator will put me right.

Mr. UNDERWOOD. Of course, I am willing to admit that a reduction in taxes on certain farm products reduced the cost of living to the American people, but the reduction was not on the farmer alone. The greater portion of the reduction in taxes in the present law was on the manufacturer, and that is the equation I consider.

Mr. GOODING. But the Senator gave the manufacturers free raw material, which is the point I am making, and that the duties fixed in the Senator's bill, now the Underwood law, are much higher than those in the McCumber bill.

Mr. UNDERWOOD. I do not think the Senator is right, but he is arguing it purely from the standpoint of protection as to which gets the benefit. The present law was not written for the benefit of the producer and manufacturer; it was attempted to be written in the interest of the consuming masses of the American people.

Mr. GOODING. I am making the point that so far as the cost of production is concerned, the manufacturer is getting less protection to-day than he did when the Underwood-Simmons bill was framed and enacted into law. I am talking from the protective standpoint, from the standpoint of one who believes in protection. That must be taken into consideration, and there is no question about it. I do not think that even the senior Senator from Alabama would agree to open the ports of our country to foreign manufacturing industries, whether we have free raw materials or not.

The cotton manufacturers have always had a high protection, very much more than appears in the laws. I might discuss that some day with the Senator.

Mr. UNDERWOOD. I would have no objection to discussing the question with the Senator. I think he is mistaken about the manufacturer getting more in the way of protection, but to me it is an idle discussion.

Mr. GOODING. The point I am making is that he is getting less. I mean to be understood as saying that he is getting less.

Mr. UNDERWOOD. That is not material with me. With me it is purely a question of how much we are taxing the American people; how much we make a man pay out of his living to build up somebody else. That is my objection to the proposition. The others are minor questions from my point of view.

Mr. GOODING. I am sure that the Senator and I understand one another very clearly. The Senator has no thought of protection at all in framing the Underwood bill. It was entirely a revenue measure, and the Senator never took into consideration the protection of a single industry. May I ask the Senator if I am correct in that statement?

Mr. UNDERWOOD. I will say to the Senator that he is right in principle, but not entirely in fact, to be perfectly candid with him. I stated when the Underwood tariff bill was written that it was moving in the direction of the theory in which I believed, and that is that we should not abandon taxes at the customhouse entirely, but that taxes should be primarily levied for revenue. But I also said at that time that "this house of protection has been built up on stilts. It is away above the ground of necessity and we are proposing to break down those stilts. But," I said, "in writing this bill we do not propose to remove the stilts with an ax and let the house fall. We are endeavoring to lower the house with a jackscrew."

Therefore, from the viewpoint of a revenue bill, the present law was an attempt to approach the subject conservatively. Of course, I recognize that in lowering the house of protection with a jackscrew instead of an ax it left incidentally some protection which might have been taken away without injury to the producer or manufacturer and to the benefit of the American people, but it was wise, in my judgment, to move conservatively instead of radically to gain the point.

Mr. GOODING. Then the idea is to force it still lower and turn the jackscrew around until it gets lower and until we will not have any use for the customhouse. Is that the idea the Senator wishes to convey?

Mr. UNDERWOOD. I have always said the customhouse was useful for the purpose of raising revenue to support the Government, but there is a very different proposition between a revenue tariff that does not cut off competition and a protective tariff that is levied for the purpose of cutting off competition and making the masses of the American people pay the price for the riches to be accumulated by a few special interests. It is immaterial to me whether that special interest works on a farm or works in a factory; they are American citizens. The Senator said he would protect them equally, whether on the farm or in the factory. So far as I am concerned, I would apply the same rule of equality to all, whether they are on the farm or in the factory.

Mr. GOODING. The Senator did not do that in his bill. The Senator kept the jackscrew under the manufacturer, but he applied an ax to the stilt so far as the farmer was concerned. There is no question about that, in my opinion. The farmer got the ax where the chicken usually gets it.

Mr. UNDERWOOD. The Senator is entirely mistaken about that. A great many duties were left on agricultural products which ultimately might have been removed.

Mr. GOODING. The Senator gave them the magnificent duty of 4.9 per cent.

Mr. UNDERWOOD. We removed all that class of taxes which were levied merely to fool the farmer into believing that he was getting something when he was not.

Mr. GOODING. I think I can prove very conclusively, so far as the emergency tariff bill is concerned, that the Senator is mistaken. If the Senator will read the telegrams which I have had inserted in the RECORD from his own State and from 29 other States in the Union, from men who are out tilling the soil, men having something to do with the greatest industry of the country—agriculture—he will be convinced that these men believe that the emergency tariff bill was a great benefit. I know that is true so far as my industry was concerned, and I am going to say "my industry," because my life's work has been given to live stock to the extent of 35 years, and I think I can say I am the oldest sheep grower in the State of Idaho to-day. If, in the estimation of the Senator from Alabama, I am committing a crime because I am standing for a duty on wool, he will have to accept it in that light. Every citizen of America is interested in the live-stock industry. The Senator is very anxious about an appropriation for Muscle Shoals to make fertilizer for the American farmer. Nature's remedy is the live-stock industry, and the history of the world is that where the live-stock industry has been destroyed civilization

has been destroyed with it. That is a rule to which there is no exception.

Mr. McCUMBER. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Idaho yield to the Senator from North Dakota?

Mr. GOODING. I yield.

Mr. McCUMBER. If the Senator will allow me, I think the Senator from Alabama has scarcely reached the Senator's suggestion. The Senator from Idaho suggested that the wage earner, the American laborer, is receiving a wage more than twice what it was in 1913. The laborer is now receiving $2.05 where he only received $1 at that time. The American manufacturer is paying that $2.05, and after we make the allowance for the extra wages that are being paid we are giving a protection that scarcely equals some of the rates that are provided even under the present law.

Mr. GOODING. I will say to the Senator from North Dakota that when the wages and increased cost of production are taken into consideration 90 per cent of the Underwood rates are higher than are the rates in the pending McCumber bill.

Mr. McCUMBER. The principal way to reduce the manufacturers' cost is to reduce the labor cost. If the Senator from Alabama wants the manufacturer to go back to the 1913 schedule and pay only $1 where he is now paying $2.05, the cost of living may be reduced; there is no question about that. What we are trying to do, however, in the pending bill is not to pull the laborers' wages down but to equalize conditions, so far as the agricultural interests are concerned, by giving the farmer a rate on his products that will enable him to furnish employment and pay these high wages—or, at least, a portion of them—without reducing the laborer's wage in the manufacturing industry.

Mr. UNDERWOOD. Mr. President, will the Senator from Idaho yield for just a moment?

The PRESIDENT pro tempore. Does the Senator from Idaho yield to the Senator from Alabama?

Mr. GOODING. I yield.

Mr. UNDERWOOD. The Senator from North Dakota, in charge of the pending bill, makes the most remarkable argument to which I have ever listened. Under what the Senator has denominated a free-trade law, but one which I call a revenue law, he says that the great increase of wages which has occurred since 1913, during the life of this low-tariff law——

Mr. McCUMBER. The increase occurred during the war.

Mr. UNDERWOOD. Well, but that was during the life of the law. If wages are affected by a tax at the customhouse, they have been affected under the present law, a low-rate tariff law; and because wages have gone up under a low-rate tariff law, a low-rate system of taxation at the customhouse, the Senator from North Dakota reaches a conclusion, which he claims to be logical but which I claim to be illogical, that we must now pass a protective tariff in order to pay somebody back for the increased wages. My mind is entirely incapable of following that line of reasoning.

Mr. McCUMBER. I do not think the mind of the Senator from Alabama is incapable of following the real reason for the high wages in the United States. I do not think the Senator would for one second claim that wages increased on account of the Underwood tariff law. Wages increased because of the war, and the war conditions had the effect of an embargo, which prevented the natural effect of the Underwood tariff law, which would have driven wages down to one-half of what they were instead of their being doubled.

Mr. UNDERWOOD. Then, if the existing tax at the customhouse did not affect wages, it seems to me it is illogical for the Senator to claim that a different tax at the customhouse would keep them up.

Mr. McCUMBER. Oh, Mr. President, when a tariff is not in effect it does not affect wages. The Senator from Alabama understands that during the war there was an embargo, which afforded higher protection than any possible tariff bill that ever was enacted. That embargo prevented the continuance of importations under the Underwood-Simmons law which were beginning to pour into the country and to drive down prices. We were saved, so far as wages and prices were concerned, by the embargo which the war produced; but the Underwood tariff law had not the slightest thing to do in raising either the prices of commodities or wages in the United States. Certainly the Senator from Alabama will not claim anything of that kind.

Mr. UNDERWOOD. Mr. President, if I may trespass upon the good nature of the Senator from Idaho for just a moment——

Mr. GOODING. I shall be very glad to yield to the Senator from Alabama.

Mr. UNDERWOOD. The Senator from North Dakota in charge of the bill has made the statement so often that I have no doubt he believes it, that wages went up during the war because of an embargo on commodities. The Senator entirely overlooks one fact. Of course, I admit that war conditions amounted to an embargo on certain goods that came out of Belgium and Germany, from which exportations ceased, but it did not affect a great line of goods coming out of England, and more or less goods coming out of France. It did not affect the exportation of any goods that came from South America or Africa or the Orient; it did not affect the raw materials that we got from those countries, because they were not engaged in the war.

More than that, the so-called embargo which was due to war conditions ended more than three and a half years ago; it ceased when the armistice was signed; and the Senator from North Dakota himself has repeatedly stated here on the floor since this bill has been under discussion that one reason why we had to increase tariff rates was that Europe was already dumping her products in the American market; and the Senator has read statistics to show that there is such dumping here. Now he comes back and claims that he wants to increase the tariff rates in order to preserve the present scale of wages which increased under the present law, and yet he claims that those wages are entirely due to a war embargo which ceased to the extent to which it was effective three and a half years ago.

Mr. McCUMBER. Mr. President——

Mr. UNDERWOOD. The Senator from North Dakota may be logical when he claims that he wants a protective tariff to put money in somebody's pocket—which is the real animus behind the protective tariff—but when he claims that it is necessary to contend against conditions that no longer exist I can not see the logic of his argument.

Mr. McCUMBER. Mr. President, if the Senator from Idaho will yield further to me——

The PRESIDENT pro tempore. Does the Senator from Idaho yield further?

Mr. GOODING. I yield.

Mr. McCUMBER. I wish the Senator from Alabama would hold to facts and not draw upon his imagination for his facts.

Mr. UNDERWOOD. I was trying to hold, and think I did hold, to the facts.

Mr. McCUMBER. In the first place, I have never stated that there was any dumping here at all. I have never used that argument. There is no dumping, so far as I know, in the markets of the United States.

Mr. UNDERWOOD rose.

Mr. GOODING. Mr. President, I do not wish to yield to a protracted discussion. I do not wish to be diverted from the point that I am making in my argument.

Mr. McCUMBER. I trust the Senator from Idaho will pardon me until I merely finish my sentence.

Mr. UNDERWOOD. I beg the Senator's pardon for interrupting him.

Mr. McCUMBER. I do, however, say that goods are being offered at prices with which the American manufacturer can not compete. The reason for that is that such commodities are being produced in foreign countries at prices at which they may be laid down in our markets without any dumping whatever but under the general range of values. I regret that I have taken so much of the time of the Senator from Idaho.

Mr. GOODING. Mr. President, I should like very much to give the credit to the law which bears the name of my friend from Alabama, whom I have learned to admire very much in the short time I have been in the Senate, for the increase in the price of labor in America, but I am inclined to think that the war, and the war alone, is responsible for that great increase, because as I read the history of conditions and as I remember the statement and predictions of the great newspapers of the country just prior to the war, we were headed for an industrial crash. There is no question as to that at all, and that is true despite the fact that Germany was getting ready for the war.

I wish to say to the Senator from Alabama that when he undertakes to discuss this question before the country he is going to meet 2,000,000 young men who went across the sea and saw service on foreign soil. There they saw people satisfied with little in this life, and in some cases the farmer and his family living under the same roof with their farm animals and the mother working on the farm, not because there was a great war in the world but because it had been the custom for ages

for the mother to go out on the farm and do the work of the farm. The Senator will find 2,000,000 young men who saw that condition and know what free trade means. In my opinion, the Senator had better take that circumstance into account.

I think we will all agree that the world has not returned to normalcy by any means. We find Russia almost destroyed and other countries staggering under a load of debt that God only knows whether or not they will every be able to pay. Yet the Senator talks about three years having elapsed since the armistice and intimates that the conditions now confronting us are not due to the war. I am rather surprised at such a statement coming from so great a Senator and so great a statesman as the Senator from Alabama, the minority leader in this body. I think we all realize that we have been through a war, and a world war at that.

On castile soap the duty under the Underwood bill is 10 per cent, while in the pending Finance Committee bill it is 15 per cent. On toilet soap the duty in the Underwood bill is 30 per cent, and in the McCumber bill it is 50 per cent. There is no duty now on vegetable oils, but they will not be on the free list when this bill passes. I submit, Mr. President, that the duty on soap is higher in the Underwood bill than it will be in the McCumber bill, as well, of course, as the duty on vegetable oils.

On oilcloth—and the poor use a great deal of oilcloth—the duty in the Underwood bill is 30 per cent, while in the McCumber bill the duty is 25 per cent. The rate of duty is higher in the present law than it will be under the pending bill when it shall be enacted, and yet the labor cost in the factory is 105 per cent more to-day than it was when the Underwood bill became a law. Under such circumstances, what is the use of talking about high rates of duty?

I have picked out these articles, Mr. President, because they are to a great extent articles which the farmer has to use. The farmer is selling his product in a free-trade market and yet paying the high prices charged by the manufacturers in a protected market. I am glad the manufacturer has had protection, so far as I am concerned, because God knows that we are headed for hard times, and if the manufactures had been on the free list, as the farmer's products have been, it would have been so much the worse for the country. History shows the necessity for a balance between various industries. It would not make any difference whether or not there were a high duty on farm products if manufactures were not protected. This country has got to stand together, so far as its great industries are concerned, as one family, for if one industry is not prosperous that very fact, of course, has its effect and contributes to hard times for other industries.

On pillowcases the duty in the Underwood bill is 25 per cent, and 35 per cent in the McCumber bill. On handkerchiefs the duty in the Underwood bill is 35 per cent, and from 30 to 40 per cent in the McCumber bill. On satchels the duty in the Underwood bill is 30 per cent, and 45 per cent in the bill reported by the Finance Committee. On straw hats the duty in the Underwood bill is 25 per cent, and in the McCumber bill from 30 to 50 per cent. On fur hats the Underwood bill imposes a duty of 45 per cent, while the McCumber bill levies a duty of from $1.50 to $16 a dozen, plus 30 per cent.

Shirts had a duty of 30 per cent in the Underwood bill, and 45 per cent in the McCumber bill; and so I could go on down the list, Mr. President. I submit that these duties in the Underwood bill would have to be increased at least 100 per cent, with the costs of labor what they are, in order to put the manufacturer on a basis where he could compete to-day, and that Germany would of necessity have to have wages something like she had in pre-war times, instead of her people working for 25 per cent of their pre-war wages.

Table covers had a duty of 25 per cent in the Underwood bill, and 35 per cent in the McCumber bill.

Glass bottles had a duty of 30 per cent in the Underwood bill, and 50 per cent in the McCumber bill.

Toothpicks—I presume the farmer uses toothpicks as well as other people—had a duty of 25 per cent in the Underwood bill, and 25 per cent in the McCumber bill.

On tobacco the duties are pretty much the same. Tobacco always has been considered a revenue-bearing commodity, and I will not discuss that.

The Senator from Alabama [Mr. UNDERWOOD] spoke yesterday about the bill bearing his name putting farming machinery on the free list. That is true; but it was an insult to the American farmer when you say you put it on the free list to give the American farmer cheaper farming material, because the facts are that the American genius on the farms in this country has led the whole world with improved American-made farming machinery. There is no farming machinery made elsewhere in the world that the American farmer can use; and so, if there is not any that can be imported, what is the use in insulting the intelligence of the American farmer by telling him that it was put on the free list for his benefit? Furthermore, within 60 days after the Underwood bill was passed it went up 5 per cent in price, and within 6 months it went up 5 per cent more, making an increase of 10 per cent. Of course, it would not benefit him anyway. There is not a single item that they put on the free list, unless it is cotton ties, where there was any benefit to the American farmer. They put barbed wire on the free list, but they gave the steel manufacturer a protection on the steel out of which that barbed wire was made. If you can go into the old farmer's home and find anything that is not protected under the Underwood bill, you will do better than I have been able to do. If you can go on his farm and find anything that the farmer and his family have anything to do with that the Underwood bill has not protected, with the exception of his harness and the shoes that he wears, I do not know what it is; while as far as the farmer's labor is concerned nothing has been protected. They call it a revenue duty, and yet it is a higher duty than the McCumber bill carries to-day.

Now, let me devote just a little time to the emergency tariff bill, Mr. President.

In the five months preceding the passage of the emergency tariff bill there was imported into this country $3,545,737 worth of cattle. There was no duty on cattle and no revenue was collected. Under the emergency tariff bill in 10 months there was imported $2,407,145 worth of cattle, and with an ad valorem duty of 30 per cent there was collected a revenue of $722,143.

Sheep: $76,137 worth were imported in the 5 months before the emergency tariff bill was passed. The emergency tariff bill placed a duty of $1 and $2 a head on sheep, and in the 10-month period there were imported $475,057 worth, and a revenue collected of $135,000.

Corn: $128,132 worth was imported in the 5 months before the emergency tariff bill was passed. There was no revenue collected. In the 10 months after the passage of the emergency tariff bill there was $127,305 worth imported, and a revenue of $17,250 was collected.

Wheat: I will just read the first figures. Twenty-nine million dollars' worth was imported in the 5 months prior to the passage of the emergency tariff bill. The emergency tariff bill placed a rate of 35 cents a bushel on wheat, and for the 10 months after the passage of the emergency tariff bill there was $12,000,000 worth of wheat imported, and a duty collected of $5,000,000.

Wheat flour: $6,000,000 worth of wheat flour was imported in the 5 months before the passage of the emergency tariff bill. That bill placed a duty of 20 per cent ad valorem on flour; $2,000,000 worth was imported in the 10 months after the passage of the emergency tariff act, with a revenue collected of $503,000.

Long-staple cotton: No duty was collected under the Underwood Act. The emergency tariff bill placed a duty of 7 cents a pound on long-staple cotton. The importations were $6,000,000 worth, and there was collected a revenue of $1,310,000.

Beef and veal: $1,884,000 worth of beef and veal was imported in the 5 months before the passage of the emergency tariff bill; $2,292,000 worth was imported in the 10 months after the passage of the bill and there was collected a revenue of $430,000.

Mutton and lamb: $2,000,000 worth was imported in the 5 months before the passage of the emergency tariff bill. The emergency tariff bill placed a duty of 2 cents a pound on lamb. In the 10 months there has been $1,373,000 worth imported with a revenue of $167,000.

Milk and cream, fresh: In the 5 months before the emergency tariff bill was passed there was imported $585,000 worth of milk and cream, with no duty; it came in free. Under the emergency tariff bill, in 10 months there was $2,660,000 worth of milk and cream imported, with a revenue collected of $89,000.

Condensed milk: $1,195,000 worth of condensed milk was imported in the 5 months before the passage of the emergency tariff bill; $278,000 worth was imported in the 10 months after the passage of the emergency tariff bill with a revenue of $26,000.

Coconut oil: $7,581,000 worth of coconut oil was imported in the 5 months before the emergency tariff bill was passed; a duty of 20 cents a gallon was placed on it in that bill, and the importation for 10 months following the passage of that bill was only $155,036 and a duty of $74,000 was collected.

Soya-bean oil: $328,000 worth of soya-bean oil was imported in the 5 months before the passage of the emergency tariff bill;

a duty of 20 cents a gallon was placed on it, and in 10 months we had $96,000 worth of soya-bean oil imported and collected a duty of $55,000.

Potatoes: $1,179,000 worth of potatoes was imported in the 5 months prior to the passage of the emergency tariff bill with no duty; a duty of 25 cents a bushel was put on potatoes in that bill, and we had an importation of $1,444,000 worth of potatoes in the 10 months' period with a duty collected of $394,000.

Butter: $4,770,000 worth of butter was imported in the 5 months prior to the passage of the emergency tariff bill; there was a duty of 2½ cents a pound on butter in the Underwood bill and a revenue of $274,000 was collected. The emergency tariff bill put a duty of 6 cents a pound on butter, and $3,187,000 worth was imported in 10 months giving a revenue of $560,000.

Wool: $45,915,161 worth of wool was imported in the 5 months prior to the passage of the emergency tariff bill, and a duty of 45 cents a pound on the cleaned content was placed on wool in the emergency tariff bill. In the 10 months after the passage of the emergency tariff bill $11,968,000 worth of wool was imported giving the Government a revenue of $25,420,000.

Importations of wheat during the first period of 5 months were 20,000,000 bushels, and during the second period of 10 months the importations were 11,000,000 bushels.

Importations of wool during the first period, the 5 months prior to the emergency tariff bill, were 217,000,000 pounds. During the second period there was 56,000,000 pounds of wool imported.

Mr. President, I want to say that at the rate that wool was pouring in here if it had not been for the emergency tariff bill that great industry would have been absolutely destroyed. There is no question or doubt about it. That great industry went down from 64,000,000 head of sheep to 32,000,000 head, and they were practically what we call old shelly ewes, 4 years old, with a life in them of possibly from one to two years. The industry, through free trade and lack of proper protection, had been almost destroyed. The emergency tariff bill has brought it back almost like magic, and to-day it is almost back to better than pre-war prices with this high duty.

That is all I have to say at the present time, Mr. President. I ask unanimous consent that the various tables to which I have referred may be printed as an appendix to my remarks.

There being no objection, the tables referred to were ordered to be printed in the RECORD, as follows:

APPENDIX.

Prices of wheat in Minneapolis and Winnipeg.

[1] Not classified.
Butter paid a duty of 2½ cents per pound under the Underwood bill.
Quantity imports of wheat: First period, 20,889,048 bushels; second period, 11,146,508 bushels.
Quantity importation of wool: First period, 217,900,691 pounds; second period, 56,918,765 pounds.

SEATTLE, WASH., *May 7, 1922.*

Senator GOODING,
Care Senate Office Building, Washington, D. C.:

Rebates on vegetable oils will greatly reduce value of tariffs to dairy industry. Emergency tariff on butter did materially help to keep dairying alive by lessening flood of imports, but expansion of imitation butter and milk industry progressed, and vegetable-oil prices advanced. West coast dairymen know that rebates will leave door open to evil practices. Our association with 6,000 well-informed members implores you to secure adequate tariffs on dairy products and full tariffs without rebates on vegetable oils.

UNITED DAIRY ASSOCIATION OF WASHINGTON,
J. A. SCOLLARD, *President.*

PROSSER, WASH., *May 3, 1922.*

Senator F. R. GOODING,
Washington, D. C.:

Emergency tariff, in our opinion, entirely responsible for comeback in wool market. Sheep industry in weakened condition and dependent upon future earnings to restore even its capital. A protective tariff of great proportion imperative for reestablishment of this industry. Its capital impaired and will take several years to restore it to normal.

J. F. SEARS,
Secretary Washington Wool Growers' Association.

EVERETT, WASH., *April 22, 1922.*

Hon. FRANK R. GOODING,
United States Senate, Washington, D. C.:

Protest action Senate Finance Committee placing shingles on free list as absolutely unfair. We can not compete 8-hour day, American standard of wages, as against British Columbia oriental labor, 9 and 10 hour day. Regardless of what the figures of Tariff Commission show, how can you expect under these conditions to build up American industry, placing duty on raw material and admitting manufactured product from such raw material free? Is this taking care of the American workmen and American capital? To my mind, it is absolutely un-American, and it is with regret this telegram should be necessary.

GEORGE A. BERGSTROM.

DELTA, COLO., *May 2, 1922.*

FRANK R. GOODING,
Senate Building, Washington, D. C.:

Farmers of western slope unanimously favor not less than 2 cents per pound tariff on Cuban sugar as absolutely essential to sugar-beet industry.

BOARD OF COUNTY COMMISSIONERS.

MONTROSE, COLO., *May 1, 1922.*

Senator FRANK R. GOODING,
Senate Building, Washington, D. C.:

A tariff of 2 cents per pound against Cuban sugar and higher against other countries will make but little difference to the consumer, but will insure a profit to our growers. We are under a reclamation project and begin paying this year. Railroad rates are against us. Our farmers must grow crops that will bring a return sufficient to pay expenses and Government costs. The beet contract is based on the selling price of sugar. We, being a debtor to the Government, feel Congress should extend every consideration that will aid our beet growers.

BOARD OF COUNTY COMMISSIONERS.

MONTROSE, COLO., *May 1, 1922.*

Senator FRANK R. GOODING,
Senate Building, Washington, D. C.

The sugar beet growers of the Uncompahgre Valley operate under a sliding scale. Labor costs us $3 per day. We can not compete with Cuban labor. The tariff on sugar must be high enough to get American labor and allow the farmer a profit. Millions are invested by the farmers and capitalists in producing beet sugar. We ask of Congress consideration of our people first.

ED FAAST, *Secretary Montrose Grange.*

—

MONTROSE, COLO., *May 1, 1922.*

Senator FRANK R. GOODING,
Senate Building, Washington, D. C.

Our farmers lost heavily on potatoes. We are just recovering from shrink in live stock values. Sugar beets offer us a partial solution if price is right. Our farmers have a cooperative contract with sugar company based on selling price of sugar. The consumer cares nothing if price of sugar is reasonable and the grower securees his part. The slump in farm activity is reflected in every branch of industrial life to-day.

HARRY V. MONELL,
Secretary Montrose County Farm Bureau.

—

MONTROSE, COLO., *May 1, 1922.*

Senator FRANK R. GOODING,
Senate Building, Washington, D. C.

Without the farmer the cattleman goes out of business. We don't care what the price of sugar is up to $10 per bag if the grower is paid accordingly for his beets. Our farmers have a contract based on the selling price of sugar. This is a reclamation project and $7,000,000 must be paid the Government. We can not grow beets and compete with Cuban labor. A tariff based on the difference between Cuban labor and American labor is only fair.

AL A. NEWLE,
President Uncompahgre Valley Cattle and Horse Growers Association.

—

COLORADO SPRINGS, COLO., *April 30, 1922.*

Senator FRANK R. GOODING,
Senate Building, Washington, D. C.:

With a 1-cent duty on Cuban sugar prevailing at the time the emergency tariff became effective sugar would have sold at 60 cents per 100 pounds less than it did, which loss would have been shared practically in equal proportions by the manufacturer and beet owner. This would have brought immediate bankruptcy to the manufacturers and established an impossible price for beets, with no hope of reestablishing the industry in the future. Encouraged by the emergency tariff the manufacturers undertook to continue in business, but due to price competition by Cuba with depleted treasuries, occasioned by last year's losses, our bankers declined to continue financing our operations, and only because of the assistance rendered by the War Finance Corporation was it possible to complete our manufacturing campaign. Based on last year's experience and giving consideration to every possible reduction in costs it will not be possible for the industry to function without an increase in present duty of four-tenths cent per pound. This applies without qualifications to the Holly Sugar Corporation, producing over 1,000,000 bags per year, and I believe our situation is rather better than the average.

A. E. CARLTON,
President Holly Sugar Corporation.

—

MONTROSE, COLO., *May 1, 1922.*

Senator FRANK R. GOODING,
Senate Building, Washington, D. C.:

The Montrose County Beet Growers' Association asks Congress to place a 2-cent duty on Cuban sugar, to insure the American grower an opportunity to operate. The sugar companies have suffered heavy losses. We are operating under contract based on price of sugar. Labor is high also. We must begin repayment $7,000,000 to Government this year.

JOE BERTORELLO, *Secretary.*

—

COLORADO SPRINGS, COLO., *April 30, 1922.*

Senator FRANK R. GOODING,
Senate Building, Washington, D. C.:

The emergency tariff saved the day in so far as the Garden City Co. is concerned. Under the Underwood tariff operations would have been suspended before this. While we have operated at a loss, we are still running in the confident belief that the Congress of the United States will provide a tariff adequate to preserve this very important industry. Already the low price which we are compelled to pay for beets in order to continue operating at all has seriously affected our acreage. In the final analysis the price which we pay to the farmer will control the amount of sugar which we can produce.

JOE STEWART,
Manager the Garden City Co.

—

ROCKY FORD, COLO., *April 30, 1922.*

Hon. FRANK R. GOODING,
Chairman Tariff Group Senators,
Senate Office Building, Washington, D. C.:

There is no question in our minds that the emergency tariff was beneficial to us as well as the factories, although it is not large enough to enable beet growers to grow beets at a profit or the factories to operate in a progressive manner. All contracts signed with the factories this year were with the expectation that a $2 tariff would be enacted against Cuba and that this Congress would give agriculture protection against foreign standards.

ARKANSAS VALLEY BEET GROWERS' ASSOCIATION,

—

GRAND JUNCTION, COLO., *May 2, 1922.*

Senator FRANK R. GOODING,
Senate Chamber, Washington, D. C.:

It is very apparent that the production of sugar beets in this community will cease if the price to be paid to producers is lowered. It is difficult to secure production, even under the price paid during the last two years. The beet industry has been an important item in this locality, and, in our opinion, can not withstand any decrease in price to the producer. Unless the industry is protected by substantial tariff we feel that a severe loss will result to this locality.

SILMON L. SMITH,
President of Grand Junction Lions Club.

—

GRAND JUNCTION, COLO., *May 2, 1922.*

Senator FRANK R. GOODING,
Senate Chamber, Washington, D. C.:

Sugar beets during the past have proven to be one of our best cash crops, but as they are paid for according to the price received for sugar and on account of the uncertainty of the tariff the sugar-beet acreage is diminishing, and unless a substantial tariff is placed on sugar this great industry of our community will soon be destroyed. We think such a tariff is necessary if the sugar-beet business is to continue, for the farmer is the main beneficiary and should be protected at the present time.

D. T. STONE,
President United States Bank & Trust Co.

—

ROCKY FORD, COLO., *May 1, 1922.*

Hon. FRANK R. GOODING,
Chairman Tariff Group Senators,
Senate Office Building, Washington, D. C.:

It is our opinion that the emergency tariff now in effect has stabilized the sugar market to such an extent that it has enabled beet-sugar factories to pay farmers for beets delivered at a greater price than would have been possible without the additional protection, but protection is still insufficient to make the sugar-beet crop under present conditions a profitable one. However, with the expectation of increased protection a large area of sugar beets has been contracted, the basis of payment for same being in accordance with the net return to the factories for sugar sold; therefore we respectfully urge that a $2 tariff be enacted against Cuba in order to enable the beet-sugar industry, which is essentially an agricultural one and of great benefit in a systematic crop-rotation scheme, to reestablish itself on a profitable basis.

OTERO COUNTY FARMS BUREAU,
C. J. COVER, *President.*
H. P. BADGER, *Secretary.*
DAN W. JONES,
H. L. WADLEIGH,
F. J. KASPAR,
WILL MORRISON,
P. K. BLINN,
Executive Committee.

—

Senator FRANK R. GOODING,
Senate Office Building, Washington, D. C.:

Our losses on carry-over sugar, 1921, were large, but had it not been for emergency tariff these losses would have been increased to a point of ruination of this company, as it is account of necessity of paying low price to farmers for beets we can not get sufficient acreage contracted to warrant operating this year and are disposing of such beets as we get to neighboring plants. We are continuing in business in the conviction that the Congress of the United States will not permit this condition to continue and will grant us a 2-cent tariff against Cuba, which we figure would permit us to again operate.

SOUTHERN CALIFORNIA SUGAR CO.

—

GRAND JUNCTION, COLO., *May 2, 1922.*

Senator FRANK R. GOODING,
Senate Chamber, Washington, D. C.:

As farmers, raising sugar beets in this section, we feel that we are entitled to protection against Cuban sugar competition, because we raised beets during the war when labor was scarce and expensive in order to help our country by producing foodstuffs. Benefits of tariff on foreign sugar go mainly to farmer, and we can not continue in beet-growing business unless we are adequately protected.

LOMA BEET GROWERS' ASSOCIATION,
H. M. LONG, *President.*

—

GRAND JUNCTION, COLO., *May 2, 1922.*

Senate Chamber, Washington, D. C.:

Beet growers anxiously awaiting assurance protective tariff against Cuban sugar. Our principal cash crop is that of sugar-beet growing, which surely will be discontinued unless protective action is taken. The industry is of benefit to the entire community, as our growers share in the profits.

GRAND JUNCTION CHAMBER OF COMMERCE,
W. M. WOOD, *Secretary.*

—

GRAND JUNCTION, COLO., *May 2, 1922.*

Senator FRANK R. GOODING,

The raising of sugar beets is our main cash crop in this territory, and unless beet sugar has protection against Cuban sugar we will have to discontinue raising beets, because the sugar companies pay us on basis of what they receive for sugar. The present price of sugar beets is low, and the uncertainty of a tariff has caused many of our members to either leave the territory or resort to other crops.

APPLETON BEET GROWERS' ASSOCIATION,
C. E. BLUMENSHINE, *President.*

—

DELTA, COLO., *May 2, 1922.*

Hon. FRANK R. GOODING,
Senate Building, Washington, D. C.:

GRAND JUNCTION, COLO., *May 2, 1922.*

Senator FRANK R. GOODING,
Senate Chamber, Washington, D. C.:

Sugar beets is one of our main crops in this community, and especially on the Government high-line land known as the Grand Valley project, and as our farmers are paid by the factories on the basis of

amount received for sugar they are vitally interested; but on account of the uncertainty of the tariff beet acreage here is diminishing, and if the price is reduced to any extent the farmers will be forced to abandon this great industry, which, we believe, should be protected with a substantial tariff on Cuban sugar.

WM. WEISER,
President Grand Valley National Bank.

—

DENVER, COLO., *May 1, 1922.*

Senator FRANK R. GOODING,
Senate Office, Washington, D. C.:

We sustained large losses last year. Without emergency tariff we could not continue to operate; relying on Congress for protection, we are contracting for coming year on sliding scale. The life of the western beet-sugar industry will depend, however, upon the passage of a tariff which will enable it to compete with Cuban product, produced with cheap labor. A 2-cent tariff would save and encourage the industry, and would not be noticed by any family. If such a tariff is not established the whole United States will feel the destruction of our domestic beet-sugar industry, and when this is accomplished will pay for being dependent on foreign supplies, as happened in 1920.

SANTA ANNA SUGAR CO.

—

GRAND JUNCTION, COLO., *May 2, 1922.*

Senator FRANK R. GOODING,
Senate Chamber, Washington, D. C.:

Reduction in price of beets to growers made necessary by competition of Cuban sugar with beet sugar has caused many beet growers to abandon the business, and unless a 2-cent tariff on Cuban sugar is established people in this section of country are going to gradually discontinue raising beets, and the sugar industry will be destroyed. Farmers under Government project in this country depend on beets as only sure fixed income, and lack of production will force many to abandon holdings under Government project.

FRED G. HOLMES,
Manager Grand Junction Plant Holly Sugar Corporation.

—

MONTROSE, COLO., *May 2, 1922.*

Senator FRANK R. GOODING,
Senate Building, Washington, D. C.:

The stockmen are just recovering from the slump in live-stock market, and, without the cattlemen and the sheepmen, every industry is affected. We, therefore, urge sufficient tariff on wool to protect us from cheap foreign wool. We ask of Congress consideration of our people first.

WESTERN SLOPE WOOL GROWERS' ASSOCIATION,
A. M. MCANALLY, *President.*

We earnestly urge your holding out for a $2 tariff against Cuban sugar, this being essential to the welfare of our growers and to the continuance of the beet-sugar industry, especially where located in the Midwestern States. We do not see why eastern cane interests, after investing in Cuban plants for profits when, during the war, they loomed large, should now wish to protect their investments in a foreign land to the detriment and possible destruction of a long-established home industry and to the great injury of the American farmer. We stand firmly for the protection of American industry so closely connected with the prosperity of our farmers, and we ask for protection of at least that afforded by the emergency tariff, if not an increase in said protection to $2 against Cuban sugar.

C. D. BELL,
Vice President and General Manager Owosso Sugar Co.

—

CROSWELL, MICH., *May 1, 1922.*

Hon. FRANK R. GOODING,
Chairman Tariff Group, United States Senate,
Washington, D. C.:

Tariff on world's sugar does not interest us in beet-sugar belt. It is Cuba that is raising devil with beet factories. Protective tariff 2 cents sugar will not make sugar cost American citizens more than it would after beet sugar is driven out of country, and 2 cents tariff will save this great industry to beet-sugar States. Cuba can supply the world, and why give them advantage over countries that do not supply any great amount. This board in favor of 2 cents tariff.

D. E. HUBBELL,
President Board of Commerce.

—

CROSWELL, MICH., *May 1, 1922.*

Hon. FRANK R. GOODING,
Chairman Tariff Group, United States Senate,
Washington, D. C.:

Have heard of disloyal husbands being reminded of marriage vows. New York bankers and Cuban planters are trying to persuade us to disregard loyalty to home agricultural industries and put us out of business. Unless they are interested in putting us on our back, why should they worry about Cuba, with a 20 per cent advantage over the world. Emergency tariff a godsend, but not strong enough on sugar. We need 2 cents against Cuba to live. All lost past two years, and many beet factories out of business. We are looking to you to see platform pledges are carried out and we are allowed to stay on earth.

F. E. HARVEY,
Manager Croswell Sugar Co.

—

MENOMINEE, MICH., *May 1, 1922.*

Hon. F. R. GOODING,
United States Senate, Washington, D. C.:

The beet-sugar companies of Michigan and Wisconsin have suffered such severe reverses in the past two years that 90 per cent of them would to-day be in bankruptcy had not the confidence of their bankers been restored by the passage of the emergency tariff bill to maintain the domestic beet-sugar industry and prevent a repetition of the robbery of the American consumer by the manufacturers of foreign sugar. A duty of 2 cents per pound should be placed upon Cuban sugar.

MENOMINEE RIVER SUGAR CO.,
By G. W. MCCORMICH, *Manager.*

LANSING, MICH., *May 2, 1922.*

FRANK R. GOODING,
Washington, D. C.:

Tariff should be sufficient to protect home industries. Am informed that beet-sugar industry can not live on 1.6 cents against Cuba. Must have 2 cents. Am also informed all sugar companies have lost heavily the past two years, and many are on verge of bankruptcy, and that but for emergency tariff beet-sugar industry should have been eliminated. Believe this information reliable, and respectfully urge firm stand to protect this important American industry.

ALEX J. GROESBECK,
Governor of Michigan.

—

LANSING, MICH., *May 2, 1922.*

FRANK R. GOODING,
Senate Office Building, Washington, D. C.:

Emergency tariff has helped. Continuance strengthened. Imperative to farm interests.

A. B. COOK,
Master Michigan State Grange.

—

SAGINAW, MICH., *May 1, 1922.*

Senator FRANK R. GOODING.
Chief Tariff Group, United States Senate Building,
Washington, D. C.:

Merchants of Saginaw can not stand continued loss sustained by decrease in sugar-beet production in this section of Michigan. Beet growing one of Saginaw's most important industries, and all merchants interested in the success of the grower. Industry needs 2 cents against Cuba to live, and we need the industry.

SAGINAW RETAIL MERCHANTS' BUREAU.

—

LANSING, MICH., *May 2, 1922.*

FRANK R. GOODING,
Chairman Tariff Group, United States Senate,
Washington, D. C.:

Trust that you are paying no attention to the false propaganda the Havemeyer interests, New York bankers, and Cuban planters have issued, and that you will stand pat and give us 2 cents against Cuba on sugar. All beet-sugar manufacturers lost heavily the past two years. Many are in bankruptcy, majority of others have bonded heavily. Beet-sugar interests can not survive on 1.6 preferential; have to have 2 cents.

SAMUEL ODELL,
Chairman Public Utilities Commission.

—

BAY CITY, MICH., *May 1, 1922.*

Hon. F. R. GOODING,
United States Senate, Washington, D. C.:

The losses sustained by the beet-sugar industries of this country during 1922 are appalling. Probably 90 per cent of all the companies will have to do more or less financing in order to meet their obligations. Were it not for the emergency tariff this would have been practically impossible. While the emergency tariff is a step in the right direction, the protection it affords is absolutely inadequate. A tariff of 2 cents a pound against Cuba is the least amount under which the companies can afford to pay the farmers a remnuerative price for beets. The eastern banks want a lower duty for Cuba's benefit, so that Cuba can pay her debts. The seaboard refiners wanted to protect their investments in Cuba, also to wipe out their only competitors in the beet-sugar industry. Cuba wants this for her own profits. None of these interests care for the American farmer or the American beet-sugar industry. After the domestic sugar producers shall have been wiped out by a lower tariff the price of sugar will advance, as we have already seen what Cuba will do along these lines when they have the opportunity.

THE COLUMBIA SUGAR CO.

—

ALMA, MICH., *May 1, 1922.*

Hon. FRANK R. GOODING,
Chairman Tariff Group, United States Senate,
Washington, D. C.

MY DEAR MR. GOODING: Strong competition is the life of trade and the foundation block which develops efficiency in all industries. The beet-sugar industry can not survive without a tariff of 2 cents per pound against Cuban sugar, and if you kill our home industry, competition is gone, and pray where will prices go? All beet-sugar companies, excepting one not Havemeyer control, are asking for 2 cents tariff against foreign sugar. All companies lost heavily this past two years, some of them hanging only by a thread outside of bankruptcy and are begging for a chance to live. Please won't you do everything in your power and give us that chance, because we are surely gone if you don't? But for emergency tariff beet industry would have been eliminated and all other agricultural industry crippled worse than they have been. Farmers can not raise beets very profitably for less than a minimum price of $6 per ton. This country must have an adequate tariff to make it prosperous. The importation of wheat for eight months preceding the emergency tariff and eight months following speak volumes for an adequate tariff to protect our home industries and thereby preserve competition, which is the strongest factor known for keeping all commodities down to the lowest possible price.

Very truly yours,

ALMA SUGAR CO.,
JOTHAM ALLEN, *Manager.*

—

SEBEWAING, MICH., *May 1, 1922.*

Hon. FRANK R. GOODING,
Chairman Tariff Group, United States Senate,
Washington, D. C.:

Have heard of disloyal husbands being reminded of their marriage vows. New York bankers and Cuban planters are trying to fool you and to induce you to destroy home agricultural industry, thereby putting us out of business and removing beet-sugar competition. We all have the picture before us of what Cuba did to us when they had it all their own way and the beet sugar of the United States was all sold. Unless Cuba and the Havemeyer interests are interested in putting us on our backs, why should they worry about Cuba with a 20 per cent advantage over the world? The emergency tariff is certainly a godsend, but not strong enough on sugar. We need 2 cents against

Cuba to live. All beet-sugar companies lost heavily during the past two years. Many of them are out of business, and some of the plants will never be operated again by the same companies. We are looking to you to see that party platform pledges are carried out and that we are allowed to stay on earth. In order to do this, it is necessary to pay a minimum of $6 per ton for sugar beets. With only $1.60, is impossible. We will appreciate fully anything you can do for us.

SEBEWAING SUGAR CO.,
W. M. SMITH, *Manager.*

—

CARO, MICH., *May 1, 1922.*

Hon. FRANK R. GOODING,
Chairman of Tariff Group, United States Senate,
Washington, D. C.:

I sincerely hope no attention is given to false and misleading propaganda of New York bankers and Cuban planters, and that, regardless of this, you will give us 2 cents per pound duty against Cuba. We need it to live. All beet-sugar manufacturers are behind in the United States. Lost heavily during the past two years and many of them will not operate this year, some of them never again. Why should Cuba worry with 20 per cent preferential against the world unless the purpose is to kill us off? Emergency tariff has given wonderful results, but is low on sugar against Cuba. We hope you will stand firm in the interest and protection of your own home industry and against Cuban producers and Havemeyer-controlled beet-sugar companies. We appreciate your effort and hope for a square deal.

L. R. STEWART,
Manager Caro Sugar Co., Caro, Mich.

—

SAGINAW, MICH., *May 1, 1922.*

Senator FRANK R GOODING,
Chief Tariff Group, United States Senate Building,
Washington, D. C.:

Beet-sugar industry important to this district of Michigan. Can not survive with less than 2-cent protection against Cuban sugar. We consider this chance for an important industry to live a part of Republican campaign pledges and looking to you to help carry to a successful conclusion.

SAGINAW BOARD OF COMMERCE.

—

BAY CITY, MICH., *May 1, 1922.*

Hon. FRANK GOODING,
Chairman Tariff Group, United States Senate,
Washington, D. C.:

If it were not for the emergency tariff the manufacturers of beet sugar would be out of business and the agricultural interests seriously embarrassed. One sixty against Cuba is not enough to keep us alive; all lost money past two years; many will not operate this year. Some of them are in hands of receivers. G. O. P. have to disregard New York bankers and Cuban producers as against the whole agricultural interests. The former has squandered a decent dividend in false and misleading propaganda you must be familiar with. We need your assistance to stay in business, and are looking to you and depending on you, and will appreciate your best efforts. We have not yet lost our faith in the Republican Party platform pledges.

EUGENE FIFIELD,
Manager Michigan Sugar Co., Bay City Plant.

—

SAGINAW, MICH., *May 1, 1922.*

Hon. FRANK R. GOODING,
Chairman Tariff Group, United States Senate,
Washington, D. C.:

Beet-sugar industry should have not less than 2 cents against Cuba to survive; it is necessary to have this duty in order to be in a position to contract with the grower for a minimum of $6 per ton for beets and a guaranty that beet prices follow advance in sugar. The loss sustained by the beet-sugar industry during the past two years is astonishing. Some of them will probably never do business again. The emergency tariff has helped us wonderfully and allowed some of us to stay in the game. The eastern banks are seemingly undertaking to protect their investment and Cuba to pay her debts at our expense. None of these interests give a whit for the American farmer or beet-sugar interests. We all know what Cuba did to us during the war when she had the opportunity, and if we did not have beet sugar the people of the United States would be paying at least twice as much for their sugar to-day. Your efforts in our behalf will be appreciated.

GEO. B. MORLEY,
Vice President Michigan Sugar Co.

—

SAGINAW, MICH., *May 1, 1922.*

Hon. FRANK R. GOODING,
Chairman Senate Tariff Group, Washington, D. C.:

We firmly believe that beet-sugar industry can not survive with less than 2 cents against Cuba. Except for the emergency tariff the beet-sugar industry would have been eliminated and all agricultural industries seriously crippled. All growers must receive minimum price of $6 per ton to insure reasonable profits, and less than 2 cents against Cuba will not permit this. We strongly urge that you stand firm and protect home industry as against Cuban producers and Havemeyer controlled beet sugar.

SAGINAW MANUFACTURERS' ASSOCIATION.

—

ALMA, MICH., *May 1, 1922.*

Hon. FRANK R. GOODING,
Chairman Tariff Group, United States Senate,
Washington, D. C.:

Two beet-sugar factories in this community on which farmers depend have lost money past two years. Farmers can not produce beets for less than $6 per ton. Industry must be protected or quit. Two cents is fair differential and will permit industry to proceed, otherwise it must quit. Home industry should be protected against Cuban sugar by adequate tariff. Please make tariff adequate to allow American farmers and manufacturers to live.

H. S. BABCOCK,
President Chamber of Commerce.

MENOMINEE, MICH., *May 1, 1922.*

Senator FRANK R. GOODING,
United States Senate, Washington, D. C.:

Representing nearly 1,200 farmers of Menominee County who grow sugar beets, we urgently request your assistance in securing an import duty of 2 cents a pound on sugar from Cuba. If the farmers are to get a price for their beets that will give them a living profit, we must have this protection.

MENOMINEE COUNTY FARM BUREAU.

—

DETROIT, MICH., *April 29, 1922.*

Senator FRANK R. GOODING,
United States Senate, Washington, D. C.:

The sugar schedule of the emergency tariff bill served the purpose for which it was enacted, namely, to tide over an emergency and check the slump in the price of sugar, thereby preventing the absolute destruction of the domestic sugar industry during the period of reconstruction. The rates named in that bill are not sufficient to encourage the development of the beet-sugar industry against the competition, especially of Cuba, so that continental United States shall be certain of producing a war ration of sugar for this country. The experience of the United States during the last war, and especially in 1920, demonstrates the advisability of producing in continental United States at least a war ration of sugar, not only because such production is sound economic policy but also because such a production of domestic sugar is essential as a means of national defense. We should have a duty of 2 cents a pound on 96° Cuban sugar entering the United States.

F. R. HATHAWAY,
Secretary-Treasurer Eastern Beet Sugar Manufacturers' Association.

—

DETROIT, MICH., *April 29, 1922.*

Senator FRANK R. GOODING,
The Capitol, Washington, D. C.:

Emergency tariff bill has been important factor in saving beet-sugar industries during recent adverse conditions. Think it absolutely necessary that a 2-cent tariff as against Cuba be maintained.

SHERWIN A. HILL.

—

DETROIT, MICH.

Hon. FRANK R. GOODING,
Washington, D. C.:

Being vitally interested in welfare of beet-sugar industry, I strongly urge that you oppose any effort to remove the protection afforded domestic sugar contained in the emergency tariff. This protection is absolutely necessary for the development of an important domestic industry. We can not afford to be at the mercy of foreign producers, who would not hesitate to boost the price if without domestic competition. Sugar beets are invaluable crop in rotation, resulting in increased yield of other crops. We have had one experience in war time of depending on foreign countries for basic products. We can not afford to do it again.

JAMES E. LARROWE.

—

HOLLAND, MICH., *May 1, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

Beet-sugar industry, including our company, is far from a prosperous condition. We sustained every manufacturing losses past two years. The emergency tariff saved our lives, but we are still very sick. To continue to live we must have 2 cents against Cuba. Help, please.

C. M. MCLEAN,
Secretary Holland-St. Louis Sugar Co.

—

BAY CITY, MICH., *May 2, 1922.*

Hon. FRANK R. GOODING,
Chairman Tariff Group, United States Senate,
Washington, D. C.:

Bay City has three sugar factories. We are looking to you to see that pledges and understandings in regard to tariff are carried out. Do not give us less than 2 cents on Cuban sugar. All good wishes.

BAY CITY BOARD OF COMMERCE.

—

LANSING, MICH., *May 2, 1922.*

FRANK R. GOODING,
Chairman Tariff Group, United States Senate,
Washington, D. C.:

If it were not for the emergency tariff, the manufacturers of beet sugar would be out of business and all agricultural interests seriously embarrassed. One and six-tenths cents against Cuba is not enough to keep us alive. All lost money past two years and many will not operate this year. The G. O. P. has its choice between New York bankers and Cuban producers and home agricultural interests. Stand pat for 2 cents against Cuba. We have not yet lost our faith in Republican Party pledges.

CHARLES J. DELAND,
Secretary of State.

—

LANSING, MICH., *May 3, 1922.*

FRANK R. GOODING,
United States Senate, Washington, D. C.:

Michigan State Farm Bureau urges you to stand for 2-cent duty on Cuban sugar. Of vital concern to beet growers.

C. L. BRODY, *Secretary.*

—

FORT WORTH, TEX., *May 1, 1922.*

Senator F. R. GOODING,
Washington, D. C.:

As stated in our brief filed with the Senate tariff bloc, the emergency tariff act has added $8 per ton to the value of cotton seed and $18 per ton to the value of peanuts. It has saved the southern producers of vegetable oils from ruin. Our organization represents 105 independent crude cottonseed oil mills and speaks the sentiment of the independent crushers of the South.

W. A. BENNETT,
President Texas Cottonseed Crushers' Association.

WEATHERFORD, TEX., *May 2, 1922.*

Senator F. R. GOODING,
Washington, D. C.:

Without question emergency tariff saved peanut industry, and the industry must be protected by permanent tariff. After the war, and practically under free trade, imported peanuts and oil forced the shelled-peanut market down between 3 and 4 cents and the peanut-oil market to between 4 and 5 cents. Since the passage of the emergency tariff and after imported stocks were exhausted shelled peanuts advanced to 6 cents per pound and peanut oil to 10 cents per pound. The emergency tariff has actually doubled the value of peanuts to the producer. The time actually existed before the emergency tariff when the farmer could not sell peanuts at more than 50 to 55 cents per bushel, and to-day the same stock is bringing from $1 to $1.10 per bushel.

WEATHERFORD PEANUT MILLS.

—

WEATHERFORD, TEX., *May 2, 1922.*

Hon. F. R. GOODING,
Senate Finance Committee, Washington, D. C.:

Referring to statements of Members of Congress that the emergency tariff act has had no beneficial effect on the productive industries of the South, I want to say that this is not true so far as the peanut industry is concerned.

Under the Underwood tariff bill our industry found it impossible, on account of foreign competition, to do any business on the Pacific coast, but after the passage of the emergency tariff act and when Chinese and Japanese stocks in this country were exhausted a market for the Texas peanuts was created, and 5,000,000 pounds of shelled peanuts have already been sold from Texas to points along the Pacific coast.

Under the Underwood tariff the price of shelled peanuts dropped to 3½ cents per pound, and after the passage of the emergency act it increased to 6½ cents; the price of peanut oil advanced from 3½ cents under the Underwood bill to 11 cents under the emergency act; and the price of farmers' peanuts, which had fallen to 60 cents per bushel under the Underwood Act, increased to 90 cents per bushel following the emergency act.

J. R. FLEMING,
Secretary Southwestern Peanut Shellers' Association.

—

LAYTON, UTAH, *May 3, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

Our beet acreage only 50 per cent of last year. Unless duty on sugar is increased so we can pay farmers more for beets, thus increasing our acreage, it will be useless to try to operate our plant in the future. The emergency tariff was certainly beneficial, and any increase will materially help out.

LAYTON SUGAR CO.

—

PROVO, UTAH, *May 1, 1922.*

Senator FRANK R. GOODING,
Chairman Tariff Group of Senators, Washington, D. C.:

Owing to tariff uncertainty, Utah and Idaho sugar companies' maximum guaranty on this year's beet contracts only $5 per ton. Result about two-thirds normal beet acreage contracted. Short tonnage will necessarily raise the year's cost above last year level. Companies operated last year on normal tonnage, but manufacturing costs were and still are above market sugar prices. Present beet contract prices discouraging to growers, but we realize manufacturers can do no better without additional tariff protection. Failure of the sugar-beet industry in this section United States would work irreparable damage to the farmer. Nothing short of 2 cents on Cuba's can save us.

UTAH COUNTY FARM BUREAU,
By L. L. BUNNELL, *President.*

—

SALT LAKE CITY, UTAH, *April 30, 1922.*

Hon. FRANK R. GOODING,
Chairman Tariff Group Senators, Washington, D. C.:

As operating receiver for this sugar company I am convinced that a 2-cent tariff on sugar as against Cuba is absolutely necessary for the continued operation of this plant.

JAMES J. BURKE,
Receiver Interstate Sugar Co.

—

SALT LAKE CITY, UTAH, *May 2, 1922.*

Senator FRANK R. GOODING,
United States Senate, Washington, D. C.:

Beet-sugar production last year less than 300,000 tons over 1914, while Cuba's increase amounts to 1,500,000 tons. Tariff rates of United Kingdom and France being three to five times higher than ours, it naturally follows that Cuba seeks this market for her sugar, where tax is lowest and money best.

UTAH-IDAHO SUGAR CO.

—

SALT LAKE CITY, UTAH, *May 2, 1922.*

Senator FRANK R. GOODING,
United States Senate, Washington, D. C.:

Our contract with farmers anticipates division of returns above guaranteed price of $5 per ton in Utah and $5.50 in Idaho. In attempting to secure sufficient acreage to warrant operating our factories the coming year we were obliged to hold out hope to our farmers that Congress would give industry adequate protection by the establishment of 2-cent duty against Cuba; hence in advocating increase above emergency rate we feel that we are representing the interests of the farmers as well as our own.

UTAH-IDAHO SUGAR CO.

—

SALT LAKE CITY, UTAH, *May 2, 1922.*

Senator FRANK R. GOODING,
United States Senate, Washington, D. C.:

The increase in the tariff rate from 1 cent to 1.60 under the emergency tariff was not reflected in the price of sugar, as anticipated, due largely to an imminent carry over of 1,000,000 tons Cuban sugar, but in the final analysis without question was of great benefit to the industry, as it had the effect of encouraging our manufacturers and farmers to continue in business with a hope that adequate relief would come later. Had Congress failed to act in that emergency results, in our opinion, would have been disastrous, as fully 90 per cent of beet-sugar producers would have been unable to survive unless growers of beets could have been induced to lower their standard of living to the basis of that prevailing in Cuba, which every American concedes is unthinkable.

UTAH-IDAHO SUGAR CO.

—

OGDEN, UTAH, *May 2, 1922.*

Senator FRANK H. GOODING,
Chairman Tariff Group Senators, Washington, D. C.:

Our company incorporated 1917 with $1,000,000 invested capital. After four years' operation entire profits wiped out during year 1921, and over period five years stockholders have never received one dollar on their investment. Due enormous losses last year we were forced to sell practically entire crop before enactment emergency tariff, and benefits to us negligible. Our 1922 operating costs compare favorably with large companies, and in some instances are improvement, and with Fordney emergency tariff earnings will not exceed 2½ per cent on investment. By increasing tariff on Cuban sugar to 2 cents per pound and continued application of drastic and rigid economy it will then be possible for us to make fair profit on our investment. Without emergency tariff our factory would have been idle and we would have been confronted with bankruptcy last September. Under existing conditions many independent beet-sugar companies in serious financial difficulties and are unable to offer beet contracts sufficiently attractive to pay farmers a price that will insure them a profit. Practically every independent beet-sugar company in hands of its bankers to-day or being operated by receivers.

WYOMING SUGAR CO.

—

SALT LAKE CITY, UTAH, *May 1, 1922.*

Hon. F. R. GOODING,
United States Senate, Washington, D. C.:

Absolutely vital for the maintenance of the sugar industry in this country that the pending tariff bill provide a duty of at least 2 cents as against importation of Cuban sugar. This duty absolutely essential as regards the beet-sugar industry in order to make possible payments to growers of beets, as well as make the crop profitable to them from the standpoint of the manufacturer, and under existing prices for sugar it is impossible to operate with a profit. Under a lesser measure of protection it is doubtful, even with a 2-cent duty, whether the sugar industry in this country may be able to survive.

GUNNISON VALLEY SUGAR CO.

—

SALT LAKE CITY, UTAH, *May 2, 1922.*

Senator FRANK R. GOODING,
United States Senate, Washington, D. C.:

Full representation of beet-sugar interests appeared before the Senate Finance Committee December 20 and 21 last and submitted facts and figures respecting all phases of the industry and showing absolute necessity of not less than 2 cents tariff duty against Cuba. Difficulty in securing sufficient beet acreage to operate factories the coming season, due to present and prospective price of sugar, demonstrates beyond question the futility of trying to continue the beet-sugar industry unless adequate protection is provided by Congress.

UTAH-IDAHO SUGAR CO.

—

PROVO, UTAH, *May 1, 1922.*

FRANK R. GOODING,
Chairman Tariff Group of Senators, Washington, D. C.:

Operating last year under emergency tariff rates with unusually high sugar content in beets our average sugar sales to date show a loss. Consequently we lowered our guarantee this year on beet contracts to $5 per ton. Beet acreage fell off one-third as a result. Beet shortage will be reflected necessarily in higher manufacturing costs. Both manufacturer and beet raiser are trying to keep sugar beet industry alive pending enactment of permanent tariff. Operations for 1920 and 1921 show conclusive industry can not continue under present uncertainty. This year's beet contract is written on profit-sharing basis, but unless 2-cent tariff on Cuba's is enacted there will be an additional deficit for sugar companies to assume. Our surplus has already disappeared and our capital is seriously impaired. Sugar beet industry can not readjust itself to present industrial conditions short of 2-cent tariff on Cuba's. Utah County Farm Bureau wiring you direct.

SPRINGVILLE MAPLETON SUGAR CO.

—

MILWAUKEE, WIS., *May 1, 1922.*

Hon. FRANK R. GOODING,
Washington, D. C.:

No sugar beet factory in Wisconsin would have continued to operate without the emergency tariff. Contracts with farmers for raising sugar beets made sliding scale, based on price of sugar. Must have 2-cent protection against Cuba to bring reasonable returns to farmers and to permit factories to continue operating.

CHIPPEWA SUGAR REFINING CO.

—

OCONTO, WIS., *May 1, 1922.*

Senator F. R. GOODING,
Washington, D. C.:

Am one of the largest growers of sugar beets in Oconto County and can speak for a large number of farmers in this section who are interested in the beet-sugar industry. We know that the existing tariff was an important factor in helping to save the beet sugar companies in this district from disaster. The farmers of this county want this industry to prosper, so we can have an open and steady cash market for our sugar-beet crop. We hope you will place at least a 2-cent duty on Cuban sugar.

O. B. GEORGE.

—

MILWAUKEE, WIS., *May 1, 1922.*

Hon. FRANK R. GOODING,
Washington, D. C.:

Referring to telegraphic inquiry, had it not been for extension of emergency tariff on sugar no attempt would have been made to operate our beet-sugar factories this year. Permanent tariff must have 2 cents against Cuba to protect sugar-beet growers and producers.

UNITED STATES SUGAR CO.

—

GREEN BAY, WIS., *May 1, 1922.*

Senator F. R. GOODING,
Chairman Tariff Group Senators, Washington, D. C.:

The emergency tariff has helped the beet-sugar manufacturers to a considerable extent, but at that it is not large enough, and at least 2 cents is absolutely necessary as against Cuba. Please note that two

beet-sugar companies in Wisconsin still owe farmer growers account beets grown in 1921. All sugar companies hesitate to push operations in 1922 because for two years sugar has been sold below cost of production, and every beet-sugar company shows terrific losses in recent inventories. Unless at least 2 cents protection is provided against Cuba the American sugar industry is doomed and then the old high sugar prices will prevail.

GREEN BAY SUGAR CO.

—

WICHITA, KANS., *March 25, 1922.*

Senator GOODING,
Washington, D. C.:

Understanding that the Senate Finance Committee, in considering the tariff bill, contemplates recommending admitting coconut oil and cottonseed oil and copra and soya beans free and placing only a 1-cent per pound duty on soya-bean oil and only one-half cent on peanut oil, we wish to enter protest, and ask that in the interest of the great dairy business of the United States a 4-cent duty be placed on oils mentioned above and 2 cents on copra and soya beans.

WICHITA CREAMERY,
Member of Kansas Creamery Association.

—

GARDEN CITY, KANS., *May 2, 1922.*

Senator FRANK R. GOODING,
Senate Building, Washington, D. C.:

The Garden City Co. has been operating a 1,000-ton mill here since 1906 and has been contracting with the local growers for from 8,000 to 10,000 acres of beets each year during the period until last year. Last year the acreage was reduced to 5,500 acres and this year to 4,500 acres. This reduction is caused solely from the fact that the company has been compelled to reduce the price of beets to a price commensurate with what it receives for sugar. Last year they lost approximately 50 cents on each bag of sugar they manufactured. Notwithstanding this fact, they are paying this year the same price for beets that they did last year, hoping that the tariff this year would be increased at least four-tenths cent per pound over present duty. Local farmers can not raise beets at a lesser price than they are now receiving, and it is self-evident that the factory can not continue operations long at losses sustained as above enumerated. We consider this question to be a most vital one for the interests of our community.

THE GARDEN CITY CHAMBER OF COMMERCE,
By CHAS. I. ZIRKLE, *President.*

—

RIGBY, IDAHO, *May 2, 1922.*

Hon. FRANK R. GOODING,
United States Senate, Washington, D. C.:

There are 5,000 sugar-beet growers in Idaho dependent upon an increased tariff of 2 cents against Cuban sugars and 2½ cents against other foreign sugars. Our farmers must have this protection before they will resume the growing of sugar beets. We can not continue to grow beets at a loss as we did in 1921 and have planted our land to other crops. Please support the higher tariff, as we need the beet crop on our farms in this section.

JEFFERSON COUNTY FARM BUREAU,
MELVING LUKE, *Agent.*

—

RIGBY, IDAHO, *April 29, 1922.*

FRANK R. GOODING,
Chairman Tariff Group Senators, Washington, D. C.:

Sales on last year's output of sugar has netted this company $4.42 per bag up to date. This sugar cost $5.77 to manufacture. Added to the enormous losses of 1920, this loss of $1.35 per bag has forced us out of business. Due to the uncertain and demoralized condition of the beet-sugar industry, this company was unable to finance another campaign and will not operate this year. Unless there is a higher tariff against Cuban raw sugar so that a higher price is absolutely assured for refined granulated, this company can not resume next year. This company has 2,400 farmer stockholders who show they can not grow beets at present prices for refined granulated sugar. Answer.

BEET GROWERS SUGAR CO.

—

RIGBY, IDAHO.

FRANK R. GOODING,
Chairman Tariff Group of Senators, Washington, D. C.:

On account of low priced beet sugar and demoralized condition of the sugar-beet industry it is impossible for Idaho farmers to grow sugar beets at a profit. Upper Snake River Valley has five beet-sugar factories backed by ample beet acreage, but there is not sufficient beets planted to date to operate one factory to capacity.

Under present conditions the sugar-beet industry in Idaho is doomed and our sugar factories can only be reopened by protection from Congress, which we strongly recommend. Answer.

JEFFERSON COUNTY FARM BUREAU.

—

SALT LAKE CITY, UTAH, *April 29, 1922.*

Senator FRANK R. GOODING,
United States Senate, Washington, D. C.:

Telegram requesting information regarding facts on emergency tariff rates received. Will telegraph you Monday our opinion, and will also endeavor to get farm bureau to do likewise.

UTAH-IDAHO SUGAR CO.

—

RIGBY, IDAHO.

Hon. FRANK R. GOODING,
United States Senate, Washington, D. C.:

This company with 2,400 farmers, who are stockholders, can not operate without a duty of at least 2 cents against Cuba and 2½ cents as against all other foreign sugars. On account of present demoralized sugar market and uncertainty of reasonable tariff protection our company is unable to operate this year.

BEET GROWERS SUGAR CO.,
By A. G. GOODWIN, *Vice President.*

—

SPENCER, IDAHO, *April 30, 1922.*

Senator FRANK R GOODING,
Senate Office Building, Washington, D. C.:

Note Senate resolution directing Tariff Commission to submit findings and investigations as to operation and results of emergency tariff. I consider this the best and most beneficial piece of tariff legislation from the point of immediate effectiveness that was ever passed by Congress. It has saved the wool and sheep growing industry absolutely; it has stimulated and encouraged the cattle and meat interests; it has saved the lemon producers of California, as I learned during my visit there this winter; and has also encouraged and materially helped producers of long-staple cotton in the Imperial Valley and Salt River Valley, Ariz. In my judgment, a large percentage of western banks and cattle loan companies have been or will be saved from closing their doors by this legislation.

F. J. HAGENBARTH.

—

MARION, OHIO, *April 30, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

Answering Senator HARRISON'S resolution, without emergency tariff sugar would be 80 cents less per hundred pounds at present prices. Farmers reluctant to grow sugar in competition with other crops without emergency tariff; impossible for them; it saved the industry a national disgrace, economical and political, to buy farm products we can grow on our own land.

C. H. ALLEN.

—

TOLEDO, OHIO, *April 29, 1922.*

Hon. FRANK R. GOODING,
United States Senate, Washington, D. C.:

Rates named in emergency tariff bill will not develop the beet-sugar industry in the United States with Cuban competition. We should have a $2 per hundred duty on 96° sugar entering United States from Cuba.

F. L. CARROLL, *Manager Toledo Sugar Co.*

—

ELYRIA, OHIO, *May 1, 1922.*

Senator GOODING,
Senate Office Building, Washington, D. C.:

Adequate protection to dairy industry with full tariffs, without rebate to soap makers on vegetable oils, essential. Emergency rate assisted in keeping back the flood of foreign butter. We ask your support of present tariff protecting dairy industry.

THE OHIO FARMERS' COOPERATIVE MILK CO.,

—

OKLAHOMA CITY, OKLA., *April 29.*

Hon. F. R. GOODING,
Senator, Washington:

Fifty-three of the fifty-five Oklahoma oil millers feel that emergency tariff helped the industry and added at least $8 per ton to value of farmers cotton seed and over twice that amount on peanuts. We urgently request that tariff be continued on vegetable oils and oil-bearing substances.

OKLAHOMA COTTON SEED CRUSHERS' ASSOCIATION.

—

ROSWELL, N. MEX., *May 1, 1922.*

Hon. F. R. GOODING,
United States Senate, Washington, D. C.:

Understand emergency tariff being attacked in Senate. When emergency bill was enacted warehouses here were overflowing with alfalfa hay, other farm products, wool pelts, and hides. Importations of wool from Australia and South America were being laid down in Boston at that time at 9 cents for crossbreds and 15 to 20 cents for best light shrinking long-staple fine wools. Freight and commission charges from the West to Boston were 6 cents per pound, leaving Northwestern growers 3 cents for their crossbred wools and Western and Southwestern growers 9 to 14 cents for their fine wools. There being no sale for live-stock hides, pelts, and wool, farm products went begging, resulting in destroyed confidence and business stagnation. Surplus cheap foreign wools and curtailment of credits forced 1920 and 1921 wool clips on market at destructive prices. Emergency tariff discouraged importation and surplus stocks of cheap foreign wools have been consumed. Sheep and wool are now bringing normal prices, considering production costs, with restored confidence in all lines of industry. If permanent tariff measure passes Senate with truly protective duties on wool, agricultural, mineral, and pastural products, with equal protection for the industries of the East, including American valuation, increased activities in our factories and in the fields will be immediate, idle labor will be employed, and complete confidence in Congress and in our country restored.

PRAGER MILLER MILLER,
President New Mexico Wool Growers' Association.

—

RENO, NEV., *May 2, 1922.*

Hon. FRANK R. GOODING,
United States Senate, Washington, D. C.:

Nevada growers credit prevailing wool prices to emergency tariff act, without which industry would have been ruined.

VERNON METCALF,
Secretary Nevada Live Stock Association.

—

SUFFOLK, VA., *May 1, 1922.*

Senator F. R. GOODING,
Washington, D. C.:

When emergency tariff law went into effect peanut and cottonseed oils were in limited quantities marketable at 4½ cents per pound. Southern peanuts with limited market $40 per ton. After emergency tariff law began to function prices of these commodities began to rise until to-day oils are selling for 11 cents per pound and southern peanuts $70 and $75 per ton. We resent with all our power statement that the emergency tariff bill has not been of any benefit to the South.

UNITED PEANUT ASSOCIATION OF AMERICA,
M. M. OSBORN, *Secretary.*

—

WOODBURY, N. J., *May 1, 1922.*

Senator F. D. GOODING,
Senate Office Building, Washington, D. C.:

Request your support of adequate protection for dairy industry with full tariffs without rebate on vegetable oils. The emergency tariff helped.

Senator FRANK GOODING,
Member United States Senate, Washington:

Dairymen here urge full rates on butter and all vegetable oils in new tariff.

R. W. BALDERSTON,
Secretary Philadelphia Interstate Dairy Council.

—

PHILADELPHIA, PA., *May 1, 1922.*

Senator FRANK GOODING,
Member United States Senate, Washington:

Rebate on vegetable oils must be eliminated to insure protection American farmers. Emergency tariff demonstrated in principle keeping our butter and vegetable oils.

F. P. WILLITS.

—

PHILADELPHIA, PA., *May 1, 1922.*

Senator FRANK GOODING, *Washington:*

Representing 16,000 dairy farmers, insist that rebate on vegetable oils is extremely dangerous and should be eliminated. Emergency tariff clearly demonstrated in principle value in holding back flood foreign butter and vegetable oils.

INTERSTATE MILK PRODUCERS' ASSOCIATION.
H. D. ALLEBACH, *President.*

—

BOSTON, MASS., *May 1, 1922.*

Senator FRANK GOODING,
Senate Office Building, Washington, D. C.:

Any cut in tariff rates on dairy products reported by Senate would be calamity. Emergency tariff rates great help, but not enough. We urge full tariff on vegetable oils without rebate.

NEW ENGLAND MILK PRODUCERS' ASSOCIATION.

—

CHICAGO, ILL., *April 29, 1922.*

A. M. LOOMIS,
Secretary National Dairy Union,
630 Louisiana Avenue NW., Washington, D. C.:

Prior to emergency tariff, the butter market in this country was in a demoralized condition during period of year when most of our best butter is made. It is mostly all placed in storage for purpose of carrying it over from time of plenty to time of scarcity. Everybody that had butter in storage prior to emergency tariff lost money on the same due to influx of butter from Denmark, Canada, Argentina, New Zealand, and Australia. It was not alone the amount of butter that affected our market and caused demoralization, but the uncertainty as to how much butter would come in had its effect. If we did not have tariff on butter at the present time in my judgment butter would go into storage 5 cents a pound less than it will go in at the present time.

G. L. MCKAY,
Secretary American Association Creamery Butter Manufacturers.

—

EAST ST. LOUIS, ILL., *May 1, 1922.*

Senator GOODING,
Senate Office Building, Washington, D. C.

DEAR SIR: The members of the Southern Illinois Milk Producers' Association, through their office, urgently request adequate protection to dairy industry, with full tariffs without rebate to soap makers on vegetable oils. The emergency rate does assist in keeping back the flood of foreign butter and giving vegetable oils a start upwards. You will remember that this tariff on oils was put on when they were at a low price point, and it almost immediately marked the beginning of the upward rise in vegetable oil prices. We urgently request that you give this matter special attention.

Truly yours,

N. E. BAUM, *Secretary.*

—

LINCOLN, NEBR., *May 1, 1922.*

Emergency tariff on dairy products has been of tremendous value in reestablishing confidence in American dairy industry, and the prices have reacted very favorably for the dairy farmer. Psychological effect more important than actual amount. Also favor vegetable oil protection.

J. H. FRANSDEN,
Dairy Editor Capper Farm Publications.

—

MONTPELIER, VT., *April 30, 1922.*

Senator GOODING,
Capitol, Washington, D. C.:

Emergency tariff has been steadying influence on price of dairy products. Vermont grange desirous of continuance of said tariff.

O. L. MARTIN.

—

MINNEAPOLIS, MINN., *May 1, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

Emergency tariff prevented Cuba from completely strangling beet sugar out of existence. Without this tariff, Cuba would have absorbed our entire market and killed beet industry. Beet-sugar industry, after taking lead reducing prices during war, is almost wiped out by Cuba, and our Government stood by and watched the process. Eastern press leading campaign of propaganda for Cuban interests to secure low tariff, which would give Cuba our market. If Cuba is successful in reducing beet-sugar competition, prices will then quickly advance. We need 2-cent tariff against Cuba. Help our farmers in Minnesota and Iowa grow beets at reasonable return and assist industry to live.

NORTHERN SUGAR CORPORATION MINNESOTA SUGAR CO.,
H. A. GOUDLAS, *President.*

DASSEL, MINN., *April 28, 1922.*

Senator GOODING,
United States Senate, Washington, D. C.:

Emergency tariff measure great benefit to dairy industry. Stabilization of prices. Importation of butter now would be disastrous.

J. R. MORLEY,
Director National Dairy Union.

—

WORLAND, WYO., *May 2, 1922.*

Senator FRANK R. GOODING,
Chairman Tariff Committee, Washington, D. C.:

The Alfalfa Commercial Club, consisting of the business men of Worland, Washakie County, Wyo., wherein the Wyoming Sugar Co.'s beet-sugar factory is located, recommend the passage of a tariff on Cuban raw sugars of not less than 2 cents per pound, and request you use your best efforts to the securing of its final passage. The farmers in this section have been greatly benefited by the emergency tariff in the securing of a better price for their sugar beets during the past season's operations which they would not otherwise have received. The sugar industry, considered a very valuable asset to this section of Wyoming, can not continue to exist and pay to the farmers a price for their sugar beets which they are justly entitled to receive without at least a 2-cent tariff, and the farmers must be paid more for their product or they will discontinue the growing of beets, which will probably result in the destroying of the industry, which will result in at least two-thirds of the farms in this section remaining vacant.

WORLAND ALFALFA COMMERCIAL CLUB,
W. O. GRAY, *President.*

—

WORLAND, WYO., *May 2, 1922.*

Senator FRANK R. GOODING,
Chairman Tariff Committee, Washington, D. C.:

Representing the farmers in this section and being large producers of sugar beets in the vicinity of the Wyoming Sugar Co.'s beet-sugar factory, we have been greatly benefited through the passage of the emergency tariff bill, which has resulted in the farmers receiving a better price this year for sugar beets than they would have otherwise received. We earnestly request you use your best efforts in securing a tariff on Cuban raw sugar of not less than 2 cents per pound, which we deem absolutely necessary to enable the sugar company to pay the farmer more per ton for the beets, and also for the industry, which is of great value to us, to continue to operate. Farmers can not continue the growing of sugar beets at present prices, and must be paid more or discontinue the growing of them, which would destroy the industry.

H. L. CLARK,
President Farm Bureau, Worland, Washakie County, Wyo.

—

WORLAND, WYO., *May 2, 1922.*

Senator FRANK R. GOODING,
Chairman Tariff Committee, Washington, D. C.:

In order that the beet-sugar industry in this locality may continue it is absolutely necessary the farmers have more encouragement and offered greater inducements to grow beets. The emergency tariff bill practically saved our company from discontinuing operations, and in order to continue the manufacturing of beet sugar and pay the farmers a fair price for beets we must have at least a 2-cent tariff. Farmers in this locality are demanding and must be paid more per ton for their beets than the sugar company under existing tariff can pay, and in order for the beet-sugar industry in this section to continue operations it must have further protection.

W. A. BUDGE,
Manager Wyoming Sugar Co.

—

EL CENTRO, CALIF., *April 28, 1922.*

Hon. FRANK R. GOODING,
United States Senate, Washington, D. C.:

The 500 dairymen members of this cooperative association ask that you use every effort to cause a protective duty of not less than 4 cents per pound to be placed on casein. It is plain that if casein can be imported free of duty it weakens the protection supposedly afforded the other dairy products, and this would mean the death of the dairy industry in Imperial Valley.

IMPERIAL VALLEY MILK PRODUCERS' ASSOCIATION.

—

LOS ANGELES, CALIF., *April 28, 1922.*

Hon. FRANK R. GOODING.
United States Senate, Washington, D. C.:

The Produce Exchange of Los Angeles, representing all the manufacturers of dairy product in southern California as well as a large percentage of the producers, desire to call your attention to serious situation to California dairy industry by placing casein on free tariff list. To allow casein to be imported free automatically weakens and practically nullifies the protection afforded other dairy products. Tax-free casein leaves American manufacturers exposed to competition from every dairy section of the world. California needs outlet which will be closed if Argentina casein can be imported tax free. We therefore urgently request a tax of 4 cents per pound on all imports of casein.

PRODUCE EXCHANGE OF LOS ANGELES,
F. M. HUDSON, *Secretary.*

—

ARCATA, CALIF., *April 27, 1922.*

Senator F. R. GOODING,
Washington, D. C.:

We are advised by the California Dairy Council that in fixing the duties on dairy products casein was left on the free list. We sincerely hope you will do all in your power to have a 4-cent per pound duty placed on all casein. Prices that we have been paid the past year would barely pay for the manufacturing, and 75 per cent of the dairymen have received nothing for their labor nor interest on money invested.

UNITED CREAMERY ASSN.

—

PETALUMA, CALIF., *April 27, 1922.*

Senator FRANK R. GOODING,
House of Representatives, Washington, D. C.:

Outlet for skim milk, from which casein is made, practically closed to California dairymen, owing to imports from foreign countries. Tons

of skim milk in California now going to waste or manufactured at a loss because of cheap foreign competition. We urge 4 cents per pound on casein.

PETALUMA CHAMBER OF COMMERCE,
H. W. KERRIGAN, *Secretary.*

—

SACRAMENTO, CALIF., *April 27, 1922.*

FRANK R. GOODING,
Washington, D. C.:

Senate Finance Committee in fixing rate on dairy products left casein on free list. California needs outlet, which will be closed if Argentine casein comes in free of duty. We urge that you help us place casein on dutiable list at 4 cents per pound.

NORTHERN CALIFORNIA MILK PRODUCERS' ASSOCIATION.

—

SAN DIEGO, CALIF., *April 27, 1922.*

Senator FRANK R. GOODING,
United States Senate, Washington, D. C.:

California casein can not compete with foreign production if this item is on free list. Will you do utmost to obtain duty of 4 cents per pound.

MILK PRODUCERS' ASSOCIATION OF SAN DIEGO COUNTY.

—

SAN FRANCISCO, *April 27, 1922.*

Hon. FRANK R. GOODING,
Senate Chamber, Capitol Building, Washington, D. C.:

From information just received we learn casein has been put on free list by Senate Finance Committee, other products of milk being on dutiable list. We desire to point out this greatly weakens value of duty on other products, with resultant injury to industry and no benefit except to provide cheap glazing material for paper manufacturers. Dairying conditions require that California have outlet for casein, the principal market for which is New York and Philadelphia. If allowed to come in free, the California dairy industry will be brought into direct competition with Argentina on this product to our insurmountable disadvantage. We earnestly urge you to make strongest possible effort to have the Senate Finance Committee amend the dairy products schedule to include casein at 4 cents per pound duty.

CALIFORNIA DAIRY COUNCIL.

—

SAN FRANCISCO, CALIF., *April 28, 1922.*

Hon. FRANK R. GOODING,
United States Senate, Washington, D. C.:

Had it not been for the protection afforded by the emergency tariff law the great dairy industry of America would have been seriously crippled. If this protection had not been provided hundreds of thousands of dairy cows would have gone to the stockyards and thus additionally depressed prices for beef cattle with increased injury to another great American industry. California, the fourth State in the Union in point of volume of butter production, has reason to appreciate the effect of the tariff most keenly, for we know that it protected the industry in this State from a flood of butter from New Zealand and Australia. With butter at unprofitable prices, dairymen would have first endeavored to save themselves through marketing the fresh milk. The oversupply of fresh milk would be again followed by unprofitable prices, thus forcing still more dairymen out of business and eventually depriving our children of this food most essential for their physical and mental development. The dairy industry of America is thankful for the emergency tariff and must have a continuance of the protection it affords.

SAM H. GREENE,
Secretary California Dairy Control.

—

SAN FRANCISCO, CALIF., *April 29, 1922.*

Hon. FRANK R. GOODING,
United States Senate, Washington, D. C.:

Information reaches us emergency tariff being criticized as not benefiting American dairy industry. Emergency tariff on dairy products has restricted importation of such products and tariff on vegetable oils has resulted in higher cost of nut oleomargarine. In these ways it has unquestionably served to stabilize prices of dairy products, thus generally benefiting the dairy industry.

C. E. GRAY,
President California Central Creameries.

—

RED BLUFF, CALIF., *May 3, 1922.*

Senator F. R. GOODING,
Senate Office Building, Washington, D. C.:

The effect of the emergency tariff was shown immediately after passing by better wool market. Again in November when it was extended was when the real benefit was noticed with better prices and a more active demand; this only saved us from going broke.

FRED A. ELLENWOOD,
President California Wool Growers' Association.

—

OCEAN PARK, CALIF., *May 3, 1922.*

Hon. FRANK R. GOODING,
United States Capitol Building, Washington, D. C.:

Have been advised that if dairy products bill is adopted that casein will be admitted free, thus allowing foreign products to compete by importing dairy products in another form. Ask that you use your influence toward placing 4 cents per pound duty on casein, thus protecting one of our important home products from certain disaster.

SOUTHERN CALIFORNIA MILK DEALERS' ASSOCIATION,
W. H. JACKSON, *Secretary.*

—

STUTTGART, ARK., *May 7, 1922.*

F. R. GOODING,
Senate Office Building, Washington, D. C.:

Urge you to use utmost efforts to retain 2-cent duty on rice and proportionate duties on off grades, if you would keep rice farmer producing food. All machinery he uses is heavily protected and freight rates are high, increasing cost about normal. Farmers must be kept from moving to cities.

ARKANSAS COUNTY BANK.

STUTTGART, ARK., *May 5, 1922.*

Senator FRANK R. GOODING,
Senate Office Building, Washington, D. C.:

The people of the rice-producing section of Arkansas are unanimous in their approval of the splendid stand you have taken in regard to tariff situation. We can not emphasize too strong the absolute necessity of maintaining the present emergency tariff schedule on clean rice. Our prosperity in this section depends, in a large measure, on this protective tariff. Rice ranks third in agricultural value in our State.

PEOPLE'S NATIONAL BANK,
By PAUL R. MCCOY, *President.*

—

STUTTGART ARK., *May 6, 1922.*

F. R. GOODING,
Senate Office Building, Washington, D. C.:

Passage of the emergency tariff measure on clean rice resulted in the saving of millions of dollars to rice producers of this community last year. A repeal of this measure at this time, or a reduction of the present duty on clean rice, would result in nothing less than a disaster to the farmers of this section of the State, in our opinion. We urge that you support and use your influence in maintaining the present duty on clean rice.

FIRST NATIONAL BANK.

—

JONESBORO, ARK., *May 9, 1922.*

F. R. GOODING,
Senate Office Building, Washington, D. C.:

In behalf of our farmer customers we believe the future of the rice industry in this country depends to a considerable extent upon maintaining the tariff on cleaned rice, and proportionately on the by-products.

AMERICAN TRUST CO.

—

STUTTGART, ARK., *May 5, 1922.*

Senator FRANK R. GOODING,
Washington, D. C.:

The farmers in this section of the country are wholly dependent upon rice growing, and it is the unanimous opinion of all, without exception, that the future of the rice industry in America depends in a large measure upon the maintenance of the 2-cent tariff on clean rice, and on the by-products in proportion. Therefore we earnestly request that you do everything possible to maintain the present tariff.

RICE PLANTERS BANK,
By I. M. BENNETT,
Vice President, Almyra, Ark.

—

STUTTGART, ARK., *May 5, 1922.*

Senator FRANK R. GOODING,
Care Senate Office Building, Washington, D. C.:

The future of our rice industry depends in a large measure upon the maintaining of a 2-cent tariff on clean rice. To lower this tariff rate would work irreparable harm to our farmer clientele. Your efforts along this line are appreciated.

W. B. WALL,
Vice President the Exchange Bank, Stuttgart, Ark.

—

STUTTGART, ARK., *May 1, 1922.*

Senator F. R. GOODING,
Senate Building, Washington, D. C.:

We are advised Senator PAT HARRISON, of Mississippi, is vigorously attacking emergency tariff act. The State of Mississippi produces little or no rice, and we are not familiar as to what extent low tariff will affect agriculture in that State. However, Louisiana, Texas, and Arkansas, producing over 75 per cent of the total crop of rice produced in the United States, not only need protection to the extent of not under 2 cents per pound, but the success or failure of the industry in these States depends primarily upon a tariff not lower than indicated. As an illustration of what may be expected in event of enactment of Underwood schedule as affecting rice, call your attention to fact that after October, 1913, when Underwood law became effective, importations of rice increased enormously. Increase November, 1913, over November, 1912, over 324 per cent. Increase December over 795 per cent. Average increase for entire year 1913 over 1912, 260 per cent.

Urge you to do all in your power to see that this all-important industry is given ample protection in final tariff measure.

ARKANSAS RICE GROWERS' COOPERATIVE ASSOCIATION,
B. E. CHANEY, *President.*

—

NEW YORK, N. Y., *May 2, 1922.*

Hon. FRANK R. GOODING,
United States Senate, Washington, D. C.:

Good morning, Senator. Just another friendly reminder in your busy day asking in behalf of American glass manufacturers that you don't forget to try to keep Grossalmerode clay on free list. Duty on Grossalmerode clay would be a hardship, and therefore a mistake. We thank you.

J. GOEBEL & CO.

—

NEW YORK, N. Y., *May 1, 1922.*

Hon. FRANK R. GOODING,
United States Senate, Washington, D. C.:

Pardon friendly reminder to ask in behalf American glass manufacturers that you use greatest effort to keep Grossalmerode clay on free list, where it positively belongs. Duty on Grossalmerode clay would surely cause hardship and dissatisfaction to glass manufacturers. Kindly do everything possible to prevent duty. We thank you.

J. GOEBEL & CO.

—

ITHACA, N. Y., *April 17, 1922.*

Senator F. R. GOODING,
United States Senate, Washington, D. C.:

Poultry men determined and prepared to defend throughout the United States rates 8 shelled, 8 frozen, 24 dried as our irreducible minimum. They are convinced that these rates would not stop importation, but stimulate freezing, and might encourage drying eggs in the United States. The American people prefer to eat American products produced in America, and believe that prosperous American farmers are better

buyers of American manufactured products than low-priced laborers in foreign countries. Stand pat, and the largest group of producers in America—the poultry men and poultry women—will stay by you.

JAMES E. RICE.

—

UTICA, N. Y., *May 3, 1922.*

Hon. F. R. GOODING,
United States Senate, Washington, D. C.:

Dairy and other agricultural interests in this country urgently need adequate tariff protection against competing products produced on cheap lands and by cheap labor in foreign countries. For this purpose there are necessary import duties based on equivalent of 10 cents per pound on butter and 4 cents per pound on vegetable oils, without any drawback on oils when used for nonedible articles. Emergency tariff proved great assistance in recovery of farmers from one of greatest economic plights in history, and increased protection should be given, so that the purchasing power of farm products will reach normal and so that there will occur in future no such breakdown of the farmers' economic position as recently was so detrimental to the entire country. The board of directors of this association, representing over 100,000 farmers, unanimously passed resolution urging tariff duties as recommended by farm organizations, and your efforts toward this end are urgently solicited.

DAIRYMEN'S LEAGUE COOPERATIVE ASSOCIATION (INC.),
C. F. CRESWELL, *Director of Research.*

—

UTICA, N. Y., *May 3, 1922.*

Senator F. R. GOODING,
Senate Office Building, Washington, D. C.:

To protect American industry duty of 10 cents on butter positively necessary, and with this rate it is inconsistent to allow importation of cream testing above 30 per cent of butter fat unless duty of 35 cents per gallon is imposed. With lower duty on cream, effect of duty on butter would be nullified by importations of cream to be made into butter. Duty of 4½ cents should be put on casein and 1 cent a gallon on skim milk. As American farmer has never had a market for the complete salvage and profitable disposition of skim milk, it seems inconsistent to permit importation of foreign products made from skim milk when there is in this country more than a sufficient quantity to supply a year's needs annually turned into creeks and sewers. Duty also should be increased to 3½ cents gallon on fresh and sour whole milk and the drawback provision on vegetable oils should be entirely eliminated. You are urgently requested to champion these rates, as they are in the interests of American agriculture.

DAIRYMEN'S LEAGUE COOPERATIVE ASSOCIATION (INC.),
W. W. HOVEY, *General Manager.*

—

WOODSTOWN, N. Y., *May 1, 1922.*

Hon. F. R. GOODING,
Senate Office Building, Washington, D. C.:

Please try to keep an adequate tariff on all dairy products. Try also to get a duty on oil-bearing seeds and get the drawback clause away from vegetable oils. If the farmer has to pay a duty on potash, the manufacturer sure ought to pay duty on soap grease.

ASHER B. WADDINGTON.

—

SCHAGHTICOKE, N. Y., *May 1, 1922.*

Senator GOODING,
Senate Office Building, Washington, D. C.:

Very important that dairy farmers have full tariff protection without rebates to soap manufacturers on vegetable oils. Emergency-tariff rate rendered great assistance in holding back a flood of foreign butter and started oils upward in price. Dairy producers sincerely request the above protection.

G. R. LITTLE.

—

NEW YORK, N. Y., *May 2, 1922.*

Hon. FRANK R. GOODING,
United States Senate, Washington, D. C.:

Half of big sugar factories very large borrowers from bank. Without emergency tariff they would have been in hands of receivers. Emergency tariff enabled us to pay the farmers enough to grow beets with fair profit. Without it most of the big factories would have had to close.

HENRY T. OXNARD.

—

AMES, IOWA, *April 28, 1922.*

Senator FRANK R. GOODING,
United States Senator, Washington, D. C.:

The dairymen of our country need protection of their industry. It can be done only through tariff. If protection is not given, some farmers will discontinue dairying; others will reduce their herds, which will eventually result in higher prices for dairy products, and we will produce less than is consumed in our country. We are at present consuming in United States about all dairy products we produce. It takes Denmark about five years to gain 20 per cent in production lost during the war. It would mean calamity to the people of the United States should our dairy production be reduced. Many of our farmers are at present making no profits from dairying. At best only a small profit is made. Our butter makers and dairy laborers are making only a living wage. They object to being compelled to live on a European standard.

M. MORTENSEN,
Professor of Dairying, Iowa State College, and President National Creamery Butter Makers' Association.

—

MASON CITY, IOWA, *May 2, 1922.*

Senator F. R. GOODING,
Washington, D. C.:

The beet-sugar industry is in a critical condition and will not survive unless we get 2-cent net tariff against Cuba. The emergency tariff has given hope to growers, but we find that it is not sufficient to give growers any profit and allow them to pay the hand labor sufficient wages to live decently and educate their children. We urge you to leave no stone unturned to secure for the beet-sugar industry what is justly done. With such a duty United States can build up the beet-sugar industry and protect United States consumers against the recurrence of exorbitant prices, such as Cuba placed on her product in United States when beet sugar was all sold out at the close of the World War. Two-cent tariff on sugar will produce more much-needed revenue for the United States and shall be paid by everyone alike. A review of prices since the emergency tariff went into effect will show that prices have declined.

IOWA VALLEY OPERATING CO.,
Belmond, Iowa.
W. C. TYRRELL, *President.*

—

NEW ORLEANS, LA., *April 29, 1922.*

Hon. FRANK R. GOODING,
United States Senate, Washington, D. C.:

We note Senate resolution by PAT HARRISON, of Mississippi. Were it not for the emergency tariff the entire domestic sugar industry, both beet and cane, would have been completely annihilated. We have asked for 2-cent tariff on Cuba and 2½-cent tariff on other foreign sugars, because we know that it will require this tariff if our domestic industry is to survive. We are in favor of adequate tariff protection for all American industries, agricultural, mineral, and manufacturing.

AMERICAN CANE GROWERS' ASSOCIATION.

—

PELZER, S. C., *May 1, 1922.*

Hon. F. R. GOODING,
Senate Chamber, Washington, D. C.:

As president Willmont Oil Mills, Pelzer, S. C., I state positively the emergency tariff has been a great benefit to our industry, also to southern raisers of cotton seed and peanuts.

JOHN A. HUDGENS.

—

CHARLESTON, S. C., *May 1, 1922.*

F. R. GOODING,
Chairman Tariff Bloc, United States Senate,
Washington, D. C.:

I believe emergency tariff on oriental oils has been extremely beneficial to the producers of peanut and cotton seed in helping to maintain prices above cost of production. Without a protective tariff the peanut industry would have no chance to prosper.

EDWARD A. EVE,
General Manager Sea Island Cotton Oil Co.

—

SPARTANBURG, S. C., *May 1, 1922.*

Senator F. R. GOODING,
United States Senate, Washington, D. C.:

Emergency tariff on oriental oil has proven beneficial to vegetable-oil industry and southern farmers producing cotton seed and peanuts. Crude oil went to 4 cents pound, now 10; cotton seed $15 ton, now $50; short cotton crop probably had some effect. We favor tariff on oriental oil.

CALDWELL & CO.

—

ATLANTA, GA., *May 1, 1922.*

Senator F. R. GOODING,
Care United States Senate, Washington, D. C.:

Referring to reported attack being made on emergency tariff, we consider emergency tariff beneficial, and favor permanent tariff on oriental vegetable oils. Last year, before emergency tariff became effective, crude cottonseed oil sold at less than 4 cents and afterwards sold at 8 cents in August and September. We consider recent price of 10 cents for crude possible only due to emergency tariff and prospect of continued protection in permanent bill. The emergency tariff enabled farmers to realize very much more for cotton seed. We favor protection for farmers' products, as he pays tariff protection on practically everything he buys. Success of our industry dependent on success of agriculture.

ELBERTON OIL MILLS.

—

WEST POINT, GA., *May 1, 1922.*

Senator F. R. GOODING,
Washington, D. C.:

It develops without any doubt that emergency tariff on oriental oil proving great benefit to oil-mill industries, this protection adding greatly to welfare of cottonseed and peanut producers.

FARMERS' COTTON OIL CO.

—

AMERICUS, GA., *May 1, 1922.*

Senator F. R. GOODING,
Washington, D. C.:

Emergency tax on oriental oils has been of great benefit to our industry; has been worth millions of dollars to farmers of United States. Hope you will insist on protection, as our farmers can not compete with oriental labor.

R. L. MCMATH,
President Americus Oil Co.

—

CARROLLTON, GA., *May 1, 1922.*

Senator F. R. GOODING,
Washington, D. C.:

Emergency tariff on vegetable oils was and is great benefit to crude oil mills, and American producers of cotton seed and peanuts hope you will do everything possible to keep these protected, eliminating drawback feature in proposed tariffs.

H. O. LOVVORN,
Vice President and Manager Mandeville Mills.

—

DAWSON, GA., *May 1, 1922.*

Senator F. R. GOODING,
United States Senate, Washington, D. C.:

Emergency tariff on oriental oils has been of very great benefit to industry, as well as to southern producers of cotton seed and peanuts. Confident that if ample protection not continued our industry will be very greatly crippled and southern farmers greatly injured, due to low prices that will be paid for cotton seed and peanuts, and that peanut industry of South will absolutely be killed. Since advent of boll weevils many sections can't grow cotton and have turned to peanuts. Lack of protection will cause many thousand acres valuable farm lands to become idle.

ED STEVENS,
Manager Dawson Cotton Oil Co.

AMERICUS, GA., *May 1, 1922.*

Senator GOODING,
Washington, D. C.:

The emergency tariff on oriental oils has been of great benefit to our industry, as well as to southern producers of cotton seed and peanuts. There was scarcely any demand for our oils last spring until the emergency tariff was enacted.

FARMERS' COTTON OIL CO.

ATLANTA, GA., *May 1, 1922.*

Senator F. R. GOODING,
United States Senate, Washington, D. C.:

In view of the fact that in March, 1921, crude cottonseed oil sold around 4 cents per pound, and in May, when the emergency tariff was passed the market began advancing and sold as high as 8 cents per pound in August, and has since sold relatively higher for a longer period than any time in the history of the business, we know that this protection has been of inestimable value to the crude cottonseed-oil mill industry and the southern cottonseed and peanut producers. We feel to remove this protection would mean a loss of approximately $8 per ton on cotton seed and $15 per ton on peanuts to the American producer, and since everything he buys is protected he should be protected on what he produces.

T. S. KENAN, Jr.,
President Atlanta Cotton Oil Co.

PHOENIX, ARIZ., *May 5, 1922.*

Hon. FRANK GOODING,
United States Senator, Washington, D. C.:

The emergency tariff has been of inestimable benefit to the live-stock industry of the whole country. We, the people in Arizona interested in the raising of live stock, wish to express to you and the Senate Finance Committee our hearty appreciation of the passage of the emergency tariff bill. It certainly saved the sheep industry of this Nation and helped all industries very materially.

HUGH E. CAMPBELL,
President Arizona Wool Growers' Association.

DEERLODGE, MONT., *May 5, 1922.*

Senator FRANK GOODING,
Washington, D. C.:

Nine thousand voters, regardless of political affiliation, directly interested in woolgrowing, with 2,000,000 sheep, proclaim in one voice that the emergency tariff saved the industry in Montana. Without it bankruptcy would have been inevitable. By all means retain it until permanent tariff is in force.

MONTANA WOOL GROWERS' ASSOCIATION,
By C. H. WILLIAMS, *President.*

SAGINAW, MICH., *May 6, 1922.*

Hon. FRANK R. GOODING,
United States Senate, Washington, D. C.:

Farmers in our State have been greatly benefited by the emergency tariff bill during the reconstruction period following the war. This especially true in reference to sugar schedule. General effect of bill was to check slump in price of farm products, which prices are not yet back to general paying basis for farmers. Our farmers are therefore in favor of the agriculture schedule for which the so-called farmer Senators are standing. The sugar schedule is of vital interest to our State, which has 17 beet-sugar factories and 30,000 beet growers, who must receive a minimum of $6 per ton for beets to insure reasonable returns. My investigation develops fact that sugar companies can not pay minimum of $6 for beets with less than 2-cent duty on Cuban sugar.

J. A. DOELLE,
Director Bureau of Agricultural Development.

Mr. CAPPER obtained the floor.

Mr. WATSON of Georgia. Mr. President——

The PRESIDENT pro tempore. Does the Senator yield to the Senator from Georgia?

Mr. CAPPER. I yield.

Mr. WATSON of Georgia. Mr. President, in the course of his remarkable written address, which he asked not to have interrupted, the Senator from Idaho [Mr. GOODING] made a statement which he can not sustain, and I invite him now to sustain it, if he can. If I understood the Senator right, he said that it was the slave sentiment which clamored for free trade, and that the free traders now were in favor of slavery, or words to that effect.

Mr. GOODING. Mr. President, I think the Senator is mistaken. I said that slave pressure was responsible for free trade in America.

Mr. WATSON of Georgia. That is substantially the same thing.

Mr. GOODING. That was the statement I made. The South had been strong for protection; but the sentiment drifted toward free trade about 1824, and in 1832 we had what was called the compromise act on the tariff question, the Clay tariff.

Mr. WATSON of Georgia. Mr. President, I did not substantially misquote the Senator. He says now that it was the slave pressure which was responsible for free trade. If I remember correctly, the Senator from Idaho was born in England. Was it the slave pressure which, in 1846, abolished the main arch of her protective system by abolishing the "corn laws," leading directly and quickly to the abolition of the entire protective system? Was Sir Robert Peel yielding to slave pressure? Did Richard Cobden and John Bright yield to slave pressure?

Mr. GOODING. Does the Senator want me to answer that question?

Mr. WATSON of Georgia. I do.

Mr. GOODING. It is very true that I had the misfortune to be born in England. As I had no control of my birth, I am not going to find much fault about it. Fortunately, my parents brought me to America when I was eight years of age, but while I lived in England I lived a life little better than that of a slave. I went to work in a lace factory when I was 7 years of age. I got up at half-past 5 in the morning and went to work before breakfast, and then went home and got a dish of porridge. That is the condition I was under in free-trade England. I do not think poor people in those days were treated as well as the slaves on American plantations. That is why I am a protectionist; it is because I know the condition of the people of England and of other foreign countries under free-trade conditions.

Mr. WATSON of Georgia. Mr. President, was the condition of the Senator from Idaho when he was in England, a poor boy, working himself up amid privations, any worse than the labor conditions in the coal regions of West Virginia? Was it any worse than the conditions of the laboring people in the coal regions of Pennsylvania? Was it any worse than the conditions which existed in the coal regions of Colorado?

Mr. GOODING. The Senator is discussing labor troubles now, and there can be no doubt they are serious. I am not discussing labor troubles, but as far as the wage scale is concerned, if the Senator wants to discuss that, there is no question but what the American wage scale has always been higher than the wage scale of foreign countries, from the time we adopted the Constitution down to to-day. There is no honest difference of opinion as to the prices paid for labor in America and those paid in any other country in the world, I do not care what class of labor it is. I can understand that the Senator has a different viewpoint from mine on the tariff question, he being born and bred in the South, where there is not the respect for labor that is found in the North. In the South your farms are mostly leased out to colored men, a great many of them, at least. What chance has the farm boy down there? I have worked on a farm in Michigan and other Northern and Western States. I was one of the family. I slept under the roof with the family at night. I sat at the table with the farmer and his family. That is the condition we have in the North. You do not have those conditions down South. You see things differently from what I do. You have a different viewpoint in life. Labor on the farms in Georgia is paid not over 50 per cent of what it is paid in the North and 30 per cent of what it is paid in my State, Idaho. If we in Idaho had the conditions you have down there, and if we should have those conditions all over the country, labor getting practically nothing at all on the farms, I do not believe the farmer would need any protection, but if he is going to give a man a chance to live and be a man in America he has to pay better prices than they pay down South for farm labor.

Mr. WATSON of Georgia. The Senator does not seem to have completed the two-hour speech which he has been reading all morning, and he now retires from the deck, from the scene of action, and he does well to retire, because my answer will be crushing.

Mr. President, in the South, as the statistics will show, since the chains were stricken from the arms of the negro, he has rapidly acquired property as no emancipated serf ever did in the history of the world. He is the owner of farms throughout the South. He is the owner of houses throughout the South. He is the owner of automobiles throughout the South. He is the owner of banks throughout the South. He is the owner of stores throughout the South. Show me the laboring men of the Middle East or the East or the North of whom that can be said!

The Senator from Idaho alludes to the condition of the slaves in the South before the war. I was born into that system, and lived in it until it was ended, and know it to its uttermost detail. Every slave on the plantation was provided with a comfortable cottage with a garden attached to it. Every slave was well clothed and well fed. When he became sick a doctor was hurriedly sent for. When he was too young to work he was not put at labor. When he was too old to work he was virtually emancipated and supported in his declining years.

There have been emancipated slaves who have said of recent years that the condition of free labor to-day is no better than the condition of the slaves in the South during the existence of that patriarchal system. How many men here, or throughout the other sections of the Union, know that the slave had his weekly holiday, and that on Sunday he could go where he pleased?

In the steel mills they work 12 hours a day and every day in the year, and have vacations neither on Saturday afternoon nor on the Sabbath.

The Senator talks about the effect of protection in England. The direct results of protection in England for centuries had been that the laborers in the coal mines never saw the sunlight; never stood in the splendor of the day; never heard the songs of birds or the ripple of the streams; never saw the green grass and the beautiful groves. They spent their lives beneath the surface in the darkness and the damp, and they were such utter slaves that when the mines were sold they were sold along with them as the other machinery was transferred.

In those mines women pulled the coal carts along the tunnels, clad in old gunnysacks, pulling the cart by a chain which passed between their limbs and was fastened around their necks.

Children of 5 and 6 years of age were repeatedly hired to feed the machines in the factories, and the poor little things were waked up so early in the morning and kept so long at work that it was no infrequent thing for them to fall asleep, fall upon a machine, and be mangled to death.

When Toussaint L'Ouverture liberated the blacks in San Domingo almost the first law he passed was one for absolute free trade; and when Wendell Phillips in his lecture on Toussaint mentioned that fact with such eulogy we almost assumed that Wendell Phillips was a free trader. Was he acting under slave pressure? Was Gladstone acting under slave pressure? Was Macaulay? Was Adam Smith? Such a contention is absurd.

As to the negro tenant of the South, he is working for himself; when he rents the land it is his for that year, and if he fails to make enough to pay himself good wages it is no fault of the landlord.

The southern negro on the farm regulates hours of labor for himself, wife, and children, and there are no workers on earth who take more time for rest, recreation, and vacation.

Mr. HARRIS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Kansas yield to the Senator from Georgia?

Mr. CAPPER. I yield.

Mr. HARRIS. Mr. President, I came in while my colleague was replying to the junior Senator from Idaho and I did not hear all of his speech. I do not care to discuss the matter except to reply to the statement of the Senator from Idaho when he referred to labor conditions in the South and how little farm labor was paid in that section. Unfortunately for the South, the principal product is cotton, 60 per cent of which is exported, and our farmers must compete with the pauper labor of Egypt, India, China, and other countries of the world. The tariff does not help the southern farmer, as no short-staple cotton is imported into this country; even pauper labor of the world can not compete with us. I greatly regret that under this bill they are putting a tax on potash fertilizers, bagging, ties, and everything else the farmer and his family consumes and must use in producing his crop. The price of cotton is not fixed by the cotton producer of the South, but by the Liverpool and New York Cotton Exchanges, which are manipulated against the cotton producer. After paying expenses of labor, taxes, and so forth, the farmers who own the land in the South get less return on their investment than the owner of any other farm lands in our country. Our farmers would be only too glad to pay more for labor if they could get a better price for cotton, which at present is far below the cost of production. Under the tariff bill we are now considering when it becomes a law it will not help increase the price of cotton, but it will greatly increase the cost of living to the farmer's family who raises cotton, when his burdens are already greater than he can bear.

BASIS OF VALUATION IN THE TARIFF BILL.

Mr. CAPPER. Mr. President, probably no feature of the pending tariff bill has provoked more discussion and has been the object of more propaganda than the basis for the assessment of ad valorem duties. The Committee on Finance of the Senate has given exhaustive consideration to this fundamental question, and I am persuaded that it proposes a solution which is from every point of view much sounder than that proposed by the Committee on Ways and Means or than any other type of so-called American valuation.

AMERICAN VALUATION NOT A PART OF PROTECTIONIST POLICY.

Before taking up directly the subject of valuation, I wish to clear the ground of a side issue raised by some of the most zealous advocates of American valuation. They have worked themselves up to a point where they desire to impose an acceptance of American valuation as a test of our protectionist faith. Probably few of them are so confused in their thinking as to believe that American valuation has a general and necessary connection with protection. We have had a century of protection without American valuation. Obviously, the basis of valuation is independent of the rates of duty and, therefore, likewise independent of the amount of protection. One man may believe in foreign valuation and high rates, and another man may believe in American valuation and low rates. I repeat, there is no general or necessary connection, and each of the two policies should be rejected or adopted on its own merits. But, unfortunately, both questions are in fact before us, since both are connected with the tariff.

It will be found that the most zealous advocates of American valuation are interested in it not altogether for itself; they are interested in its adoption now along with the fixing of the rates of duty. They desire this change of system because it would complicate and confuse the issue; because they believe that by this change they can conceal from the American people the extent to which they desire to raise the rates. In effect, they admit that they are seeking rates so high as to be unpopular; that they are endeavoring not to represent the will of the people, but to fool the people. I am a protectionist, and I believe that a considerable majority of the American people share that belief. But I do not believe in protection so high that the increases in the rates must be glossed over and covered up. These zealous advocates of American valuation who would make its acceptance a protectionist password are in my opinion exorbitant and exaggerated protectionists. They represent a comparatively small group that inherits its protectionist ideas from a period three or four decades in the past. They fail to appreciate the fundamental changes which have come over America's economic position in recent years. American valuation to them means the revival of a policy of exclusiveness which was outgrown 20 years ago. I say it was outgrown upon the authority of that great protectionist, President McKinley, who so stated in his last speech at Buffalo.

Mr. President, that a change to American valuation at the present moment would conceal the extent to which the tariff is being raised is to my mind in itself a serious objection to the present adoption of that plan. I want no jokers in this tariff. Let us keep the tariff issue as simple as the complexity of the subject allows. Let us keep the question of protection wholly apart from the question of valuation. We on this side of the Chamber are agreed that American interests, both manufacturing and agricultural, are to be protected by rates sufficient to equalize the differences in competitive conditions between the United States and foreign countries. The manufacturer is entitled to protection, as is the American farmer. But a change in the basis of valuation is not necessary to afford this protection.

BASES FOR ASSESSING AD VALOREM DUTIES.

Mr. President, I wish we could avoid the question of valuation altogether. It is not very clear to me why the system of specific duties—i. e., so much per pound, per yard, per head, and so on—should be feasible in France and on the Continent generally and should not be applicable here. But the Committee on Finance assures us that they have adopted specific duties for all items in which the range of value is small enough to make a specific rate feasible. There remain hundreds of items, each of which covers such a range of qualities or such diversities of products that the fairest way seems to be to assess duties on each particular shipment according to its value. But value, whether it be the value of wheat, or of land, or of imported woolens and silks, is something that changes constantly. Hence our problem is to formulate a rule to determine the exact value of goods as they pass the customhouse.

As pointed out by the Committee on Finance in reporting the tariff bill, three plans of valuation of imported merchandise have been considered in preparing the present bill. These plans are:

(a) The value of American products comparable and competitive with the imported article.

(b) The value or wholesale selling price of the imported article in the United States.

(c) The value or wholesale price of the imported article in the country of origin.

The House bill embodied the first and second plans—the value of comparable American goods, and, in the absence of such goods, the value in the United States of the imported article.

The bill as reported by the Senate Committee on Finance accepted the third plan—foreign valuation—as the basis of rates, with the provision that in certain cases the President may change the basis to that of the value of comparable articles produced in the United States. This power granted to the President is an emergency power. It is to be used when an investigation shows that an American industry is being or is likely to be materially injured by foreign competition in spite of the protection carried in this bill, and that in that particular case the foreign valuation is not a certain and effective basis for our protective system. Within a few years, perhaps, when Europe shall have recovered from the more violent effects

of the war and stabilized her currencies, it is not unlikely that this provision for the proclamation of American valuation will become a dead letter.

HOME VALUATION IN FOREIGN COUNTRIES.

Superficial students of the subject have declared that the most advanced foreign countries have adopted home valuation. But the report of the Tariff Commission on American valuation shows that this is not the case. Many countries assess duties on the landed cost, i. e., the c. i. f. value in the port of importation. But, obviously, this value is merely the foreign cost plus certain expenses. Where foreign countries have approached in their customs procedure valuation plans labeled in this country "American," they have placed in customs officials more arbitrary power than we have been willing to grant under our free institutions.

UNDERVALUATION.

Mr. President, the positive arguments for American valuation are few. One of them is that it will prevent undervaluation. The present system of valuing goods at the usual wholesale price of the goods in the principal markets of the country of origin is represented as a huge fraud. But proof of undervaluation is strangely absent. Cases cited happened years ago. Students of customs procedure, on the other hand, assert that comparatively little undervaluation is now taking place. However that may be, the defects of the present system are not arguments for a radical, untried, and revolutionary departure in valuation for the adoption of a basis of valuation which will be more expensive and uncertain in its administration than the present system. If the present system, indeed, had worked as badly as the enthusiasts for American valuation claim, it would have been discarded long ago.

DISTURBANCE TO BUSINESS AND CUSTOMS PROCEDURE.

The first and most obvious objection to either form of American valuation, whether the duty is based upon the value of the comparable American product or upon the value in the United States of the imported article, is the disturbance to business and to our customs administration by the wholesale change from one basis of valuation to another. Under American valuation the documents and consular invoices which accompany imports would not be the basis for assessing the duties. The precedents and procedures which have accumulated for a century would largely go by the board. Customs officials must suddenly revise their point of view and build almost overnight a structure of dutiable values based on American prices to apply to imported goods. For months, or perhaps years, either there would be insufferable delays in the administration of our tariff law or else duties would be assessed largely by guesswork.

LITIGATION.

The change of basis of valuation would involve not only delay and guesswork but litigation. Almost any sweeping legal change is likely to bring a flood of new questions before the courts; but the plan of American valuation which was embodied in the House bill positively requires litigation, because of the uncertainty of the standard which it sets up. Heretofore, only occasionally have our laws used such vague expressions as "comparable" or "competitive," and their use has naturally led to differences of opinion and to litigation. Mr. President, if we should now suddenly base our whole tariff system, except in so far as its rates are specific, upon the valuation of "comparable and competitive" American products, the duties leviable upon a large fraction of our total imports might easily be contested in the courts. It will be the exception rather than the rule that the importers and the customs authorities will agree. Among the articles which bear ad valorem rates in this bill one may almost count on one's fingers those which are admittedly comparable with domestic products. It is true such standard articles as sugar, wheat, and pig iron are comparable, grade for grade, in the world's market, but these articles as a rule bear specific duties.

Ad valorem rates are largely reserved for imported specialties or for classes of goods whose constituent items are as varied as the arts can make them. Silk—the duties in those items under which the largest importations of silk take place are specific, with a minimum ad valorem; prices are such, however, that the specific duties are likely to be largely inoperative, so that throughout the silk schedule the ad valorem duties will be effective ones. Cotton or wool fabrics, for example, are made in innumerable varieties, and each manufacturer, whether domestic or foreign, attempts to turn out a product which, in pattern and texture, and therefore in price, is not comparable with the products of other factories. Even if the physical qualities are the same, the imported article often carries a higher price because of its prestige.

SHIFT IN POSITION OF ADVOCATES OF AMERICAN VALUATION.

So serious are these and other defects of the plan of basing duties upon the values of the comparable American products that the advocates of American valuation have largely shifted their position since that plan was written into the House bill. Some of the original boosters of this plan have abandoned the plan in the House bill and are now urging that the Senate and the House "compromise" in conference by adopting the plan to assess ad valorem duties on the value of imported articles in the markets of the United States. This so-called compromise plan, which was also considered and rejected by the Committee on Finance, is as different from the basis of valuation adopted by the House as is foreign valuation, and in some respects is subject to more criticism than is the House provision.

Mr. President, at the present time business needs, almost more than anything else, certainty and stability. We should not further disturb it by introducing the difficulties and uncertainties of a new customs procedure. Any unfamiliar system disturbs business, but the plan of basing valuations upon the American selling price of the imported article is such that no amount of familiarity with its workings could remove the element of uncertainty. A thousand legal decisions might enable importers and customs officials to determine with some success the identity of the "comparable and competitive" articles, but no amount of experience would enable them to determine future prices, and only the ability so to determine future prices would eliminate the element of uncertainty from this compromise plan.

In many lines of merchandise orders are placed at the factories six or eight months ahead of the jobbing or retailing season; therefore importers have no way of calculating their duties when placing a foreign order, because they can only surmise the future American price. Even if previous shipments of identical articles were already being sold on the American market, there would remain this uncertainty in regard to the duty. Not being able to calculate the duties, importers could make no contracts for the sale of their merchandise except by demanding an additional price to cover the additional risk. This additional profit which the importers would necessarily demand would itself operate further to increase the duty so that the price of the imported merchandise would be doubly raised to the consumer.

It may be claimed, Mr. President, that importers would be able to eliminate risk due to uncertain dutiable values by refusing to make future contracts and by selling on the open market when the goods arrived. Under such a practice, if prices fell between the dates of purchase and sale, the importer would lose less by having to pay a somewhat less duty. On the other hand, if prices should rise in the interim, his higher profits would more than offset the additional duty which he would have to pay. In so far as this practice prevailed it would limit contract sales, but, in general, the contract system, especially for seasonal goods, is so fundamental to stable business enterprises that it would probably not be abandoned to any great extent even under American valuation. Contracts will be made by importers and they will merely raise the price of their goods to cover the new risk injected into business conditions. In so far as American valuation does limit contract orders it will be a distinctly retrograde step in the direction of uncertainty and price fluctuations.

In discussing the import business it is sometimes forgotten that raw materials and semifinished products are frequently imported by American manufacturers. Many American concerns are dependent upon foreign countries for articles which it is their business to advance further in the process of manufacture. If American valuation is intended as a device to cripple the importing business in the United States, it will, in so far as it achieves this result, injure also many basic industries upon which American capital and labor depend for their prosperity.

AMERICAN VALUATION A CLOAK FOR PROHIBITIVE DUTIES.

Mr. President, the objections to American valuation which I have enumerated are based largely upon the difficulty of administering the law and the uncertainties which would beset business under its operation. There are, however, other objections more serious than the disturbance of customs routine; objections which are even more far-reaching than the economic demoralization which may result from the enactment of the law. These objections are known to all of you who have seriously studied the House bill; that is, that American valuation as interpreted by some of the leaders in the House and by some manufacturers was nothing more or less than a cloak to hide the enormous duties which were being imposed. Do not misunderstand me when I make this statement—a state-

ment which will be supported by facts presently. I do not mean that any sinister influence was brought to bear on the House or on any of its Members. I do not believe any manufacturer, much less any Congressman, had any motive beyond the earnest desire to protect American industry, but in their earnestness, I may say in their enthusiasm, to erect a tariff barrier against the low-cost countries of Europe they went far beyond the point of justifiable duties.

Believing sincerely that a rate approximately as high as those of the Payne-Aldrich tariff was necessary and knowing the uncertain conditions in Europe, the Committee on Ways and Means turned to American valuation as the surest method of accomplishing its purpose. When the bill was reported, however, the whole country was astonished to see that the absolute duties levied—that is, the specific equivalents of the ad valorem rates—were far beyond anything that this country had ever attempted by way of protective duties. Rates equivalent to 100 per cent on foreign values were so common as to lead one to suppose that the slogan "100 per cent American tariff" was meant in a literal sense. In proof of this statement let me present some facts and figures from the valuation report of the Committee on Finance. In addition to the equivalents of the Fordney rates, computed on foreign values, the rates under the Underwood, the Payne-Aldrich, and the Senate bills are also given on the same basis for purposes of comparison.

Dutiable articles.	Percentage of foreign value.			
	Underwood bill.	Payne-Aldrich bill.	Senate bill.	House bill.
Average of 17 items of reed furniture	20	45	60	453
Average of 23 items of perfume materials	20	25	52	107
Average of 8 classes of silk handkerchiefs	49	52	60	137
Average of 8 classes of post cards	16	25	44	100

In this table there is a total of 56 items picked at random from different schedules showing duties under the House bill ranging from 100 to 450 per cent on foreign valuation.

It may be objected, Mr. President, that these special cases are not typical of the bill as a whole. They are, indeed, special cases, but they illustrate the point that prohibitive rates were not accidental. And that these rates are prohibitive requires no argument. I may point out, further, that these rates are upon the value of the finished product and represent even higher percentages of conversion costs.

I have here another comparison of the different bills in the form of average rates for the important items in each schedule. The table does not include all the items in any one schedule, but a sufficient number is given to indicate the tendencies in the various bills:

Schedule.	Number of items.	Equivalent ad valorem rates of foreign values.			
		Underwood bill.	Payne-Aldrich bill.	Senate bill.	Fordney bill.
Chemical schedule	81	16	18	33	71
Manufactures of wool	78	35	57	51	78
Silk schedule	87	44	52	55	83
Paper schedule	124	16	28	28	36
Wood schedule	237	12	18	19	41

An examination of this table will show that the averages in the Senate bill are close to the rates of the Payne-Aldrich law. The chemical schedule is the only one of the five given that is seriously out of line with the law of 1909. The average of 81 chemicals in the Senate bill is almost double the average of the same items in the Payne-Aldrich bill, but this grows out of the well-known fact that many of the items in the chemical schedule require special protection under present industrial conditions. The other schedules shown have average rates which are surprisingly close together in the two bills—57 and 51 per cent for manufactures of wool; 52 and 55 per cent for silk; 28 and 28 per cent for paper; and 18 and 19 per cent for wood products. The average House rates, however, are far beyond these figures—in some cases more than double the Senate averages.

A fact of equal importance with this comparison of the three bills is that the Committee on Ways and Means made a special effort to levy rates which would conform fairly close to those of the Payne-Aldrich law. "No higher and possibly a little under the Payne-Aldrich law" became the watchword in the House.

From the above comparisons, however, it is evident that the House did not succeed in its purpose. Another method of showing how far it fell short of a true comparison with the act of 1909 is presented in the following table of familiar chemicals copied from the Senate valuation report. The last column in this table is the significant one. It is headed the "Adjusted ad valorem rate to equal Payne-Aldrich rate," which means that the percentages given in the column, when applied to American values of the products named, would give the same specific duties as those which resulted from the Payne-Aldrich law. I ask unanimous consent to include the short table in my remarks.

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). Without objection, it is so ordered.

The table referred to is as follows:

Article.	Payne-Aldrich rate of duty.	Fordney bill rate of duty.	Adjusted ad valorem rate to equal Payne-Aldrich rate.
	Per cent.	*Per cent.*	*Per cent.*
Formic acid	25	25	13.01
Atropine sulphate	25	25	16.87
Aluminum nitrate	25	25	7.43
Aluminum acetate, pure	25	25	11.23
Aluminum chloride	25	25	7.08
Ammonium nitrate, C. P.	25	25	4.12
Ammonium nitrate, commercial	25	25	13.43
Ammonium phosphate	25	25	14.82
Antimony, sulphide, golden H-6	25	25	18.75
Antimony, sulphide, crimson, 15-17 per cent	25	25	18.99

Mr. CAPPER. The meaning of this table is clear. To the superficial observer it seems that the same duty is imposed in the Fordney bill as was in the Payne-Aldrich law, 25 per cent on these items in both cases. As a matter of fact, the House bill was far too high. In one case a duty as low as 4 per cent on American valuation would have been sufficient to give the same specific amount of duty as 25 per cent on the foreign value; the specific duty collectible under the Fordney bill would have been six times as great as that collected under the Payne-Aldrich law. The equivalent duty on most of the items shown ranges around 10 or 12 per cent, showing that the change to American valuation would more than double the duty.

THE WAY IN WHICH HOUSE RATES WERE DETERMINED.

The high ad valorem duties of the House bill seem to have risen from a number of causes. In the first place, the rates were originally written on the assumption of foreign valuation, because the question of American valuation was not decided on until late in the consideration of the bill. In many cases the old rates on foreign values were taken over without change when the basis of valuation was changed. This seems to have been true for the items just quoted. In other instances high rates were due to a defective formula which was used to convert rates on foreign values to those of American values. This formula did not take into consideration the transportation expenses necessary to land foreign goods in this country nor allow the importers any margin for overhead expenses and profits. That is to say, if an article sold for $1 abroad it was assumed that the American selling price of the imported article would be $1 plus the duty imposed by the bill. If this duty were 50 per cent on the foreign value, or 50 cents, then the equivalent rate on the American price would be 50 cents divided by $1.50, or 33⅓ per cent. Obviously this is wrong, because the expenses of transporting the goods and marketing them in this country is an appreciable item. An article costing $1 abroad and paying 50 cents duty will probably sell for $2 in this country. If, then, the duty is to be based on the American selling price, an ad valorem duty of 25 per cent would be the proper rate to result in the same duty as the 50 per cent ad valorem on foreign valuation. Furthermore, this method of estimating American prices was even further in error, because in the Fordney bill the chief basis of valuation was that of the American selling price of articles comparable with the importer's product. To assume, therefore, that the price of articles of domestic manufacture will be equal merely to the price of similar goods abroad plus any duty we may impose is stretching the theory of comparability beyond its elastic limits.

AMERICAN VALUATION IN THE COMMITTEE ON FINANCE.

Mr. President, the Committee on Finance recognized these errors in the House bill and attempted to correct them, first, by considering the possibility of calculating duties on the

American value of the imported article by means of a formula which allowed for transportation and landing charges an item of 10 per cent on the foreign cost and for importers' expenses and profits a margin of 25 per cent on the landed cost. These assumptions of importing expenses and profits lead to some complicated arithmetic in converting rates on foreign values to the rates on American values, but I need not repeat the detailed explanations which the Senator from Utah [Mr. SMOOT] has already so ably presented. For present purposes it is sufficient to remind you that a 50 per cent duty on foreign values becomes 33⅓ per cent on American values under the Fordney plan of conversion but only 25 per cent under the method of calculation of the Committee on Finance.

When it became known that the Committee on Finance was considering American valuation, using this rule of converting foreign values, I am told that a curious result followed among the proponents of the Fordney bill. Many of them became lukewarm and even silent on the subject, and in some cases direct opposition developed among those who had formerly espoused the cause. The reason for this sudden shift in opinion on the part of many eastern manufacturers is clear. The high secret protection under the name of "American values" was largely eliminated by the Senate formula and manufacturers were no longer interested in the plan merely as a change in administrative procedure. In other words, it was not American valuation that they wanted but secret protection under a popular name.

As a matter of fact, rates on foreign values finally adopted as the base by the Finance Committee furnish a more stable protection than equivalent rates on American values. The valuation report prepared for the Committee on Finance shows very wide variations in importers' profits and expenses. This report, which was intended to show how American valuation would work, demonstrated to impartial students of the subject that American valuation could be serviceable only in a very limited field and as an emergency measure. Low rates of duty on American valuation which may be adequate at one time may be wholly insufficient at another if prices change. If rates of duty should be fixed in the present tariff bill on high importers' prices—when compared with the foreign cost—and then prices should fall, the rates thus fixed would be wholly inadequate. A 4 or 5 per cent rate would yield a high duty as long as high prices prevailed, but if the market slumped and importers' margins were reduced to almost nothing the amount of the duty would be so low as to afford practically no protection to the domestic industry affected. On the other hand, if the rates on American valuation were placed sufficiently high to be protective when importers' margins were low, these rates would be prohibitive on many articles when importers' margins were normal.

AMERICAN VALUATION AND DEPRECIATED CURRENCY.

There is some truth in the statement that foreign values in terms of paper money are not as certain a basis for valuation as the prices in the United States of similar articles, but the margin of error in foreign valuation is not large for the ordinary run of goods. This is true, first, because international competition forces the prices of exportable products up to a gold basis, regardless of the value of the paper money in which prices are quoted. That is to say, in the long run an American importer can not get special bargains in Germany regularly and for large quantities of goods, because competing purchasers in America and elsewhere will bid up the price in terms of gold; second, German exporters are quoting prices either in gold or dollars at world-market levels. This practice is followed (a) because individual sellers charge what the market will bear, and (b) more especially, because the export trade of Germany is controlled by the Government largely for the purpose of forcing export prices up to something near world-market values. I do not mean that all articles in Germany are priced on an international gold basis, but the standard articles of export are usually so priced—as, indeed, they must necessarily be—under competitive buying. If copper, wool, and iron and their chief products were undervalued in gold as compared with the remainder of the world, fortunes could be made overnight by brokers who deal in these products.

It seems, therefore, that foreign valuation is not condemned by the paper-money régime of Europe, for, as a matter of fact, most exports from there are on a gold basis, regardless of paper quotations. In the relatively few cases where paper values are uncertain the President will have power under the proposed law to change the basis of valuation to that of comparable American products.

Some have thought that American valuation will correct the competitive advantages which purchasers in central Europe enjoy because of paper money and the resulting low costs of production. This idea is erroneous, except to the extent that the duties will be higher on American valuation than on foreign valuation. Obviously no plan of valuation will prevent American buyers from picking up special bargains in the remote villages of central Europe where paper prices rule. Such imports would merely pay a higher duty, and unless the duty is very high the goods would still be obtained at bargain prices. But no plan of valuation will be tolerated by the American people which is merely a scheme for assessing higher duties under the guise of higher values.

AGRICULTURE AND AMERICAN VALUATION.

Mr. President, ad valorem rates on agricultural products are comparatively few. Our great agricultural staples, such as wool, wheat, cotton, and meat products, carry specific duties. On the other hand, the great percentage of manufactured articles used by the American farmer carry ad valorem rates of duty. Necessities of tariff making justify this difference to a large degree. Specific rates are preferable, particularly on agricultural products, because the farmer needs protection most when prices are low. Where ad valorem rates, however, are imposed the farmer is interested in having them no higher than is necessary for equalizing competitive conditions.

Virtually every duty in the agricultural schedule—Schedule 7—is specific, except a few basket clauses which cover a small number of commodities which are unimportant, or are in the nature of luxuries of a considerable range in value. Thus cheese, valued at 30 cents or more per pound, largely a commodity for luxurious consumption, is dutiable at 25 per cent ad valorem. Miscellaneous fresh, prepared, or preserved meats, not specially provided for, covers a number of meat products, none of them of more than trifling importance in our import trade. The same is true of prepared and preserved birds and poultry, dutiable at 35 per cent ad valorem. Almost the only item on an ad valorem basis in which the farmers have more than a passing interest is mixed feeds (par. 731), which are dutiable at 15 per cent. There are a few paragraphs dealing with dried fruits, and so forth, which certain sections of the country produce, and certain imports of which are dutiable at 35 per cent. Every other duty on items of any importance is specific. I shall not go into further details, but I ask unanimous consent that the table which I present, giving the schedule of rates on the principal agricultural products, may be printed as part of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

The table referred to is as follows:

Agricultural rates in Senate bill.

PRINCIPAL PRODUCTS.

Commodity.	Ad valorem.	Specific.
	Per cent.	
Cattle		1½ to 2 cents per pound.
Fresh beef and veal		3½ cents per pound.
Tallow		½ cent per pound.
Oleo oil and oleo stearin		1 cent per pound.
Cattle hides		2 to 4 cents per pound.
Sheep and goats		$2 per head.
Mutton and goat meat		2½ cents per pound.
Lamb		5 cents per pound.
Swine		½ cent per pound.
Fresh pork		¾ cent per pound.
Bacon, hams, shoulders, and other pork, prepared or preserved.		2 cents per pound.
Lard		1 cent per pound.
Lard compounds and lard substitutes		5 cents per pound.
Extract of meat, including fluid		15 cents per pound.
Meats, fresh, prepared, or preserved, n. s. p. f.	20	
Sausage casings, etc.	Free.	
Milk, fresh		2½ cents per gallon.
Sour or buttermilk		1 cent per gallon.
Cream		22½ cents per gallon.
Milk, condensed or evaporated, unsweetened		1 cent per pound.
Sweetened		1½ cents per pound.
All other		1⅞ cents per pound.
Whole milk powder		3 cents per pound.
Cream powder		6 cents per pound.
Skim milk powder		1½ cents per pound.
Malted milk and compounds or mixture of and substitutes for milk or cream.	20	
Butter, oleomargarine, and other butter substitutes.		8 cents per pound.
Cheese, valued at less than 30 cents per pound		5 cents per pound.
Valued at more than 30 cents per pound	25	
Substitutes	*	Do.
Poultry (birds, live)		3 cents per pound.
All other birds, valued at $5 or less		50 cents each.
All other birds, valued at more than $5	20	
Poultry, dead (birds), dressed or undressed		6 cents per pound.
All other birds, dressed or undressed		8 cents per pound.
All the foregoing, prepared or preserved	35	
Eggs, in the shell		8 cents per dozen.
Frozen (whole, yolks, or albumen)		6 cents per pound.
Dried (whole, yolks, or albumen)		18 cents per pound.
Honey		3 cents per pound.

Agricultural rates in Senate bill—Continued.
PRINCIPAL PRODUCTS—continued.

Commodity.	Ad valorem.	Specific.
	Per cent.	
Barley, hulled or unhulled		20 cents per bushel.
Malt		49 cents per 100 pounds.
Pearl, and barley flour		2 cents per pound.
Buckwheat, hulled or unhulled		10 cents per 100 pounds.
Flour or grits, or groats		½ cent per pound.
Corn or maize, including cracked		15 cents per bushel.
Grits, meal, flour, and similar products		30 cents per 100 pounds.
Oats, hulled or unhulled		15 cents per bushel.
Unhulled ground		45 cents per 100 pounds.
Oatmeal, rolled oats, oat grits, and similar		90 cents per 100 pounds.
Rice, paddy or rough		¾ cent per pound.
Brown (hulled)		⅞ cent per pound.
Milled (bran removed)		1 cent per pound.
Broken, rice meal, flour, polish, and bran		½ cent per pound.
Rye		15 cents per bushel.
Flour and meal		45 cents per 100 bushels.
Wheat		30 cents per bushel.
Flour, seminola, crushed or cracked wheat and similar wheat products, n. s. p. f.		78 cents per 100 pounds.
Bran, shorts, and other by-products feeds from milling wheat and other cereals.	10	
Hulls of oats, barley, buckwheat, or other grains, ground or unground.		10 cents per 100 pounds.
Malt sprouts, brewers' grains, and dried-beet pulp		$5 per ton.
Mixed feeds	15	
Screenings, scalpings, chaff, etc., unground		$1.50 per ton.
Ground		75 cents per ton.
Cereal breakfast foods, and similar	25	
Biscuits, wafers, cakes, etc	30	
Bread	15	
Apples, green or ripe		30 cents per bushel.
Dried		2 cents per pound.
Otherwise prepared and n. s. p. f		2½ cents per pound.
Berries, edible, in natural state or in brine		1½ cents per pound.
Dried		2½ cents per pound.
Otherwise prepared or preserved and n.s. p.f.	35	
Cherries, in natural state, sulphured, or in brine		2 cents per pound.
Maraschino, or other, prepared or preserved	40	
Cider		5 cents per gallon.
Vinegar		6 cents per proof gallon.
Figs, fresh or dried		2 cents per pound.
Prepared or preserved in any manner	35	
Dates, fresh or dried		1 cent per pound.
Prepared or preserved in any manner	35	
Grapes, in barrels or other packages		25 cents per cubic foot.
Raisins		2½ cents per pound.
Currants		2 cents per pound.
Lemons		Do.
Limes and oranges		1 cent per pound.
Grapefruit		½ cent per pound.
Olives, in brine, green or ripe		20 cents per gallon.
Pitted or stuffed		30 cents per gallon.
Dried, ripe		4 cents per pound.
Peaches or pears, green or ripe		½ cent per pound.
Dried		2 cents per pound.
Otherwise prepared or preserved, n. s. p. f.	35	
Pineapples		22½ cents per crate.
In bulk		¾ cent each.
Prepared or preserved in any manner		2 cents per pound.
Plums, prunes, prunellas, green or ripe, or dried		½ cent per pound.
Otherwise prepared or preserved, n. s. p. f.	35	
Jellies, etc	30	
Fruits, in natural state, in brine, or pickled, dried, or otherwise prepared or preserved, n. s. p. f.	35	
Trees, etc, seedlings, layers, etc		$2 per 1,000.
Grafted or budded	30	
Almonds, not shelled		5 cents per pound.
Shelled		15 cents per pound.
Brazil nuts		1 cent per pound.
Filberts, not shelled		2½ cents per pound.
Shelled		5 cents per pound.
Pignolia nuts and pistache nuts		1 cent per pound.
Coconuts		½ cent each.
Coconut meat, shredded and dried, or similarly prepared.		4 cents per pound.
Peanuts, not shelled		¾ cent per pound.
Shelled		1½ cents per pound.
Walnuts, not shelled		4 cents per pound.
Shelled		12 cents per pound.
Pecans, not shelled		1 cent per pound.
Shelled		2 cents per pound.
Edible nuts:		
Shelled or unshelled, n. s. p. f.		1 cent per pound.
Pickled or otherwise prepared or preserved, n. s. p. f.	35	
Oil-bearing seeds:		
Castor beans		½ cent per pound.
Flaxseed		40 cents per bushel.
Poppy seed		32 cents per 100 pounds.
Sunflower seed		2 cents per pound.
Apricot and peach kernels		3 cents per pound.
Soya beans		1/10 cent per pound.
Cotton seed		½ cent per pound.
Grass seeds—alfalfa, clover, timothy, millet, vetch, etc.		¼ cent per pound.
Garden and field seeds (except n. s. p. f. at 20 per cent).		1/20 cent per pound.
Sugar beets		80 cents per ton.
Mushrooms, fresh, dried, or otherwise prepared or preserved.	55	
Beans, n. s. p. f.—green		½ cent per pound.
Dried		2 cents per pound.
In brine or prepared or preserved in any manner.		2½ cents per pound.

Agricultural rates in Senate bill—Continued.

Commodity.	Ad valorem.	Specific.
	Per cent.	
Peas, green or dried		1 cent per pound.
Split		1¼ cents per pound.
Prepared or preserved		2 cents per pound.
Onions		1 cent per pound.
Garlic		2 cents per pound.
Potatoes, white or Irish		58 cents per 100 pounds.
Dried		2½ cents per pound.
Flour		3 cents per pound.
Tomatoes		1 cent per pound.
Tomato paste	45	
Turnips		12 cents per 100 pounds.
Vegetables, in natural state, n. s. p. f	30	
Not in natural state and prepared or preserved in any way, n. s. p. f.	35	
Hay		$3 per ton.
Straw		$1.50 per ton.
Hops		24 cents per pound.
Teasels	25	

Mr. CAPPER. Mr. President, an argument advanced in favor of American valuation is that it will protect our industries from severe competition from countries with greatly depreciated currencies. I have already shown how little there is to this argument. What little there is does not interest the farmer, for most of the countries in that group do not export agricultural products to the United States. The countries from which we import commodities which compete with the products of our farms are in a more favorable position in regard to international exchange. Here, again, the manufacturer has a much more vital interest in the adoption of American valuation than has the farmer.

On the other hand, if American valuation is to be used as a method of concealing undue increases in protective rates it becomes clearly a bunco game at the expense of the farmer, for plainly it is not applied in favor of his products, while its use will increase the price of many products which he uses.

Again, American valuation, by increasing the height of the tariff wall, would limit the exportation of agricultural products in exchange for the manufactured goods bought in foreign countries. The nature of international trade should be clear to all after the experience of the last few years. During the war our outflow of goods was enormous and our inflow of gold correspondingly great. We received so much gold that we did not know what to do with it, while the international exchange has been affected so that it is next to impossible for other countries to buy from us now. It must be clear that international trade has to be an exchange of goods.

Many of our agricultural products are on an export basis, and the tariff will not help the producers of these products except under exceptional conditions and oh special grades. If, in addition to this, the power of foreign countries to buy the products of our farms and ranches is limited by a tariff which prevents our people from buying on a fair competitive basis the manufactured articles of the highly industrialized countries of Europe, the plight of agriculture will be even worse than it is at present.

Mr. President, my final point on the farmer's relation to ad valorem duties is that the price levels of the present moment make ad valorem duties especially disadvantageous to the farmer. There is good reason for believing that we are now at, or at least near, the bottom so far as prices are concerned. Certainly agricultural commodities are very low. As prices rise the ad valorem equivalent of the specific duties upon agricultural products will decrease, and the relative amount of protection afforded to the farmer will decrease. On the other hand, the duty upon manufactures protected by ad valorem duties will increase with the increase of prices whatever be the basis of valuation. It should be noted that when manufactured articles rise in value because of the rise in the price of raw materials, the amount of protection afforded to the manufacturer increases whether his conversion costs have increased or not.

I do not say that the duties on agricultural produce should be changed to an ad valorem basis. Specific duties are so simply and easily administered, and there is so much to be said against fluctuating rates of duty for the protection either of agricultural produce or of the conversion costs of manufacturing, that the specific duties in our system should be extended rather than curtailed. But I do say that the farmer is in no wise benefited by the fact that the tariff contains so many ad valorem rates and that these rates are so high; he has rather a great interest in seeing that these ad valorem rates are no higher than is absolutely necessary to give adequate protection to the American manufacturers.

CHEAP APPEAL OF THE PHRASE "AMERICAN VALUATION."

Some proponents of American valuation have made a naïve and superficial appeal. They have urged that we should have an "all-American tariff," or "a tariff for Americans," and that, therefore, anything "foreign," including "foreign valuation," should have no place in the tariff schedules. The thoughtless may have been won by the cheap appeal contained in the very phrase "American valuation," but we can not allow catch phrases to influence our decision upon the issues before us. There can be no more objection to assessing duties on foreign values than there is to making the foreign purchase itself. Perhaps some of the advocates of American valuation, who believe in Chinese-wall protection, would urge that no loyal American would purchase goods from a foreign country, and to these probably no argument of mine in favor of foreign valuation will seem reasonable. However, our position in international trade does not permit us to shut ourselves off from fair and equitable commerce with other nations of the world.

In conclusion, Mr. President, I wish to repeat the statement made in the beginning, that the question of American valuation and the question of protection are wholly distinct. I favor protection for the American manufacturer, and what I have said is not to be construed as a desire to withhold from him duties which will place him in a fair and equal competitive position with foreign producers in the American market. I am, however, opposed to the wholesale adoption of a valuation plan which can not fail to have serious political and economic consequences. In tariff procedure which affects so many interests it is safe to begin with the experience we have and approach innovations by stages. American valuation should be treated, as it is in the amendment proposed by the Senator from Utah, as an emergency measure. Like antidumping duties, it may be properly resorted to to meet unusual competitive situations. Beyond that it is a cloak for excessive protection and a needless political burden for the Republican Party to carry.

Mr. UNDERWOOD obtained the floor.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from North Dakota?

Mr. UNDERWOOD. I yield.

Mr. McCUMBER. The cyanide paragraph is now under consideration. There are, however, a number of Senators who do not wish to have a vote upon that subject at this time, and have asked me to allow the matter to go over. If there is no objection, I ask that paragraph 33a may be passed over for the present.

The PRESIDING OFFICER. Without objection paragraph 33a will be passed over.

Mr. WALSH of Massachusetts. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Massachusetts?

Mr. UNDERWOOD. I yield.

Mr. WALSH of Massachusetts. Yesterday, when I was arguing against the increased tariff duty on olive oil, the junior Senator from California [Mr. SHORTRIDGE] interrupted me to make the comment that the increased duty in this bill would result only in a per capita tax of 4 cents. Upon this estimate I have had some figures prepared. On the basis of the population of our country being 110,000,000, the total cost to the consuming public of America for that one item alone will be $4,400,000. As there are estimated to be 4,000 important items—of course there are many thousand more—in this bill, and olive oil is a very insignificant one of those 4,000, based upon the per capita tax fixures submitted by the junior Senator from California, the total cost to the consuming public of America, if the same ratio of tax per capita is maintained, will amount to $17,600,000,000.

The figures can be very easily proved by anybody who wants to take the trouble to figure them out. Four cents on 110,000,000 individuals represents $4,400,000, and 4,000 items in this bill will make the total tax to the American people $17,600,000,000.

Mr. SMOOT. Mr. President, the Senator might just as well say——

Mr. WALSH of Massachusetts. I have not the floor.

Mr. HARRISON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The roll was called, and the following Senators answered to their names:

Ashurst	Capper	Dial	Frelinghuysen
Ball	Caraway	Dillingham	Gerry
Borah	Colt	Edge	Glass
Brandegee	Culberson	Ernst	Gooding
Bursum	Curtis	Fletcher	Harris
Harrison	Lodge	Oddie	Simmons
Hitchcock	McCormick	Overman	Smoot
Johnson	McCumber	Page	Sterling
Jones, N. Mex.	McKinley	Phipps	Sutherland
Jones, Wash.	McLean	Pittman	Townsend
Kendrick	McNary	Pomerene	Underwood
Keyes	Moses	Ransdell	Walsh, Mass.
King	Nelson	Robinson	Walsh, Mont.
Ladd	New	Sheppard	Watson, Ga.
La Follette	Newberry	Shortridge	Willis

Mr. CURTIS. I have been requested to announce the absence of the Senator from Wyoming [Mr. WARREN] on account of a death in his family. I will let this announcement stand for the day.

The PRESIDING OFFICER (Mr. WILLIS in the chair). Sixty Senators having answered to their names, a quorum is present.

Mr. UNDERWOOD. Mr. President, I stated to the Senator from Idaho [Mr. GOODING] that I would endeavor to say something in answer to his discussion this morning when he concluded, as I did not want to interrupt him, but, unfortunately, I was not able to get the floor at that time.

Of course, the Senator from Idaho and I differ primarily on fundamental questions. He advocates the passage of this bill from the standpoint of doing something for somebody, and makes his argument on the basis that what is accomplished results in ultimate good to the person for whom that accomplishment is intended. Of course, my view of using the power of the Government is entirely different from that of the Senator from Idaho. I believe that the great powers of the Government are intended to be used only for the benefit of all the people, and not for the promotion of special interests, and I care not whether those special interests come out of the fields of agriculture or arise from the smokestacks of a foundry, to me they are equally special interests, and obnoxious to the principle I believe in.

This use of the taxing power of our Government to promote special interests can be illustrated by a decision of the Supreme Court on yesterday. Very often the use of the taxing power to promote special interests or to accomplish a result for some particular endeavor has behind it an excellent motive, and the purpose is often good, if it could be limited to that sole purpose, but too often those who are interested in accomplishing what they think is desirable for the end they have in view violate principles in a way which would be most disastrous to the people of the United States if the application were to be applied universally.

For instance, on yesterday the Supreme Court, in an opinion in which all the justices concurred, rendered one of the most important opinions that has been rendered in the life of the court. The decision was rendered in the so-called Child Labor case.

I suppose there is not a man on this floor and but few in America not in thorough accord with the viewpoint that children of a tender age should not be worked in the factories and the foundries, their opportunity for education neglected, and their opportunity for growth and development in the fresh air interfered with. As a matter of fact, most of the States of the Union have adopted laws protecting children against these unreasonable exactions on the part of employers working them under age. My State has a most meritorious law, which in the main conforms to the law which was passed by Congress, and most of the States of the Union have similar laws. But in the formation of our Government the Constitution granted certain powers to the Federal Government and reserved the balance of the power to the States. Questions involving police regulations, the protection of the health and happiness of the people, were left in the States, and there they should remain, because in the great scope of this country the conditions in Maine are not those found in Alabama and the conditions in New York are not those of San Francisco, and when we come to regulating human life and human endeavor it can be more satisfactorily worked out and regulated by those in each local community to meet the conditions which exist with them.

Of course, when we find the individual of good heart who lets his heart carry him beyond the lines his reason would dictate we often see in the cause of good a demand to extend our powers of government beyond the line of safety, where we endanger other great principles, and on yesterday the Supreme Court held that it was not within the power of Congress to use the taxing power of this great Government to enforce the regulation against the employment of children in factories and mines of the various States of the Union; that that was a question of local jurisdiction, belonging to the sovereign power of the States, and that under the subterfuge of taxation the

power of the State could not be invaded to regulate, even if the purpose were good.

Those who have sympathetic hearts for the child and would like to see laws of that kind extended to the furthermost ends of the Union can well recognize that if the Congress has the power, under the guise of taxation, to say how many hours and under what conditions a child may labor, it would have the power to say that all labor in the United States, agricultural or mechanical, shall be allowed to work only four hours a day, or that the person employing labor in excess of that time should undergo heavy penalties of taxation. In other words, this power of taxation, when used in that way, and allowed to be used in that way, in violation of the constitutional limitations, would break down the entire fabric of State government and destroy the local government of the people.

I only say that in the way of illustration of the use of the taxing power. I belong to that school of thought which believes that the legislative body, the Congress of the United States, has no constitutional right—I might go further and say no moral right—to use the taxing power of this great Government for the purpose of building up fortunes or tearing them down. I am just as much opposed to the idea of so levying a tax, under the guise of protecting American industry, that the great mass of the American people must contribute out of their pockets money to build up a special industry, and make a few rich, as I am of extending the power of taxation so far that it confiscates the property of the individual and accomplishes by the power and force of taxation what the communism of Russia has accomplished by a red flag.

The Senator from Idaho does not believe in that principle. He announces that the power of taxation in the Federal Government can and should be legitimately used for the purpose of building up agriculture primarily, from his standpoint, and, secondarily, for the purpose of building up industry, not for the purpose of raising revenue, allowing the incidental benefits which arise from it to help somebody, but the main purpose of the taxation should be to develop the business of some individual or some corporation.

It is an old theory, one which has been fought out year in and year out, but we are facing it in a new guise to-day. If it were not for the support which those who represent agricultural constituencies on this floor carry to the protective manufacturer of America, it would be impossible to pass such a bill as is now pending before the Senate. The argument is used that because taxes have been levied on manufactured products taxes should be levied on agricultural products, and if you are going to penalize the American people by taxation for the benefit of the manufacturer you should penalize them with taxation for the benefit of the farmer.

If you are going into that false philosophy and going to use the taxing power for some purpose other than the revenues of the Government, I might very well concede that if you could you should throw the blanket of protection as far as possible if it was beneficial. But I think where the fallacy of the argument comes is that under the guise of protection, under the guise of doing something to help the agricultural interests in some particular item, you ask their support for a bill which means that for every dollar of benefit they may derive out of the bill they must pay $100 in taxes to benefit some one else, or for the 1 per cent of protection which they may get under the bill they must pay the 99 per cent of protection which is afforded to other people. I do not think there is any question about that proposition.

When we come down to agriculture, in my judgment there are very few items as to which the levying of a tax at the customhouse would be effective in raising the price of the product to the farmer. For many years, as a smoke cloud to make the farmers of America think they were getting something out of a tax bill, a tax has been levied on corn—20 cents per bushel of corn, if I recall correctly. That is the rate levied in the pending bill. When the present law was written corn was taken off of the tax list and placed on the free list, and why? It was because there was no appreciable revenue that could be raised from taxing corn. We could not raise revenue from taxing corn because America is the great producer of corn. There may be a little corn drift over the Canadian border occasionally; there may be a little corn come from here or there; but in comparison with the great corn production of America the importations would not amount to one ten-thousandth of 1 per cent. It was idle to say that you levied a tax for protection when it did not protect, because nothing would come in when corn was on the free list. It was idle to say we would keep it there for revenue when no revenue could come to the Government. To keep a tax on corn, such as is put there to-day, is only for the purpose of fooling the producer of corn into the belief that he is going to get something out of the bill.

I might go on with 100 other items in the bill on which it makes no difference whether you levy a tax of 1 per cent or 100 per cent. Nothing will come in on the free-trade basis, nothing appreciable will come in on a 1 per cent tax, and it would not change the result if it were made a 100 per cent tax. But our friends on the other side of the Chamber are in the habit of putting corn and similar commodities on the tax list, which mean nothing except that it gives the local orator at the crossroads in the Corn Belt an opportunity to say that the great Republican Party protects the farmer along with other people. Of course if it is the desire to engage in subterfuge for the sake of votes, that is a political proposition. Possibly political parties may do that here and there, but it can not be justified from the standpoint of high morals or sound reasoning.

There are a few agricultural items, of course, which will produce revenue if a tax is levied at the customhouse and thus raise the price to the American producer. I admit that. I think sugar is one of them. I think wool is another. There are comparatively few men in the country who are raising sugar. The production of cane sugar is confined practically to one State and a part of another. The beet sugar of the great West has a market that consumes practically the entire product which is protected by freight rates, and the sugar from Louisiana and the sugar from abroad can not enter the domain of that production as long as its product is ready for market.

Mr. SMOOT. Mr. President——

Mr. UNDERWOOD. I will yield in just a moment. Of course we all know that the sugar of the great West does not stand preservation as the cane sugar does, and that it has to be marketed and sold within a reasonable time. While it is undergoing that sale it drives the imported sugar out of its market, but when it is sold out the cane sugar again invades its market.

I now yield to the Senator from Utah.

Mr. SMOOT. I do not think the Senator understands where the market for the beet sugar is or he would never have mentioned the question of freight rates. There is about 15 per cent of the quantity of sugar used in the intermountain country that is manufactured there, and no more than that. The great market for that sugar is Chicago. The New York refiners have a rate about one-third the amount of the beet sugar manufacturers' rate. They have every advantage in the world in the markets where the beet sugar is disposed of.

Mr. UNDERWOOD. I know that just as well as the Senator from Utah.

Mr. SMOOT. I did not think the Senator understood it or he would not have made the statement which he did make.

Mr. UNDERWOOD. I have not defined the locality of the market yet. I can say more than that. I sat for years and heard the testimony on this subject. I know that at times the beet sugar from the West can come as far east as the Buffalo market beyond Chicago. I know that along the line of the Mississippi River is about as far as it usually comes, but I did not say it was confined to the intermountain States, of course. I said its market was confined to where it was protected by the freight rate. The freight rate from New York to Chicago is a protection against that sugar, and every mile that it goes into the other territory the freight rate further protects it against that product.

Mr. SMOOT. The freight rate from New York to Chicago is not one-third of the freight rate from the intermountain country to Chicago. Chicago is the central market for sugar. That is where the great bulk of it is distributed and that is where at least 75 per cent of the beet sugar goes for sale.

Mr. UNDERWOOD. Undoubtedly. That is just what I am arguing.

Mr. SMOOT. Therefore if anyone has the advantage in freight rates it is the sugar refiner in New York and not the beet grower in the West.

Mr. UNDERWOOD. Of course the Senator was not listening to me——

Mr. SMOOT. Oh, I was listening.

Mr. UNDERWOOD. If the Senator was listening to me he misunderstood what I said or he would not have interrupted me, because by his own statement he now verifies what I said. I said that the sugar raised in the intermountain country could invade the cane-sugar importations and meet them in the competitive market, and the Senator proves what I said to be true by saying that they have a much greater freight rate to Chicago than the cane-sugar man has from New York to Chicago. That is true, but I am not arguing the question now as to how much

tax should be placed on sugar. If revenue is needed, I recognize that sugar is a revenue producer, and I have never denied it.

When we started out 10 years ago we placed sugar on the free list, which was because we had put $100,000,000 of taxes on wealth, and we supposed we did not need the revenue from sugar and so took it off the tax list. We felt that we were taking the tax off of a commodity which we knew the masses of the American people use and that they would be benefited, but when the war came on and we needed more revenue no one heard me object to levying a tax on sugar as a revenue producer for the purpose of bringing revenue to the Government. It undoubtedly does that.

But that is not my objection to the taxes. I have never denied that a reasonable revenue should be raised at the customhouse out of articles which are susceptible of producing revenue. I am objecting to the way taxes are levied on most articles, trying to build up a wall so high that nothing can come in, and the American Treasury thus not getting any benefit from it. The tax is levied entirely in behalf of the special interests which are being protected. Also, I object to that camouflage and that smoke cloud when a tax was levied on corn to try to make the American farmer think he was getting some protection because of that tax on corn. That is just an absurdity.

But I want to get back to what I started to say in reference to the argument of the junior Senator from Idaho, who is contending that the McCumber bill is in the interest of the American farmer and that this tax should be levied in order that the American farmer may get the benefit of it. I do not deny that a few farmers will be benefited by the bill. On the other hand, I do not deny that the farmer as a general rule is not a dirt farmer. He is very often a very large, substantial business man who, for instance, raises sugar in Louisiana, who will be benefited by an increased tax on sugar, and I am glad to say that this is a revenue producer. It responds in revenue very largely in proportion. More than that, it is not handed down into a finished product, where it is doubled and redoubled several times over before it gets to the ultimate consumer.

I am free to admit that the proposed tax of 33 cents a pound on scoured wool will raise the price of wool in the American market and will raise some revenue. It will be a small amount of revenue in proportion to the taxes on the American people, but it will raise some revenue for the Government. But I am also willing to admit that the very large number of farmers who raise wool, who will be benefited by this tax, are the men who are in an industrial business called farming, but who are in reality very large owners of sheep and very large employers of labor. It is no poor farmer who is to be benefited. But, taking them all in all, even down to the farmer who has a few head of sheep on a small farm, I say you make that farmer pay an enormous price for the protection you are giving in the bill to the few men who specialize in raising sheep. You make him pay until he bleeds in taxation for what you pretend to give him.

The figures of last year's crop were given in the hearings, and I think the figures are substantially correct. I think the figures refer to the crop of 1920, but I am not sure. However, that makes no difference; it is a crop of recent years. I am not substantiating the figures, but making the argument. Last year's crop of raw wool was valued at $65,000,000. Of the domestic requirements, 55 per cent are imported. That means that to supply the American market in the consumption of manufactured wool we are to get 55 per cent of the wool from abroad and 45 per cent at home; but you can call it 50–50, if it pleases you better.

Figuring mixed wool at 30 cents a pound at Boston with 60 per cent freightage, we have the following comparison of dutiable and free wool. This gentleman makes the comparison with a tax of 25 cents on raw wool. He figures scoured wool at 75 cents per pound, duty 25 cents. So that if there is a tax of 25 cents a pound on the dutiable list you have scoured wool costing $1 and free wool, as under the present law, 75 cents.

Then he takes the next item and says, allowing for waste 36 per cent, less 6 per cent recoverable, net 30 per cent, with wool dutiable, a pound in the cloth will cost $1.43. Free wool will make that pound of cloth cost but $1.07. The mill profit of 8 per cent and the selling profit of 2 per cent, making a total of 10 per cent, add 14 cents to the wool in the cloth on the dutiable side and 11 cents to that on the free side, making a total of $1.57 for cloth the wool in which pays the duty and $1.18 for cloth made of wool on the free list.

Add to that the garment maker's profit and the selling expense of 10 per cent, 16 cents on the dutiable side and 12 cents on the free side, making a total for the cost of $1.73 for the dutiable product and $1.30 for the product with free wool.

Then to the retail dealer's profit and the selling expense of 50 per cent add on the dutiable side 87 cents and on the free side 65 cents, making the total cost when it goes to the consumer of a pound of manufactured cloth which is made from dutiable wool taxed at 25 cents a pound $2.60, and $1.95 for cloth that is made from free wool. In other words, with a tax of 25 cents on raw wool, the consumer of each pound of cloth will pay 65 cents more a pound. But that 25 cents a pound is not the tax which it is now proposed to levy. It is proposed to levy a tax of 33 cents a pound. Each 1 cent of duty per pound on raw wool will cost the consumer of clothing 2.6 cents, so that under the tax of 33 cents a pound instead of 25 cents a pound there will be added to the cost of the manufactured cloth when sold to the purchaser 85.8 cents, nearly 86 cents, a pound. That amount is proposed to be taken out of the consumer.

The American people do not comprise merely those who live in cities; the clerks in stores and the men who run the railroads of the country do not constitute the mass of the population; but the farmers as well make up a large element, and farmers wear woolen clothes as well as do city people. If the proposed tax on wool shall be levied, the farmer will have to pay the tax as well as the man who lives in the city, as well as the man who works in the foundry or in the machine shop. If the analysis which I have suggested be worked out, it demonstrates that the tax of 33 cents per pound on scoured wool at the customhouse will result in a cost to the public of about $198,000,000 a year—nearly $200,000,000—of which those who are engaged in the business of wool growing will get $79,200,000, against which the farmers as a whole will pay $99,000,000, and the remainder of the public who are not farmers will pay about an equal amount; and the Government of the United States will only realize out of this enormous tax the sum of $19,800,000. I do not say that there may not be a variance here or there, but the substance of the statement is correct, that by taking wool off the free list and levying a tax of 33 cents a pound on scoured wool the price which the people of America must pay for the cloth when it goes into their clothes will be lifted to the extent of nearly $200,000,000; but the Government of the United States out of this tax is only going to get about $20,000,000 of revenue. That is what the majority party propose to do.

Now, how about the farmer? The farmer wears clothes as well as the merchant or the clerk, and there are nearly as many farmers in this country as there are people who live in the cities. The burden of this tax on the farmers of the country will amount to nearly $100,000,000; yet Senators on the other side say it will be beneficial to the farmers of America. Of course, I admit it will be profitable to those particular farmers whose entire business is the raising of sheep and who will secure the bulk of this tax which is going to be levied on the American people, but the remainder of the farmers of America, the men whose principal business is raising corn in the Middle West, and the farmers who raise cotton in the Southern States, are going to get a bunco duty and a subterfuge for a duty.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER (Mr. STERLING in the chair). Does the Senator from Alabama yield to the Senator from Idaho?

Mr. UNDERWOOD. I yield.

Mr. GOODING. I should like to ask the Senator a question. I do not know whether he is familiar with the sheep industry, but if he is, he knows that the wool industry of America can not exist without protection. Would he protect it and save the industry or would he put wool on the free list where it has always been put by the Democratic Party?

Mr. UNDERWOOD. Of course, that is what the Senator from Idaho asserts, and I am sure he believes in his assertion.

Mr. GOODING. I am sure that every Senator from the West who lives in a sheep-raising or woolgrowing State will agree with me that the industry can not exist without protection. I wish to say to the Senator also that, so far as the corn grower is concerned, his whole market is dependent on the live stock in the country, for without live stock there is not any market for corn at all.

Mr. UNDERWOOD. I will get back to live stock in a moment.

Mr. GOODING. So that the corn grower is vitally dependent upon live stock.

Mr. UNDERWOOD. That is another bunco game, in my judgment, but, of course, I am not reflecting on the Senator. It is one of those subterfuges which are thrown out to fool the American people into believing they are getting something for nothing.

Mr. GOODING. What I am anxious about and what I hope will happen—and I think it has already happened, so far as that is concerned—is that the Senator and his party will before the country take the position where they properly belong, where

they have stood for a hundred years in the Senate, and not go out among the people and talk about incidental protection and assert they are not trying to destroy any industry. I will not say all Democratic Senators conduct that kind of a campaign before the people. I merely want to have defined the position of the Democratic Party that a protective tariff is unconstitutional and not proper in any way.

I hope the Senator and his Democratic colleagues will define their position clearly before the people, so that we may go out and discuss it before them and let them settle it. The Senator from Alabama has been very frank and very clear about his position, and I understand it exactly, that if protection is not unconstitutional it ought to be and that we have no right to tax the people in order to protect any industry, whether it be the sheep industry or the manufacture of wool or anything else.

Mr. UNDERWOOD. I want the Senator to understand, of course, that I am speaking for no one but myself; but I believe what I have said, and when I stood on the bridge and commanded the tariff ship in the House I did not hesitate to put the products in which I was personally interested on the free list, because I believed they belonged there. I am applying no rule to anyone else that I do not apply to myself. I shall be delighted if what the Senator says may come about, because I know that then the question will be settled.

I never have contended that the Democratic Party is a free-trade party, for it believes in a revenue tariff and believes in collecting some revenue at the customhouse; but it believes in levying the tax so that the Government will derive the benefit of the revenue and not the special interests, such as is the case when the Republican Party build their tariff wall so high as to prevent importations.

The Senator from Idaho says he would like to see the Democratic Party come out and say that they are for such a tariff policy, and so would I, for I think one of the great faults of the Democratic Party has been that we have had too many who compromise with the evil of protection. They do not stand for it as a whole; they do not stand for it as a system; but they stand for it as to what their individual constituencies demand and compromise with the question instead of denouncing it as a false theory and telling the American people the truth, that wherever a dollar of protection is levied they pay it every time from five to ten fold in the increased cost of living.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Idaho?

Mr. UNDERWOOD. I yield, of course.

Mr. GOODING. As far as taxation is concerned, I am unable to understand the difference between a revenue duty and a protective duty; and this is true as far as the Underwood-Simmons bill is concerned, with one or two exceptions. There is not a trust or a combination or a great industry, predatory or otherwise, that has not been and is not protected under the Underwood law. There are only one or two exceptions to that rule.

There is a lot of talk here about "predatory wealth" and "special interests." As far as revenue is concerned, if you call it revenue, the Democratic Party has protected every trust and combination in America. It is all right if it is a revenue bill; it is a crime if it is a protective bill, although in many instances your revenue tax is higher than the protective tax.

Mr. UNDERWOOD. That is not so. Of course, I know the Senator does not mean it in the way he says it.

Mr. GOODING. I mean it exactly as I say it.

Mr. UNDERWOOD. The Senator does not mean——

Mr. GOODING. I mean if you take the cost of production into consideration.

Mr. UNDERWOOD. Oh, to be sure; it needs an explanation to show what the Senator means.

Mr. GOODING. Not an explanation if you believe in a tariff. Of course, with you, a revenue tariff is wrong. It is a tax. That is your principle. It is entirely wrong, even as a revenue measure, because it is a tax.

Mr. UNDERWOOD. Oh, no; I am not opposed to taxation.

Mr. GOODING. I wish you would tax the special interests. You are protecting the special interests and taxing the American people very fully.

Mr. UNDERWOOD. If the Senator will stop a minute, and not continue to make a noise so that I can not talk myself, I shall be glad to answer him. I am perfectly willing for him to interrupt me, but I want the privilege of replying.

The Senator says we have taxed every great trust. So far as I know, there is no tax on kerosene oil under the present law, although I believe the Senator's party is going to put one on. We certainly left out the so-called Standard Oil Trust.

Mr. SMOOT. There is none in this bill.

Mr. UNDERWOOD. I understand that it was proposed in the House; so that we did not cover them all. On the great Steel Trusts of America we cut the tariff all down the line, and where we did not think the tax would produce revenue we put the product on the free list, and in answer to that you are going back and putting back the taxes that you had before we attended to them. We levied the taxes only for revenue. We cut the manufacturing interest in this country far more than we actually cut any agricultural interest, because there are only a few cases where agriculture could be really cut. You may say that we took the tax off of corn and other things of that kind, beets, and household vegetables. Of course, if you want to fool the American people into thinking that that tax was effective, or meant anything, you can try to do so. I do not think you will get very far with it; but I want to come back to where you are levying a tax that counts.

This tax on raw wool is going to cost the American people in the neighborhood of $200,000,000 a year before they get their clothing, and the Government of the United States, in round figures, will not get over $20,000,000 from the tax, and you are going to levy that tax as much on the farmer as you are on anybody else.

The farmer with a few head of sheep running on his farm will have to go a long way to get enough tax out of this to pay for the clothes he has to buy; and the farmer who has not any sheep, the man who raises corn and has a subterfuge of a tax, and the man who raises cotton, on whom you are trying to practice a subterfuge for the first time by levying a little tax on long-staple cotton that will do nobody any good, must pay their proportion of this tax of $200,000,000 that you are going to put on the American people for the benefit of the few raisers of sheep.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alabama yield again?

Mr. UNDERWOOD. I yield.

Mr. GOODING. If I remember the Senator's figures, the total value of the wool clip in America was only $65,000,000; and yet he says that the people are taxed something like $200,000,000, or over three times the real value of all the wool that is produced in America.

Mr. UNDERWOOD. Surely.

Mr. GOODING. The Underwood bill put a duty on shoddy. It taxed the American people, if the Senator calls it a tax, for shoddy; and I presume the McCumber bill has done exactly the same thing. The woolgrowers do not grow shoddy. The manufacturer gets the protection, however; and if you are going to hold the woolgrowers responsible for the entire tax, as you call it, for the protection that you gave the manufacturer and the protection that the McCumber bill is giving him on all these articles, simply because there is a duty on wool, you might get the amount up to $200,000,000. That is the only way in which you can build it up that high, and that is not fair.

Mr. UNDERWOOD. I am sorry that the Senator, after I carefully went into details as to how this $200,000,000 came about, did not realize it.

Mr. GOODING. Yes; I understand it thoroughly.

Mr. UNDERWOOD. For fear, however, that somebody may misunderstand it, I will go into it again, and say that, of course, I do not mean that the tax stops with the tax on raw wool. If it did, it would not be so bad. The vicious part of this tax and this class of taxation is that with every step you take away from raw wool you add the manufacturer's profit to the tax, and the wholesale seller's profit to the tax, and the retail seller's profit to the tax, so when you start this tax it is not merely the tax on the raw wool but you are accumulating all these profits as they go along that are added to the tax and the increased cost of carrying the goods, until, starting out with a tax of only 33 per cent on raw wool that is untaxed now, you put a burden of $200,000,000 on the American people; and that figure can not be disputed by anybody who has followed this subject.

The Senator says we taxed shoddy. Yes; I think in the present law there is a very low tax on shoddy. What was that for? It was to tax a class of goods that were coming in here that would bear a revenue duty, and for no other purpose. We did not propose to abandon the customhouse; we have not abandoned the customhouse; but we do not propose to levy taxes that are any more burdensome than that which is necessary to support the Government. I am not objecting to your way of raising taxes at the customhouse if you would only raise taxes; but you are trying to raise a wall, instead of taxation, behind which monopoly and special interests may flourish.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER (Mr. LADD in the chair). Does the Senator from Alabama yield to the Senator from Idaho?

Mr. UNDERWOOD. If the Senator wants to interrupt me, I shall be glad to yield, although I want to go ahead and finish my speech.

Mr. GOODING. I want to say to the Senator again that if he will study this bill he will not find that there is any monopoly there or that the duty is so high that it will not admit a reasonable amount of imports in practically everything. There is not a rate in the bill that is excessively high—not one.

Mr. UNDERWOOD. That is merely an assertion on the Senator's part.

Mr. GOODING. I have gone over them very carefully, and I have worked out many of them, and I have the comparison with the Underwood law in most of the schedules, and I think I know what I am talking about. I have given a great deal of time to it.

Mr. UNDERWOOD. I am sure the Senator thinks so, but I do not. I have the greatest respect for the Senator. He is earnest in what he says. He deserves great credit for his achievements. He has been in the Senate about a year. I suppose before he came here he studied the wool schedule carefully, but I know that the Senator is mistaken. He says that these rates will all produce revenue. I will tell him why I think they will not.

I have not worked out every rate in this bill. I could not do so. It is a task that would be impossible in the limited time that we have known what the rates are, because they were only given to the public in the Senate bill about a month ago; but I know this: I have gone through this bill enough to understand that on the average the taxes levied in it are greatly higher than those in the Payne-Aldrich Act. I am talking about the Senate bill now, not the House bill. I think the House bill, with its American valuation, was still higher. I know that when I came to rewrite a tariff bill 10 or 11 years ago, and the Payne-Aldrich law was on the statute books, I had the experts gather the statistics and find out what importations there were and what there were not, and how far the bill was effective as a revenue producer; and I found out that at least a fourth of the articles that were named in the bill that were consumed by the American people had prohibitive rates, and many of them would not appear in the list of importations at all, because the rate was so high that they could not get in; they could not appear at the customhouse because they were excluded entirely.

When I know that that condition existed under your law that was written 12 years ago, and I know that you have higher rates in this bill than you had in that bill, I think it is a very safe assertion that a large percentage of the rates in this bill are levied purely to build a tariff wall to keep out importations for the benefit of special interests and not for the purpose of raising revenue.

I want to pursue the argument, though, in reference to the farmer.

A number of years ago there were very few peanuts raised in my State. On account of the boll weevil the people of my southern country had to diversify their crops, and among other things they went into the raising of peanuts. They complained against the importation of oils against their peanuts. In the present law a small revenue tax is levied on peanuts. There is a small, reasonable tax on oil. Under the emergency tariff bill, however—and it was carried into this bill—they are being fooled with the idea that they are going to get something out of it if you give them a tax that will prohibit the importation of peanuts into the Southern States or into America, or will build a wall high enough to keep out vegetable oils that compete with their oils.

I do not think it has been effective in putting up the price so far and I do not think it will be effective in putting up the price, because the production of peanuts and vegetable oils in this country is so great that any tax would be ineffective except in particular moments of stress.

But I say that an agricultural people, who raise cotton as their chief product, and must sell it in the markets of the world, and must receive their pay in return by allowing imports to come into this country, as the other people of the world no longer have gold to pay, will be playing with a fallacy which will produce their destruction if they tie themselves to this protective ship. But outside of that, even if they got some little benefit in the price of their peanuts, think of the enormous price they must pay to special interests for the protection in this bill. On wool alone, in the value of the cloth for their clothes, the American people must pay $200,000,000, and the farmers will pay their share. But that is only one item. When it comes to the increase you have made on iron and steel products, on their supplies, the increased price of their axes, their saws, their wire, most of the products which under the present law are on the free list—and although the importations may not be great there is no wall behind which monopoly can flourish—you are going to build up this wall in order that monopoly can exact out of this farming class of people a higher price. Yet you say, "We will compensate you for your support. We will take you aboard the protective ship and buy your support by giving you a protective tariff on peanuts."

Agricultural implements are on the free list now under the present law. One of the main propositions, as I said the other day, in which the southern farmer is interested is the item of bagging and ties. You propose to return them to taxation after we put them on the free list.

What I rose to say here to-day is that it is absurd to talk of the American farmer getting anything out of a protective tariff except in special cases, such as the great growers of wool in the West, whose sole business it is to grow wool, or the producers of sugar in Louisiana, or possibly the lemon growers in California—a few particular interests. It is a subterfuge, and they are being led into a cul-de-sac to be shot to pieces with taxation. There is no justification for it.

You provide in this bill for taxes on butter and milk and chickens. Along the Canadian border, within a limited distance of transportation, you may shut off some competition with the farmer who lives within that limited radius, but you do not do anything for the farmer. Of what value is a tax at the customhouse on butter and eggs and chickens to the farmer of Alabama or Ohio or Wyoming? None whatever. He gets nothing out of it. What good does it do the wheat farmer to tax sugar? What good does it do the wheat farmer to tax wool? Yet on those two items alone you are penalizing him twice as much as any possible benefit he could get, even if his tariff were effective.

So that I say, Mr. President, that we might as well look this question squarely in the face. The pretension that the great mass of the agricultural people of America are going to be benefited by this bill absolutely can not be justified. It is false in theory and false in fact, and the sooner we let the agriculturists of America know that under the guise of protection, under the false doctrine of protection, they are being led into a charnel house for their own destruction by way of taxation, instead of deriving a reasonable or a just benefit from it, the sooner we will get a decision on the question which will be in accordance with the fundamental principles of our Government and in accordance with abstract justice to the great mass of the American people.

Mr. GOODING. Mr. President, I want to say merely a word in reply to one question of the Senator from Alabama. He asked what interest in wool the southern farmers have, who do not grow wool, and what interest the farmer who does not grow sugar in some other State has in sugar, and all those things. I want to say to the Senator that there are 40,000,000 acres in production in America more than in consumption, and unless we grow all of our wool and all of our own sugar, and everything else we consume in America, the time will come when there are not going to be 40,000,000, but fifty or sixty million, and that is why the farmer in Alabama is interested in the prosperity of the farmer in Idaho and the Idaho farmer is interested in the prosperity of the farmer in Texas.

They stand together as a great industry, feeding a great people, and if we are ever going to get to the point where we will not have a great surplus to import, we will at least have to produce our own sugar and all of our own wool, and finally reach a balanced condition. So it is with every farmer, because if he does not grow sugar he must grow peanuts in the South, and if he does not grow wool in Idaho he must grow wheat, and that is why every farmer is interested in every other farmer, as far as that is concerned, and in the industry as a whole.

Mr. UNDERWOOD. Mr. President, I am glad to hear the Senator's new-made theories, for they certainly are new made; but, so far as I know, wherever I have met a farmer who wants protection, or a manufacturer who wants protection, his theory and his arguments are not based on taking care of the whole United States. He says he wants protection because he desires a higher price on a particular commodity which he is producing, and for no other reason that I ever heard of. When the farmer himself talks about it, that is what he says.

The Senator says this wall should be so high that we should grow all in America that America consumes, and he illustrates it by mentioning sugar, when, as a matter of fact, less than half of the sugar we consume is raised in the great West, in Louisiana, and the Hawaiian Islands combined; and if you forced the production of the additional sugar in the United States, you would enormously burden the housewife of America

and the tables of America, because you would have to produce it in such an artificial way that the present tax would not only be burdensome but the cost would be enormously increased, and everybody knows that.

The reason why Arizona can not compete with Cuba in the raising of sugar is not because of labor. That may cut some figure in it, but it is because when the Cuban planter plants his cane he only has to replant it every three to five years. He can cut it and it grows, but the Louisiana planter must replant his cane every year. It is due to a difference in climatic conditions, which makes competition difficult, and raises the price to the American people. You might as well say that because we can raise some bananas along the Rio Grande we can raise enough bananas to supply the entire American market, if you carry the Senator's argument to its logical conclusion.

Mr. GOODING. I do not want to be unfair to the Senator——

Mr. UNDERWOOD. The Senator is not unfair to me.

Mr. GOODING. And I do not think I shall be when I say that he has not quite the bigger view of this great country of ours, and I can understand that. A man who gives his lifework to the law, or to Congress, who does not get back among his people, has not grown up with them, in other words, does not see it in the bigger light.

With all due respect to the Senator, I state to him that we have reached a new condition in America, a new world, so far as that is concerned, and the day is coming when we will not be able to find employment for our own people. That is not only true of this country but it is true in other parts of the world. They are scrapping our Navy and reducing our Army, and that is taking place everywhere, and the great problem which comes to every country is that of finding employment for their own people. There is no longer a single homestead to be taken up anywhere in the West. In my lifetime I have seen all that great country west of the Missouri River settled, and it has furnished employment for millions of people. I think the great question confronting the American people is to find employment, and you can only find employment through the production of the necessities of life for America. We have a great problem confronting us, that of finding employment for our own people, and we must grow our own sugar, and we can grow sugar enough for the whole world. We do not have to hothouse it at all.

The Senator is not fair in his statement, because if you look up the reports of the Secretary of Agriculture you will find that my statement is true. We can grow sugar beets in nearly every State in the Union, and without hothousing it. We are growing it in a great many States now. We can grow cane in more States than Louisiana, I dare say, if it were made profitable.

But let me say that we have an American standard in this country to maintain, the highest standard in all the world, and if you are going to maintain it there must be some way of equalizing the difference in the cost of production in this country and abroad, and I do not think there has ever been a time in the history of the country when we needed a protective tariff as much as we do to-day, because the lines are farther apart than they have ever been in the history of this country, as far as the price of labor is concerned, and the price of labor practically controls the price of nearly every product in the whole world.

Mr. UNDERWOOD. Mr. President, I do not care to continue to occupy the time of the Senate, but this question is too important to let it rest without meeting it squarely.

The Senator says that we must have this protective-tariff wall in order that we can produce employment for our own people and develop our own country. Nobody knows better than the Senator that the difficulty with American labor and American employment to-day is overproduction. The wheat fields of the West are overproducing for American consumption. The cotton fields of the South are overproducing for American consumption. The great iron manufactories of America are overproducing for American consumption, and so I might go on to an endless degree. We are overproducing for American consumption, and unless we find foreign markets to consume the surplus of American toil we will be eating up ourselves. If we continue to build a Chinese tariff wall around this country by a protective tariff, we will die of our own dry rot, and it goes without saying that we must find those surplus markets, and we can not do that by excluding all importations. We can not do that by not allowing the other nations of the world to trade with us. We can not do that by saying that we will ship abroad and that we will receive nothing in return, because, as has been repeatedly said, and the Senator knows as well as I do, the world has nothing to pay us with except the product of their toil. They have neither gold, nor credit, nor American securities, and as long as you refuse to allow the products of their fields and their factories to come into America, then you must limit the production of American workmen, American labor, and American opportunity, and it is folly to say otherwise. The great spirit of America has reached that point.

I am perfectly willing to accept what the Senator thinks is his judgment, that my view is narrow and his is broad, that his experience in Idaho for the past 25 years in the fields and mountains of Idaho has given him a broader view of what is necessary for the expansion of American trade and American commerce and the upbuilding of our people than the viewpoint I have obtained while serving my country under the dome of this Capitol for more than a quarter of a century. I am perfectly willing to accept the Senator's judgment of myself because that is immaterial. It does not amount to anything as to whether the Senator's viewpoint is greater or less than mine or mine is better than his. That is of no importance to the American people.

Mr. GOODING. I agree with the Senator.

Mr. UNDERWOOD. It is of no importance to the world. The question is that America is confronting a great economic crisis. Whether the Senator and his party are proposing the proper remedy or the wrong remedy to meet this crisis is an issue which the American people themselves must determine.

Mr. GOODING. Mr. President, the Senator is not quite fair in his debate in this respect. I have never stated that we should place an embargo duty so high that no imports would come into the country at all. My statement has been that there must be a duty sufficient to cover the honest difference in the cost of production in this country and abroad, and enough, too, to give us practically our market.

I want to say to the Senator that we spent last year for products of the soil something like $780,000,000 more than our entire foreign trade amounted to before the war. We shall have plenty to buy. We have paid out $250,000,000 for silk that we do not produce in this country, and $75,000,000 for rubber. I regret that I have not the figures to refer to, but I shall put them in the RECORD later. We shall have plenty to buy from the world. We buy more now than any other country is buying and will continue to do so. There is plenty to trade with and plenty to buy. I do not want to tear down or burn up the customhouse and give the foreigners a chance to come here and destroy our industries. I am only asking for the honest difference in the cost of production. That is all; that and nothing more.

Mr. SMOOT. Mr. President, I have before me a carbon copy of the statement made by the Senator from Massachusetts [Mr. WALSH]. I can not see any real reason for the statement being made other than that it was an endeavor to impress the American people with the idea that this tariff bill will cost the consuming public of America $17,600,000,000. I do not think the Senator from Massachusetts believes that, nor do I think for a moment that he really intended it to be accepted as a statement of what the result of the tariff bill will be.

Mr. HARRISON. Mr. President, may I ask what are the Senator's figures on that proposition? How much does he think the bill will cost the American consumer?

Mr. SMOOT. Nobody can figure what it will cost on the basis of the figures presented by the Senator from Massachusetts.

Mr. HARRISON. On the Senator's basis, how much would he figure it will cost?

Mr. SMOOT. I can not say, and no living man can say, in my opinion, what it will cost the American people.

Mr. WALSH of Massachusetts. Mr. President——

Mr. SMOOT. Will the Senator please wait until I get through, and then I think he will know more of what I have to say in relation to his statement than the mere statement I have already made.

Mr. WALSH of Massachusetts. Is there any doubt that at 4 cents per capita the tax upon this one item would be $4,400,000?

Mr. SMOOT. The Senator says "if." His statement was based on an assertion made by the Senator from California, and the Senator from Massachusetts does not figure upon the facts in the case as they really are. I want to call the attention of the Senate to that fact.

Mr. WALSH of Massachusetts. I figured on the basis of the figure given by the Senator from California, which was 4 cents per capita. There are 4,000 items in the bill. As a matter of fact, there are many more than 4,000 items. The Senator from Utah informed the Senate the other day that in the chemical schedule alone there are 6,000 items.

Mr. SMOOT. I think the Senator is wrong. On a large number of items there is a great reduction made in the rates. The Senator says "if" all the 4,000 items had the same increase and "if" every one of the 4,000 rates was a 4-cent tax upon every person in the United States, then it would mean $4,400,000.

Then, "if" there were 4,000 schedules with this rate, it would cost $17,600,000,000.

The fact is that the rate under existing law is 30 cents, instead of 60 cents, on the item to which the Senator referred—olive oil. Therefore we might just as well say that on the 4,000 items in the Underwood bill it has cost the American people $8,800,000,000.

I have never said that, and I do not believe the Senator from Massachusetts believes it. I do not believe the Senator thinks for a moment that is going to happen. I simply rose to show that such a thing could not possibly be. It was figured upon the basis of "if," and not upon the facts as they exist.

Mr. WALSH of Massachusetts. Of course, it was an estimate based upon the statement of the Senator from California.

Mr. SMOOT. The average annual importation of olive oil for the last 21 years was 6,500,000 gallons. That would be a duty, at the increased rate, of $3,500,000, or 3 cents per capita, and under the Underwood law the duty would be just one-half of that. That, of course, could not give any information to the American people as to what the pending bill would really cost because of the increase in the rate on olive oil.

Mr. KING. Mr. President, of course my colleague with his large experience knows that where there are importations and also domestic products and a tariff is levied, it reflects itself in the increased prices upon the domestic production. So that when my colleague says the importations during the 21 years were a certain figure he does not mean to state that the tariff imposed would not more or less reflect itself upon the domestic product.

Mr. SMOOT. The domestic product, I will say to the Senator, in this case is only 2 per cent of the consumption. Ninety-eight per cent is imported into the United States. That is why I called particular attention to this item. I thought it was not very fair even to intimate that the result would be the way it was stated by the Senator from Massachusetts. In other words, the reason why the statement was made—at least, I can not conceive any other reason—was to have the American people believe the pending bill would cost them $17,600,000,000.

The Senator knows that the entire production of everything in the United States is only $62,000,000,000, and that includes every item that is manufactured and every stage of manufacture; that is, the pyramiding of every manufactured article from the raw material to the finished product, which sometimes includes six or seven turnovers before it is in the finished product. With all of that, it is only $62,000,000,000. Of course, the Senator knows that it could not possibly be the amount he stated.

Mr. McCUMBER. Mr. President, I would like to ask the Senator from Utah, because possibly he has it in mind, what is the total income of all the American dealers? I am assuming that they are not spending more than their income, and it seems to me that this additional cost is almost equal to their income from all sources.

Mr. SMOOT. I would not want to say offhand, because I have not the figures in mind right now, but I think it was about $8,000,000,000 during the war.

Mr. KING. If my colleague will pardon me, it was between five and six billion dollars nine years ago, referring to the savings of all the people of the United States. The difference between the total value of production and that which was required in its production, available for investment, or the savings of all the people, was approximately $5,000,000,000.

Mr. McCUMBER. I thought it was in the neighborhood of something like $40,000,000,000.

Mr. SMOOT. Oh, no; the Senator is mistaken.

Mr. McCUMBER. But according to this estimate the entire income of all the people was $25,000,000,000.

Mr. SMOOT. I thought the Senator said profits.

Mr. McCUMBER. No; I am asking the amount of the entire income of all the people in the United States. They can not spend more than their income. According to the figures that are being given here, if we did not have any tariff it would not cost them anything to live. They would get everything free.

Mr. SMOOT. All the wages paid in the United States in all of the industries of every name and nature were $10,531,600,340. That is every cent of wages paid to every employee in every industry in the United States. I understood the Senator from North Dakota to ask what the profits were. During the war I think the profits were $8,000,000,000 in the United States, because that was the figure upon which we based our revenue law during the war period. Of course, they are not half that amount now.

Mr. WALSH of Massachusetts. It was not very long ago that the Senator from Utah was claiming that with a 3 per cent sales tax on the manufactured articles he could raise a revenue of $1,000,000,000.

Mr. SMOOT. Oh, no—$750,000,000; and that was on the completed article.

Mr. WALSH of Massachusetts. And exempting all farm products and all producers who produced products of less than $5,000 in value.

Mr. SMOOT. That is true. I am quite sure that can be done. That was on the basis of a turnover of $62,000,000. If the Senator will look up my speech of November 11 last, he will find exactly what the figures were. I simply rose at this time to show that such a thing as stated by the Senator from Massachusetts could not possibly be.

Mr. KING. Mr. President, the production of the United States in 1909 or in one of the years between 1909 and 1912—that is, the value of all the products of the United States of the farm and field and mine and manufacturing plant—was approximately $35,000,000,000. In the production of that aggregate sum $30,000,000,000 were required as the wage or price paid for the various materials entering into the value of the raw material or the completed product. So that at the end of the year there was only $5,000,000,000 saved and available for investment. The value of the products, as has been stated by my colleague and as was stated likewise by the Senator from North Carolina [Mr. SIMMONS] a few days ago, last year amount to approximately $62,500,000,000.

In part that enormous advance of which I spoke over $35,000,000,000 is attributable to the increased prices, and undoubtedly the products of the United States last year, in volume as well as in price, exceeded the volume and the price when the $35,000,000,000 registered the correct amount.

In the production of that $62,500,000,000 approximately all of it was used but $8,000,000,000 or $9,000,000,000. Our publicists and statisticians who are trying to familiarize themselves with the subject disagree, but I should estimate, judging by the ratio of past production to cost, that the savings would probably be $8,000,000,000.

Mr. President, with respect to the statement made by the Senator from Massachusetts [Mr. WALSH] and the statement which was made by my colleague [Mr. SMOOT] I desire to say that I think my colleague is right in stating that it is difficult to determine just what the additional cost will be annually to the American people as the result of the enactment of this bill into law; but assume that the bill perpetuates the present high prices, then undoubtedly its passage will result in costing the American people annually between $5,000,000,000 and $10,000,000,000, and perhaps more. I think it will be almost impossible to determine what the additional cost will be. It has been avowed, not by my colleague but by some who are defending the bill, that one of its objects is to perpetuate high prices. They do not say that in so many words, but that is the effect of their position. If we are to perpetuate these high prices, then the bill will cost the American people annually billions upon billions of dollars and the burden which will be imposed upon them no one can approximate; but it will be so great, Mr. President, that, in my opinion, they will be compelled to turn for relief from the party which enacted it to the party which is opposing it.

Mr. WALSH of Massachusetts. Mr. President, the figures which I used were suggested by the junior Senator from California [Mr. SHORTRIDGE]. I thought at the time he stated them that they were excessive as to the per capita amount of the proposed tax, but, in view of the fact that he was from the State which produces olives and was supporting the committee amendment, I thought my calculation might well be made upon the figures furnished by the man who ought to know best what the burden of the tax upon the American people would be.

The VICE PRESIDENT. The question is on agreeing to the amendment reported by the Committee on Finance.

Mr. KING. I ask that the amendment may be stated.

The VICE PRESIDENT. The amendment will be stated.

The ASSISTANT SECRETARY. On page 25, paragraph 61, line 22, before the words "per centum," it is proposed by the Committee on Finance to strike out the numerals "15" and to insert the numerals "25," so as to make the paragraph read:

PAR. 61. Plasters, healing or curative, of all kinds, and court-plaster, 25 per cent ad valorem.

Mr. HARRISON. Mr. President, until about two days ago every other hour we had a lecture in the Senate from the distinguished chairman of the Committee on Finance, the Senator from North Dakota [Mr. MCCUMBER], with the object of creating the impression among the people of the country that the Democrats were filibustering against the pending tariff bill.

If those who watched the proceedings on yesterday and to-day had any such idea, I am sure it is now dissipated. For about two hours this morning one Senator on the other side of the Chamber discussed the agricultural phases of the tariff, and the remainder of the time has been used, for the most part, by Senators on the other side of the aisle.

Mr. SMOOT. We were, however, speaking on the pending tariff bill all the time.

Mr. HARRISON. No; Senators on the other side of the Chamber were trying to defend the iniquitous provisions of the bill.

Mr. SMOOT. But, I repeat, we were discussing the tariff bill.

Mr. HARRISON. The Senator from Utah himself, like the old woman's snake—

> Has squirmed in and squirmed out
> And left the people all in doubt,
> As to whether the snake that made the track
> Was coming in or going back.

The Senator has not explained anything but is merely trying to get away from the charge that the distinguished Senator from Massachusetts has elaborated upon as to what the junior Senator from California on yesterday stated in reference to olive oil. That is the trouble. The whole situation here now is a mess; it is a muddle, because no Senator on the other side of the Chamber has explained the provisions of the bill. They merely want to delay its passage, of course.

Mr. SMOOT. May I say to the Senator——

Mr. HARRISON. In one moment I will yield to the Senator from Utah. Of course, we understand that the plan of the majority is to allow the consideration of the pending bill to occupy a long time in the Senate, to permit it to drag along for months and months, then the bill will go to conference, and it will then stay in conference during and until after the election. Then, of course, the big industries which are interested in the provisions of the bill which will cause delay in conference will be appealed to to help the Republicans retain control of the House of Representatives. Then Congress will adjourn without a tariff bill having been passed.

I wish to say, however, that if this tariff bill must be passed and forced upon the American people we want to see it gotten out of the way, and if the Senator from Utah and his colleagues on the other side of the Chamber will stop filibustering and unnecessarily delaying the bill, we will let them pass it and we shall get away from here, so that they will not be allowed to carry out their scheme of letting the bill die in conference while they extort from the large interests campaign contributions in order to elect the House of Representatives.

Mr. SMOOT rose.

Mr. HARRISON. Does the Senator from Utah wish to interrupt me now?

Mr. SMOOT. I will merely say to the Senator that I hope he is speaking with authority when he states that the Democratic Senators will allow the bill to pass. Up to the present time, however, I have not noticed any indication at all of a disposition on the part of the Democrats to do that. If the Senator from Mississippi had been present in the Chamber when we have been trying to explain various items, I think he would not have made the statement he has in reference to Senators on this side of the Chamber.

Mr. HARRISON. The Senator from Mississippi stays in the Chamber all the time. He tries to keep in close touch with the distinguished Senator from Utah. He likes the association.

Mr. SMOOT. I do not know that it is worth while now to take the time to read them, but I have here nearly two pages——

Mr. HARRISON. The Senator from Utah may do that in his own time.

Mr. SMOOT. I repeat, I have two pages here which will show who has consumed the time in filibustering, what has been done, and how it has all happened. I can read these memoranda if it becomes necessary to do so.

Mr. HARRISON. The Senator from Utah may do that after I have concluded. I have not yet spoken on the bill. I have sat here and listened to the Senator from Utah day in and day out and night in and night out. I have been merely waiting for a time so that I could recall some facts and circumstances to the Senator and his colleagues.

If they will heed me and follow my advice, I will tell them something that will set them right, because they are traveling to a fall too fast. We want this bill out of the way. We know what will be its effects and the condemnation you will receive as soon as its iniquitous provisions are ascertained.

The Senator from Utah will probably admit that this is about the worst tariff bill that has been framed by any committee of the Congress in the history of the Government. I understand the Senator from Utah did his best to remedy some of its defects; but I further understand that the Senator's advice as to many of the items was not taken, and consequently we have this mess and muddle before us. This tariff bill imposes the highest rates that have ever been attempted to be forced upon the American people. Of course, I may not restate that a tariff is but a tax, and if you think the American people will welcome more taxes you are mistaken.

Now, the Senate, I hope, will bear with me for a moment, and I want Senators on the other side of the Chamber to listen, because what I say may be useful to them between now and the election. In the Sixty-second Congress, in 1911, the Democrats obtained control of the House of Representatives by a majority of 68. The Republicans had been in control previously and had placed upon the people the Payne-Aldrich tariff law, with its obnoxious Schedule K. The majority in this Congress are so ashamed of that schedule, and are smart enough to change the letter or the number of that schedule in the pending bill, but they are not going to fool anybody by that. I repeat the Republicans had control of Congress in the Sixty-first Congress, but the Democrats had control of the Sixty-second Congress by a majority of 68. What did we do? We had won that election by appealing to the people to repudiate those gentlemen who had sponsored and advocated the Payne-Aldrich tariff law. It smelled to high heaven and was nauseating to all people who believed in equity, fairness, and justice. They did repudiate them and gave us control. We immediately went to work, and a tariff measure was one of the first bills that we passed.

I look into the classic countenance of my good friend from Iowa [Mr. CUMMINS] and remind him that he voted for that measure when it came to the Senate. I look into the bewitching and smiling face of my friend from North Dakota [Mr. MCCUMBER], chairman of the great Committee on Finance, and remind him that he voted for it when it came to the Senate. I refer to the farmers' free list bill. The Senator from Utah [Mr. SMOOT] did not vote for it, but the Senator from North Dakota and the Senator from Iowa did. That measure placed upon the free list plows, barbed-wire fencing, bagging, ties, and similar commodities in order to relieve the situation which confronted the farmer, for we really wanted to help him. The Senator from Utah apparently did not want to do that, but the Senator from Iowa did, and the Senator from North Dakota did. We passed that bill in the House. As I have stated, we had 68 majority, but we passed it by 127 majority. All the progressive Republicans lined up with us and voted with us for that bill. Some progressive Senators, who now are not so progressive as they were in former days, voted with the Democrats and the bill was passed in the Senate, but a Republican President [Mr. Taft] vetoed it.

The Senator from Utah will recall that in the same Congress the Democrats passed a bill which reduced the rates on wool 40 per cent. The Senator from Iowa voted for that bill when it reached the Senate, and the Senator from North Dakota also voted for it. Does that statement surprise Senators? It finally passed the Senate and went to the same President who vetoed it. We passed through the House at that time by a large majority a bill reducing the rates on cotton goods 38 per cent, as I recall, and again the Senator from Iowa and the Senator from North Dakota in the Senate voted for the reduction, and the bill was passed.

Then what happened? We went before the American people in the following election asking approval of our course in Congress in passing that legislation, reducing the high tariff which had been placed in the Payne-Aldrich tariff law by the Republican Congress upon the necessaries of life, including agricultural implements to the American farmer. What happened? How did the American people respond? Did they repudiate us? No. From a majority of 68 in the Sixty-second Congress we came back with a majority of 163, and made a gain in the Senate, overturning control of that body by the Republicans from 11 majority to 7 majority in our favor.

The cost of living was high in those days, but it was not one-third as high as it is to-day. In the last campaign—the campaign of 1920—the Senators on the other side talked about the high cost of living. I have heard the Senator from Utah talk about it here and all of you on the hustings promised to reduce it; but what are you doing toward reducing the high cost of living? Can you do it by placing a tax upon bread, meat, flour, and similar commodities? No. You propose in this bill to tax the toys and the joys of the little children; you propose to tax the shawls and the sorrows of the aged women. I even heard a Senator on the Republican side advocate the other day a tax on the chalk which the little schoolboy and schoolgirl needs to write

their lessons upon the blackboard. Hungry mouths get no relief from this bill, but the Republican majority goes down the line and protects by this bill everything in utter forgetfulness of the consumers of the country.

I want to read to you, because it is apropos of this discussion, what a distinguished Progressive—he was called a "Bull Mooser" in those days—said in speaking of the Payne-Aldrich tariff law. He said it to the American people, and it was printed in the Saturday Evening Post. It was back in 1913. You Republicans had better take some advice. On June 28, 1913, this article was printed in the Saturday Evening Post. It was on "The Progressive-Republican merger." This gentleman has recently won in a contest in Indiana over one who has been faithful to this administration, who is a splendid gentleman and conscientious statesman; but this man, whom I shall quote, is now the nominee of the Republican Party for the Senate in Indiana, and here is the way he talked about some of you fellows and your party back in 1913. I think he used the name of the distinguished Senator from Utah [Mr. SMOOT] in this article. If he did not he was talking about him, because no one could speak of reaction in the Republican Party without having the Senator from Utah in mind.

Here is what Beveridge said in this article:

True, some Republicans and some Democrats favor this Progressive Party principle; but the majority of both Democratic and Republican leaders are against it. Mr. LA FOLLETTE is for it and Mr. LODGE so unalterably opposed to it that he gave this as his excuse for deserting his personal friend and greatest benefactor, Colonel Roosevelt. Mr. CUMMINS is for it, but Senator Root thinks it will break down our Government.

Then he goes on to say that a party could hardly exist with men of the type of SMOOT and BORAH in it at the same time. Here is what he said, talking about the tariff, and that is what I want to read to the Senate. He was speaking at a time when the tariff question was rife before the American people.

What then? Does anybody imagine that people who have thus been so fooled and wronged will not strike down the party which has promised all this and not made good? Of course they will.

He is talking about your party now.

What will the people then do? If they turn to the Republican Party, that party will say that at least the people have indorsed the Payne-Aldrich tariff bill; at least Mr. Taft's statement at Winona that the Payne-Aldrich bill was the best ever passed has been proved to be true. That is what the Republican Party will say, and that party will have a right to say just those things. Its leaders are saying just those things right now by way of prophecy. So if the people in their disappointment and despair turn to the Republicans the latter will give us another dose out of the same bottle from which they dosed us with the Payne-Aldrich tariff bill.

I do not know whether this part of this statement was put in pamphlet form and circulated in Indiana in the recent primary campaign or not; but evidently they knew that you were discussing the tariff down here and framing a bill that was worse than the Payne-Aldrich tariff law, and they knew that this man had made that expression and they nominated him as your candidate for the Senate in that State.

We should have again the same one-sided and worthless hearings; the same star-chamber caucus methods; the same framing of a bill by a few men, with the unjustly favored interests in the background; the same slugging of the bill through Congress; the same outrages and injustices in the end.

That is what Beveridge said in 1913 would happen again should the Republican Party get control of the Government.

The only difference would be that the Republican Party will feel licensed to be more extreme than ever, for it will reason that the people, tired and exhausted with this endless tearing down and building up of tariffs, will stand for anything rather than see it continue.

He says further:

You see, Americans are the only people on earth who can afford a government by politicians. We are so few in numbers and so wealthy in resources that we can manage to get along with politician-made tariffs and dark-lantern tariff methods. But ought we go on with such tariffs and such methods just because our wealth is so great and our numbers so few that we still can live in spite of such tariffs and such methods? The Progressive Party believes that we ought not.

And he further says:

And we are at relentless war with the present-day Republican doctrine of a guaranty of profit to manufacturers.

Oh, if he were here now, would he employ those words in indicting your party and in opposing this bill?

Such an idea never was heard of before the Taft-Aldrich-Root-Lodge combine forced it into the Republican platform.

Let me read that again. That is a wonderful expression:

And we are at relentless war with the present-day Republican doctrine of a guaranty of profit to manufacturers. Such an idea never was heard of before the Taft-Aldrich-Root-Lodge combine forced it into the Republican platform.

He could have employed the name of the distinguished Senator from Utah [Mr. SMOOT] in that connection, but he did not.

Why not guarantee profits to farmers and barbers and doctors and lawyers?

Some day, when I do not want to take up too much time of the Senate, I am going to read the rest of this speech to you. It is interesting at this time.

The Senator from Idaho [Mr. GOODING] talked about this bill doing something for the farmers. We did something for the farmers. Our record was made when we placed plows and tooth and disk harrows and headers and harvesters and binders and reapers on the free list in the Sixty-second Congress, and they have stayed there ever since; bagging for cotton, gunny cloth and similar fabrics, barbed-wire fencing, hoop or band iron and steel, leather, boots, and shoes. Yes; you were going to reduce the high cost of living. What is higher, what tax will bear down heavier, than the tax that you are placing on shoes and boots, that the poor people over this country will be forced to buy? Why, if the honest laborer to-day who is making two and three dollars a day has five or six children and has to go to the store to purchase some shoes for them, how can he do it? And yet, with the high price of shoes that is now existing, you propose to make the price still higher.

Beef, veal, mutton, lamb, pork, meats of all kinds, were placed upon the free list in the Democratic measure. But you change it by the proposed bill and lay the heavy hand of taxation upon all these necessities of life.

Flour and corn meal were on the free list, and if he needed a home we placed shingles and lumber upon the free list; and yet you propose in this bill to tax these things; aye, you tax even the crust upon the lips of the hungry, and yet you are going to have the audacity, with such a record, to go before the American people in the coming election. What they will do to you you will see. The landslide of two years ago will be but a molehill by the side of what will happen in that election.

Friends of the people? Why, you are not thinking about anybody but the huge manufacturers and special interests of the country that you permitted to come behind closed doors and tell you what to do. The record shows that the chairman of the Ways and Means Committee of the House, when these manufacturing interests and representatives came before them, asked them, "How much tax do you want us to levy?" and the bill shows that they got about what they asked in every instance; and you, in instance after instance, have gone further and increased the tax.

Let us see what you are going to permit the American people to get free of tax. It shows your generous spirit, your kindly disposition, your interest in behalf of the consumers.

I notice, first, that you are going to let them have "sand." That can come in free under your bill.

You are going to give them "fish sounds." They may be either "crude, dried, or salted," but "fish sounds" can come in free.

Then you have put on the free list "dried blood." Well, who wants "dried blood?"—and yet you permit that to come in free.

Then "bones." You let "bones" come in without any tax.

I go through the bill and I see "Brazilian pebble." You let "Brazilian pebble" come in without a tax. Who knows what it is?

Then "bristles." They have to be "crude bristles," or they can not come in free, but if they are "crude bristles" they can come in without being taxed.

"Cuttlefish bone," "dried insects," "stems" of vegetables and flowers can come in free. I do not understand how these things escaped.

"Bird eggs" and "fish eggs" and "insect eggs" can all come in free of tax, and "fishskin," you permit that to come in.

"Fossils," "dragon's blood," "horsehair," and "cattle hair" can come in free.

"Hoofs," "unmanufactured hoofs," can come in without tax.

"Old junk." If it is new junk it can not come in, but if it is "old junk" no tax under this bill can be levied on it.

"Leeches." You permit "leeches" to come in without tax.

"Lodestones." I do not know whether you let "loaded dice" come in or not, but you are playing on the American people "loaded dice" in this bill that you are passing.

"Marrow," "crude marrow." That can come in free of tax.

"Seaweed." Of course seaweed drifts in. They are not going to tax "seaweed."

"Nux vomica." The American people will administer you a dose in the coming election if you pass such a bill as this.

"Rags," "shavings," "old paper," "rope ends," "waste rope" and "waste bagging," "old gunny cloth," and "old gunny bags." All those things can come in free.

"Sausage casing" and "bladders."

"Skeletons." You do not tax them.

"Spunk." I wonder if you tax nerve.

"Teeth." If you pass this bill and levy these exorbitant taxes on the consuming masses, they will not need any "teeth," be-

cause they will not have anything with which to buy the necessaries of life.

Mr. CARAWAY. I hope the Senator will not overlook the fact that "joss sticks" are also on the free list.

Mr. HARRISON. Yes; I was about to omit that. "Turtles." "Worngut" also.

So that is the free list the American people are going to get. Those are some of the articles that may come in free of tax under the beneficent provisions of this bill. I received a letter the other day to which I wish to call attention. It seems that some big manufacturing plant, the Phillips Co., of Chicago, wrote a letter to the Peru Plow & Wheel Co., and the Peru Plow & Wheel Co. answered them. The Phillips Co. had a sprinkling system they wanted to sell to their correspondents, and here is the copy of the reply they received. It is very interesting, and if Senators will just follow the suggestions in this letter it will be well for them:

APRIL 5, 1922.

The PHILLIPS CO.,
718 The Temple, 108 South La Salle Street, Chicago, Ill.

GENTLEMEN: Your valued favor of the 28th ultimo received.

We thank you heartily for keeping us in mind for a fire-prevention or sprinkling system, and when we buy you shall have the first opportunity. However, manufacturers have now a far surer system of "putting out fires" than those you advocate; a system that has been thoroughly tried and tested for the last three and a half years and never once has been found lacking or inefficient.

They began to manufacture these in the fall of 1918, and they have put out the fires of practically every manufacturer in the United States. This same combination, known as the Incorporated G. O. P., has not only put the fires out of factories and furnaces but have ruthlessly and cruelly turned 5,000,000 honest, beguiled American workmen into idleness—yes, more, snatched the food from the children's mouths and torn the clothes and shoes from their little bodies—made loafers of honest workingmen.

There is but one fire extinguisher, and it is so easily operated that its head plays golf half of the time, and in a recent speech stated that he felt he had been our President for 20 years. Lord only knows, I feel he has been my President for 20 years; the lines in front of the soup houses feel he has been their President 20 years; the man that got what he voted for in 1920 feels he has had him 20 years; and I venture to say that your good concern feels itself that he has been your President for 20 years. Times do seem long when we are miserable, but remember when the bright and hopeful lights for prosperity are again kindled by honest Democrats, and the flames flare in the ruddy faces of the firemen and engineers, then we will have use for your kind of fire extinguishers, and not until then.

Yours in the Lord,

PERU PLOW & WHEEL CO.,
By D. W. VOORHEES, *President.*

Mr. President, I shall not take up any further time of the Senate. I hope that the advice I have offered will be accepted, this filibustering upon your part stopped, so that we can get along with this bill.

Mr. McCUMBER. Mr. President, I suppose we will reach the millennium when we can raise $4,500,000,000 a year, necessary for running the Government, without taxing anybody to pay it. I suppose we will all be equally happy when foreigners furnish everything we wear and eat and the American people furnish none of it. But until that good Democratic millennium comes, I think we had better take the situation which confronts us and begin the consideration of a bill which will help us to take care of some of the indebtedness which we must immediately meet.

The funny man of the Senate has given us an address just now upon the free list. The gallery enjoyed it, as he enjoyed telling it. The only trouble was that the Senator made a mistake. He got hold of the wrong bill, and was reading the Democratic free list. Every one of the articles the Senator was having such a funny time about is upon the Democratic free list in the present law. He told us all about fishskins and free fossils. Yes; those are in the Underwood law. He told us about dragon's blood. Yes; that was made free under the Democratic tariff law. He told us about the hair of horses and cattle. Yes; and hides, raw, and whetstones, and unmanufactured hoofs, and joss sticks, and old junk, and leather, and half a thousand other things; and he followed right down the paragraph here which the Democrats put upon the free list, things which have always been upon the free list, and which the Republican tariff makers left upon the free list.

Mr. HARRISON. If the Senator will permit, if he will go a little further on the Democratic list he will find that cotton bagging and ties were on the free list, National cash registers were on the free list, and many other things which are not on the free list in this bill.

Mr. McCUMBER. Oh, Mr. President, we took some things off the free list——

Mr. HARRISON. You took most of the things off the free list.

Mr. McCUMBER. Which the Democrats put on the free list; but we left leeches, just as they put them on there, and we left joss sticks, because we thought if it pleased our Democratic friends to have joss sticks upon the free list we would continue it for their dear sakes. We left old junk upon the free list because they seemed to be married to it and wanted it, and they got it; and now, for Heaven's sake, let them quit kicking about it. They put it there themselves. They put every one of these things upon the free list about which they are talking at the present time. I do not think they would bring in a great deal of revenue, consequently we left those for their dear consolation; and now let them take all they can out of it.

In the meantime let us get at this bill. We have been here now nearly five hours to-day and have not voted upon a single item. If any of our duties are too high, vote them down; change them. We think they are fair. We do not think a 25 per cent ad valorem on general drugs, and so forth, will add very materially to the cost which only the consumer will pay when he gets a prescription filled.

Mr. WALSH of Montana. If the Senator will permit, I desire to advert in that connection to the fact that the discussion to-day was precipitated by general political discussion and tariff discussion by the Senator from Idaho [Mr. GOODING]. Senators upon this side felt called upon to respond to some of his political observations.

Mr. McCUMBER. They were discussing what was in the bill, I will have to admit, and they have to get that out of their systems some time, and these speeches will be made; but now, since we have spent five hours to-day, it seems to me we might get back to the bill itself.

Mr. WALSH of Montana. I thought so, and so I desired to remark that the discussion which prevented the vote which the Senator so much desires was precipitated from the other side of the Chamber.

Mr. McCUMBER. Mr. President, I am not complaining about which side started it, as long as the speeches are on the tariff, but I think we are wasting time discussing whether leeches ought to be free or taxed, or some other things ought to be free or taxed, which have been on the Democratic free list ever since there was a Democratic Party.

Mr. NELSON. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Minnesota?

Mr. McCUMBER. I yield.

Mr. NELSON. I was listening to the articles on the free list enumerated by the Senator from Mississippi. I was much surprised that he did not call attention to ice, for that is on the free list.

Mr. WILLIAMS obtained the floor.

Mr. SPENCER. Mr. President, I can not agree with the Senator from North Dakota in characterizing the distinguished Senator from Mississippi as the funny man of the Senate. I was particularly impressed by what the Senator from Mississippi said as to the wishes of the other side of the Chamber to vote upon the pending bill, and the strong and eloquent manner in which he characterized the delays as coming from this side of the Chamber. I believe in the absolute sincerity of what he said, precisely as I do always when he speaks upon any political question. He is not a member of the Finance Committee, nor am I, but evidently he speaks with some authority, which authority perhaps I lack. I now ask him to join with me in a request for unanimous consent that on the 1st day of June, unless he desires another date, we shall proceed to vote upon every pending amendment, and every amendment which may be offered, and every other matter in connection with the bill, and upon the bill itself, without any further debate.

I suggest the absence of a quorum, and will call up the unanimous-consent request as soon as the quorum is present.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Gerry	McCumber	Shields
Ball	Gooding	McKinley	Simmons
Borah	Hale	McNary	Smoot
Brandegee	Harris	Moses	Spencer
Bursum	Harrison	Nelson	Stanley
Capper	Hitchcock	New	Sterling
Caraway	Johnson	Newberry	Townsend
Colt	Jones, Wash.	Nicholson	Underwood
Cummins	Kendrick	Norris	Wadsworth
Curtis	Keyes	Oddie	Walsh, Mass.
Dial	King	Page	Walsh, Mont.
Dillingham	Ladd	Phipps	Watson, Ga.
Elkins	La Follette	Pomerene	Williams
Ernst	Lenroot	Ransdell	Willis
Fletcher	Lodge	Rawson	
Frelinghuysen	McCormick	Sheppard	

The VICE PRESIDENT. Sixty-two Senators have answered to their names. There is a quorum present.

Mr. SPENCER. Mr. President, I now ask unanimous consent that upon the 1st day of June following, unless an earlier date is proposed, the Senate shall proceed to vote without fur-

ther debate upon every pending amendment, upon every amendment that may be offered, and upon the bill itself.

I may say to the Senate in a sentence, because it is by the courtesy of the Senator from Mississippi [Mr. WILLIAMS] that I am now speaking——

Mr. WILLIAMS. The Senator is not speaking by my courtesy. I have not yielded to him. The Senator is making a mistake if he puts it on that ground.

Mr. SPENCER. Perhaps that is true. The reason why I make the request at this time is because the junior Senator from Mississippi [Mr. HARRISON] stated in a very forceful manner, which impressed me exceedingly, that the cause for the delay of the tariff bill was on this side of the Chamber, that upon the other side of the Chamber they are anxious to vote to dispose of the tariff bill and get away. Therefore I ask for the unanimous-consent agreement which I have suggested.

Mr. BORAH. Make it not later than the 1st of June.

Mr. SPENCER. Yes; not later than the 1st of June.

Mr. WATSON of Georgia. Mr. President, I object to any unanimous-consent agreement of any kind at this time.

Mr. WILLIAMS. Mr. President, just for the sake of getting before the Senate myself, I object to the request for unanimous consent for the moment, at any rate.

I am a little bit afraid that the Senate may have forgotten what we were talking about. There has been a labored attempt this morning upon the part of the Senator from North Dakota [Mr. MCCUMBER] and the Senator from Missouri [Mr. SPENCER] to "damn my colleague with the faint praise" of being "a funny man." I do not think my colleague ever was funny. I do not think the other side of the Chamber regards him as being very funny. I notice that they take very seriously pretty nearly everything he says.

I am very fond of the Senator from North Dakota, as fond of him as I am of any man on that side of the Chamber, but certainly he could never be dubbed a funny man even by his worst enemy nor a judge of who was funny. It would be very difficult indeed for any human being with an ordinary sense of humor to find the Senator from North Dakota even amusing, much less humorous.

As to the Senator from Missouri [Mr. SPENCER] he has wittingly taken the place that he sought to give to my colleague.

This body will not forget to remember that it was the junior Senator from Missouri who wanted to hurry up proceedings in the Newberry case and have the debate cease before the country could find out what had happened in Michigan in that election. Now he is engaged in the same old business of trying to close debate before the country can find out what is in another—this tariff bill. I do not mean what is in it in detail as to every duty. The country would not find that out in five years, and would then find it out only by experience. I am merely emphasizing the fact that the Senator from Missouri has assumed the place which he chose to try to give to my colleague. He is when tried by his recent request for unanimous consent par excellence the funny man of the Senate.

Whenever the debate gets too close for the Republican Party, whether upon a contested-election case or upon a tariff bill, there comes to the front, with the appearance of a Presbyterian elder—so serious is his countenance—the junior Senator from Missouri, and solemnly proposes that we now proceed to vote. Of course, the Senator from Missouri does not care whether we proceed to vote or not. He does not know enough about the bill to know whether we ought to proceed to vote or not. He merely intended to be funny, and he was. He was funnier than I imagine my colleague could possibly be under any circumstances whatsoever, even in the imagination of the Senator from Missouri, and his imagination is one of the funniest things I have ever come in contact with during 30 years of public life.

Now, Mr. President, to come back to the Senator from North Dakota [Mr. MCCUMBER], for whom I have a real, an earnest, and an honest, good opinion; I would not select him as a judge of who was "a funny man," because he has not sense of humor enough to be a judge of who is funny, outside or inside of himself even. He is a regular bonny Scotchman, and what old Samuel Johnson said about the race is true about him. It will be remembered that Sam Johnson said if you wanted to get a Scotchman to appreciate a joke, you had to split his skull with a hatchet and put the joke inside bodily. That is about the situation of the Senator from North Dakota as regards humor, particularly or generally, generically or specifically. So if he were the only man in the world to pronounce my colleague to be "a funny man," nobody would pay any attention to the indictment, because the Senator from North Dakota is the least qualified of all possible grand jurors to bring in the indictment.

Now, a few words seriously about the pending bill, and I am talking about it seriously. The Senator from North Dakota said one thing that aroused my attention and made me take my feet. He said, in substance, that he wanted a bill that would "put money in the United States Treasury." I am not quoting him literally, but I am quoting the meaning of what he said. Mr. President, if there ever was a bill brought before the Congress of the United States whose intention was *not* to put money in the United States Treasury this is the bill. It is brought here for the purpose of putting a stop to importations, and unless there be importations there can be no duties collected upon importations, and therefore there can be no money put in the Treasury of the United States through this particular vehicle.

There have been various theories of what a protective tariff ought to be. All of them have been wrong, because there ought not to be any protective tariff at all. A man who can not make his living by the sweat of his brow or the ingenuity of his intellect or the inventiveness of his genius ought not to appeal to the Government to frame its laws so as to give him an advantage over the foreigner who has intellect, who has genius, or who has productive capacity. There is only one excuse ever given that has justified a protective duty upon any article, and that was the excuse given by John C. Calhoun. The things absolutely necessary for self-defense in war ought to be protected to the extent of giving an opportunity to produce them, so that the country should not be defenseless in war. That is the only good reason ever given for a protective duty upon any subject matter. The balance of it is bare beggary, a bare confession of pauperism, a bare admission that the man asking it is unable to make his own living in competition with the world.

Mr. President, for a great people like this, abounding in invention, abounding in adventure, abounding in mental capacity, to use the natural resources which are abundant in the country for self-enrichment, is nonsense. All this talk about our paying superior wages is nonsense. Why, Mr. President, we paid them before we were an independent country. When we were still colonies we paid three times the wage that was paid in Great Britain. We paid it and we prospered, not only without a protective tariff against Great Britain and the balance of the world, but when Great Britain was restricting our manufactures by laws prohibitive of their operation. Australia has done it; Canada has done it; every new country has done it. Every man who has any sense at all knows that high wages are due to cheap land and abundant land, that the two run in inverse ratio to one another, and that it is a habit of new countries to pay high wages, and the habit of overcrowded manufacturing countries gradually to reduce wages to the starvation point or very near it, at least to the point where the laborer can barely get a decent profit and maybe educate his children. So that has nothing to do with it.

Mr. President, a bill that "wants to put money in the Treasury" by stopping importations, by putting an end to the very utmost limit of legislative ability to all importations in the United States, is a self-evident absurdity. A bill which will put money in the Treasury would answer the purposes of one of the theories of a protective tariff, the theory of which the distinguished senior Senator from Alabama was the original father.

He was the father of the idea of a "competitive tariff," as he called it. I never believed in it, but still it is the only sort of protective tariff that may be justified. What does a competitive tariff mean? It means a tariff that will put our producers upon competitive ground with the foreigner. A tariff that goes higher than that gives to our producers an advantage that shuts out competition is not competitive. When it shuts out competition it shuts out imports, and when it shuts out imports it shuts out revenue. Do Senators think that my good friend the Senator from North Dakota [Mr. MCCUMBER], whom I value very highly, with his Scotch honesty would get up and tell me that this bill was intended to provide a "competitive tariff"; that it was to give to the foreigner a chance to compete with our producers while our producers could compete with him? If I went further and said that his bill not only shut off competition but enabled the American producer to make a monopolist of himself and his adventures, he might deny that, because that is not his intention; but he will not say that he believes that this bill gives a fair chance for competition between foreign and American producers, with an opportunity for the American consumer to buy from one or the other at his will at a fair price. That is not the object of the bill. The object of the bill is to close competition.

I said there were several theories of the protective tariff. One of them is the competitive theory, which my friend from Alabama for the nonce assumed more for the sake of argument than of anything else, and it was a theory which he said was

at the root of the Underwood-Simmons bill. Even that was a protective bill in the main features.

Then there is the old idea of protecting infant industries. The only trouble about that is that the industries got to be older than the idea itself after a while and that some of them never did become of adult age. I do not know of any that ever have from the beginning of time reached adult age, from sugar in Louisiana down to cotton goods up in Massachusetts.

They start with the idea of being raised on the bottle while they are very young, but they insist upon increasing the size of the bottle and the richness of the milk as they grow older. That is true as to every one of them.

Mr. President, the Senator from North Dakota says, and says very truly, that we are in a bad fix financially, and if modern patriotism prevails amongst "our boys" and they get a bonus—how much is as yet unsettled—we shall be in a worse condition financially. There is a strong appeal to each of us, if we can, to put money into the Treasury. So far as import duties are concerned the only way of putting money into the Treasury is to let the imports come in and collect the tax on them, unless we are going to levy an internal tax upon exactly the same products. My friend from North Dakota knows that the object of this bill is *not* to put money into the Treasury. He knows that the effect of this bill will be to keep money out of the Treasury; he knows that *the purpose* is to stop importations; he knows that the effect, if the purpose is carried out, will be to stop payments into the Treasury. So that defense of the bill as made by its friends will not do a little bit, whether a man has the sense of humor or whether he has not. That pretense of putting money in the Treasury will not pass for a fact or for a joke, either one.

Now, here we are in this fix: We can not balance our Budget, even this year, and we have a soldiers' bonus threatening us from the so-called "patriotism" of every boy, who calls himself "a veteran," who went abroad and fought for his country, and now wants to collect, and wants to collect in cash. If he collects in cash we not only can not balance our Budget this year, nor next year, nor the year after next, but we can not balance it for 20 years to come, unless we tax the people to death at home.

We are told that all of these tariff taxes are paid by the foreigner. Well, if so, then, for God's sake, let us tax the foreigner and let him pay these taxes that we need for the soldiers' bonus and for various other things that are certain to come after a while. Of course, however, there again Senators would usurp the place that they sought to give my colleague [Mr. HARRISON] and are speaking merely as funny men. Of course, they know that the foreigner does *not* pay the tax. There is a sense in which the foreigner suffers, and that is by the inability to export to us because we will not let him import to us, but he does not pay the tax on the stuff that does come in. The consumer pays that.

The foreigner may suffer a loss on that part of it that *can not* come in, but he does not pay the tax on that which *does* come in.

Now, here we are in this bad fix in the Treasury. It is going to get worse, too, because just as sure as fate, if a cash bonus bill comes before these two Houses of the National Legislature, composed as they are of men of ordinary weaknesses and of ordinary political ambitions, it is going to pass, and the President will have to have the courage to veto it if it is not to become a law. I shall not say beforehand that he will not have the courage because he may have it; I do not know; but it will be an immense strain upon a purely political conscience to expect him to do it, and I rather imagine he will not.

But that is not all. With the world owing us $11,000,000,000—a world which has neither cash nor credit wherewith to pay; having nothing but commodities; nothing but the things that it can produce on the farm or in the factory or in the mine—we are confronted with this bill which says to them in effect: "It is true you have no cash, and it is true you have but little credit, and what credit you have we must extend, for the balance of the world can not extend it, because it has not the financial ability, and if we extend it we must extend it on security and you have no security. It is true that the only way you can pay is from the produce of the farm and the mine and the workshop. We decline to let you pay in that way. We isolate ourselves from your products and your products from us. What we demand is a pound of flesh, and we will not have any blood with it, either; it must be pure, unadulterated flesh—gold flesh. We are standing upon a mountain of gold, and we do not want it to get away from us.

"We do not want to pay you anything; we want to trade with you in the way of having you buy all that we produce at a good profit, without having to buy anything from you, whether with or without a profit. We are going to shut you out of our market to the very fullest extent of our ability." That is the situation.

Mr. President, I always did scorn to go into the details of the rates of one tariff bill as compared with another. It was always sufficient for me to know that a rate was high enough to give some citizen of the United States, through the exercise of the taxing power, an unfair advantage over the great body of the American consumers. That was enough for me, and I never cared a baubee about discussing an x duty, a 2x duty, or a 3x duty upon apatite or upon something else in the chemical schedule.

I am just reminded by a note from some colleague that my friend the Senator from North Dakota [Mr. MCCUMBER], in his report, does not even claim that the pending bill will put more money into the Treasury. I do not myself make that statement, because I have not examined the report sufficiently to know, but, at any rate, I am inclined to believe it is true, for I know that the Senator from North Dakota is not the sort of a man to make any claim which in his opinion is not true, and I am inclined to believe that, even in his opinion, it is not true that this bill can result in any increase of the revenue of the Government.

Mr. President, what is the Treasury of the United States? Very frequently people speak of the Treasury as if it were a sort of independent entity of some description that has nothing to do with the citizen. A dollar can not get into the Treasury unless it be taken, after subtracting the cost of collection, out of some citizen's pocket. Every tax is an evil; it may be a necessary evil, it may be a justifiable evil under certain circumstances, but it is still an evil, and an import duty is as much a tax as any other description of tax that can be levied by any Government at any time.

How are the people who owe us $11,000,000,000 going to pay us? They have a fool notion in Europe that somehow or other they are going to borrow from us the money with which to pay us. Of course, they can not do that. Our Government is not going to lend to the Governments of Europe any more money; that is something distinctly impermissible, except during war, and it is not going to happen. Is anybody in Europe crazy enough to imagine that the American capitalist is going to let one squeezed dollar go from his fist unless he can find some opportunity of getting it back with an increase and a security to make him believe that he can get the principal back? And can any man blame him? Capitalism is his business, and increasing his capital is a part of his business. While I would dislike to be one of them, and thank God that I do not have to be, at the same time when one becomes a so-called business man he has got to be a business man, and "business is business," as the saying is. How in the name of common sense are we going to increase our trade with the world by shutting off their products in our market? How in the name of common sense are we going to increase the ability of our debtors to pay us their honest debts by declining to take the products which are the fruit of the sweat of their brow and the result of their intellectual ingenuity? Now, how?

Mr. President, there have been parties in this country, there have been parties in other countries, who in the presence of great emergencies have made asses of themselves, and I do not say this with a particle of bad feeling, because there is nothing personal in it. I merely say that the party in all the history of the world which, faced by a given situation inviting human solution of a world-wide, human problem, has made the greatest ass of itself, is the present existing Republican Party. Faced with a deficient Treasury, faced with debtors that can not pay us, faced with a bankrupt world, faced with restless labor and restless social conditions all over Europe and Asia, and partially in America, faced with a fluctuating exchange, called upon to solve these problems, they do it how?

Faced with an unstable exchange growing out of the fact that all trade is one way, called upon to solve that problem, how do they undertake to do it? By saying to the debtor: "We will not let you pay in anything except cash. We can not give you credit unless you give security, and you have none, or but little," and by saying to a world where there is immense unemployment of labor: "Your salvation, it is true, lies in the reemployment of your labor, in making things and growing things and doing things with a profitable result, so that out of the product of your labor you can get cash or credit; we know all that, but we refuse to receive the products of your labor. You are nothing but foreigners." Why, "we deny that we live on the earth equally with you. God did not make us all at the same time. I have no debt toward you. I have no obligation to help you in your trouble. God made me specially on a Monday and neglected you until the next Saturday, or some other time." Like the ancient Greeks and like the ancient Romans,

we look upon all foreigners as barbarians, and there is no particular reason why we should trade with them unless they want to buy from us and pay cash and not by any means sell to us. "That is a hard job right now, because I have all the gold, a whole mountain of it, and I am sitting on top of it, and I am not going to slide down it for fear I might disturb a few pieces and might lose them."

Mr. President, what is the use of entering into details about a thing of this sort? What is the use of calling my colleague a funny man? Especially, what is the use when he is called a funny man by people who have no sense of humor at all? If they had any sense of humor, they would see that it is not a question of a funny *man;* it is a question of a funny *thing,* a funny bill, a funny act, a funny piece of legislation, a funny and curious attempted solution of a live, world-wide problem. It is world-wide. You can not get rid of it. There is only one way to solve it, and that is by mutual helpfulness; and if you attempt to isolate yourselves, not only politically but economically and in every other way, how can you help the other fellow to meet his obligations?

Mr. President, I have heard of so-called free-trade tariffs—of course, there never was one, because "free trade" means no tariff—I have heard of competitive tariffs; I have heard of mildy protective tariffs; I have heard of severely high protective tariffs; I have heard of all sorts of methods of curing the existing exchange trouble; I have heard of all sorts of propositions, as wild as a hyena in moonlight, of lending money to our foreign debtors in order to have them pay it back to us, and somehow or other extinguishing the debt by the reloan; but there is not a particle of sense in any of it. It is utterly impossible to help the situation in this way.

One more word: Speaking for myself alone—I am not speaking for others; I recognize the fact that I have about reached the stage of my parliamentary career when I can not speak for anybody except myself—but as far as I am concerned, speaking now as a partisan, throwing aside the interest of the country for the time being, replying to the challenge that has been thrown down to me and others as a Democrat, I wish, if this bill were to pass, that it would pass to-day.

If it were done when 'tis done, then 'twere well it were done quickly.

I wish it could be passed in time to let the American people feel the heel of it on their business before the election. The only thing I am afraid of as a partisan Democrat is that it will pass so late that its effect can not be felt, and that some Republican speakers will go out and deny that it will have any bad effect, on the ground that it has not been able to have it in two or three weeks. That is all I am afraid of about this bill as a partisan, because if there ever was anything surely written in the book of fate it is that the Republican Party is pursuing its old self-destructive course, only it is taking longer and quicker strides.

It never won a victory in this country upon any subject, no matter what the issue was, whether it was gold monometallism, whether it was Philippine annexation, whether it was anything—it makes no difference what—without obeying the voice of its commanders and masters and purse holders and contributors and proceeding at once to raise the tariff rates; and it never but twice in its entire history has raised them without suffering defeat in consequence of it at the next general election. It is going to do it now, provided everybody on both sides will let this bill pass in time enough to let the people feel it before the election.

Mr. McCUMBER. Mr. President, I have no doubt that my good friend the senior Senator from Mississippi [Mr. WILLIAMS] has often heard some one, possibly in an adjoining room, singing most lustily, and he has wished to God that he were deaf, at least temporarily. Possibly the good lady who had been splitting the skies with her shrieks would say that the Senator from Mississippi had not a true sense of music. That is a question for the Senator from Mississippi and the singer to settle between themselves; and so it often happens that when some of my good friends think they are humorous I thank God for my Scotch dullness that is unable to understand their particular kind of humor. Sometimes I think that they mistake hilarity for humor. They get confused. They are like a drunken man who thinks he is humorous and tells me that he is a humorist, and I say: "No; you are drunk." It is a difference in the viewpoint. It is a difference in our idea of what constitutes humor.

The filly colt kicking her heels skyward may think that she is a humorous little animal. I think she is simply hilarious, feeling good, and wants to show how she feels. It is simply a question of the viewpoint. If I can not join in that kind of humor, I suppose I shall be accused of having a dull Scotch intellect; but, after all, it is a question of what you call humor and what you call sense.

Mr. WILLIAMS. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Mississippi?

Mr. McCUMBER. I yield.

Mr. WILLIAMS. This is another tribute to the genuineness of my friend's Scotch descent. As I understand him now, he is not only pleading not guilty to the charge of not being sensitive to humor but he is also arguing that there is no such thing. That is just what Sam Johnson said about him.

Mr. McCUMBER. No, Mr. President; I am arguing that I think I understand the difference between humor and mere hilarity, and I do not think it is just exactly the kind of a subject to discourse upon at any length on any kind of a tariff bill.

The junior Senator from Mississippi [Mr. HARRISON] may have thought that he was humorous when he was quoting a lot of articles on the free list which were quoted really from the Democratic tariff law, and he was charging them entirely to the Republicans. I saw neither humor nor anything else in it. I saw a good deal of time being wasted, however.

Mr. WILLIAMS. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota further yield to the Senator from Mississippi?

Mr. McCUMBER. I yield.

Mr. WILLIAMS. The Senator thinks that a Republican protective tariff is rather a tragedy than a comedy. I quite agree with him; and if any apology is due for having in a semiserious moment treated it as a comedy, I apologize.

Mr. McCUMBER. Mr. President, I will accept the apology of the Senator for almost anything he says. I want to answer the Senator's remark that this bill was designed not to secure any revenue for the Government.

In the making of the Democratic tariff in 1913, and in the making of the Republican tariff in 1909, we had with us Mr. McCoy, the actuary of the Treasury Department, and I think no man in the United States has a greater right to claim to be a prophet than this actuary of the Treasury Department. He made his calculations as to what the tariff law of 1909 would bring in, and within a very few millions of the exact amount. He made his calculations as to the amount of revenue the tariff law of 1913 would bring in, and he came within a very few millions of the mark. He made his estimate as to what the revenue bill would bring in in the year 1920, and out of the billions he came within a very few millions of the exact amount. He has made an estimate as to the amount of revenue this tariff bill will bring in, and he says it will be at least $350,000,000. He has not worked out all the details as yet, and indeed, as with all the others, he has made allowances for conditions which will be likely to happen during the next year, on which he is making his estimates, and according to his calculations, this bill will bring in more revenue by from $25,000,000 to $50,000,000 per annum than any other tariff law that has ever been passed.

Mr. WALSH of Montana. Mr. President——

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Montana?

Mr. McCUMBER. I yield.

Mr. WALSH of Montana. I notice in the report made by the committee, doubtless the work of the Senator from North Dakota, the purpose of the bill is expressed as follows:

In the preparation of this measure your committee has endeavored to recommend rates that will afford protection to American industries and permit them to pay wages sufficient to enable our workmen to maintain an American standard of living.

Until now I understood that this bill was framed primarily not as a revenue bill, but for the purpose of affording protection to the American producer, the rates being measured by the difference in the cost of production here and abroad, including in the cost of production abroad the cost of transportation to this country. In 1908 the Republican Party declared in its platform in favor of a protective tariff measured by the difference between the cost of production at home and abroad and a reasonable profit to the American producer, but I did not understand that the Senator practiced, in the fixing of rates in this bill, the inclusion of a profit to the American producer. Now, however, I understand that this is a revenue measure, that its primary purpose is to produce revenue, and that it will operate effectively to that end.

Of course, it would make a very considerable difference in the attitude of a good many of us toward the bill if its main purpose were to raise revenue. None of us could seriously object to that. I should like to hear from the Senator on that matter. I am a little confused just now as to his attitude.

Mr. McCUMBER. Mr. President, I do not know how many times I have declared upon the floor in this debate that the pending bill is both for revenue and for protection. The Senator

possibly can not understand how a bill can be both a revenue producer and a bill for protection; I can understand it.

Mr. WALSH of Montana. It is not at all difficult for me to understand that, because every bill for the purpose of raising revenue must necessarily, as incidental to that purpose, afford some measure of protection to the producers of the articles upon which the duties are laid, if there is any importation whatever of those articles.

Mr. McCUMBER. I can hardly agree with the statement that a duty will give some protection. It may, and it may not.

Mr. WALSH of Montana. I did not understand that that was the theory upon which this bill was framed. My understanding about the matter was that the purpose was, as expressed in the report of the Senator, to afford protection to the domestic producer. I continue reading from the report:

> Your committee has also endeavored to recommend rates sufficient to maintain essential industries created as a result of the war and considered vital to the future industrial independence of the American people.

That seems to have been the purpose of the bill, and the other was some incidental revenue, which, of course, is obvious; but I rather felt that the Senator was shifting positions, and that he is now insisting that it is the purpose of the bill to raise revenue, and that it would incidentally afford protection.

Mr. McCUMBER. I have not said anything of the kind. I said the bill is both to raise revenue and to afford protection. That is a clear, clean-cut statement, which anyone can understand; and the Senator understands it, and does not understand me to mean that it is incidental protection with revenue, or revenue with incidental protection.

Mr. WALSH of Montana. That is, there are two purposes, neither one being subordinate to the other?

Mr. McCUMBER. I think the Senator is really quibbling over matters.

Mr. WALSH of Montana. Not at all.

Mr. McCUMBER. If the Senator will read the title of the bill, he will understand its purpose. Whether in is rates it conforms to that purpose is a question the Senator and I may disagree upon, but I stated in my opening address upon the subject, when I presented it, the following:

> Mr. President, we have written our tariff law on the basis of both revenue and protection. We believe we have made no rate so low that it will compel the American producer to surrender the American market to the foreign producer, if he exercises proper economy in the manufacturing and marketing of his product. On the other hand, we do not believe we have made any rate so high as to prevent reasonable foreign competition.

I do not know how I could have made the matter clearer or more easily understood than in that statement. So I do not see how the Senator or any other Senator can say now that, "We have a new idea, this is something else, and after this long time, this is the first time we have heard that it is a tariff for revenue." The statement I have read was made when we opened the debate. I insist that it is true now, as I insisted at that time.

Mr. WALSH of Montana. If the Senator will pardon me for just one other statement, I advert also to the fact that not only is the purpose so explicitly stated in the report to which I have called attention, but, so far as I can learn, there is not a suggestion in the report as to the amount of revenue which will be produced by the bill.

Mr. McCUMBER. No, Mr. President; because I reported it before the actuary had time to go thoroughly into the matter as to just what revenue it would bring in; and after the report was made, and at the time I opened the debate with my address, he had given me his calculation, not made with great care, as he stated, because he was then going over it item by item, and he has not quite finished his work yet.

Mr. WALSH of Montana. The Senator did not regard the revenue feature of it as of sufficient importance to acquaint the Senate with it in his report, even in a general way.

Mr. McCUMBER. I did; in the address which I gave explaining the bill, and the two were before the Senate. I could say a great many things in a report possibly which might enlighten, and I might enlighten the Senator by something I might say in my opening address. A report is not expected to cover everything; and I assumed that when a bill stated that its purpose was to raise revenue, the Senator from Montana would understand, without my reiterating it in the report, that that was one of its purposes.

INVESTIGATION OF WAR FRAUDS.

Mr. SMOOT. Mr. President, I report back favorably from the Committee on Appropriations without amendment the bill (H. R. 11645) making an appropriation to enable the Department of Justice to investigate and prosecute war frauds. The bill appropriates $500,000 for the use of the Attorney General. I ask for its immediate consideration as an emergency matter.

The VICE PRESIDENT. Without objection, the report will be received. Is there objection to the immediate consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

> *Be it enacted, etc.*, That for the investigation and prosecution of alleged frauds, either civil or criminal, or other crimes or offenses against the United States, growing out of or arising in connection with the preparation for or prosecution of the late war, to be available for the employment of counsel and other assistants, rent, and all other purposes in connection therewith, whether in the District of Columbia or elsewhere, there is appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $500,000, to be expended in the discretion of the Attorney General, and to remain available until June 30, 1923: *Provided*, That this appropriation shall not be available for rent of buildings in the District of Columbia if suitable space is provided by the Public Buildings Commission: *Provided further*, That not more than one person shall be employed hereunder at a rate of compensation exceeding $10,000 per annum.

Mr. KING. Mr. President, I do not object to the consideration and passage of this bill.

We have heretofore made liberal appropriations for the Department of Justice to prosecute violations of the Sherman antitrust law and the Clayton Act. I have believed, and I think that is the opinion of many, that there has not been that earnest effort to enforce these acts that should have characterized those charged with the duty of executing the laws. I do not say that this administration is more derelict than other administrations have been, but I do believe that never before have trusts and combinations in restraint of trade been more truculent and audacious than at present. While I believe that Colonel Goff, of the Department of Justice, is a faithful and able official, I do not think the Department of Justice has prosecuted offenders against these laws with that vigor which the situation demands. If the laws enacted to secure competition are not enforced and trusts and monopolies are permitted to dominate the industrial and business life of the Nation, then demands will be made for radical changes in our social life which may greatly modify our political form and our political institutions. Never before has the Department of Justice been confronted with greater problems, and never before has its responsibilities been greater. I hope it will act promptly in proceeding against infractions of the Sherman law. I believe the predecessor of the present Attorney General left records in the office showing that action, either criminal or civil, or both, should be taken against corporations who had violated either the Sherman or the Clayton Acts. There is a broad field for immediate action by the department in enforcing the acts referred to, and it should act and act promptly.

Only the other day when Colonel Hayward, in New York, procured an indictment against a corporation for violating the Sherman antitrust law the matter was suspended by the Department of Justice here in Washington.

I do not think that the large sums appropriated for the enforcement of that law are bringing the fruit which Congress had a right to expect. There is much disappointment—and it is not at all partisan—over the record made by the department in dealing with this vital matter. I hope the Department of Justice will act more vigorously under this appropriation than it has under the appropriations made to enforce the antitrust laws. Something should be done to impress upon the Department of Justice the necessity of enforcing these laws, particularly as there is accumulating evidence of plans to evade the law by means of open-price associations or similar devices. And with the passage of the tariff law, which will prevent foreign competition, and with the disposition of many corporations and business organizations in the United States to combine for the purpose of suppressing domestic competition, there will be an oppressive industrial and economic condition which will disturb the peace of our country and provoke unrest and discontent among the people. This tariff bill will strengthen monopolies and promote trusts. If the Department of Justice fails in its duty it will bring reproach upon the administration and conduce to socialistic development and disturbing industrial movements.

Mr. WALSH of Massachusetts. I presume the bill has the unanimous approval of the Committee on Appropriations?

Mr. SMOOT. It is a unanimous report. I am going to ask to have the report of the House committee printed in the RECORD following the action taken by the Senate on the bill.

Mr. WALSH of Massachusetts. I think there ought to be no objection to the passage of the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

Mr. SMOOT. I ask that the report on the bill prepared by the House Committee on Appropriations be printed in the RECORD at this point.

The VICE PRESIDENT. Without objection, it is so ordered.

The report referred to is as follows:

[House Report No. 1008. Sixty-seventh Congress, second session.]

APPROPRIATION TO ENABLE THE DEPARTMENT OF JUSTICE TO INVESTIGATE AND PROSECUTE WAR FRAUDS.

Mr. MADDEN, from the Committee on Appropriations, submitted the following report to accompany H. R. 11645:

The Committee on Appropriations, to whom was referred House Document No. 298 of the present session, being an estimate from the Executive for $500,000 to enable the Department of Justice to investigate and prosecute alleged frauds, civil or criminal, growing out of or arising in connection with the preparation for or prosecution of the late war, report the accompanying bill appropriating the full amount and submit the following in explanation thereof:

There is pending in the Department of Justice at the present time between 250 and 275 cases of this class of litigation. The amounts involved range from a few hundred thousand dollars in a single case to several million dollars. The total amount involved in all is approximately $192,000,000. The character of the cases is such that the expense of handling them is greater than that of any class of work the department has to deal with except, perhaps, antitrust prosecutions.

The defendants will employ the best legal talent that private means can secure and the Government should be adequately prepared to meet them. The cases are complicated, and in addition to capable counsel will require the services of high-grade auditors and accountants, expert witnesses, and investigators. The number of the cases referred to the Department of Justice thus far will unquestionably increase from time to time as the War Department progresses with the work of going over the 135,000 cases which are yet to be gone over by that department.

Up to the present time this character of litigation has been handled by the Department of Justice with its regular organization. The Attorney General stated to the committee that the magnitude of the task has reached the point where it is no longer possible to carry it on with the present funds. The work at the present time is distributed in the department, about one-fourth of the time of the best men in the service being devoted to it. It is the hope of the Attorney General, if this appropriation is approved, to concentrate the work in a single division, to place at the head of it a man of unusual ability and character, and to expedite the investigations and prosecutions to the limit of the department's ability.

The appropriation is to be used for the compensation of special assistants to the Attorney General, for salaries of accountants, investigators, clerks, stenographers, fees of expert witnesses, traveling expenses, reporting testimony, and for necessary office expenses. The committee recommends a limitation upon the salaries to be paid from the appropriation, prohibiting any payment at a rate in excess of $10,000 except to the person in charge of the work, and for him the fixing of the maximum is left in the discretion of the Attorney General.

The establishment of a special fund for the prosecution of a special class of litigation by the Department of Justice is not unprecedented when that class of litigation had reached the point where the ordinary funds of the department were no longer able to support it. The Congress for many years past has provided a separate fund for the enforcement of antitrust laws, a class of work equal only in importance to the work for which the special appropriation is asked in this bill.

It is an undoubted fact that the amounts which the Government will recover in these cases will be many times the amount which is granted to defray the expenses incident to their prosecution.

The committee recommends the early passage of the bill in order that the Department of Justice may be adequately equipped with every facility necessary to a rapid and successful disposition of these cases. Those who have defrauded the Government during the war should be prosecuted to the limit with all the vigor that the Government can command. Those upon whom an unjust suspicion may rest are entitled to know as soon as possible that the suspicion is not justified.

EXPORTATION OF WHEAT.

The VICE PRESIDENT laid before the Senate a communication from the chairman of the Federal Trade Commission, transmitting, pursuant to Senate Resolution 133, agreed to December 22, 1921, Volume I of a report on the Methods and Operations of Grain Exporters, which was referred to the Committee on Agriculture and Forestry.

ALIEN REGISTRATION.

The VICE PRESIDENT laid before the Senate resolutions adopted by Richard J. Harden Camp, No. 2, United Spanish War Veterans, of Washington, D. C., favoring the enactment of House bill 10860, containing provisions relative to alien registration, which were referred to the Committee on Immigration.

PAY OF THE ARMY AND KINDRED SERVICES.

Mr. WADSWORTH. Out of order, from the special committee of five Senators appointed under the provisions of Senate Resolution 240, agreed to February 16, 1922, to consider and report by bill if necessary a revision of the pay and allowances of the Army, the Navy, the Marine Corps, the Coast Guard, the Public Health Service, and the Coast and Geodetic Survey, I report back favorably with amendments the bill (H. R. 10972) to readjust the pay and allowances of the commissioned and enlisted personnel of the Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, and Public Health Service, and I submit a report (No. 719) thereon.

I desire to give notice at this time, if I may, that at the first opportunity I shall ask the Senate to take up this bill for consideration and action, in view of the fact that its passage or disposition bears a most important relation to the passage of the War Department appropriation bill and the naval appropriation bill.

Mr. KING. Mr. President, may I inquire of the Senator from New York the reason for not taking up the question of the pay of officers and enlisted men in the Army appropriation bill? Of course, I am not criticizing the Senator.

Mr. WADSWORTH. The bill which I have reported revises the pay schedules of officers and enlisted men of all the services affected. The appropriation bills do not fix the pay; of course, the pay is fixed by permanent legislation.

Mr. KING. But we have in the Army appropriation bill in the past, as I recall, fixed the pay.

Mr. WADSWORTH. We appropriate in the regular appropriation bill the amount necessary to meet the pay schedules already on the statute books, but we do not fix the rates of pay.

Mr. KING. I inquire of the Senator whether or not in an appropriation bill we did not raise the pay both of officers and enlisted men?

Mr. WADSWORTH. We never have; that would be legislation on an appropriation bill and out of order.

Mr. KING. My recollection is that it was done during the war.

Mr. WADSWORTH. No; I think the Senator is mistaken.

Mr. KING. My recollection is that we increased the pay of enlisted men from $13 to $30 a month.

Mr. WADSWORTH. That was done by a separate act.

Mr. KING. Very well.

The VICE PRESIDENT. The bill will be placed on the calendar.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. HITCHCOCK. Mr. President, I wish to say a word in comment upon what the Senator from North Dakota [Mr. McCUMBER] stated, to the effect that this bill is a bill to assure revenue. It seems to me that claim is just as unfounded as the claim that the bill levying taxes upon the products of factories using child labor in violation of law was a bill to assure revenue. The report which the Senator himself made to the Senate, the majority report of the committee in support of the bill, does not even mention the word "revenue" in it. The Senator there distinctly states, under the head of the purpose of the bill, that it is intended to protect industries and regulate commerce.

Not only that, but his present claim that the pending bill will raise $370,000,000 is an estimate made up after the bill has been considered and reported to the Senate. When the bill was considered and when the bill was reported the committee evidently did not know what revenue it would raise. Nor is that all. The Senator now estimates that the revenue to be derived from the bill will approximate $350,000,000. The fact is that the present law raises almost that much. The revenue last year from the existing law was over $308,000,000 and the revenue for the previous year was $323,000,000. The fact is that the present law raises as much revenue as was ever raised in the previous history of the country by a tariff law, with the exception of five years, and even in those cases it is approximately the same.

It is inconceivable that the Congress of the United States has taken over a year in the consideration of this bill, that the Finance Committee has considered it for nine months, and that the Senate proposes to consider it for a number of weeks still to come, if the purpose is to raise revenue, when, as a matter of fact, the estimated revenue is just a few scant millions above what has actually been received during the last year and during the previous year. If the Senator will point out in his written report, which I have before me, embracing some 20 printed pages, a single statement that the purpose of the bill is to raise revenue, I would like to have him do so. I have been through it several times, and I find a long argument that it is for the purpose of regulating commerce, that it is for the purpose of promoting industry, that it is for the purpose of making profitable certain industries deemed to be unprofitable, but I can not find a word that it is for the purpose of raising revenue.

Mr. McCUMBER. Mr. President——

Mr. HITCHCOCK. I want to call attention to another thing.

Mr. McCUMBER. I want to call the Senator's attention to the place where he will find it, if he really desires to do so.

Mr. HITCHCOCK. Here is a great bill, which for the first time in the history of tariff legislation, so far as I know, incorporates in its title the statement that it is for the purpose of regulating commerce. We have had bills heretofore which have stated they were for the purpose of raising revenue and encouraging home industries, but never before, so far as I know, in the history of tariff legislation has it been baldly stated in the title of the bill that it was for the purpose of regulating commerce with foreign countries, as well as for encouraging the

industries of the United States. True, it is stated that it is to provide revenue, but I have shown that the existing law provides the revenue within a few scant million dollars.

It is not conceivable that the Congress, which is in the habit of levying taxes and raising hundreds of millions of dollars at a time, should have been engaged for the past year in considering a bill which can only raise fifteen or twenty million dollars more than the present law actually raises. It seems to me a very late day for the Senator to rise on the floor of the Senate and claim, as he has done to-day, that the excuse for this bill is to provide revenue for the Government of the United States.

Mr. WALSH of Massachusetts. Mr. President——

Mr. HITCHCOCK. I yield to the Senator from Massachusetts.

Mr. WALSH of Massachusetts. I have before me a statement of the revenue collected from tariff duties during nine months of the present fiscal year. The sum is $282,000,000. Assuming that the same ratio is continued for the remaining three months, the total sum collected under the present revenue law will be nearly $375,000,000, or more than is claimed for the pending bill. I have before me the figures to prove that fact.

Mr. HITCHCOCK. I do not doubt that at all. The existing law is perfectly capable of producing as much revenue from the customs duties as the country has ever raised from customs duties. The fact that the chairman of the committee has confessed upon the floor to-day that when the bill was drawn and when it was reported to the Senate he did not know how much revenue it would raise, and the committee did not know how much money it would raise, is the very best evidence that the committee did not frame the bill for the purpose of raising revenue.

Mr. McCUMBER. Mr. President, the Senator should have some sense of fairness. He certainly knows that no committee, the moment that it fixes a rate, can sit down and tell what amount the rate on a particular commodity will bring in the way of revenue. Nobody ever attempted it in any tariff bill that was ever framed. The committee can know in a general way what that rate of duty brought in under the existing law, what it has brought in under previous laws on previous rates. The committee may, on the very best estimate that they can possibly get, estimate what it would bring in under this different rate depending upon a thousand conditions affecting trade.

The expert, the actuary, engaged in his ordinary work during the day, can not work these matters out as the committee proceeds. As we are running over item after item it is impossible for him to do so. With the other work he may have to do he is busy day and night, and he has not completed every item yet, but he told me the last time I talked with him that it would bring in at least $350,000,000.

Mr. WALSH of Massachusetts. The revenue for the present fiscal year appears to be $375,000,000 under existing law.

The VICE PRESIDENT. The pending amendment will be stated.

The ASSISTANT SECRETARY. On page 25, line 22, the committee proposes to strike out "15" and insert "25," so that if amended the paragraph will read:

PAR. 61. Plasters, healing or curative, of all kinds, and court-plaster, 25 per cent ad valorem.

Mr. KING. Mr. President, I move to amend the committee amendment by striking out the numerals "25" and inserting in lieu thereof the numerals "10."

The Underwood law gives a rate of 15 per cent ad valorem upon the commodities embraced within this item. The Payne-Aldrich law gives a rate of 25 per cent ad valorem, the Senate committee bill proposes 25 per cent ad valorem, and the House bill provided 15 per cent ad valorem.

While the items comprised within this paragraph are in the view of many unimportant, I submit that they are important relatively to the people, particularly those who are ill and require the items herein referred to.

The Tariff Survey, describing the items embraced within this paragraph, states:

Healing and curative plasters are intended for external application. They are usually pliable at the temperature of the body. The plastic material may be "lead plaster" (a lead soap made by beating together equal parts of lead oxide, olive oil, and lard), a mixture containing crude rubber, or a mixture of resinous substances with fats and waxes. The substances are spread upon linen, muslin, paper, or leather before using. The active principle used in the plaster depends upon the curative action desired.

Adhesive plasters are used in surgery to keep dressings in place, to cover ulcers, and to strengthen weak muscles. Court-plaster is made by applying to silk a coating of isinglass and tincture of benzoin.

What I have just read indicates the character of the products, the uses to which they are put, and the Tariff Survey shows that the items are important to the sick and the ailing. Why there should be a tariff upon them at all surpasses my comprehension. They ought to be on the free list. When we reach the free list I shall move to transfer them from the dutiable to the free list.

Moreover, to show the absurdity of imposing this high tariff on these articles, I direct attention to the fact that the imports are comparatively unimportant. The imports for four years prior to the war averaged a little less than $5,000 in value. The value of the imports in 1914 was $10,129; in 1916, $8,094; in 1918, $7,000 plus; in 1919, $6,000 plus; in 1920, $10,000 plus; and for the first nine months of 1921 was $9,754.

Adhesive plaster, mustard plaster, and various kinds of plaster are used by persons who have pleurisy, backache, and various other sorts of ailments. With the limited importation, with the domestic market established, the domestic production assured, the enterprise or business being one of long standing, it is obvious that the purpose of the tax is not for revenue, because the amount of revenue would be unimportant, but it is to enable the producers in the United States to swell their profits and to impose additional burdens upon the American people.

For instance, the amount derived as duty in 1919 was only $921; in 1920, $1,500; in 1918, $1,100. From the limited imports it is manifest that no considerable revenue is expected to be derived from this source. Then what is the object of the duty? This is not an infant industry. The question of wages here and abroad cuts no figure whatever. So upon no theory can this be justified except upon the theory that we are to perpetuate, so far as we can, present prices and project the high level of prices of to-day into the future, thus increasing the burdens resting upon the people.

Mr. McCUMBER. Mr. President——

Mr. KING. I yield to the Senator from North Dakota.

Mr. McCUMBER. Does the Senator know what are the imported prices of mustard plasters?

Mr. KING. The imported prices?

Mr. McCUMBER. Yes; the imported value on which we levy the duty.

Mr. KING. Yes.

Mr. McCUMBER. I notice by the Reynolds report that 100 sheets were $1.92 or $1.82. The imported article is $1, I am informed. If it is based upon the $1 price and a 10 per cent duty upon that in addition to the present rates, it would be 1 mill on each sheet. Does the Senator imagine for a single instant that the druggist will take into consideration that 1 mill on one sheet when he sells a mustard plaster? It would probably sell for 10 cents, just the same——

Mr. SMOOT. It sells for 15 cents.

Mr. McCUMBER. Does the Senator really think that it is going to cost a person who wants to buy a mustard plaster 15 cents and 1 mill?

Mr. KING. Mr. President, the argument of the Senator from North Dakota, if I understand it aright, I must confess, goes over my head. The object of this tariff bill, if I have been able to understand the Senator's colloquy with the able Senator from Montana [Mr. WALSH], is to raise revenue and to afford protection. The Senator's own admission now is that this will raise 1 mill on a sheet. It is obvious, then, that there is no revenue to be derived from it. Then, if there is no revenue to be derived from it, and the tariff does not enhance the price of the article—and that seems to be his contention after the suggestion made by my able colleague—then the Senator can not justify this tariff tax upon the theory that it is important for protective purposes. So what is the object of it?

Mr. President, we may indulge in all of the casuistry possible, but, despite the sarcasm of my good friend, the thought and the accepted view that tariff rates are imposed to enable the domestic producer to increase the price can not be dissipated. That is the only object of it, unless in some instances revenue be sought; but primarily our Republican friends are framing a protective tariff bill. The panegyrics which have been delivered to-day by the Senator from Idaho [Mr. GOODING] and the Senator from Kansas [Mr. CAPPER] upon the bill indicate that they regard this bill as the apotheosis of Republican protectionism. It is the greatest tariff bill that ever was drawn because it imposes the highest rates that have ever been found within a tariff bill. Those Senators measure the greatness and the perfection of tariff bills by the altitudinous heights reached by the rates prescribed in the bill.

I asked again, What is the purpose of the rate with reference to this item? It is either for protection or revenue, or both. I have shown that but little revenue may be derived from it. The Senator from North Dakota himself confesses that but little, if any, revenue will be derived from it. Then there is

only one other reason why the tax is levied, and that is to permit the domestic producer to increase the price.

Ah, but my friend may say the producer will not increase the price. How do we know he will not? Has not the history of tariff laws shown that, whenever buttressed behind tariff walls, the domestic producer has taken advantage, as far as he possibly could, of tariff laws which have been enacted and of the tariff rates which have been prescribed?

The Senator from Idaho wants a high tariff upon various products. Why? To increase the price. The Senator from California [Mr. JOHNSON] has asked for a high tariff upon olive oil. Why? To increase the price of the product. He justified it upon the ground that it would not amount to much in any way; and he asked the Senator from Montana as to the cost to the people of his State. The Senator from Montana shortly afterwards figured it up hastily and announced that it would cost his State more than $14,000 per annum, dependent, of course, upon the use which the people of that State make of olives. Doubtless, with an increasing use of that important edible, the tax would be greater. That is exactly the position taken.

When we mentioned castor oil and Epsom salts and various other drugs and medicines the other day, my good friend, the Senator from North Dakota, with that smile of his—that bland smile which so often dissipates our displeasure, if it does not destroy our arguments—said, "It is such a little thing; a man will only take one dose, perhaps, a week or one dose a month, and the tax on one dose does not amount to much." Mr. President, it is the little things, the little doses, the little accretions, the little burdens, that in the end break down the courage of the people and bring upon them burdens which are oppressive. When the Senator from North Dakota [Mr. MCCUMBER] was a boy he read about the "Little drops of water" and "little grains of sand" making "the mighty ocean and the pleasant land." So it is these little drops here—a mill here, a cent there, 5 cents in another place, a dime, a dollar, $5, $10, $100—built up in these tariff rates which impose upon the people of the United States burdens which, I aver, will amount to billions of dollars annually—perhaps not as much as the learned junior Senator from Massachusetts stated a few moments ago, but undoubtedly, Mr. President, the aggregate resulting from the imposition of these high rates will impose upon the people of the United States an annual burden, not of hundreds of millions of dollars but of billions of dollars.

This is a little item, but it is of importance to the great mass of people, to the sick people, to those who have pains and aches. We ought to have some regard for the sick if we have no compassion for the well and strong. One of the largest domestic producers of these plasters is the firm of Johnson & Johnson, an establishment having considerable capital. It is not a mushroom organization; it is not a "war baby"—and we have heard much about "war babies" and industries which are the product of war—it does not come within that category. It is a well-established business with large capital, of considerable earnings and large profits. Seabury & Johnson, in New York, is another large firm engaged in the manufacture of these products. Barr & Black, of Chicago, are another. The Reynolds report, to which my friend referred, shows that only a few mustard and kidney plasters came into the United States from England, and those at relatively low prices. What is the purpose? The few kidney plasters and adhesive plasters, perhaps, which have come from England and from Italy have aroused the committee, because, as I read the report, I can not find anybody has asked for a tariff duty upon these plasters.

Mr. President, that is all I care to say in regard to this matter. It is an item of importance to the people. These plasters are used very largely and, indeed, universally, and there is no purpose in imposing duties upon them in this bill other than to permit the corporations which are producing them in the United States to increase or to maintain their prices at levels which are entirely too high.

The PRESIDING OFFICER (Mr. WILLIS in the chair). The question is on agreeing to the amendment offered by the Senator from Utah to the amendment reported by the committee.

Mr. KING. I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. HARRIS (when his name was called). I transfer my pair with the junior Senator from New York [Mr. CALDER] to the senior Senator from Texas [Mr. CULBERSON] and will vote. I vote "yea."

Mr. OVERMAN (when his name was called). I have a general pair with the senior Senator from Wyoming [Mr. WARREN]. I transfer that pair to the junior Senator from Alabama [Mr. HEFLIN] and will vote. I vote "yea."

While I am on my feet I have been requested to announce that the Senator from South Carolina [Mr. DIAL] is unavoidably detained. He has a general pair with the Senator from Colorado [Mr. PHIPPS]. If the Senator from South Carolina were present he would vote "yea."

Mr. SIMMONS (when his name was called). I transfer my general pair with the junior Senator from Minnesota [Mr. KELLOGG] to the senior Senator from Tennessee [Mr. SHIELDS] and will vote. I vote "yea."

Mr. WATSON of Georgia (when his name was called). I transfer my pair with the Senator from Arizona [Mr. CAMERON] to the Senator from Rhode Island [Mr. GERRY] and will vote. I vote "yea."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as on the last roll call, I vote "nay."

The roll call was concluded.

Mr. NEW. Transferring my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Washington [Mr. POINDEXTER], I vote "nay."

Mr. STERLING. Transferring my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Oregon [Mr. STANFIELD], I vote "nay."

Mr. LODGE (after having voted in the negative). I have a general pair with the Senator from Alabama [Mr. UNDERWOOD]. In his absence, I transfer that pair to the Senator from Nevada [Mr. ODDIE] and will let my vote stand.

Mr. COLT. I transfer my general pair with the junior Senator from Florida [Mr. TRAMMELL] to the junior Senator from Pennsylvania [Mr. PEPPER] and will vote. I vote "nay."

Mr. ELKINS. I transfer my pair with the Senator from Mississippi [Mr. HARRISON] to the Senator from Maryland [Mr. WELLER] and will vote. I vote "nay."

Mr. GLASS. I transfer my general pair with the senior Senator from Vermont [Mr. DILLINGHAM] to the senior Senator from Arizona [Mr. ASHURST] and will vote. I vote "yea."

Mr. FLETCHER (after having voted in the affirmative). I find that my general pair, the Senator from Delaware [Mr. BALL], is absent. I transfer that pair to the Senator from Nevada [Mr. PITTMAN] and will allow my vote to stand.

Mr. JONES of New Mexico. I transfer my general pair with the Senator from Maine [Mr. FERNALD] to the Senator from Missouri [Mr. REED] and will vote. I vote "yea."

Mr. EDGE. I transfer my general pair with the Senator from Oklahoma [Mr. OWEN] to the senior Senator from Oregon [Mr. MCNARY] and will vote. I vote "nay."

Mr. CURTIS. I have been requested to announce that the Senator from West Virginia [Mr. SUTHERLAND] is paired with the Senator from Arkansas [Mr. ROBINSON].

The result was announced—yeas 17, nays 34, as follows:

YEAS—17.

Caraway	Jones, N. Mex.	Sheppard	Walsh, Mont.
Fletcher	King	Simmons	Watson, Ga.
Glass	Myers	Stanley	
Harris	Overman	Swanson	
Hitchcock	Pomerene	Walsh, Mass.	

NAYS—34.

Borah	Gooding	McLean	Smoot
Capper	Hale	Moses	Spencer
Colt	Jones, Wash.	Nelson	Sterling
Curtis	Keyes	New	Townsend
Edge	Ladd	Newberry	Wadsworth
Elkins	Lenroot	Norris	Watson, Ind.
Ernst	Lodge	Page	Willis
France	McCumber	Rawson	
Frelinghuysen	McKinley	Shortridge	

NOT VOTING—45.

Ashurst	du Pont	McNary	Shields
Ball	Fernald	Nicholson	Smith
Brandegee	Gerry	Norbeck	Stanfield
Broussard	Harreld	Oddie	Sutherland
Bursum	Harrison	Owen	Trammell
Calder	Heflin	Pepper	Underwood
Cameron	Johnson	Phipps	Warren
Crow	Kellogg	Pittman	Weller
Culberson	Kendrick	Poindexter	Williams
Cummins	La Follette	Ransdell	
Dial	McCormick	Reed	
Dillingham	McKellar	Robinson	

So Mr. KING's amendment to the amendment of the committee was rejected.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

Mr. WALSH of Montana. Mr. President, before we vote on that I should like to understand just why the Finance Committee felt obliged to increase the House rate on this remedy, imposing an additional tax upon the sick and disabled.

Mr. McCUMBER. In the confusion I could not hear the Senator.

Mr. WALSH of Montana. The House fixed a rate of 15 per cent ad valorem.

Mr. McCUMBER. On what?

Mr. WALSH of Montana. On plasters, healing or curative, of all kinds, and court-plaster. The Finance Committee recommends that that be raised to 25 per cent. I merely inquire the reason for the increase.

Mr. McCUMBER. The 15 per cent was upon the American valuation. The 25 per cent is upon the foreign valuation, which is about the equivalent of the other.

Mr. WALSH of Montana. What is the foreign valuation?

Mr. McCUMBER. Taking one item—mustard plaster, for instance—the foreign valuation was $1 a hundred, and the American valuation was $1.82, or something like that. Of course, the Senator can see that one would be about the equivalent of the other.

Mr. WALSH of Montana. One dollar and eighty-two cents is the figure that is asked by the American producer?

Mr. McCUMBER. Yes; $1.82 is the American selling price, and $1 is the foreign selling price, and it would be about the same difference as we have given here.

Mr. WALSH of Montana. Can the Senator tell us how much profit there is in the price of the American manufacturer who sells at $1.82?

Mr. McCUMBER. No. I can not tell how much profit there is in the price of the foreign manufacturer, either.

Mr. SMOOT. Mr. President, I want to say to the Senator that when in the Dingley bill the duty on plasters was 35 per cent they sold at exactly the same price that they do to-day. In the Payne-Aldrich bill the duty on plasters was 25 per cent, and they sold at exactly the same price that they do to-day. Under the Underwood bill the duty on plasters was 15 per cent, and they sold at exactly the same price as to-day for the sick and afflicted; and when the rate is 25 per cent, the sick and the afflicted will pay the same identical rate at the drug stores that they pay to-day.

Mr. WALSH of Montana. I notice, in this connection, that there have been practically no importations.

Mr. SMOOT. That is true.

Mr. WALSH of Montana. So I suppose that there are no importations, because the American manufacturer is able to put the product upon the market at a figure that affords no profit to the importer.

Mr. McCUMBER. There never has been a great quantity imported.

Mr. HITCHCOCK. Mr. President, I should like to ask the Senator from North Dakota whether he admits the figures given by the Senator from Utah [Mr. KING], that the imports under the existing law approximate only $5,000 a year?

Mr. McCUMBER. They are very small; but we have passed that. Let us go to the next item.

Mr. HITCHCOCK. We have not passed it yet. I should like to know on what basis the Senator justifies an increase of the tax when the imports are almost negligible and there is no competition?

Mr. McCUMBER. On the same basis that the Underwood bill put a tax of 15 per cent upon the importations when they were also negligible.

Mr. HITCHCOCK. At the present time the tax is 15 per cent.

Mr. McCUMBER. Yes.

Mr. HITCHCOCK. No imports are coming in. Why, then, raise it?

Mr. McCUMBER. Just as great imports are coming in as when there was a tax of 15 per cent on the product.

Mr. HITCHCOCK. What is the purpose of putting it on, then, if it will not have any effect?

Mr. McCUMBER. To secure a little revenue from it.

Mr. HITCHCOCK. Is it not the purpose to give the American manufacturers an opportunity to raise their prices without encountering some foreign competition?

Mr. McCUMBER. I do not think they will raise the prices one mill on a plaster.

Mr. HITCHCOCK. The Senator admits that under the existing tariff of 15 per cent, which has been in effect since 1913, the American manufacturers are not suffering any disastrous competition. They are supplying the market with a comparatively small volume of imports. Now, I should like to have him say on what theory of Republicanism, even of protection, he can justify raising the tax under those circumstances so as to give an opportunity for the American manufacturers to raise their prices?

The Senator can not answer. Of course, he can not answer. There is no Republican on the other side of the aisle who can defend a schedule of that sort. It is just typical of the other schedules in the bill. They are raised, not because there is any competition from abroad that is injuring the industry in this country, but simply for the purpose of giving an opportunity for somebody who is engaged in the manufacture in this country to raise the prices and increase the cost of living.

What was said earlier in the day here is true of almost every schedule as it comes up. The Republican Party, which promised the people of the United States a reduction in the cost of living, which made that one of the issues of the campaign, is deliberately in this bill, in thousands of instances, making it absolutely certain that the cost of living is going to be increased to the consumers of the United States.

Mr. POMERENE. Mr. President, I want to ask the chairman of the committee a further question. He has indicated that the foreign valuation cost is a dollar, and that the American valuation price is $1.82. That indicates a very great difference between the two valuations, without any imports, or very few. I want to ask the Senator a general question. Is this relative difference between the American valuation and the foreign valuation on this article substantially the same as prevails as to all other imports? What information have we on that subject?

Mr. McCUMBER. I can not say that it is an average. You can scarcely compare them. In some instances they are very close, depending on the country from which they come. In other instances there is a very wide difference. The Senator understands, of course, that this is the foreign wholesale price.

Mr. POMERENE. I assumed so.

Mr. McCUMBER. Then, of course, there is the added expense of freight, overhead charges, and profits to put it upon the American market, and I assume when it gets on the American market it sells for about the same price as the American article.

Mr. POMERENE. I asked the question because I desired the information. The House adopted the American valuation plan, and the Republican members of the Senate Finance Committee, by a vote of 7 to 3, discarded it, and I think very properly so. I do not know how any man can defend that system unless his purpose is to conceal from the public just what are the real rates which the consumer must pay. But I was hoping that we could get some very definite information on this subject either through the committee or elsewhere.

Mr. McCUMBER. I will tell the Senator why it is difficult to get definite information. As we all admit, values are very fluctuating, and have been for the last six months. The latest we have is in the Reynolds report. The Senator can get one of those. We cover the principal items upon which an ad valorem duty is based, and in the Reynolds report are set out the foreign selling price, the landing cost, the profits, the price the same article is selling for in the American market, and the comparable American article. That is as nearly up to date as anything we have in the way of a general publication.

Mr. POMERENE. This was based upon prices as they were last August, I believe.

Mr. McCUMBER. Yes; and for that reason I am perfectly free to admit that they are not very reliable at the present time.

Mr. POMERENE. I thank the Senator for his candor in that statement. I have no doubt that led the majority of the committee to the conclusion which they reached, namely, to discard the American-valuation plan; but word comes from the other House that that plan is to be adopted, or we will stay here until the snow flies. I hope we will stay until the snow flies before the Senate will yield on a proposition of that kind. I may have some observations to make later, as I am making some investigation of that subject myself. I understand, of course, that the report to which the Senator refers pretends to give information touching only a portion of these imports.

Mr. McCUMBER. Of course, the Senator understands that it is limited to articles on which the ad valorem duty is imposed, and does not cover any of those articles on which we levy a specific duty only.

Mr. POMERENE. I understand that to be true; but, as I examine this report, and without making any very definite comparison, I have been led to the conclusion that the committee has very largely increased the number of articles upon which the ad valorem duty is placed. Am I right about that?

Mr. McCUMBER. Increased over what?

Mr. POMERENE. Over the previous legislation.

Mr. McCUMBER. Over the bill as it passed the House?

Mr. POMERENE. No; over the Payne-Aldrich law or the Underwood-Simmons law.

Mr. McCUMBER. No; I think I can give it as nearly as possible in this way: In the case of those things which were upon the free list under the Payne-Aldrich law, but which have been made dutiable, undoubtedly the duty upon the finished product, after making allowance for the differentials, would be higher than in the Payne-Aldrich law. I think if the Senator will eliminate those probably the others will be found to be a little lower, although I have no definite statement upon it. Of course, they are higher than in the present law.

Mr. POMERENE. That does not answer the question I asked.

Mr. McCUMBER. I thought I answered it.

Mr. POMERENE. Perhaps I did not make myself clear. A certain number of articles were made dutiable by the ad valorem system under the Underwood law and under the Payne-Aldrich law. Have you adopted more generally the ad valorem system under this bill than under previous legislation?

Mr. McCUMBER. Have we placed a greater number on the ad valorem basis?

Mr. POMERENE. That is the question.

Mr. McCUMBER. No; just the contrary. We have taken the ad valorem rates off of quite a number and placed specific duties on them.

Mr. POMERENE. That answers my question.

Mr. McCUMBER. We have increased the number bearing a specific duty and decreased the number bearing an ad valorem rate.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the committee was, on page 25, paragraph 62, line 25, to strike out "25" and insert "30," so as to read:

PAR. 62. Paints, colors, and pigments commonly known as artists' paints or colors, whether in tubes, pans, cakes, or other forms, 30 per cent ad valorem.

Mr. McCUMBER. I understand that one Senator desires to have this amendment go over.

The PRESIDING OFFICER. The paragraph will be passed over.

Mr. KING. May I inquire of the Senator whether he expects to take it up to-morrow morning when we meet?

Mr. McCUMBER. I hope so, but I can not say definitely. It will depend on whether the Senator who desired to have it passed over has the information he wished to obtain.

The PRESIDING OFFICER. The Secretary will state the next amendment.

The next amendment of the committee was, in paragraph 64, on page 26, line 8, to strike out "$4" and insert "$5," so as to read:

Barytes ore, crude or unmanufactured, $5 per ton.

Mr. KING. Mr. President, under the act of 1913, baryta sulphate, or barytes, including barytes earth, unmanufactured, carried a duty of 15 per cent ad valorem; when manufactured, 20 per cent ad valorem. Blanc fixe, or artificial sulphate of barytes, carried a duty of 20 per cent ad valorem.

The act of 1909 provided for a tariff of $1.50 per ton upon baryta, sulphate of, or barytes, including barytes earth, unmanufactured; manufactured, $5.25 per ton; and blanc fixe, or artificial sulphate of barytes, $1.01 per ton.

The House fixed a duty on barytes ore, crude or unmanufactured, of $4 a ton. That has been increased to $5 a ton; and ground or otherwise manufactured barytes was given a specific rate of $7.50 per ton in the House and increased to $10 in the Senate; precipitated barium sulphate, or blanc fixe, was increased from 1 cent specific per pound to 1¼ cents specific per pound.

Coming to the imports of the ores of crude barytes, in 1921 there were imported into the United States 9,870 tons, at $6 per ton; that is the foreign valuation. The ground barytes imports in 1921 amounted to 16,902 pounds, at $19.20 a pound, foreign valuation.

Of the precipitated the imports were 22,470 pounds in 1921, at a foreign valuation of $1.005 per ton.

On the first item, which we are now considering, the duty which is sought by the Senate committee amendment, of $5 a ton, amounts to approximately 83 per cent ad valorem; so that upon this crude product the Senate committee asks us to fix a duty of 83 per cent. On the ground barytes the committee asks us to give a duty of 51 per cent, and on the precipitated a duty of 83 per cent.

I call attention now to the ore. Before the war the price was $2.14 per ton, foreign valuation. Now it is proposed to give a duty of $5 a ton upon a product which cost in the foreign market only $2.14 before the war. That would mean a duty of considerably more than 200 per cent over the pre-war foreign value. Of course, it is obvious that the design is to increase the prices not only of the crude but of the manufactured and of the precipitated, so that upon each of these various grades of the product the prices will be increased above the pre-war prices two, three, or four hundred per cent, all of which, of course, will be reflected in the finished product or in the various forms of the product in which the same may be used by the people.

Let me call attention to the importance of these particular products. I concede that when you mention many of these products by their chemical names they may not be fully comprehended by the people, and they do not understand how intimately these products are connected with their lives. They do not understand that thousands of the products or commodities comprised within this bill enter into their daily lives. They do not understand that some of the tannin acids, to which we will address ourselves soon, affect the prices of shoes; that the duties on the pigments and paints, to which we shall address our attention in a few moments, will affect the price of the paints which they buy to paint the barn or the home or to be used in various other ways by the farmers or by the mechanics or by the home owners.

So we come to barytes. That is important, and some of the uses to which it is put are explained by the Tariff Commission. One-half of the barytes ore consumed in the United States goes into the pigment lithopone, which is a paint, and the remainder is used in manufacturing ground barytes and barium chemicals, and a few of the barium chemicals are medicinal in character. But they are used very largely in the rubber-tire industry, so that the high rate of duty which is recommended will, of course, be reflected in an increased cost of the rubber products of the United States, including the rubber tires used by the owners of automobiles.

Barytes is a mineral found in many places in the United States. Proceeding, the Tariff Survey says:

It is employed in the preparation of dark-colored paints, and as a filler in the paper industry, chiefly in the manufacture of heavy and stiff materials, such as used for playing cards and Bristol board. Bleached ground barytes which has been treated with acid to dissolve out the iron and thereby improve its color is known as "prime white" and "floated" barytes. It is used in white paints and as a filler in paper and rubber goods where a white product is desired.

Production of crude barytes in the United States since 1912 has been as follows:

	Tons.
1912	37,478
1913	45,298
1914	52,747
1915	108,547
1916	221,952

Speaking of foreign production, it is stated in the Survey:

Up to the beginning of the war Germany, which has unlimited deposits of barytes of an exceedingly good grade, was one of the largest producers. In 1913, for example, she exported about four times as much as was produced in the United States in the same year. Since the war, however, production in this country has increased until the present output is greater than the exports of Germany previous to 1914. The United Kingdom also has large high-grade deposits.

Imports: Prior to 1915 from 35 to 45 per cent of our consumption of crude barytes was imported, chiefly from Germany. During the war importation was practically negligible.

And yet, in view of that fact that we find a duty of $10 per ton, whereas the pre-war price was $7.89 per ton. So we are asked now for a tariff rate of more than 130 per cent ad valorem upon ground barytes, and we are asked for a tariff of 110 per cent plus upon the precipitate. These rates can not be justified. As I stated, upon crude, the pre-war price being $2.14 per ton, we are asked to lay a duty of $5 per ton specific or a rate of more than 200 per cent.

I was commenting upon the fact that although the imports of the ground barytes have always been small, practically negligible, yet we are asked to lay a duty of 130 per cent, a duty greatly in excess of the pre-war price. Of course, the purpose is to compel the domestic buyer to pay these enormous post-war prices, prices which have been forced by the domestic producer, and because of a lack of importations, undoubtedly largely owing to conditions in Germany and the economic chaos which prevails in Europe.

Because I did not desire to take up the time of the Senate, I have briefly discussed the three items together. I wish now to move an amendment to the committee amendment on barytes ore, striking out the "$5" and inserting in lieu thereof "15 per cent ad valorem."

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Utah to the committee amendment.

Mr. WALSH of Montana. Mr. President, before we vote on this item, perhaps we can have some explanation from some member of the committee as to why there should be a duty of $5 a ton on crude ore. I must confess that I do not know

very much about the mining of barytes, but if I have any true conception of it at all, it is a very simple process. Why should there be a duty of $4 or $5 per ton on crude ore?

Mr. McCUMBER. I understand it is mined by steam shovel in both countries.

Mr. WALSH of Montana. So I understand.

Mr. McCUMBER. I can state generally for the information of the Senator——

Mr. WALSH of Montana. I understand that both Georgia and Missouri are the great sources of supply, with cheap coal available in both sections.

Mr. McCUMBER. Let me give the prices. At present the crude barytes from Germany is selling at the Atlantic ports for $5.20 per ton. That, of course, is the ore. The freight rate from Georgia to the Atlantic points is about $5.50 per ton. The cost of producing barytes in Georgia in 1919—and I do not observe that it is different now—was $6.31 per ton. Taking the cost of $6.31 per ton at the mines and the freight of $5.50 per ton to land it at the Atlantic seaboard, we have $11.81. It costs the American producer in Georgia, therefore, $11.81 to put his product down, we will say, in New York. It costs the German $5.20 to put his product down in New York. That makes a difference of $6.61. We, however, gave but $5 duty instead of a sufficient amount to measure that difference, assuming that probably the cost of production would go down in this country.

Mr. WALSH of Montana. The information given to us by the Senator from North Dakota is particularly interesting, because it appears quite clearly from the statement now made that a prime element in fixing the rate of duty in this case is the cost of transportation from the point of production to the market.

Mr. McCUMBER. That necessarily is an element which enters into the computation.

Mr. WALSH of Montana. That introduces an element which, so far as my information goes, has never heretofore been avowed in the fixing of tariff rates. Some other features of the bill will give particular pertinence to that consideration when we reach them.

Mr. HITCHCOCK. That is assuming that the port of New York is the only place where the product is consumed in the United States.

Mr. WALSH of Montana. That is true.

Mr. HITCHCOCK. Of course if the product brought from Europe comes into this country, it would have the same freight to pay to the interior points that the interior points have to pay to get to New York.

Mr. WALSH of Montana. That is true. The point I am making is that here is an item in which the cost of transportation is brought into consideration. I speak of it because the producers of manganese in my State have been contending for that principle. They have been contending that they should have a duty upon manganese not only sufficient to take care of the difference in the cost of production in Brazil or Cuba, for instance, and in Montana, but also to cover the cost of transportation from Montana to the various points of consumption in the United States—Pittsburgh, Duluth, Chicago, and other centers of the manufacture of steel. That principle was denied by both the House committee and the Senate committee as entirely inadmissible, as contrary, I understand, to the basic principle upon which a protective tariff is framed, but apparently it is a principle which is made applicable to the case of barytes, though found to be inapplicable to the case of manganese.

Mr. McCUMBER. It is often difficult to determine whether or not we can afford to put a duty high enough upon an article to bring it from the west coast, for instance, to the east coast, and whether the trade itself could afford to pay that much freight. It is quite serious. In some instances, I think, we fix the duties where the article could go probably as far as Pittsburgh and no farther, as far as Chicago and no farther, while the imported article would have most of the market east of those points, governed at all times, of course, by its effect upon the business of the country and the manufacturing interests.

From Georgia to New York is not a great distance, and yet, if we were producing the barytes in San Francisco and had to bring it clear across to New York, the freight might be so great that we would be indisposed to add a duty which would measure the freight for all that distance and in other respects to meet the competition. Upon heavy articles like that it is difficult to determine where to draw the line.

Mr. WALSH of Montana. That clarifies the situation very well. Those who live in the West are to get no advantage, if there is any advantage in a protective-tariff system at all, by reason of their unfortunate location. If we were located in Georgia or Alabama or Mississippi we would come in under the protection of the bill, but as it is it seems the committee can not do anything for us.

Mr. McCUMBER. I do not think the Senator is justified in making that statement. I think he will find a great many things which we have tried to protect in the far West so as to give them a market in the most easterly sections of the United States.

Mr. WALSH of Montana. Am I to understand the Senator that there is any commodity produced in my State as to which the duty has been fixed with respect to the cost of transportation to the eastern market?

Mr. McCUMBER. I think the Senator will find that a number of commodities produced in his State—I do not know that I can now recall each particular item—have been so treated.

Mr. WALSH of Montana. But can the Senator recall any?

Mr. McCUMBER. I think there are a number.

Mr. WALSH of Montana. Can the Senator tell me of one? I am not asking for many.

Mr. SIMMONS. Mr. President——

Mr. SMOOT. Mr. President, I desire to say to the Senator from Montana that I think the controlling factor in the situation which induced the majority of the Republican members of the Committee on Finance to place manganese on the free list was the report made by the Geological Survey to the effect that there were no deposits of manganese of any extent in the United States which were of sufficient content to enable them to be worked profitably.

I think it is fair also to the Senate to say that there was a divided sentiment in the committee; but what I have stated was the controlling factor in the action of the majority of the committee in placing the article upon the free list. So far as freight rates are concerned, as the Senator knows, in the case of magnesite that question was taken into consideration, and there are other items in connection with which it was taken into consideration, both as to articles produced in his State and also in my own State, and it would have been taken into consideration also with reference to manganese if it had not been for the report of the Geological Survey, the nature of which I have stated. That is the absolute situation as it existed.

Mr. WALSH of Montana. When we reach the item of manganese we shall discuss the question as to whether or not there are any manganese deposits in the United States worthy of development; but the point just now made, so far as barytes was concerned, is that the duty is fixed not on the principle of the difference in the cost of production at all—or, at least, that is only one element, and perhaps an unimportant element—the important element being the cost of transportation from the place at which it is produced to the place where it is consumed.

Mr. SMOOT. I am certainly willing to wait until the manganese item is reached and then to discuss it, and I think that is the best method of procedure. If the occasion arises I shall tell the Senator from Montana precisely the position which I took upon the matter; but I desire to say now that I do not believe in treating manganese in any different manner than other products are treated which are produced in the same way as is manganese, no matter whether the place of production is Montana or California or Oregon or Washington.

Mr. McCUMBER. Mr. President, I desire to ask unanimous consent at this time that when the Senate closes its business for the calendar day that it take a recess until to-morrow at 11 o'clock a. m.

Mr. SIMMONS. At what time does the Senator propose that the session to-day shall close?

Mr. McCUMBER. By 6 o'clock, at any rate.

The PRESIDING OFFICER. Is there objection to the request of the Senator from North Dakota? The Chair hears none, and the order will be entered.

Mr. SMOOT. Mr. President, in the meantime, if the Senator from Montana desires to turn quickly to the statement made by the Geological Survey in relation to the amount of manganese that is likely to be produced in the United States, he will find it recorded on page 2097 of the hearings.

Mr. SPENCER and Mr. SIMMONS addressed the Chair.

The PRESIDING OFFICER. The Senator from Missouri.

Mr. SIMMONS. I was recognized when the Senator from Utah [Mr. SMOOT] interrupted me.

The PRESIDING OFFICER. The Chair begs pardon of the Senator from North Carolina. The Chair recognized the Senator from Missouri. The Chair will recognize the Senator from North Carolina in a moment.

Mr. SPENCER. I yield to the Senator from North Carolina.

Mr. SIMMONS. I assert positively the Chair recognized me. I had been standing here and the Senator from Utah got up without my consent and began to speak.

Mr. SMOOT. If I did so I did not know that the Senator from North Carolina had been recognized. I thought that I had the floor.

Mr. SIMMONS. I have been standing ever since I was recognized.

Mr. SPENCER. I yield to the Senator from North Carolina, and then may I ask the Senator from North Carolina to yield to me for a moment to answer a question which was asked by the Senator from Montana [Mr. WALSH]?

Mr. SIMMONS. If I had been asked to yield, I should have done so, but I did not desire to be taken off the floor.

Mr. SPENCER. I will yield the floor if the Senator desires.

Mr. SIMMONS. No; the Senator may proceed.

Mr. SPENCER. I should like to say to the Senator from Montana [Mr. WALSH] in regard to barytes that Missouri up to 1916 was the largest producer of barytes in the United States, and then for that year Georgia took the lead. We have since assumed the lead, so that the largest present production of barytes in the United States is in Missouri. The transportation question, though it seriously complicates the situation in Missouri, is not determinative of it, because where the largest amount of barytes is produced—namely, in Missouri—the actual cost of production is $10 a ton. When in 1918 the importations were practically zero there was put upon the United States the necessity of producing barytes. In Missouri we call it "tiff." It is a white substance which goes into paints and linoleums and rubber fillings, and is rather extensively used. The industry developed until in 1918, when there were no imports there were produced in the United States 228,000 tons, though the consumption before the war had been something like only 60,000 tons.

It costs in Missouri to produce barytes upward of $10 a ton. When the war ended and importations again came in, principally from Germany, but to some extent from Italy, they were brought in at such a low price, as I shall show in a moment, that the effect was to close down every mine in Missouri, so that in 1921, although previously hundreds of families had been dependent upon the industry of the mining of barytes, there was a scene of desolation and want that I can not begin to picture. There was not a mine operating.

Mr. WALSH of Montana. Mr. President——

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from Montana?

Mr. SPENCER. I yield.

Mr. WALSH of Montana. The Senator is making a very persuasive kind of an argument; but let me tell him that exactly the same condition existed in my State with reference to copper. The copper mines have been shut down in my State for nine months. What is the difference? The barytes mines are shut down in Missouri; the copper mines are shut down in Montana for exactly the same cause, namely, general depression in industry. There is no demand for the barytes of Missouri or for the copper of Montana.

Mr. President, while I am addressing this inquiry to the Senator I should like to understand from him upon what kind of evidence he assures the Senate that it costs $10 a ton to mine an ore which is mined with a steam shovel? Why, Mr. President, in Montana we go down into the depths of the ground to a distance almost of 1 mile from the surface, and if we could not mine even that character of ore for less than $10 a ton we would have to let it stay in the bowels of the earth. Upon what kind of testimony does the Senator from Missouri desire to have gentlemen who are acquainted, to some extent at least, with the rudiments of mining understand that it costs $10 a ton to mine with a steam shovel?

Mr. SPENCER. If the Senator would like the authority and will turn to page 192 of the document entitled "Barytes and Barium Production," issued by the Government of the United States, he will find the cost exactly as I have given it; and that is the cost in Missouri.

I can tell the remedy for that condition in Missouri, and it might apply also in Montana. Germany brings over barytes and lays it down in New York at less than $7 a ton. Therefore it is laid down in New York at less than it can be produced for in Missouri, and when there is added——

Mr. WALSH of Montana. Mr. President——

Mr. SPENCER. If I may finish the sentence—when there is added to the cost of production in Missouri the transportation charges from Missouri to New York, where the Missouri product has to compete with the German barytes, because the places where the barytes is used are on the Atlantic seaboard, then there is apparently a cost of from $17 to $18 a ton for the American production as compared with $7 to $8 per ton for the German product. What is the remedy? The remedy is precisely what is proposed in this bill, although I do not think the bill has gone far enough, and that is to impose a tariff duty of $5 a ton on the German production, which will raise the German cost to $12 a ton. How can that compare, however, with the American cost of $17?

Mr. WALSH of Montana. Mr. President——

The PRESIDING OFFICER. Does the Senator from Missouri yield further to the Senator from Montana?

Mr. SPENCER. I will yield in a moment. If the cost of carriage lessens, as we hope it may, and if the cost of production increases, as we hope it may, every mine in Missouri, on the strength of those possibilities, will open when this tariff bill goes into effect.

Mr. WALSH of Montana. Mr. President, the force of the argument of the Senator is that the Missouri producers are being driven out of business by imports from Germany. Let me give the figures: In 1919, 35 tons were imported into this country from Germany; in 1920, 22,209 tons were imported from Germany; and for the first nine months of 1921, 6,316 tons were imported from Germany—practically a negligible amount in any year, considering that the American production in 1919 was 209,330 tons and in 1920, 228,113 tons.

Mr. SPENCER. The Senator has answered his own argument. The consumption in the United States in 1920 was 228,000 tons, but where did we get it? We got it from the mines of the United States, every one of which is now closed. The demand, however, for the product will continue.

Mr. WALSH of Montana. But suppose they are closed, there are no importations. Why? Because there is no demand in this country, for the industries consuming barytes are not operating.

Mr. SPENCER. The Senator is mistaken, because the official report shows that for the first few months of 1921 the importations exceeded the pre-war importations.

Mr. WALSH of Montana. I have read the figures, showing that there were imported during nine months in 1921 6,315 tons, whereas the year before there were 22,209 tons imported. It is perfectly obvious that there was no demand; and the barytes mines in Missouri are shut down for just exactly the same reason that the copper mines in Montana are shut down, and not because there was any foreign competition, for there was none in either the case of copper or in the case of barytes.

Mr. SPENCER. I quote from page 191 of Barytes and Barium Production, issued by the Government of the United States, as follows:

> The total quantity of barytes imported in 1920 surpassed that imported in 1914 before such shipments were stopped by the war, and the value of these imports—

That is, for 1920—

> was more than three times the value of the imports of 1914.

Mr. WALSH of Montana. Before the war the consumption was on an average about 60,000 tons, but in 1918 228,000 tons were produced in the United States.

Mr. SPENCER. I have before me the Summary of Information furnished by the Tariff Commission concerning barytes. That information tells us that in 1920—to which the Senator refers—there were imported 22,209 tons, and that the American production was 228,113 tons.

Mr. HITCHCOCK. Mr. President, I want to call the attention of the Senator from Montana, however, to the fact that he is misconceiving the situation. The figures he gives show that the imports of barytes, even in the largest year, were only one-tenth of the production in Missouri.

Mr. WALSH of Montana. Exactly.

Mr. HITCHCOCK. But that is not what Senators on the other side of the aisle want. They do not want any importations at all. They want to shut out all importations. They want to kill trade. They want to have commerce collapse. They do not want a dollar's worth coming into the country. They are not satisfied with having 90 per cent of the consumption of the country produced here; they want to produce 100 per cent. They want to have no commerce at all; and the very fact that the Senator from Montana shows that we produced, even in that high year, 90 per cent of all the consumption of barytes is not any argument to a Republican statesman in these days.

Mr. SPENCER. That is not what is desired, and that is not the purpose of this tariff on barytes. The purpose of it is that with wages in Germany at 45 cents a day, the product of that wage, which enables them to produce a ton of barytes in Germany at less than $5, shall not come into competition with the barytes produced in American States with an American wage and close those American mines. Does the Senator disagree with the desirability of such a purpose?

Mr. WALSH of Montana. But the trouble about the Senator is that he assumes that the mines were closed for that reason.

Mr. SPENCER. Mr. President——

Mr. WALSH of Montana. Wait a minute, now; let us try to get the facts right. From what does the Senator read?

Mr. SPENCER. The quotation that I read was from the pamphlet "Barytes and Barium," Government Printing Office, 1921.

Mr. WALSH of Montana. Does it tell just how many tons were imported in 1920?

Mr. SPENCER. Yes.

Mr. WALSH of Montana. What does it give?

Mr. SPENCER. Twenty-four thousand eight hundred and seventy-four short tons.

Mr. WALSH of Montana. This information is 22,209 tons, but the difference is of no consequence.

Mr. SMOOT. One is long tons, and the other is short tons.

Mr. WALSH of Montana. Very well. Whatever it may be, it is a matter of no consequence. Now, are we to understand from the Senator from Missouri that the introduction into this country during the year 1920 of 24,000 tons closed down the Missouri mines?

Mr. SPENCER. No; the Missouri mines were operated in 1920; but if the Senator will read a little further in the book that he has—because I doubt not it is a replica of what I have—he will find that in the beginning of 1921 the importations exceeded even the pre-war importations.

Mr. WALSH of Montana. Very well. Now, I will ask the Senator to refer to his document again. Does it give the number of tons imported?

Mr. SPENCER. No; it does not; and, of course, you could only apply——

Mr. WALSH of Montana. Wait a minute; mine does. My book gives me, for the first nine months of 1921, just 6,315 tons. Now, I inquire of the Senator, did the importation from Germany, or all other countries, wherever it came from, in 1921 of 6,315 tons shut down the Missouri mines?

Mr. SPENCER. The importations in 1921 exceeded the pre-war importations. We were competing before the war. In 1921, because Germany brought into the United States her barytes at a price so low that the American mines could not compete with it, the fact is that every mine in Missouri closed down, and the fact is that the day this tariff goes into effect every mine in Missouri will reopen.

Mr. KING. Mr. President, will the Senator yield?

Mr. WALSH of Montana. The Senator is indulging in predictions. We have the fact that there were just 6,315 tons imported into this country during the year 1921, and the Senator will have us understand that the introduction of that amount into this country from foreign countries shut down the Missouri mines, the total production in the United States annually being something over 220,000 tons.

Mr. SPENCER. That was in 1918. That was when there was nothing imported, and when the demand was exceedingly large.

Mr. WALSH of Montana. In 1919 the production was 209,330 tons, and in 1920 the production was 228,113 tons; and the Senator wants us to believe that the introduction of 6,315 tons in the first nine months of 1921 shut down the mines of the United States!

Mr. KING. Mr. President, will the Senator from Missouri permit a suggestion at this point?

Mr. SPENCER. Certainly.

Mr. KING. I understood the Senator from Missouri to say that the importations in 1921 exceeded the importations into the United States in any preceding year.

Mr. SPENCER. No; I did not say that. I quoted from the Government report—

> The total quantity of barytes imported in 1920 surpassed that imported in 1914, before such shipments were stopped by the war, and the value of these imports was more than three times the value of the imports in 1914.

That was the quotation.

Mr. WALSH of Montana. If the Senator will pardon me, for the sake of information, will the Senator give us now the American production and the importation in 1914?

Mr. SPENCER. The amount imported in 1914 was 24,423 tons.

Mr. WALSH of Montana. And what was the American production in that year?

Mr. SPENCER. I can not tell the Senator. I have not it.

Mr. KING. Mr. President——

Mr. WALSH of Montana. One moment; I can give it to the Senator. The American production in that year was 52,747 tons; that is to say, Mr. President, under free-trade conditions or under the 15 per cent tariff that existed at that time, we were even then putting on the market two-thirds of all the barytes consumed in this country.

Mr. SPENCER. Because the effect of the war still hung over.

Mr. WALSH of Montana. Oh, but this was before the war.

Mr. SPENCER. Oh! I thought the Senator meant during 1920.

Mr. WALSH of Montana. Before the war, when we were operating under the Payne-Aldrich Act, the American producer was able to hold the market to the extent that he supplied two-thirds of all the barytes consumed in this country.

Mr. KING. May I say to the Senator from Missouri that the record here, the Tariff Survey, shows, on page 31, that the imports as early as 1911 were 20,602 tons; that in 1912 they were 23,507 tons; and that in 1913 they were 31,761 tons. During that time the domestic production was very large, and, as the Senator from Montana has just stated, supplied the greater portion of the demand; so that away back in 1912 and 1913, under the Payne-Aldrich law, the importations of the crude ore were greater than at any time since.

Mr. SPENCER. And yet the Senator from Utah will agree with me that the main decisive fact of the whole question lies here: That as it costs in Missouri approximately $10 a ton to produce, and $7 a ton to carry it to its place of market, the Atlantic seaboard, making a total of $17 a ton, so long as Germany is allowed to bring her barytes into the seaboard at $7 a ton no Missouri barytes will be produced. That is undeniable. That can not be denied. That is evident.

The situation in Georgia is a little better than that in Missouri, because the cost in Georgia is somewhat less than the cost in Missouri; and yet it is equally true that when you add to the cost in Georgia the carriage cost of bringing that barytes to the seaboard, where it is sold, it does not come within $11 of the price at which the German barytes can be laid down on the Atlantic seaboard; and therefore it follows that the mines in Georgia, precisely as the mines in Missouri, close.

Mr. NORRIS. Mr. President, may I interrupt the Senator from Missouri?

Mr. SPENCER. Yes.

Mr. NORRIS. The tariff is a matter about which I get my information largely from the debate as I go along. The Senator from Missouri is assuming that the market for barytes is New York.

Mr. SPENCER. On the eastern seaboard.

Mr. NORRIS. I want to ask if the only market is there, where it is shipped, on the Atlantic seaboard? As a matter of fact, is not a good deal of it manufactured in St. Louis, right in the State where it is mined?

Mr. SPENCER. That is not entirely true.

Mr. NORRIS. To what extent is it true?

Mr. SPENCER. This is what is true: Barytes, in so far as it goes into the making of barium products, goes to the Atlantic seaboard. Therefore, perhaps 10 or 11 great manufacturers of barium products are all on the Atlantic seaboard.

A part, however, of the barium that we produce in Missouri in the rough as a filling used in pigment, in white paint, has a market not as far as the Atlantic seaboard, around in Missouri, at St. Louis, at Cincinnati, in the general neighborhood; and a certain amount of the product can be sold there, but not enough to keep the mines going.

Mr. NORRIS. I should like, if the Senator can give the information, to know about what per cent of the product mined in Missouri goes to the seaboard and what per cent is kept in Missouri, or the general neighborhood?

Mr. SPENCER. I can not give the Senator the per cent.

Mr. KING. Mr. President, if the Senator will pardon me, I direct his attention to the fact that in his own city of St. Louis there are a number of firms engaged in the production of barium products—the National Pigments & Chemical Co., of St. Louis, Mo.; the Collinsville Zinc Corporation, of St. Louis; and the Mallinckrodt Chemical Works, of St. Louis. The Senator knows that the latter is a very large concern. They are engaged in the production of barium sulphate and other of the barium products.

Mr. SPENCER. I think that is true; and may I say, as I take my seat, that the figures in regard to Georgia would be very much like these: The cost in Georgia is approximately $6.31 a ton. The cost of freight to the market is $5.50 a ton. That makes the cost of the Georgia ore at the market $11.81 a ton. Germany, under present conditions, can lay down her barytes in that same market at $5.20 a ton. There is a differential there of $6.61 a ton.

Mr. HITCHCOCK. Mr. President, can the Senator state why Germany does not do it?

Mr. SPENCER. First, she has broken the American market.

Mr. HITCHCOCK. When?

Mr. SPENCER. Early in 1921.

Mr. HITCHCOCK. She sent only 6,000 tons.

Mr. SPENCER. She has closed the American mines. She has closed the place where they manufacture these barium compounds. Undoubtedly it is true that the general depres-

sion and lack of demand has a temporary effect, and Germany sends over only enough to meet the demand under the depressed condition of industry. That condition, as the Senator knows, fortunately is changing every day; so that we get right back to what is the basic difference between the cost of what Germany produces and the cost of what we can produce, because the Senator must know that the demand for barytes, like the demand for other minerals and for other products of those minerals, is on the upgrade; that the demand is constantly growing larger; that everyone expects with confidence that the demand will soon be normal. So, what is the difference between the German cost of production and the cost of production in the United States, for that is what inevitably we have to come to?

Mr. HITCHCOCK. Does the Senator maintain that the arrival of 6,000 tons of barytes in New York in 1921 broke the market in which we were consuming 200,000 tons?

Mr. SPENCER. That question has been asked four or five times already this afternoon.

Mr. HITCHCOCK. Does the Senator say that?

Mr. SPENCER. Let me say again that the market was broken in 1921. I do not know just when those 6,000 tons came in.

Mr. HITCHCOCK. They came in in the first nine months of 1921.

Mr. SPENCER. My impression is that they came in in the latter part of the nine months and that the market had been broken before.

Mr. HITCHCOCK. That broke the market in which we were consuming 200,000 tons?

Mr. SPENCER. As the Senator must know, not that small amount of importations. What broke the market was the potential German price of $5.20 a ton in New York, which would enable Germany to import any amount of her barytes at that price in New York. What mine could operate when they knew that the more they produced at a cost of $17 a ton—or, as in Georgia, for $11.81 a ton—the greater deficit they were piling up for themselves? That is what broke the market.

Mr. HITCHCOCK. Will the Senator state what the country has been doing in order to get barytes? It was consuming something like 250,000 tons of barytes a year. Now he states that the American mines have been closed a year, but admits that only 6,000 tons arrived from Germany. What has become of the rest of the consumption?

Mr. SPENCER. The average consumption before the war was approximately 60,000 tons. In 1920 the United States alone produced 228,000 tons, quite enough to run a considerable time.

Mr. HITCHCOCK. Let me read the Senator the figures. He is mistaken, because that was not the production. We produced in the United States 206,888 tons in 1917. We produced 155,300 tons in 1918, we produced 209,000 tons in 1919, and 228,000 tons in 1920, and after all that production the Senator argues that the market was broken by the arrival of 6,000 tons in New York in 1921, and that that closed the mines of Missouri.

Mr. SPENCER. That is precisely the thing I did not say.

Mr. HITCHCOCK. I ask the Senator what has become of that production? The Senator knows that it has dropped, because the consumption has stopped, just the same thing that has happened in the case of copper.

Mr. SPENCER. I have said that; I admit it again.

Mr. HITCHCOCK. So the Senator admits that it was not the arrival of 6,000 tons which closed the Missouri mines, but the falling off of the demand under Republican prosperity.

Mr. SPENCER. I admit no such thing.

Mr. HITCHCOCK. That is what you ought to admit.

Mr. SPENCER. That may be as the Senator from Nebraska may think. What broke the mines of Missouri and of Georgia, and of the other 12 States where barytes is produced, is the possibility of Germany landing that product in New York at $5.20 and demonstrating their power by actually doing it.

Mr. HITCHCOCK. When did they do it?

Mr. SPENCER. They did it in 1921.

Mr. HITCHCOCK. How many tons did they send in?

Mr. SPENCER. Six thousand tons.

Mr. HITCHCOCK. Six thousand tons broke the market?

Mr. SPENCER. The Senator harps on that.

Mr. HITCHCOCK. That is what the Senator said.

Mr. SPENCER. It was the power to produce and land in New York an unlimited quantity of ore at $5.20 which absolutely closed the American mines. The Senator is a keen business man——

Mr. HITCHCOCK. Let me ask the Senator a question.

Mr. SPENCER. Let me finish this sentence. Where is the incentive to open and continue the operation of a mine when every ton the Senator produces costs him at the mine $10, and costs him at the market $17, and he knows that his rival in Germany can duplicate every ton he produces at $5.20 in New York? Of course, he would close his mine down.

Mr. HITCHCOCK. These possibilities do not compare with the actual figures.

Mr. SPENCER. I am giving actual figures.

Mr. HITCHCOCK. The Senator says the mines in Missouri closed. When was that?

Mr. SPENCER. In 1921.

Mr. HITCHCOCK. And 6,000 tons of German ore arrived. What has become of the rest of the consumption?

Mr. SPENCER. I repeat, if the Senator did not understand it before, undoubtedly there is a lack of demand; but that is not what affects basically the condition.

Mr. HITCHCOCK. Let me ask the Senator another question. Suppose no German ore arrived; could the mines run now, when there is no demand for the ore?

Mr. SPENCER. There is a demand for the ore.

Mr. HITCHCOCK. Then why does not the German ore come in?

Mr. SPENCER. It is coming in, to an increasing degree. If the Senator will refer to the figures, he will see that in 1920 the importation exceeded that before the war, in 1914.

Mr. HITCHCOCK. Yes; but the Senator knows that in 1921 it fell off to one-third of what it had been.

Mr. SPENCER. That was largely due to the lack of demand.

Mr. HITCHCOCK. It is absolutely due to that.

Mr. SPENCER. Not absolutely; largely it is that. But the fact of the case is that if the mines of Missouri and Georgia are to operate, instead of a duty of $5 a ton on barytes there ought to be one of $7.50 a ton. The only thing that will open those mines and keep them open is the confidence that the railroad rates may decrease and the danger of German competition decrease.

Mr. HITCHCOCK. Then the Senator contends that the barytes mines of Missouri can not run with anything less than 100 per cent tariff?

Mr. KING. More than 100 per cent they are asking.

Mr. HITCHCOCK. I said 100 per cent.

Mr. SPENCER. I did not figure the percentage. The Senator has figured that; it is arithmetical and mathematical, and I will not dispute his figures. They can not run without a tariff of at least $5 a ton, and it ought to be more than that. Close those mines if you like.

Mr. HITCHCOCK. I will restate it. The Senator says the barytes can be produced in Germany for $5 a ton.

Mr. SPENCER. Laid down in New York.

Mr. HITCHCOCK. And the tariff proposed is $10 a ton. So it is 200 per cent.

Mr. SPENCER. The only mistake the Senator makes is that it is $5 a ton.

Mr. HITCHCOCK. It is $5 a ton for the unmanufactured. That is a hundred per cent, just as I first stated.

Mr. SPENCER. Substantially.

Mr. HITCHCOCK. I withdraw the statement about 200 per cent. So the Senator is claiming before the American people a right to levy a tariff of 100 per cent protection?

Mr. SPENCER. Without any doubt; and it ought to be larger.

Mr. NORRIS. Will the Senator yield?

Mr. SPENCER. Certainly.

Mr. NORRIS. Since I interrupted the Senator before I have been informed by one of the experts that the Missouri crude barytes is never shipped to the Atlantic coast; that that is not the market at all.

Mr. SPENCER. That is my information; though I do think, as I said to the Senator before, that the market for Missouri barytes is largely within a geographical circle around the mines.

Mr. NORRIS. The report of the Tariff Commission states that the raw Missouri barytes is consumed in St. Louis and Chicago. If the freight question which the Senator raised, about which I questioned him before, is vital, it seems to me that the Missouri barytes in the raw state would never be able to reach the New York market, even if we had 1,000 per cent duty on importations, because of the difference in the freight between the seacoast and the southern field and between the coast and Missouri.

Mr. SPENCER. I think there is merit in what the Senator says. I think Georgia has a distinct advantage in the New York market over Missouri.

Mr. NORRIS. Georgia, Tennessee, and Kentucky.

Mr. SPENCER. Georgia is the main producer.
Mr. NORRIS. Georgia produces more of it.
Mr. SPENCER. I think that is true.
Mr. KING. May I interrupt the Senator to state that in Kentucky there are undeveloped deposits of barytes which would, perhaps, supply the United States for many, many years. All you need to do is to uncover the ground. It is there.
Mr. NORRIS. I interrupted the Senator from Missouri purely for the purpose of obtaining information, because I have not looked it up. He has made quite a point of the freight. If the Missouri barytes were the barytes which was used to supply the coast market, his point would be good, it seems to me; but he was claiming that they could not compete with the imported because they had to pay freight from Missouri to New York. It develops, if my information is correct, that the theory of the Senator from Missouri is absolutely without any foundation, because the barytes is never shipped to the coast from Missouri, and if the foreign barytes were kept out by a sufficiently high tariff, so that none of it could come in, still the coast market for Missouri barytes would be denied, because of the proximity of the barytes fields in Georgia, particularly, and in Tennessee.
Mr. SIMMONS. No crude barytes is shipped from Missouri to New York, and for the very same reason no foreign barytes landing in New York is shipped to St. Louis.
Mr. NORRIS. I was coming to that, and I thank the Senator for bringing me to it quicker than I probably would have reached it. It does seem to me that if the Missouri barytes can not reach the New York market to compete with the imported article on account of the freight, the freight on the imported article from New York to St. Louis, for instance, would very likely act as a protective tariff and keep the imported article from competing at St. Louis with that which was produced in Missouri.
Mr. SPENCER. I have not figured the exact cost of transportation, but my information generally would be that the imported article would drive the Missouri barytes even out of the St. Louis market.
Mr. NORRIS. These rates are not always based on scientific bases I admit, but it ought to be practically the same rate from New York to St. Louis as it is from St. Louis to New York.
Mr. SPENCER. As a matter of fact, it is not.
Mr. NORRIS. That would be a very material item, and would act in the way of protecting the market of the Missouri article in its proper sphere.
Mr. SPENCER. Taking the cost of transportation from where the barytes is mined first to the railroad, and then over the railroad to St. Louis, and adding that to the cost of production in Missouri; then taking the German article landed in New York at $5.20 a ton, and adding the cost of transportation westward, without being able to give the Senator the exact figures, my judgment is that the foreign article would drive the Missouri product even from the St. Louis market.
Mr. WALSH of Montana. Before the debate closes on this matter I want to submit that the Payne-Aldrich rate on crude barytes was $1.50 a ton. Under that rate in 1914 the American producers supplied over two-thirds of all of the barytes consumed in the United States.
Mr. SMOOT. The Underwood rate was in force in 1914.
Mr. WALSH of Montana. It went into force the 1st of January, 1914, but the figures for 1913 are practically the same. The American production was 45,298 pounds, and the importations were practically the same.
Mr. SPENCER. The cost of production in Germany was very much higher then.
Mr. WALSH of Montana. The facts I am giving the Senate are to this effect, that under a tariff of $1.50 upon crude barytes the American producers were able to maintain themselves so well in the American market prior to the war that they furnished two-thirds and more of the entire consumption.
Mr. SPENCER. The wages in Germany were over 45 cents a day then.
Mr. KING. They are now.
Mr. SPENCER. Not now.

EXECUTIVE SESSION.

Mr. SMOOT. I move that the Senate proceed to the consideration of executive business.
The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened; and (at 6 o'clock p. m.) under the order previously entered, the Senate took a recess until to-morrow, Wednesday, May 17, 1922, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate May 16 (legislative day of April 20), 1922.

MEMBER OF CALIFORNIA DÉBRIS COMMISSION.

Maj. Edward D. Ardery, Corps of Engineers, United States Army, for appointment as a member of the California Débris Commission provided for by the act of Congress approved March 1, 1893, entitled "An act to create the California Débris Commission and regulate hydraulic mining in the State of California," vice Col. Thomas H. Rees, Corps of Engineers, United States Army.

PROMOTIONS IN THE REGULAR ARMY.

To be colonels.

Lieut. Col. Albert N. McClure, Quartermaster Corps, from May 1, 1922.
Lieut. Col. Edwin Albert Hickman, Finance Department, from May 2, 1922.

To be lieutenant colonels.

Maj. Henry Tilghman Bull, Cavalry, from May 1, 1922.
Maj. Girard Lindsley McEntee, Infantry, from May 2, 1922.

To be majors.

Capt. Frederick McCabe, Infantry, from May 1, 1922.
Capt. Milton Raymond Fisher, Cavalry, from May 2, 1922.

POSTMASTERS.

ALABAMA.

Washington H. Carlisle to be postmaster at Alexander City, Ala., in place of J. L. Thornton. Incumbent's commission expired July 23, 1921.
John H. McEniry to be postmaster at Bessemer, Ala., in place of J. H. Read, deceased.

CALIFORNIA.

Stella L. Vincent to be postmaster at Carmel, Calif., in place of S. L. Vincent. Incumbent's commission expired May 20, 1922.

COLORADO.

Susan L. Clark to be postmaster at Blanca, Colo. Office became presidential October 1, 1921.
Grace M. Fawcett to be postmaster at Smuggler, Colo. Office became presidential April 1, 1922.

CONNECTICUT.

Edward A. Honan to be postmaster at Gaylordsville, Conn. Office became presidential April 1, 1922.

ILLINOIS.

Anna M. Peters to be postmaster at Sandoval, Ill., in place of J. F. Knight, removed.

INDIANA.

Frank B. Husted to be postmaster at Liberty, Ind., in place of A. T. Sering, resigned.

KENTUCKY.

Boyd M. Williams to be postmaster at Kenvir, Ky. Office became presidential January 1, 1922.

MICHIGAN.

George K. Hoyt to be postmaster at Suttons Bay, Mich., in place of F. B. Clark, resigned.

MINNESOTA.

George P. Dickinson to be postmaster at Excelsior, Minn., in place of G. H. Smith. Incumbent's commission expired August 7, 1921.

MISSOURI.

Philip G. Wild to be postmaster at Spickard, Mo., in place of R. J. Mulford, resigned.

NEBRASKA.

James E. Schoonover to be postmaster at Aurora, Nebr., in place of J. H. Grosvenor, resigned.
William H. Willis to be postmaster at Bridgeport, Nebr., in place of C. E. Steuteville, removed.

NEW JERSEY.

Ralph G. Riggins to be postmaster at Bridgeton, N. J., in place of W. B. Hurff. Incumbent's commission expired January 24, 1922.

NEW YORK.

Ella L. Winch to be postmaster at Lakewood, N. Y. Office became presidential July 1, 1921.
Edmund E. Bandy to be postmaster at St. Regis Falls, N. Y., in place of W. B. Hollister, removed.

OKLAHOMA.

James M. Baggett to be postmaster at Tuskahoma, Okla. Office became presidential April 1, 1921.

Agnes L. Dillon to be postmaster at Geary, Okla., in place of M. B. Carley. Incumbent's commission expired February 4, 1922.

William C. Colvin to be postmaster at Westville, Okla., in place of Fred Couch, resigned.

PENNSYLVANIA.

Alex L. Carlier to be postmaster at Point Marion, Pa., in place of Lewis Dilliner, resigned.

RHODE ISLAND.

Jonathan Bateman to be postmaster at Manville, R. I., in place of E. H. Desilets, removed.

SOUTH CAROLINA.

Hugh C. Finklea to be postmaster at Latta, S. C., in place of Hoyt Watson, declined.

SOUTH DAKOTA.

Robert C. Gibson to be postmaster at Geddes, S. Dak., in place of J. L. Minahan. Incumbent's commission expired January 24, 1922.

Theresa R. Zimmerman to be postmaster at Montrose, S. Dak., in place of P. G. Williams. Incumbent's commission expired January 31, 1922.

TENNESSEE.

Link Monday to be postmaster at Kimberlin Heights, Tenn. Office became presidential April 1, 1922.

TEXAS.

Benjamin F. Womack to be postmaster at Snyder, Tex., in place of E. B. Barnes. Incumbent's commission expired January 24, 1922.

UTAH.

Clyde A. Pons to be postmaster at Standardville, Utah. Office became presidential April 1, 1922.

VIRGINIA.

Milton S. Roberts to be postmaster at Faber, Va. Office became presidential April 1, 1921.

Jessie R. Haven to be postmaster at Greenwood, Va. Office became presidential January 1, 1921.

WASHINGTON.

Andrew F. Farris to be postmaster at Dryden, Wash. Office became presidential April 1, 1922.

WEST VIRGINIA.

Harry M. Slush to be postmaster at Whitesville, W. Va. Office became presidential April 1, 1922.

WISCONSIN.

Emil H. Lang to be postmaster at Gleason, Wis. Office became presidential April 1, 1922.

WYOMING.

Ellen L. George to be postmaster at Superior, Wyo., in place of R. G. Chappell, resigned.

CONFIRMATIONS.

Executive nominations confirmed by the Senate May 16 (legislative day of April 20), 1922.

CIRCUIT COURT JUDGE.

Daniel H. Case to be circuit judge, second circuit, Territory of Hawaii.

UNITED STATES DISTRICT JUDGES.

John Foster Symes to be United States district judge, district of Colorado.

John T. DeBolt to be United States district judge, district of Hawaii.

UNITED STATES ATTORNEY.

J. D. Ernest Meyer to be United States attorney, eastern district of South Carolina.

UNITED STATES MARSHAL.

Samuel J. Leaphart to be United States marshal, eastern district of South Carolina.

POSTMASTERS.

MASSACHUSETTS.

Luke W. Hemmenway, Bryantville.
Cleon F. Fobes, Stoughton.
James H. Jenks, jr., West Dennis.

MISSOURI.

Walter S. Johnston, Crocker.
Flavius A. Rumbuhl, Leslie.
Hattie Biggs, Neelyville.

NEW JERSEY.

William Jeffers, Hackensack.
Harold Chafey, Point Pleasant.

OKLAHOMA.

William C. Yates, Comanche.
Nellie E. Vincent, Mutual.
Leroy D. Harding, Pryor.
Asa A. Puckett, Shattuck.

HOUSE OF REPRESENTATIVES.

TUESDAY, *May 16, 1922.*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

The eyes of the Lord are upon His children. Thou dost neither slumber nor sleep. Thou knowest all outward circumstances, every inward impulse, and every secret thing. Behold our earthly estate, and may the light of Thy truth be in us. Measure Thy gifts according to Thy abundance and bestow them according to Thy wisdom. Lead us in the ways of wider knowledge and enlargement of understanding. Be with any to whom life may bring but little pleasure and much toil. For Thy name's sake. Amen.

The Journal of the proceedings of yesterday was read and approved.

REQUEST TO PRINT REMARKS.

Mr. ANDREWS of Nebraska. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing in regular 8-point type an address delivered by my colleague, the gentleman from Illinois [Mr. GRAHAM], at Lincoln, Nebr., on the 11th instant. It relates to the financial affairs of the Treasury during the period of the World War.

The SPEAKER. Is there objection to the request?

Mr. GARNER. I was interrupted for the moment and did not hear the request. Will the Speaker kindly repeat the request?

The SPEAKER. The gentleman from Nebraska asks unanimous consent to extend his remarks in the RECORD in 8-point type by printing a speech delivered by the gentleman from Illinois [Mr. GRAHAM] at Lincoln, Nebr., covering Treasury transactions during the war. Is there objection?

Mr. GARNER. For the present I object. I would like to look at that speech before I agree that it may go into the RECORD.

Mr. ANDREWS of Nebraska. Mr. Speaker, may I ask the gentleman to reserve his objection for a moment?

Mr. GARNER. I will.

Mr. ANDREWS of Nebraska. I think that a similar request was granted in relation to a speech delivered by a former Member of the House, Mr. Hull, of Tennessee, on some questions relating to the financial affairs of the Treasury, and I had hoped that there would be no objection to the insertion of this speech also.

Mr. GARNER. I presume it is not a pressing matter, and I would like to have an opportunity to glance over the speech, and then I will be able to tell more about it.

The SPEAKER. The gentleman from Texas objects.

CHILD LABOR.

Mr. LAYTON. Mr. Speaker, yesterday the Supreme Court of the United States by a unanimous decision delivered what I believe to be one of the most interesting and opportune decisions that has been made by that court for a long time. A résumé of that opinion is found in the Washington Post this morning. As you all know, it is upon the question of the child labor laws passed by this Congress. I ask unanimous consent to have that article from the Washington Post printed in the RECORD.

The SPEAKER. The gentleman from Delaware asks unanimous consent to print in the RECORD an article from the Washington Post. Is there objection?

Mr. DYER. Mr. Speaker, will not the gentleman amend his request, to print the opinion of the court instead of the article in the newspaper?

Mr. LAYTON. I will be very glad to, if it is agreeable to the House.

Mr. DYER. Just put the decision in the RECORD.

The SPEAKER. The gentleman amends his request and asks that the decision be printed in the RECORD. Is there objection to that?

Mr. LAYTON. It only occurred to me, Mr. Speaker, that the newspaper article was of such a character that it would attract more attention throughout the whole country in the manner in which it is presented than it would if the whole decision was printed.

Mr. WALSH. Nothing in the RECORD attracts attention. [Laughter.] I do not think we ought to print a newspaper article.

Mr. MONTAGUE. Reserving the right to object, this opinion, of course, is a matter of very great importance to the country and of very great interest to this House, at least it is to be hoped so.

Mr. LAYTON. I hope it is so.

Mr. MONTAGUE. Therefore, if the opinion is to be published, would it not be proper to print it in 8-point type? If it is printed in small type nobody will read it.

Mr. LAYTON. I think that is very proper.

Mr. WALSH. The opinion will not be ready for distribution until Thursday. I think the entire opinion should be printed.

Mr. LAYTON. Mr. Speaker, in obedience to what I think is the sentiment of the House I will ask unanimous consent to insert in the RECORD in 8-point type the opinion of the court in the child-labor case, and I will defer publication until the official printed opinion is obtainable.

The SPEAKER. The gentleman from Delaware asks unanimous consent that the opinion of the Supreme Court in the child-labor case be printed in the RECORD in 8-point type. Is there objection?

There was no objection.

Mr. LAYTON. Mr. Speaker, under the leave granted by the House, I insert the opinion of the Supreme Court of the United States, delivered by Mr. Chief Justice Taft, on the child labor law. The opinion is as follows:

Supreme Court of the United States. No. 657.—October term, 1921. J. W. Bailey and J. W. Bailey, Collector of Internal Revenue for the District of North Carolina, plaintiff in error, v. The Drexel Furniture Co. In error to the District Court of the United States for the Western District of North Carolina. (May 15, 1922.)

Mr. Chief Justice Taft delivered the opinion of the court.

This case presents the question of the constitutional validity of the child labor tax law. The plaintiff below, the Drexel Furniture Co., is engaged in the manufacture of furniture in the western district of North Carolina. On September 20, 1921, it received a notice from Bailey, United States collector of internal revenue for the district, that it had been assessed $6,312.79 for having during the taxable year 1919 employed and permitted to work in its factory a boy under 14 years of age, thus incurring the tax of 10 per cent on its net profits for that year. The company paid the tax under protest, and after rejection of its claim for a refund brought this suit. On demurrer to an amended complaint judgment was entered for the company against the collector for the full amount with interest. The writ of error is prosecuted by the collector direct from the district court under section 238 of the Judicial Code.

The child labor tax law is Title No. XII of an act entitled "An act to provide revenue, and for other purposes," approved February 24, 1919 (40 Stat. 1057, 1138.) The heading of the title is "Tax on employment of child labor." It begins with section 1200 and includes eight sections. Section 1200 is as follows:

SEC. 1200. That every person (other than a bona fide boys' or girls' canning club recognized by the Agricultural Department of a State and of the United States) operating (a) any mine or quarry situated in the United States in which children under the age of 16 years have been employed or permitted to work during any portion of the taxable year; or (b) any mill, cannery, workshop, factory, or manufacturing establishment situated in the United States in which children under the age of 14 years have been employed or permitted to work, or children between the ages of 14 and 16 have been employed or permitted to work more than eight hours in any day or more than six days in any week, or after the hour of 7 o'clock p. m., or before the hour of 6 o'clock a. m., during any portion of the taxable year, shall pay for each taxable year, in addition to all other taxes imposed by law, an excise tax equivalent to 10 per cent of the entire net profits received or accrued for such year from the sale or disposition of the product of such mine, quarry, mill, cannery, workshop, factory, or manufacturing establishment.

Section 1203 relieves from liability to the tax anyone who employs a child, believing him to be of proper age, relying on a certificate to this effect issued by persons prescribed by a board consisting of the Secretary of the Treasury, the Commissioner of Internal Revenue, and the Secretary of Labor, or issued by State authorities. The section also provides in paragraph (b) that—

The tax imposed by this title shall not be imposed in the case of any person who proves to the satisfaction of the Secretary that the only employment or permission to work which but for this section would subject him to the tax has been of a child employed or permitted to work under a mistake of fact as to the age of such child and without intention to evade the tax.

Section 1206 gives authority to the Commissioner of Internal Revenue, or any other person authorized by him, "to enter and inspect at any time any mine, quarry, mill, cannery, workshop, factory, or manufacturing establishment." The Secretary of Labor, or any person whom he authorizes, is given like authority in order to comply with a request of the commissioner to make such inspection and report the same. Any person who refuses entry or obstructs inspection is made subject to fine or imprisonment, or both.

The law is attacked on the ground that it is a regulation of the employment of child labor in the States, an exclusive State function under the Federal Constitution and within the reservations of the tenth amendment. It is defended on the ground that it is a mere excise tax levied by the Congress of the United States under its broad power of taxation conferred by section 8. Article I, of the Federal Constitution. We must construe the law and interpret the intent and meaning of Congress from the language of the act. The words are to be given their ordinary meaning unless the context shows that they are differently used. Does this law impose a tax with only that incidental restraint and regulation which a tax must inevitably involve? Or does it regulate by the use of the so-called tax as a penalty? If a tax, it is clearly an excise.

If it were an excise on a commodity or other thing of value, we might not be permitted under previous decisions of this court to infer solely from its heavy burden that the act intends a prohibition instead of a tax. But this act is more. It provides a heavy exaction for a departure from a detailed and specified course of conduct in business. That course of business is that employers shall employ in mines and quarries children of an age greater than 16 years; in mills and factories, children of an age greater than 14 years, and shall prevent children of less than 16 years in mills and factories from working more than eight hours a day or six days in the week. If an employer departs from this prescribed course of business, he is to pay to the Government one-tenth of his entire net income in the business for a full year. The amount is not to be proportioned in any degree to the extent or frequency of the departures, but is to be paid by the employer in full measure, whether he employs 500 children for a year or employs only 1 for a day. Moreover, if he does not know the child is within the named age limit, he is not to pay; that is to say, it is only where he knowingly departs from the prescribed course that payment is to be exacted. Scienters are associated with penalties, not with taxes. The employer's factory is to be subject to inspection at any time not only by the taxing officers of the Treasury, the department normally charged with the collection of taxes, but also by the Secretary of Labor and his subordinates whose normal function is the advancement and protection of the welfare of the workers. In the light of these features of the act, a court must be blind not to see that the so-called tax is imposed to stop the employment of children within the age limits prescribed. Its prohibitory and regulatory effect and purpose are palpable. All others can see and understand this. How can we properly shut our minds to it?

It is the high duty and function of this court in cases regularly brought to its bar to decline to recognize or enforce seeming laws of Congress dealing with subjects not intrusted to Congress but left or committed by the supreme law of the land to the control of the States. We can not avoid the duty, even though it require us to refuse to give effect to legislation designed to promote the highest good. The good sought in unconstitutional legislation is an insidious feature, because it leads citizens and legislators of good purpose to promote it without thought of the serious breach it will make in the ark of our covenant or the harm which will come from breaking down recognized standards. In the maintenance of local self-government, on the one hand, and the national power, on the other, our country has been able to endure and prosper for near a century and a half.

Out of a proper respect for the acts of a coordinate branch of the Government, this court has gone far to sustain taxing acts as such, even though there has been ground for suspecting from the weight of the tax it was intended to destroy its subject. But in the act before us the presumption of validity can not prevail, because the proof of the contrary is found on the very face of its provisions. Grant the validity of this law and all that Congress would need to do hereafter in seeking to take over to its control any one of the great number of subjects of public interest, jurisdiction of which the States have never

parted with, and which are reserved to them by the tenth amendment, would be to enact a detailed measure of complete regulation of the subject and enforce it by a so-called tax upon departures from it. To give such magic to the word "tax" would be to break down all constitutional limitation of the powers of Congress and completely wipe out the sovereignty of the States.

The difference between a tax and a penalty is sometimes difficult to define, and yet the consequences of the distinction in the required method of their collection often are important. Where the sovereign enacting the law has power to impose both tax and penalty the difference between revenue production and mere regulation may be immaterial, but not so when one sovereign can impose a tax only and the power of regulation rests in another. Taxes are occasionally imposed in the discretion of the legislature on proper subjects with the primary motive of obtaining revenue from them and with the incidental motive of discouraging them by making their continuance onerous. They do not lose their character as taxes because of the incidental motive. But there comes a time in the extension of the penalizing features of the so-called tax when it loses its character as such and becomes a mere penalty with the characteristics of regulation and punishment. Such is the case in the law before us. Although Congress does not invalidate the contract of employment or expressly declare that the employment within the mentioned ages is illegal, it does exhibit its intent practically to achieve the latter result by adopting the criteria of wrongdoing and imposing its principal consequence on those who transgress its standard.

The case before us can not be distinguished from that of Hammer *v.* Dagenhart (247 U. S. 251). Congress there enacted a law to prohibit transportation in interstate commerce of goods made at a factory in which there was employment of children within the same ages and for the same number of hours a day and days in a week as are penalized by the act in this case. This court held the law in that case to be void. It said:

> In our view the necessary effect of this act is, by means of a prohibition against the movement in interstate commerce of ordinary commercial commodities, to regulate the hours of labor of children in factories and mines within the States, a purely State authority.

In the case at the bar Congress, in the name of a tax which on the face of the act is a penalty, seeks to do the same thing, and the effort must be equally futile.

The analogy of the Dagenhart case is clear. The congressional power over interstate commerce is, within its proper scope, just as complete and unlimited as the congressional power to tax, and the legislative motive in its exercise is just as free from judicial suspicion and inquiry. Yet when Congress threatened to stop interstate commerce in ordinary and necessary commodities, unobjectionable as subjects of transportation, and to deny the same to the people of a State in order to coerce them into compliance with Congress's regulation of State concerns, the court said this was not in fact regulation of interstate commerce, but, rather, that of State concerns and was invalid. So here the so-called tax is a penalty to coerce people of a State to act as Congress wishes them to act in respect of a matter completely the business of the State government under the Federal Constitution. This case requires, as did the Dagenhart case, the application of the principle announced by Chief Justice Marshall in McCullough *v.* Maryland (4 Wheaton 316, 423) in a much-quoted passage:

> Should Congress, in the execution of its powers, adopt measures which are prohibited by the Constitution; or should Congress, under the pretext of executing its powers, pass laws for the accomplishment of objects not intrusted to the Government, it would become the painful duty of this tribunal, should a case requiring such a decision come before it, to say that such an act was not the law of the land.

But it is pressed upon us that this court has gone so far in sustaining taxing measures the effect and tendency of which was to accomplish purposes not directly within congressional power that we are bound by authority to maintain this law.

The first of these is Veazie Bank *v.* Fenno (8 Wallace 533). In that case the validity of a law which increased a tax on the circulating notes of persons and State banks from 1 per cent to 10 per cent was in question. The main question was whether this was a direct tax to be apportioned among the several States "according to their respective numbers." This was answered in the negative. The second objection was stated by the court:

> It is insisted, however, that the tax in the case before us is excessive, and so excessive as to indicate a purpose on the part of Congress to destroy the franchise of the bank, and is, therefore, beyond the constitutional power of Congress.

To this the court answered:

> The first answer to this is that the judicial can not prescribe to the legislative departments of the Government limitations upon the exercise of its acknowledged powers. The power to tax may be exercised oppressively upon persons, but the responsibility of the legislature is not to the courts, but to the people by whom its members are elected. So if a particular tax bears heavily upon a corporation, or a class of corporations, it can not for that reason only be pronounced contrary to the Constitution.

It will be observed that the sole objection to the tax here was its excessive character. Nothing else appeared on the face of the act. It was an increase of a tax admittedly legal to a higher rate, and that was all. There were no elaborate specifications on the face of the act, as here, indicating the purpose to regulate matters of State concern and jurisdiction through an exaction so applied as to give it the qualities of a penalty for violation of law rather than a tax.

It should be noted, too, that the court, speaking of the extent of the taxing power, used these cautionary words (p. 541):

> There are, indeed, certain virtual limitations arising from the principles of the Constitution itself. It would undoubtedly be an abuse of the power if so exercised as to impair the separate existence and independent self-government of the States, or if exercised for ends inconsistent with the limited grants of power in the Constitution.

But more than this, what was charged to be the object of the excessive tax was within the congressional authority, as appears from the second answer which the court gave to the objection. After having pointed out the legitimate means taken by Congress to secure a national medium or currency, the court said (p. 549):

> Having thus, in the exercise of undisputed constitutional powers, undertaken to provide a currency for the whole country, it can not be questioned that Congress may, constitutionally, secure the benefit of it to the people by appropriate legislation. To this end, Congress has denied the quality of legal tender to foreign coins and has provided by law against the imposition of counterfeit and base coin on the community. To the same end, Congress may restrain, by suitable enactments, the circulation as money of any notes not issued under its own authority. Without this power, indeed, its attempts to secure a sound and uniform currency for the country must be futile.

The next case is that of McCray *v.* The United States (195 U. S. 27). That, like the Veazie Bank case, was the increase of an excise tax upon a subject properly taxable in which the taxpayers claimed that the tax had become invalid because the increase was excessive. It was a tax on oleomargarine, a substitute for butter. The tax on the white oleomargarine was one-quarter of a cent a pound, and on the yellow oleomargarine was first 2 cents and was then by the act in question increased to 10 cents per pound. This court held that the discretion of Congress in the exercise of its constitutional powers to levy excise taxes could not be controlled or limited by the courts because the latter might deem the incidence of the tax oppressive or even destructive. It was the same principle as that applied in the Veazie Bank case. This was that Congress in selecting its subjects for taxation might impose the burden where and as it would, and that a motive disclosed in its selection to discourage sale or manufacture of an article by a higher tax than on some other did not invalidate the tax. In neither of these cases did the law objected to show on its face as does the law before us the detailed specifications of a regulation of a State concern and business with a heavy exaction to promote the efficacy of such regulation.

The third case is that of Flint *v.* Stone Tracy Co. (220 U. S. 107). It involved the validity of an excise tax levied on the doing of business by all corporations, joint-stock companies, associations organized for profit having a capital stock represented by shares, and insurance companies, and measured the excise by the net income of the corporations. There was not in that case the slightest doubt that the tax was a tax and a tax for revenue, but it was attacked on the ground that such a tax could be made excessive and thus used by Congress to destroy the existence of State corporations. To this, this court gave the same answer as in the Veazie Bank and McCray cases. It is not so strong an authority for the Government's contention as they are.

The fourth case is United States *v.* Doremus (249 U. S. 86). That involved the validity of the narcotic drug act (38 Stats. 785), which imposed a special tax on the manufacture, importation, and sale or gift of opium or coca leaves or their compounds or derivatives. It required every person subject to the special tax to register with the collector of internal revenue his name and place of business and forbade him to sell except upon the written order of the person to whom the sale was made on a form prescribed by the Commissioner of Internal Revenue. The vendor was required to keep the order for two years, and the purchaser to keep a duplicate for the same time, and all were to be subject to official inspection. Similar requirements were made as to sales upon prescriptions of a physician and as to the dispensing of such drugs directly to a patient by a physician. The validity of a special tax in the nature of an excise tax on the manufacture, importation, and sale of such drugs was, of course, unquestioned. The provisions for subjecting the sale and distribution of the drugs to official

supervision and inspection were held to have a reasonable relation to the enforcement of the tax and ·re therefore held valid.

The court said that the act could not be declared invalid just because another motive than taxation, not shown on the face of the act, might have contributed to its passage. This case does not militate against the conclusion we have reached in respect to the law now before us. The court there made manifest its view that the provisions of the so-called taxing act must be naturally and reasonably adapted to the collection of the tax and not solely to the achievement of some other purpose plainly within State power.

For the reasons given, we must hold the child labor tax law invalid, and the judgment of the district court is affirmed.

Mr. Justice Clarke dissents.

DISPENSING WITH CALENDAR WEDNESDAY.

Mr. MONDELL. Mr. Speaker, I ask unanimous consent that the House dispense with business under the Calendar Wednesday rule to-morrow. I make this request in order that we may be able to complete, if possible, the consideration of the bill that will be taken up to-morrow, and in order that we may then take up for consideration and complete this week the consideration of the river and harbor bill.

The SPEAKER. The gentleman from Wyoming asks unanimous consent to dispense with the business of Calendar Wednesday to-morrow. Is there objection?

There was no objection.

Mr. SNELL. Is it intended to have regular business on Thursday?

Mr. MONDELL. Yes; we will be in session on Thursday, but just what the character of the business will be I can not say at this time, although it may be general debate on the river and harbor bill.

LEAVE OF ABSENCE.

By unanimous consent leave of absence was granted—

To Mr. GARRETT of Tennessee, indefinitely, on account of important business.

IMPORTATION AND EXPORTATION OF OPIUM.

Mr. HADLEY. Mr. Speaker, I move to take from the Speaker's table the bill H. R. 2193, amending the export and import drugs act, and concur in the Senate amendment.

The SPEAKER. The gentleman from Washington moves to take from the Speaker's table the bill with a Senate amendment, of which the Clerk will read the title.

The Clerk read as follows:

A bill (H. R. 2193) to amend section 6 of an act approved January 17, 1914, entitled "An act to amend an act entitled 'An act to prohibit the importation and use of opium for other than medicinal purposes,' approved February 9, 1909."

The Senate amendment was read.

The SPEAKER. The gentleman from Washington moves to concur in the Senate amendment.

Mr. GARNER. Will the gentleman yield?

Mr. HADLEY. Yes.

Mr. GARNER. If I understand the gentleman, he has consulted with the gentleman from Arkansas [Mr. OLDFIELD], who was on the subcommittee that drew this bill, and the amendment is satisfactory to Mr. OLDFIELD, and he thinks that this will contribute to the effectiveness of the legislation?

Mr. HADLEY. I have consulted with the gentleman from Arkansas [Mr. OLDFIELD] and gone over the subject with him, and I understand this is entirely agreeable to him.

Mr. OLDFIELD. Yes; I think the amendment improves the bill.

Mr. HADLEY. The bill as it passed the House contained a provision making the master of a vessel which brings in a narcotic drug not shown on the vessel's manifest liable to a penalty equal to the value of the drug, the drug being seized and forfeited besides. As a matter of fact, it appears that smoking opium has no market or commercial or determinable value, while other drugs covered by the bill have a commercial and ascertainable value. Therefore by the Senate amendment smoking opium is segregated, so as to provide in its case a specific penalty of $25 an ounce and a penalty equal to the value in the case of the other drugs. It is an amendment that will make the administration of the law more effective.

Mr. STAFFORD. And it makes it more stringent.

Mr. HADLEY. It does.

The SPEAKER. The question is on agreeing to the Senate amendment.

The Senate amendment was agreed to.

TO SCRAP CERTAIN NAVAL VESSELS.

Mr. CAMPBELL of Kansas. Mr. Speaker, I submit a privileged report from the Committee on Rules.

The Clerk read as follows:

House Resolution 347. Report No. 1010.

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into Committee of the Whole House on the state of the Union to consider H. R. 11214, being "A bill authorizing the President to scrap certain vessels in conformity with the provisions of the treaty to limit naval armaments, and for other purposes." That there shall be not to exceed four and a half hours of general debate on said bill, one-half to be controlled by the gentleman from New York, Mr. HICKS, and one-half to be controlled by the gentleman from Tennessee, Mr. PADGETT. At the conclusion of the general debate the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendments the committee shall rise and report the bill back to the House with the amendments, if any; the previous question shall be considered as ordered on the bill and all amendments thereto to final passage, without intervening motion, except one motion to recommit.

Mr. CAMPBELL of Kansas. Mr. Speaker, I am very happy to be able to report this resolution to the House. It comes as a unanimous report from the Committee on Rules, making in order a bill unanimously reported from the Committee on Naval Affairs providing for the scrapping of certain battleships.

One of the greatest days in the political history of civilization was the day upon which the representatives of the great Governments of the world met in Continental Hall and listened to the words of the President of the United States, in which he breathed the hope that civilization had finally arrived at a day when differences between nations might be adjusted without resorting to the arbitrament of arms. [Applause.] It was not only inspiring but encouraging to hope when the Secretary of State, Mr. Hughes, submitted a program that was in part the fulfillment of prophecy that the day might come when nations should beat their swords into plowshares and their spears into pruning hooks and have war no more.

The followers of Christ, of Mohammed, and of Confucius all assembled together in the same place, indulging in the same hope, the hope of peace on earth.

I am, therefore, happy, I say, to have the opportunity of bringing on the floor of the House for its consideration a bill providing for the scrapping of battleships, the greatest instrumentalities of war. The world has long hoped that some condition might be brought about that would enable nations differing with one another over international questions to adjust these without resort to force of arms. The Conference on the Limitation of Armaments showed the nations of the world how the rule of reason could take the place of the rule of force—communication, debate, conversation will enable them hereafter, when great international questions arise threatening war, to adjust those questions in conference by mutual understanding. That is the purpose of laying aside great instruments of war and hereafter securing peace by negotiation.

Mr. CONNALLY of Texas. Will the gentleman yield?

Mr. CAMPBELL of Kansas. I will.

Mr. CONNALLY of Texas. The gentleman says that in case of a threat of war it is the desire to settle it by debate. Suppose war should be threatened by some nation not a party to the disarmament conference; would the gentleman be willing to submit that in the same way? Suppose Russia or Germany or some great nation not a party to the conference was involved.

Mr. CAMPBELL of Kansas. A nation that is not present can not discuss questions of difference between such nations.

Mr. CONNALLY of Texas. If the gentleman is right in his theory, would not he favor an association that would comprehend all the nations of the earth rather than four particular nations, if his principle is correct?

Mr. CAMPBELL of Kansas. With a view to constant meddling in international questions?

Mr. CONNALLY of Texas. No; I am following the gentleman. He says that when war threatens anywhere his theory is that it ought to be prevented by debate and consultation and conciliation. Would the gentleman from Kansas limit the beneficence and the effect of that policy to four nations instead of all the nations of the world?

Mr. CAMPBELL of Kansas. I would limit it to the controversy between the nations—to the nations involved, and not involve the whole world in the debate between those two nations. [Applause.]

Mr. CONNALLY of Texas. Will the gentleman yield further?

Mr. CAMPBELL of Kansas. For a question.

Mr. CONNALLY of Texas. The gentleman would limit it to the two nations that were in dispute?

Mr. CAMPBELL of Kansas. I would limit the conversation to the two nations.

Mr. CONNALLY of Texas. Does not the gentleman know that every war that has ever occurred in history has been left to the two nations that were fighting, and that it always resulted in a war rather than a settlement by debate?

Mr. CAMPBELL of Kansas. No; the gentleman does not know that. The gentleman does know that after the fighting the representatives of the two nations get together and have conversations that should have occurred before the fighting began. [Applause on the Republican side.] That is always so. The treaty of peace should have been called before rather than after the fighting. That is what I favor. That is what we should do hereafter; but it is not necessary when a debate arises, say, between Bolivia and Uruguay, to involve the United States and all the other Central and South American countries. It is not necessary when a dispute arises between two nations in Europe to involve all Europe or the whole world in the debate.

Mr. CONNALLY of Texas. The gentleman says that he would leave it to the controversial parties?

Mr. CAMPBELL of Kansas. Yes.

Mr. CONNALLY of Texas. Peru and Bolivia have had this question up for 40 years.

Mr. CAMPBELL of Kansas. Yes.

Mr. CONNALLY of Texas. And have been unable to settle it; and it was only at the instance of the United States, not a party to the controversy, that the present conference was called. Does the gentleman oppose the intervention of the United States in controversies of that kind in an endeavor to settle the matter?

Mr. CAMPBELL of Kansas. Where a friendly power is called in to aid in the adjustment of international disputes, certainly there could be no objections; but this is aside from the matter that I rose to discuss. I congratulate the United States and I congratulate the whole world upon the opportunity now offered for beginning a limitation of armaments, for the beginning of that era in which international disputes may be adjusted without resorting to the arbitrament of the sword.

Mr. GARNER. Mr. Speaker, will the gentleman yield for a question?

Mr. CAMPBELL of Kansas. Yes.

Mr. GARNER. If I understand the gentleman, this resolution has the unanimous support of the Committee on Rules.

Mr. CAMPBELL of Kansas. It has.

Mr. GARNER. And the bill has been unanimously reported by the Committee on Naval Affairs.

Mr. CAMPBELL of Kansas. It has.

Mr. GARNER. Considering the very effective argument of the gentleman from Kansas, I think the resolution ought to pass.

Mr. CAMPBELL of Kansas. Mr. President, I move the previous question on the resolution.

The SPEAKER pro tempore. The question is on ordering the previous question.

The previous question was ordered.

The SPEAKER pro tempore. The question is on agreeing to the resolution.

The resolution was agreed to.

Mr. HICKS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 11214) authorizing the President to scrap certain vessels in conformity with the provisions of the treaty to limit naval armaments, and for the conversion of two battle cruisers into aircraft carriers.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 11214, with Mr. HUSTED in the chair.

The Clerk read the bill, as follows:

Be it enacted, etc., That for the purpose of giving effect to the provisions in the treaty to limit naval armament, concluded February 6, 1922, by the United States of America and the British Empire, France, Italy, and Japan, respecting the abandonment of shipbuilding programs and the scrapping of capital ships in excess of the number which the United States may retain in conformity with the said provisions, the President of the United States be, and he is hereby, authorized to make such disposition as in his judgment may be proper of any capital ship of the Navy built or building and to cause to be taken such action as is necessary for the scrapping of capital ships to be dealt with in that manner in accordance with the said provisions.

SEC. 2. That the President of the United States is hereby authorized and empowered to discontinue the construction of and to cancel or modify any contract entered into for and on behalf of the United States for the construction of seven of the first-class battleships and the six battle cruisers authorized in the act entitled "An act making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes," approved August 29, 1916, and for the machinery, materials, equipment, armor, armament, and ordnance equipment therefor: *Provided*, That whenever any such contract is canceled or modified just compensation therefor shall be made in the manner and upon the basis provided in the act of July 1, 1918, entitled "An act making appropriations for the naval service for the fiscal year ending June 30, 1919, and for other purposes," out of any funds hereafter to be appropriated for that purpose.

SEC. 3. That of the battle cruisers authorized in the act entitled "An act making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes," approved August 29, 1916, the President of the United States is hereby authorized to undertake the conversion of the two battle cruisers now building which in his judgment are furthest advanced in construction, or will be the most economical to convert into airplane carriers, within the limits of cost heretofore authorized for said battle cruisers; and the President is hereby further authorized to utilize any such funds and materials that may be on hand or under contract at this time for the construction of battle cruisers heretofore authorized.

The CHAIRMAN. Under the rule, general debate upon the bill is limited to four and a half hours, one-half under the control of the gentleman from New York [Mr. HICKS] and one-half under the control of the gentleman from Tennessee [Mr. PADGETT]. The Chair recognizes the gentleman from New York [Mr. HICKS].

Mr. HICKS. Mr. Chairman and gentlemen of the committee, it is with a good deal of regret that I stand here to present this bill to the committee—a regret which comes not from lack of faith in the fulfillment of the aims and purposes of the treaties concluded by the Washington conference, nor from any doubt of the wisdom and desirability of carrying those treaties into effect, but from the fact that the chairman of the committee, Mr. THOMAS S. BUTLER, of Pennsylvania, can not be here to take charge of the proceedings. Mr. BUTLER is at his home in West Chester, at the bedside of a seriously ill daughter-in-law, for whose recovery we express all hope. Having served on the committee with Mr. BUTLER for many years, knowing his feelings in regard to this bill, I wish to testify that one of the things nearest and dearest to his heart is to be here to-day to add his word in favor of the measure which seeks to curtail the great naval armaments of the world. Mr. BUTLER, a man of the greatest honesty, a conscientious man, and a true friend, has worked steadfastly and earnestly to upbuild the great naval forces of the United States, but with it all there has been ever present in his heart the hope that some day by international agreement the nations of the world would ratify a compact by which those naval programs would be curtailed, competitive construction plans ended, and operation costs reduced. If he were here to-day he would voice these sentiments, for the hour has come for those results to be attained.

When the Washington conference assembled at the invitation of President Harding, the hopes of humanity and the aspirations of the world were centered in its deliberations. That event will be recorded in history as one of the greatest in the story of civilization. For centuries idealists have dreamed of that day when the armed forces of the earth would be limited and preparations for war minimized. To-day that hope of the ages is a reality; and the bill now before us carries out the mandate of the conference and makes effective the provisions of the treaties to accomplish those purposes. The bill provides, first, for the scrapping of ships now in commission and upon the ways, and, second, for the conversion of two of the unfinished battle cruisers into airplane carriers.

At this time I desire to speak briefly of the conference, and later will take up in detail the question of the construction of the much-needed airplane carriers.

Under the lead of America—the Nation most fortunately situated for carrying forward great military programs, yet willing to make the greatest sacrifices—inspired by Mr. Harding who holds the affection of his own countrymen and commands the respect of nations abroad and guided by the superior ability of Secretary Hughes, ably supported by the American delegates, statesmen formulated a practical, workable agreement whereby competitive naval programs shall be checked, ever-increasing costs of maintenance reduced, and the chances of future wars lessened.

Mr. CONNALLY of Texas. Mr. Chairman, will the gentleman yield?

Mr. HICKS. If the gentleman has any special question. What is the purpose of the gentleman's interruption?

Mr. CONNALLY of Texas. I want to ask the gentleman a question.

Mr. HICKS. What is it?

Mr. CONNALLY of Texas. Does the gentleman yield?

Mr. HICKS. I will for a question.

Mr. CONNALLY of Texas. The gentleman spoke about the President being guided by high inspiration and he also spoke of the superior ability of Secretary Hughes. Does he mean to make a comparison as between the President and the Secretary of State in that respect?

Mr. HICKS. Oh, Mr. Chairman, I do wish the gentleman from Texas [Mr. CONNALLY], with all of his ability and broadness of character, would try once in a while to leave out these petty, foolish questions, which I think are beneath his standard of statesmanship. If the gentleman had followed my statement clearly, he would have seen that my allusion to Mr. Hughes referred to the statesmen who were at the conference and did not refer to President Harding in comparison with the Secretary of State.

Accepting completely the conference treaties, I voice the feeling that this conference will be a milestone on the pathway of an ever-advancing civilization, and that it ushers in a new era in the affairs of men, when justice, mutual confidence, and abiding peace among the nations shall cast their beneficent mantle over the world. Let us accept the covenants in letter and in spirit, with conviction of their righteousness and with a determination that they shall be adhered to with honor and good will.

By the ratification of these treaties one nation surrenders the proud position it has maintained for 300 years as mistress of the seas, and without the terrific expenditures which naval supremacy would have entailed, the fleets of America in friendly rivalry will meet on the blue waters on terms of equality, the fleets of Great Britain.

While we rejoice over the achievements of the conference, acknowledge the benefits to be derived therefrom, and scan the future with confidence, yet the passage of this bill is tinged with sadness. Great ships which in honor have carried the flag in peace and in war will be reduced to shapeless hulks, and other ships, the most powerful ever designed by the genius of man, will be torn to scrap iron ere they have had the opportunity of adding to the glory which would have been theirs by service. Let us have no Roman festival when the hour comes for dismantlement; let there be no gala day when the flag which these noble ships carried in defense of their country is forever lowered from their masts.

To those who may feel that we will be without a sufficient navy, let me remind them that the Navy provided for under the conference plan will be far stronger than was our Navy at the commencement of the World War. In efficient fighting ships in commission it will be heavier in tonnage and more powerful in gunfire than was our Navy at any period of that war. Let me give you some figures as to comparative strength of the American Navy.

On November 1, 1918, the Navy, in vessels actually completed, exclusive of those building or authorized, consisted of:

		Tons.
39	battleships	711,596
93	destroyers	94,583
0	airplane carriers	----------
79	submarines	29,886
365	auxiliary combat vessels	255,071
207	other auxiliary vessels	713,045
	Total	1,804,181

Total number of vessels in service, 783.

The Navy under the conference plan, including the completion of ships under construction permitted by the naval treaty, and excluding those to be scrapped, will consist of:

		Tons.
18	battleships (2 being built)	525,850
318	destroyers (3 being built)	368,643
3	airplane carriers (including 2 to be converted)	80,000
130	submarines (38 being built)	91,186
129	auxiliary combat vessels	324,143
237	other auxiliary vessels	1,114,428
	Total	2,504,250

Total number of vessels to be retained, 835.

To complete the record, I submit the number of vessels to be scrapped under the conference plan:

In commission, 2 first line batttleships, 3 second line battleships; out of commission, 13 second line battleships; under construction, 7 first line battleships, 4 battle cruisers. (This assumes that 2 of the 6 cruisers on the ways will be converted into aircraft carriers.) Total, 29 ships.

Let me also suggest that naval strength is comparative and is measured by the strength of one's adversary. With the international agreement limiting the ratio between nations, an agreement which I fervently believe will be a covenant of honor, we are as strong relatively as we would be if that ratio was doubled or quadrupled.

Let no one think that the Navy of the present will be impotent or inefficient. Let no one think the Navy of the future will live only upon the traditions and the memories of the past. Let no one harbor the belief that the greatness of the American Navy will reside in the achievements of former days, glorious as those achievements were.

Adhering to the letter and to the spirit of that conference, adjusting ourselves to its provisions, the American Navy of tomorrow will "carry on," strong and resolute, the bulwark for defense, protecting our rights and maintaining our policies as of yore. The Navy means more than men and ships; it means more than might of shell and strength of steel; it connotes the power and the will, the ideals and the hopes of those whose guardian and benefactor it always has been and always will be. It is the symbol not only of daring but of sacrifice, not only of courage but of constructive endeavor, constant in purpose and steadfast to the end.

Mr. Chairman, I will ask the gentleman from Tennessee if he will use some of his time.

Mr. PADGETT. Mr. Chairman, I yield 45 minutes to the gentleman from Virginia [Mr. TUCKER]. [Applause.]

Mr. TUCKER. Mr. Chairman and gentlemen of the committee, I join with the gentleman from New York [Mr. HICKS] in the expression of regret that the honorable chairman of this committee [Mr. BUTLER] is not with us to-day, and unite with him in the hope that the cause of his detention may soon be removed in the restoration to health again of his loved one. This bill, as has been stated, has been unanimously reported by the Committee on Naval Affairs to carry out the five-power treaty entered into by the United States, Great Britain, France, Italy, and Japan in this city in the past few months and ratified by the Senate of the United States on the 29th of March last. It is a bill to carry out that treaty. I notice in the hearings before the committee that one gentleman who appeared before them to give his opinion of the bill said it seemed to be harmless, and that while he thought the President of the United States had ample power to carry it out, that there could be no harm in a bill going through the Congress such as this.

Mr. Chairman, I am for this bill not because it is a harmless way in which this matter may be carried out, but I am for this bill because it is the only way in which this treaty can be executed legally and constitutionally. To this question I invite the attention of the committee. Look at the very first article of the treaty:

> The contracting powers agree to limit their respective naval armament as provided in the present treaty.

They agree to limit. That is, this treaty says, in effect, you shall not "provide and maintain a navy" except as far as we say. Take the next provision:

> ART. II. The contracting powers may retain respectively the capital ships which are specified in chapter 2, part 1.

All others are to be scrapped.

> ART. III. Subject to the provisions of Article II, the contracting powers shall abandon their capital-ship building program.
>
> ART. XVIII. Each of the contracting powers undertakes not to dispose by gift, sale, or any mode of transfer of any vessel of war in such a manner that such vessel may become a vessel of war in the Navy of any foreign power.

Now, Mr. Chairman, each one of these provisions—the right to scrap the Navy, the agreement not to sell or give away any vessels, the agreement to cancel all capital-ship building contracts—embrace subjects under powers which belong to the Congress of the United States, as set forth in Article I (sec. 8, c. 13; sec. 8, c. 14; sec. 8, c. 18) and Article IV (sec. 3, c. 2), as follows: The power to "provide and maintain a Navy," to "make rules for the government and regulation of the land and naval forces," to "dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States." These powers are specifically granted to the Congress of the United States.

Gentlemen will recall that Article 1, section 8, of the Constitution specifies 17 great grants of power to the Congress, and then, as if fearful something might escape, there was added the coefficient clause that—

> Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

Under the Articles of Confederation, as you will remember, the United States possessed only powers which were expressly granted; and here are 17 great powers expressly granted to Congress, while implied powers were given in the coefficient clause which I have just given you.

How, then, can this treaty be executed without the help of Congress, when it contains subjects that the Constitution commits solely and exclusively to Congress? This same Constitution, in Article II, section 2, clause 2, gives the power to the President, by and with the advice and consent of the Senate, to make treaties, an unlimited power, seemingly, with no restrictions. What is a treaty? It is an agreement, a contract, between two or more nations to do or not to do something. That contract, like any other contract, may be an executed contract, or an executory contract. If it is an executed contract, then the treaty is self-executing. But if the treaty provides something that must be done by another arm of the Government it is executory—inchoate—and can not become a part of the supreme law of the land until that arm of the Government acts. Gentle-

men say, "Oh, well, but in the Constitution the treaty power is given in a way that can leave no doubt that the treaty can execute itself, for it is declared to be the supreme law of the land."

Notice that they read Article VI as if it were "all treaties made or that shall be made under the authority of the United States shall be the supreme law of the land." That is the way it is often read by gentlemen. But pick up the sixth article of the Constitution and read it, and what do you find? Here it is. First:

This Constitution—

And second—

and the laws of the United States which shall be made in pursuance thereof;

And third—

and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land.

Of the three, which is supreme? A trinity in unity. The same words that carry into the treaty power supremacy carry the same supremacy into the laws of Congress and into the Constitution itself. If the same words convey the same supremacy, how can the treaty power be supreme over the power of Congress or the Constitution itself, as some people claim? Why, gentlemen, is it possible that the treaty power, the child of the Constitution, can be superior to the parent? Can a part be more powerful than the whole? Therefore, I say that the supremacy of the treaty power carried in the sixth article of the Constitution is valid, but the same article carries the same supremacy to the Constitution and to the laws of Congress.

Let us see. This is no new question; oh, no. This has been before this House for 125 years. My good friend who sits before me, "Uncle Joe," has fought this question out in favor of this House and its powers in the good old days in which he has served his country. It started with the Jay treaty in 1796. George Washington, the President of the United States—from Fairfax County, Va., for the benefit of my friend MOORE—was requested by this House to send to it the Jay treaty with all accompanying papers. And what was the reply of that great man? With great dignity and force he said in effect:

I will not send the treaty and the papers to the House. You have nothing to do with the making of treaties. My function, with the Senate, is to make treaties, and it is your duty to carry out those treaties by voting appropriations that they carry.

The House did not agree with the President and put on record a defiant resolution which from that time to the present they have upheld in the history of this country, until finally it has triumphed, and is recognized to-day as a great principle controlling our Government.

I put into a resolution which I offered in the House some days ago the very language used by this House when the same question was considered under the Jay treaty, asking President Harding to send this treaty to the House, not that we especially cared for it, but to keep up the orderly conduct of business and the recognition of the powers of this House in respect to treaties. Why, gentlemen, not only was that fight made under the Jay treaty, but when Jefferson acquired Louisiana he sent the treaty to this House, or, rather, he got the House to appropriate the money first, telling them what he wanted with it before the treaty was ratified. When Florida was acquired, the same principle was adopted. With the Ashburton treaty, involving a part of the State of Maine, the same principle was carried out, and when Alaska was purchased the same principle was also carried out. It has been a great and long fight; but this House has won out and will never surrender its power. James G. Blaine, a former great Speaker of this House, in his "Twenty Years in Congress," Volume II, page 337, states that that struggle, which had continued for a century, had finally been settled in favor of this House, not the claim of having the right to make treaties but its claim to pass upon the question when a revenue law was sought to be changed or an appropriation made by a treaty.

Now, gentlemen, not only that—and I beg gentlemen to hear this—not only that, *but every President from John Adams to Woodrow Wilson, except William Henry Harrison and James A. Garfield, who held office only a short time—every one of them—sent to this House voluntarily, not by request of this House, as under the Jay treaty, but voluntarily they sent to this House one or more treaties either carrying an appropriation or providing for a change in the revenue laws.*

Why? Because Congress alone can appropriate money and lay taxes. If gentlemen want to see these treaties, I have them collected and arranged. So that this principle which is asserted is this bill, and which the committee is entitled to the congratulations of the House for thus framing, has the sanction of 125 years of procedure here, the sanction of the great name of James G. Blaine, of Crandall and Charles Henry Butler, who have written on this subject, and not only these but the sanction of every President of the United States except the alpha and the omega—Presidents Washington and Harding.

Another view seems to be conclusive. Under the coefficient clause Congress has power "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers and all other powers vested by this Constitution in the Government of the United States or in any department or officer thereof." That is, Congress has power to pass laws to carry out the 17 enumerated powers, and by this provision also any powers necessarily implied in them. But not only has Congress that power, but note it has the power to carry into execution "all other powers vested by this Constitution in the Government of the United States or in any department or office thereof." One of these powers vested in the Government of the United States is the treaty power, and when Congress finds that it is "necessary and proper" to carry out an executory contract made by the treaty power, here is a distinct authority for the same. A treaty may be by its very terms executed, and there is no law necessary to carry that out; but if it is executory and needs the ancillary help of a coordinate power, here is the express provision for it. This shows that the validity of a treaty may be conditioned upon the will of Congress, and Congress has the power under this Constitution to pass all laws which they shall deem necessary and proper to carry it into execution; but they are unrestrained; no moral or legal obligation under the treaty power to do what may not commend itself to their judgment. Again, the common rule of construction of instruments is that a *general* grant of power must yield to a *specific* grant in the same instrument. Here we have the general grant to make treaties, which may embrace any subject, practically. Now, the specific grant to Congress to pass revenue laws qualifies the general grant to that extent, for how could the general grant to make treaties fail to yield to the special grant to Congress to pass and to this House to originate revenue bills? And, again, the treaties before us require execution by Congress, and the very first article of the Constitution and the very first section of that article declares "All legislative powers herein granted shall be vested in a Congress of the United States," not in the treaty-making power.

Mr. MONDELL. Would it be agreeable to the gentleman from Virginia to yield to a question at this point?

Mr. TUCKER. Certainly.

Mr. MONDELL. I am not sure that I clearly understand the gentleman's position. Is it the gentleman's contention that the President should have sent the naval treaty to the House?

Mr. TUCKER. What is the gentleman's question?

Mr. MONDELL. Is it the gentleman's contention that the President should have sent the naval treaty to the House? Of course, it was necessary to send it to the Senate. Do I understand the President should have sent the treaty to the House?

Mr. TUCKER. I think to conform to the practice of the country ever since the days of President John Adams, in recognition of the established position of the House in this matter, the President ought to have sent the treaty to the House.

Mr. MONDELL. Well, if the gentleman will yield——

Mr. TUCKER. Yes.

Mr. MONDELL (continuing). I think it is proper that I should say that the President considered that matter. He was anxious to have the House participate, take a part in, and do whatever it was proper to do under the Constitution touching the matters and questions involved in the naval treaty, and the President, of course, is in full accord with what it is proposed to do in the bill before us, in the first section. I am not certain it would have been in accordance with precedent for the President to have transmitted the treaty itself to the House. Of course, it was essential that the treaty should be transmitted to the Senate, because under the Constitution the Senate must act upon it. But I am very much interested in the gentleman's position. In the main I am inclined to agree with him.

Mr. TUCKER. Come all the way over.

Mr. MONDELL. But I do not know just what the procedure might have been following the gentleman's view.

Mr. TUCKER. If the gentleman will permit me, we must not get things mixed. This House has no power to make a treaty. It does not claim any. But when the treaty contains a provision that this House must act upon in order to effectuate it, such treaty should be sent to the House as well as the Senate, and the uniform action of all Presidents from John Adams to Wilson would seem to make such action not only proper, but necessary. I am not sure that this treaty is one the sending

of which would have given much light to the House, but very often papers that are used in the course of making a treaty may throw light upon the question of an appropriation or the change of a revenue law, and, therefore, while this treaty might not have carried many papers of that sort I wanted the President to keep in line with the precedents which are before us. For, gentlemen of the House, if American liberty is to be preserved this House is to be the instrumentality by which it is to be done. [Applause.] Its powers, then, must be preserved.

Mr. MONDELL. I am anxious to know——

Mr. TUCKER. Will my friend pardon me just a moment? I probably can bring it out more clearly. President Washington, when he refused to send the Jay treaty and papers to the House, said in effect, "You are bound to carry out the appropriation in that treaty." The House said, "We bound? To whom? We must use our own judgment, our own discretion in reference to all other matters, but when it comes to a treaty we are to surrender it. Never!" That was the position of the House, and that is the position here.

Mr. MONDELL. What I am anxious to know is what the gentleman's view is as to what might have been done by the President in carrying out, as I understand it, the gentleman's view of the proper procedure. Assuming that the President had sent the treaty to the House, what would have been our action, if any, in the gentleman's view, touching the treaty or in regard to the treaty? Of course, we are now acting upon the subject matter.

Mr. TUCKER. Exactly; we are acting on the thing that is published in this pamphlet as the treaty. I do not know whether it is the treaty or not. We have no official document here that I know of.

Mr. MONDELL. But is it the gentleman's contention that the President should have transmitted the treaty to the House? And if so, what action could the House have taken on the treaty itself?

Mr. TUCKER. I think the President by all means ought to have sent the treaty to the House.

Mr. MONDELL. Merely as a matter of information?

Mr. TUCKER. No; but because it contained matters of legislation that the treaty power could not carry out.

Mr. MONDELL. But we could not have acted directly upon the treaty itself?

Mr. TUCKER. No, indeed. We had nothing to do with it, except so far as it contains executory contracts that we must act upon.

Mr. MONDELL. We are now proceeding, then, to do the thing which the gentleman thinks we should do touching the treaty?

Mr. TUCKER. Yes.

Mr. MONDELL. Then the only contention that the gentleman makes in regard to the matter is that it would have been more in accordance with the precedents had the President transmitted the treaty for information?

Mr. TUCKER. Yes. We wanted to be sure of what it was, whether we had a treaty; and any treaty that contains matter requiring legislation should be sent by the President to this House.

Mr. MONDELL. As a matter of information?

Mr. TUCKER. Yes.

Mr. MONDELL. We have the information otherwise.

Mr. TUCKER. We have something here. I hope it is correct.

Mr. LAYTON. Mr. Chairman, will the gentleman yield for a question?

Mr. TUCKER. Yes.

Mr. LAYTON. I am not as clear on that point as I want to be. Let us take the Colombian treaty, for instance. Does the gentleman hold or not hold that when that treaty was negotiated it was absolutely incumbent upon this House to vote for $25,000,000?

Mr. TUCKER. Never!

Mr. LAYTON. That is my idea. Does the gentleman hold that with respect to this recent treaty it was incumbent upon this House to abrogate its powers and let the matter of the destruction of property, which under the Constitution belongs to this House, go by the board?

Mr. TUCKER. The gentleman is right, beyond question. Undoubtedly when the executive department negotiates a treaty with a foreign country or agrees to a matter implying legislation, that treaty is strongly persuasive to this House. That far it should go, and no further. General Washington claimed that, because the treaty power put an appropriation into the treaty, we were bound like slaves, without discretion, without deliberation, without exercising our own judgments to pass it. O, no; never!

Mr. CRISP. Will my friend yield for a question?

Mr. TUCKER. Yes.

Mr. CRISP. When this treaty was first entered into there was some question in the minds of some of the Members of the House as to whether the treaty itself gave the Executive authority the right and power to destroy the ships in accordance with the treaty without congressional legislation. I would like to know the views of the gentleman, whether or not it was absolutely necessary to have legislative authority before the executive department of the Government could be authorized to scrap or destroy the ships in accordance with the treaty?

Mr. TUCKER. That is my view exactly.

Mr. HICKS. Mr. Chairman, will the gentleman yield?

Mr. TUCKER. Yes.

Mr. HICKS. Having had the benefit of the very able presentation of the gentleman's view before our committee, it seems to me this is the line of thought that he is leading toward, that under the general acceptation treaties are the supreme law of the land, but the Constitution also is the supreme law of the land; that treaties may provide for one thing; the Constitution also provides that Congress shall support and maintain a Navy. Now, that is in the Constitution. In order to have the power given to destroy the Navy it might seem to avoid any conflict or contention if Congress itself could pass a law providing for their destruction. Is that the gentleman's idea?

Mr. TUCKER. That is my idea.

You see, gentlemen, we are not only considering this bill, but we are also considering the question of where the principle involved in this bill may lead to. If the contention of the school whose theory I am contesting to-day is that we are bound in this House without regard to deliberation or consideration to pass any appropriation that may be in a treaty, then the treaty power can annihilate the powers of Congress, and Judge Storey said with great power that no one power in the Constitution can annihilate another. (Storey on the Constitution, sec. 1508.) Of course, it can not.

And yet some gentlemen take that view. Just think of it! That supremacy of the treaty power is incorporated in the sixth article of the Constitution, the last article of the Constitution in which any substantive grant of power is made. For months the makers of the Constitution had been adjusting the niceties between the States and the Federal Government, and with skillful hands had been doing what they could to satisfy the people of the country; and yet, according to the theory of these gentlemen, after doing all that, they inserted in the last article of the Constitution a power which could destroy not only the powers of Congress, the powers of the Executive and the judiciary, but the Constitution itself.

Mr. MOORE of Virginia. Mr. Chairman, will the gentleman yield?

Mr. TUCKER. In a moment.

For if it be true, in reference to this House, that a treaty can absorb powers granted to the Congress and thereby annihilate their powers, the same treaty power can override the executive power or the judicial power of this Government, for the executive and the judicial powers have supremacy infused into them to the same extent that Congress has and no greater. We could make a treaty under this theory with Haiti or with Liberia—Liberia seems now to be one of our favorites—providing that any inhabitant of Liberia that came to the United States could be eligible to the Presidency of the United States. That is not more extreme than the power which is sought by the treaty power to destroy the power of Congress. We have a provision of the Constitution, "The trial of all crimes * * * shall be by jury" (Art. III, sec. 2). Why not a treaty between this country and Italy by which we agree that all Italians that may be brought up for trial here shall be tried before the court without a jury? There is not a right, there is not a civil or a religious right, embodied in the granitic foundations of this Constitution for the benefit of American citizens that can not be wiped away by agreement in a treaty between this country and Patagonia or some other country equally as important if the doctrine of the unlimited treaty power advocated by many should come to be the law of the land.

So I may add that not only might this power, if allowed to go unlimited, overcome the powers of Congress, the powers of the Executive, the powers of the judiciary, but it might come down to the homes of the people, to their firesides, and destroy their local rights in their States, their counties, and their magisterial districts, because provisions might be put into a treaty which would destroy those rights. The tenth amendment secures to the people of the States all the powers not granted to the Federal Government. What would become of them?

No local right is nearer to the hearts of the people than that of educating their children in their own way. Suppose a treaty

with Liberia or Haiti should attempt to guarantee the right of the children of either country residing in this country to attend such schools as they desired. Many States of the Union do not permit mixed schools. Could the treaty power do in this matter what Congress could not do? Or take another example: I live in the Godly town of Lexington, Va., nestled in the foothills of the Blue Ridge and Allegheny Mountains, surrounded by mountains even as the mountains are around about Jerusalem. Long before national prohibition Lexington had driven the barrooms out. Now, suppose a treaty between the United States and France, which guarantees to the citizens of each country the reciprocal rights of doing business in that of the other, wholesale or retail, and with no further limitations or conditions; a Frenchman coming to Lexington, and finding it exceedingly dry, and imagining that it would be a fine place to open a barroom and do business as he had done in his own country, opens a barroom. He is promptly brought before Judge Holt by the sheriff, and his lawyer pleads in justification the treaty between the United States and France as 'the supreme law of the land' under which he claims the right to run the barroom. Judge Holt reluctantly admits the force of the plea and says the Frenchman is protected by the treaty, which is the supreme law of the land. The Frenchman, I am sorry to admit, does a large business, and Jim Johnson, a citizen of Lexington, who had borne arms in defense of his native State in the Civil War, furnished four sons to the Government in the war against Germany, who has been paying his taxes and discharging the duties of citizenship with unquestioned credit, but being poor, and desiring to make money, determines to open a barroom also himself. At once the vigilant sheriff takes him before Judge Holt, the law of Virginia is read to him, the court promptly sentences him to jail and puts a big fine on him, and there he stands, day by day, at the window of his cell looking at his hoped-for customers crowding the door of the Frenchman's barroom. Can these things be in Israel, under the treaty power or any other power?

So, gentlemen of the committee, because of my intense interest in this great question, so essential to the power of this House and the liberty of the people, I was delighted when I found that the committee presided over by my old friend [Mr. BUTLER] had adopted the only measure by which this treaty can be carried out legally and constitutionally.

Mr. MOORE of Virginia. Will my friend, to whom I am listening with the greatest profit and pleasure, permit an interruption?

Mr. TUCKER. Certainly.

Mr. MOORE of Virginia. I have been impressed with the suggestion he made awhile ago that we can take executory and executed contracts as furnishing an analogy. Now, what would the gentleman say to the proposition advanced by some of the leading writers, Judge Cooley among them, I think, that it is competent under the treaty-making power, without any assistance by Congress, for this Government to dispose of territory or acquire territory by treaty? Would that be such a contract—such an executed contract—as would operate of itself to accomplish a surrender or acquisition of territory?

Mr. TUCKER. I think not, and we have very ample and splendid backing for that proposition. In the Ashburton treaty, familiar to many of you, wherein a part of the State of Maine was involved, Mr. Webster, the great statesmen, said no, that that treaty could not be carried into effect without the consent, as I remember it, of the State of Maine. Mr. Webster upheld that view.

I find myself tempted to go into other inviting paths to follow this principle in other directions. But, gentlemen of the House, our forefathers in the Parliament of England fought the battle of individual liberty and won it. It took many years, but it was the power of Parliament over the purse strings that caused them when His Majesty came to them for an appropriation to demand a redress of grievances also. That great fight should give us courage and give us hope and give us determination to uphold the dignity of this House, its power and its usefulness to the people of the country. [Applause.]

I do not care to discuss the details of this bill. Others will do that. I am told that this bill does not amount to anything, that it provides for just a little scrapping, but that it does not amount to anything substantial. I do not know, Mr. Chairman, whether it amounts to much or not.

But one thing I do know. It is in the right direction. It points to Peace. We may never get international peace. We do not know whether the hearts of men have been changed by the Great War, or whether envy, hatred, malice, and all uncharitableness have been purged from the souls of men. We do not know whether the iron hand of despotic power is entirely crippled. But this much I do know, that we can not get disarmament without starting.

I do not ask to see the distant scene;
One step enough for me.

[Applause.]

I do not care whether the proposition for peace comes from Woodrow Wilson or from Harding, I am for it. [Applause.] Let us do our duty. I can not fully express the feeling I have—I suppose we all have it—that after listening here in the last few weeks to the splendid eulogies on the glory of the American Navy, we come now to its funeral. We will drop a tear. Indeed, I should like to ask the gentleman in charge of the bill if he will not permit an amendment, providing that when the President scraps or sinks one of these great dreadnoughts that have added so much of power and glory to the American name, that when she goes down he shall erect a buoy there on which shall be written the word, "Resurgam!" For—

"If peace should be hopeless and justice denied,
And war's bloody vulture should spread her black pinions,
Then gladly to arms, while we hurl in our pride
Defiance to tyrants and death to their minions,"
And the folds of Old Glory shall triumphantly wave
To light us to freedom and glory again.

[Applause.]

Under leave to extend his remarks, Mr. TUCKER further said: This discussion has taken so wide a range involving the treaty power that I desire to submit to the committee a review of the decisions of the Supreme Court on this subject, which may be of interest.

"The first case brought to the Supreme Court on the construction of this clause was Ware *v.* Hylton (3d Dallas, 199). It was decided in 1796. This case is familiar to many of you, no doubt, as involving old British debts, a case that grew out of claims of British creditors against American debtors just after the Revolutionary War. This case has been quoted for 120 years as having first and finally decided the question that a treaty is superior to and annuls all laws of a State in conflict with it. It is a case which you will remember Patrick Henry argued in the city of Richmond with John Marshall for the Virginia debtors. The case was heard before Justices Jay and Ireland, and Griffin, the district judge. It was in May, 1794, that the case was heard. The old Chief Justice, as he left his apartments that morning to go to the hearing of the case, was walking with Judge Ireland, and Judge Ireland said to him, 'I am very curious to hear this Governor Henry; he is said to be quite a speaker, and I understand he is to appear in this case.' 'Oh, yes,' said the Chief Justice, 'he is a remarkable speaker.' The account which I read in an old magazine of this incident said that when Governor Henry had been speaking about two days and was coming down the home stretch with all flags flying and with that wonderful eloquence peculiar to him, Judge Ireland was so enthused by it that he grabbed the Chief Justice by the arm and said 'Great God, what an orator!' The case was decided in the lower court in favor of the Virginia debtors, and was taken to the Supreme Court. Patrick Henry did not follow the case there, but Marshall did. It is the only case that Judge Marshall ever argued, by the way, in the Supreme Court, and he lost it. The case was heard before four judges; Justice Ireland sat in the case, but announced that he would take no part in its decision, as he had sat on the court below. It required, of course, a majority of the four to reverse the decision below; it required three out of the four.

"Now, what was the case? It was a suit on a bond, an action brought by a British creditor against a Virginia debtor. There were two pleas to the declaration, one of which we need not consider, and the second plea was a plea setting up a Virginia law of 1777, which it was claimed confiscated British debts. To that law of 1777, when that plea was filed, immediately a replication was filed setting up the treaty of peace between the United States and Great Britain, in which it was declared that no legal impediment should be set up against the collection of debts between the two countries, and that the law of Virginia of 1777 was a legal impediment. To that replication there was a rejoinder by the Virginia debtors, in which they said in effect, 'Your old treaty is no good; you promised to do certain things and you haven't done them, and as your treaty has been violated in some respects it is no good in any.' That was the rejoinder. To that rejoinder there was a demurrer. Now, brethren of the bar, what was the effect of that demurrer? Why, virtually that demurrer went not only to the rejoinder but to every prior pleading in the case beginning with the declaration and stopped where the first error was found. When this second plea was reached, what did they say to that? Three of the four judges declared that the Virginia act of 1777 was invalid. What was the effect of that? Why, the plea fell, of

course; when the plea fell, the replication to the plea fell; when the replication went out, the rejoinder went out; and there was nothing left except the declaration and a clear road to judgment, and the court held in favor of the British creditor by eliminating the Virginia law, declaring that it was no law. It was not decided that the treaty was in conflict with the law, for the court held that there was no law. Yet that case has been quoted and cited for 120 years as deciding a conflict between the law and the treaty, when three of the four judges declared there was no law. The case was decided right, but the point I am addressing my attention to is that it is claimed that this case decided a conflict between the law and the treaty, when, as a matter of fact, you see there could be no conflict between the law and the treaty if the court declared there was no law.

"Judge Chase, who was a man of clear legal vision, delivered the clearest and ablest opinion in the case. He uses the following language:

"The second point made by counsel for the plaintiff in error was, 'If the Legislature of Virginia had a right to confiscate British debts, yet she did not exercise that right by the act of the 20th of October, 1777'; *if this objection is well founded, the plaintiff in error must have judgment for the money covered by the plea of that law and the payment under it.* (Three of the four judges sitting in the case found this 'objection' well 'founded,' namely, Paterson, Wilson, and Cushing.)

"That was Judge Chase's view of the case; but each judge delivered a separate opinion, and his was not the opinion of the court. So misunderstood has this case been, however, that six years ago, in the city of Washington, where the National Society of International Law was meeting and discussing the treaty power, no less a lawyer than Mr. Root, as president of that association, in speaking of Judge Chase's opinion, declared it was the opinion of the court. If Judge Chase's opinion had been the opinion of the court the issue would have been decided clearly in favor of the treaty. Two deans of law schools in the same meeting quoted Judge Chase's opinion as the opinion of the court; so that this case for 120 years has been quoted as deciding that the treaty annulled the State law of Virginia; and yet it shows by analysis that it could not have decided that, as the majority of the court held either that the State law was invalid, or if valid that it did not actually attempt to confiscate debts.

"The next case is that of Chirac *v.* Chirac (2 Wheat. 259), followed by Hauenstein *v.* Lynham (100 U. S. 483), and then by Geofroy *v.* Riggs (133 U. S. 266).

"John Baptiste Chirac became a resident of Maryland in 1793. In 1795 he took the oath of citizenship under the law of said State, and received a conveyance in fee of land from the State. In 1798 he became a naturalized citizen under the laws of the United States, and died in 1799, leaving heirs in France. His land was escheated to the State. In 1809 his heirs brought ejectment for the land.

"The treaty between France and the United States of 1800, which was in existence when the heirs brought the suit in ejectment, contained the following:

"The citizens and inhabitants of either of the two countries who shall be heirs of goods, movable or immovable, shall be able to succeed *ab intestato* without *being obliged to obtain letters of naturalization* and without having the effect of this provision contested or impeded under any pretext whatever.

"The law of Maryland referred to contained the following:

"If any subject of France, who shall become a citizen of Maryland, 'shall die intestate, the natural kindred of such decedent, whether living in France or elsewhere, shall receive the property in like manner as if such decedent and his kindred were the citizens of the United States.' * * *

"But to this enacting clause is added a proviso; that whenever any subject of France shall by virtue of this act become seized in fee of any real estate his or her estate, 'after the term of 10 years be expired,' shall vest in the State, unless the person seized of the same shall within that time either come and settle in *and become a citizen of this State* or enfeoff thereof some citizen of this or some other of the United States of America."

"The heirs of Chirac complied with neither of these requirements. The effect of the clause from the treaty of 1800, quoted above, Judge Marshall tells us in the following:

"The direct object of this stipulation is to give French subjects the rights of citizens so far as respects property and to dispense with the necessity of obtaining letters of naturalization. It does away with the incapacity of alienage and places the defendants in precisely the same situation with respect to lands as if they had become citizens. It renders the performance of the condition a useless formality.

"When the Maryland law said that the estate should cease after 10 years unless the owners became citizens of Maryland, or some other State of the Union, Judge Marshall says that that condition of the law of Maryland was met by the treaty which put the Frenchmen 'in the same situation with respect to land as if they had become citizens.' The treaty did not change the law of Maryland, which required a man to be a citizen of that State or the United States to hold the land. It simply removed the badge of alienage from him that would prevent his holding it, and *quoad* this privilege made him a citizen, and the whole question therefore turns on whether the treaty power can remove the badge of alienage and not whether it can change the law of descent of the State.

"In Ekiu *v.* United States, 143 U. S. 659, Judge Gray says:

"It is an accepted maxim of international law that every sovereign nation has the power, as inherent in sovereignty and essential to self-preservation, to forbid the entrance of foreigners within its domain, or to admit them only *in such cases and upon such conditions as it may see* fit to prescribe. In the United States this power is vested in the National Government; it belongs to the political department of the Government and may be exercised either through treaties made by the President and Senate or through statutes enacted by Congress.

"In Bohaund *v.* Bize, 105 Fed. 485, the court said:

"It is not an open question that the United States has power to make treaties removing the disability of aliens to inherit, and that such treaties are a valid exercise of and within the power of the Constitution of the United States."

"In short, the law of Maryland prohibited a Frenchman from holding land that he had acquired after 10 years unless he became a citizen of that State or some other State; this law was valid, but undoubtedly the question of who is a citizen must be determined not by the law of Maryland but by the law of the United States, and when a treaty removed the badge of alienage, as Judge Marshall said, from the Frenchman it did not make him a citizen of Maryland, but it prevented Maryland from denying to him a right under her laws because he was a foreigner, because the treaty power that had the right to do so declared that *quoad* that property in Maryland the Frenchman was not a foreigner, but, as Judge Marshall said, he was placed 'in precisely the same situation with respect to land as if he had become a citizen.'

"The condition of the law of Maryland, that he who acquired real estate within the bounds of the State was to be a citizen, was not annulled by the treaty, but who was to be considered a citizen was the question which under the Constitution was left with the Government of the United States. In other words, Maryland could say that none but a citizen could hold her lands, but the Federal Government alone could say who was to be regarded as a citizen.

"The case of Geofroy *v.* Riggs (133 U. S. 270) is to the same effect. In this case two Frenchmen, nephews of a citizen of the United States, resident in Washington, sought to inherit from their uncle under the laws of descent of the District, which under the act of Congress of February, 1801, made the laws of Maryland in force at that time the laws of the District. The common law prevailed there. Under this aliens could not inherit; but in 1780 the State of Maryland passed an act modifying the common law as to subjects of France who settled in Maryland and who had given allegiance to the State, and allowed the heirs of such Frenchmen who died intestate to inherit the estate, whether they were subjects of France or of the United States. This, however, did not reach the case at bar, for here the intestate was a citizen of the United States and not a citizen of France, as provided for under the law of 1780.

"In 1791 an act was passed by Maryland that any foreigners, not Frenchmen alone, might hold lands in that State as if they were citizens, and that they might be inherited by their foreign heirs as if they were citizens of the State, but this law did not cover the case at bar, for, as was said, the decedent here was a citizen of the United States. So that as to this case the common law was applicable, that an alien could not inherit land; and by the convention of 1853 between France and the United States the following provision was incorporated:

"In all the States of the Union, whose existing laws permit it, so long and to the same extent as the said laws shall remain in force, Frenchmen shall enjoy the right of possessing personal and real property by the same title and in the same manner as the citizens of the United States. They shall be free to dispose of it as they may please, either gratuitously or for value received, by donation, testament, or otherwise, *just as those citizens themselves;* and in no case shall they be subjected to taxes on transfer, inheritance, or any others different from those paid by the latter, or to taxes which shall not be equally imposed.

"As to the States of the Union, by whose existing laws aliens are not permitted to hold real estate, the President engages to recommend to them the passage of such laws as may be necessary for the purpose of conferring this right.

"In like manner, but with the reservation of the ulterior right of establishing reciprocity in regard to possession and inheritance, the Government of France accords to the citizens of the United States the same rights within its territory in respect to real and personal property and to inheritance as are enjoyed there by its own citizens."

"Judge Field, in construing this provision of the treaty, declares that its meaning is 'that there shall be reciprocity in respect to the acquisition and inheritance of property in one country by the citizens of the other—that is, in all political communities in the United States where legislation permits aliens to hold real estate the disability of Frenchmen from alienage from disposing and inheriting property, real and personal, is

removed and the same right of disposition and inheritance of property in France is accorded to citizens of the United States as are there enjoyed by its own citizens.'

"When the treaty says in that section that Frenchmen shall enjoy the rights of possessing real property in the same manner as the citizens of the United States, and that they shall be free to dispose of it as they may please, 'by donation, testament, or otherwise, just as though citizens themselves,' there can be no doubt, as Judge Field says, that the alienage of the heirs was removed, which the treaty had the right to do.

"The court in Chirac *v.* Chirac, and in this case, do not undertake to say that the treaty annuls the laws of inheritance of the States, for in both cases the foreign heirs took their inheritance under the laws of descent of Maryland, nor did the court in either case declare that the treaty power could make a Frenchman a citizen of the United States, for this, under the Constitution, would naturally be left to Congress to naturalize the foreigner. But in both cases the court does hold in effect that while the treaty can not make the Frenchman an American citizen, it can declare his status when he comes to America, and while the treaty power may not clothe him with positive rights, it may change his status in such a way as to permit his enjoyment of rights which would have been denied him but for such change. And when the law of the State says that no alien shall inherit, that law is valid, but its validity can not prevent the Government of the United States, to whom is committed all power over aliens, from declaring who is an alien.

"Judge Field says:

"As commercial intercourse increases between different countries the residence of citizens of the country within the territory of the other naturally follows, and the *removal* of their disability from alienage to hold, transfer, and inherit property in such cases tends to promote amicable relations. Such removal has been within the present century the frequent subject of treaty arrangement. (P. 266–67.)

"It is seen, therefore, that under the treaty power there exists the right to remove the badge of alienage and to clothe the foreigner with the right of sonship to his inheritance before he touches American soil. And though 'aliens from the Commonwealth of Israel, and strangers from the covenants of promise' (I Ephesians ii, 12), the Government of the United States through this treaty power may in its wisdom remove the fetters upon alienage and declare that those who are the subjects of its favor may enter the country free from the hindrance of alienage. The magic words, 'I pronounce you man and wife,' are not more potent when uttered at the altar in changing the status of a blushing bride and clothing her with marital rights unknown to her before their utterance than are the provisions of a treaty changing the former status of the alien and clothing him with privileges unknown to him before adoption.

"The marriage ceremony does not change the law of inheritance in the State where the ceremony is performed—that alone can be done by the legislative power—but it places some in the line of inheritance under the State law who were outside of its provisions by changing the status of such persons. Had the bridegroom suddenly died 10 minutes before the ceremony, the prospective bride, under the law of the domicile, would have been deprived of the inheritance which would go to her had the death of the bridegroom occurred 10 minutes after the ceremony, instead of 10 minutes before, as supposed. The law of the State is the same, the persons are the same, but the status of such persons has been changed.

"This case is always quoted as deciding that a treaty can annul the laws of inheritance and descent of a State. Judge Field delivered the opinion of the court. If the case so decides, then Judge Field had changed his opinion on that subject, for he said, in Fox *v.* United States (94 U. S. 320, 24 L. ed. 192), speaking for the court:

"The power of the State to regulate the tenure of real property within her limits, and the modes of its acquisition and transfer, and the rules of its descent, and the extent to which testamentary disposition of it may be exercised by its owners, is undoubted. It is an established principle of law, everywhere recognized, arising from the necessity of the case, that the disposition of immovable property, whether by deed, descent, or any other mode, is exclusively subject to the government within whose jurisdiction the property is situated.

"If the above is law, then, of course, neither a treaty nor any other power can change the laws of inheritance of a State. Did Judge Field in Geofroy *v.* Riggs intend to overrule his opinion in Fox *v.* United States? And that, too, without referring to the case? For there is no reference to Fox *v.* United States in Geofroy *v.* Riggs. How, then, can both opinions stand as valid and correct? Only by adopting the suggestion above given, that when Judge Field, in his dictum, declared the treaty suspended for the while the law of the State, he meant it was suspended by the removal of the badge of alienage from the Frenchman. He did not declare the law was null and void, but only suspended. If the treaty was in conflict with the law and superior to it, why did it not annul the law? It is quite improbable that Judge Field in Geofroy *v.* Riggs could have intended to uproot the principles laid down in Fox *v.* United States without a word giving his reasons for the change and without even referring to the case. Judge Field was too bold and too great a judge to have pursued such a course.

"The examination of the facts in this case shows quite conclusively that in point of fact there was no conflict between a treaty and a law, and that that question was not necessary to the decision of the case, and in the latter part of his opinion Judge Field strongly intimates this in his discussion of the statute of 1887.

"An American citizen died intestate seized of real estate in the District of Columbia. He had heirs who were Frenchmen. Article 7 of the treaty between France and the United States of 1853 provided:

"In all the States of the Union whose existing laws permit it, so long and to the same extent as the said laws shall remain in force, Frenchmen shall enjoy the right of *possessing* personal and real property by the same title and in the same manner as the citizens of the United States.

"Now, what law referred to in this case contravenes the language of this treaty? Congress in 1801 adopted the laws of Maryland which were in force on the 27th day of February, 1801, in that State, and the law of Maryland as to the inheritance by aliens was the common law, modified by two statutes, one of 1870 and one of 1791, but these statutes did not change the common law as to the right of aliens to inherit from citizens of the United States; but the Congress of the United States on the 3d of March, 1887, with complete legislative jurisdiction over the District of Columbia, where the property in question was situated, passed an act declaring that it—

"shall be unlawful for any citizen or persons not citizens of the United States, or who have not lawfully declared their intention to become such citizens * * * to hereafter acquire, hold, or own real estate so hereafter acquired, or any interests therein, in any of the Territories of the United States or in the District of Columbia, except such as may be acquired by inheritance or in good faith in the natural course of justice in the collection of debts heretofore created, etc.

"Under the language of the seventh article of the treaty of 1853 the court holds that the District of Columbia is to be considered as a State of the Union, so far as the provisions of the treaty are concerned, and, therefore, that if the laws of the District permit the Frenchman to enjoy the right of possessing personal and real property that they shall hold it by the same title as citizens of the United States, and further on under the treaty they are permitted to dispose of it by testament or otherwise. The law of March 3, 1887, covering the District of Columbia, allows a Frenchman to take property by inheritance; and if so, so far from conflicting with the treaty it conforms to the treaty. When the law of 1887 was passed, Riggs, the ancestor from whom complainants claimed the inheritance, was still living, and did not die until January 19, 1888, so that the common law of Maryland, which would have prevented the French heirs from inheriting, had been supplanted by the law of Congress granting such right of inheritance, and there was no conflict, therefore, between the treaty and the law, and therefore Judge Field's opinion as to the suspension of the statute law of Maryland by the treaty of 1880 was dictum.

"The case of Hauenstein *v.* Lynham (100 U. S.), I think, is improperly cited as a case involving a conflict between the law of the State and the treaty. The case came up from Richmond, Va., and the learned judge of the Supreme Court of Virginia who decided it, as well as Justice Swayne, who delivered the opinion of the court in the Supreme Court of the United States, both admitted that it turned on a mere question of construction. That such was the case is plainly seen from a recital of the law of Virginia and of the treaty with which it was supposed to collide.

"The treaty between the United States and Switzerland of November, 1855, contained the following provision:

"But in case real estate situated within the territories of one of the contracting parties should fall to a citizen of the other party, who, on account of his being an alien, could not be permitted to hold such property in the State or in the canton in which it may be situated, there shall be accorded to the said heir or other successor *such term as the laws of the State or canton will permit* to sell such property; he shall be at liberty at all times to withdraw and export the proceeds thereof without difficulty, and without paying to the Government any other charges than those which, in a similar case, would be paid by an inhabitant of the country in which the real estate may be situated.

"The law of Virginia did not permit an alien to inherit lands, except under conditions which had no relation to the case. The law of Virginia (6th sec., ch. 115, p. 557), Code of Virginia, 1860, is as follows:

"When by any treaty now in force between the United States and any foreign country a citizen or subject of such country is allowed to sell real property in this State such citizen or subject may sell and convey the same and receive the proceeds thereof *within the time prescribed by such treaty.*

"Hauenstein was an alien. The law of Virginia did not permit him to hold real estate. The provision of the treaty above quoted provided for such a case and the law of Virginia above quoted likewise recognized such cases. The treaty declared in such cases such time should be given for the sale as the law of the State might prescribe; with equal politeness the law of the State said that in such cases such time should be given as the treaty might prescribe. Neither the treaty nor the law prescribed any limitations of time. The Virginia court held that no time was allowed to sell the land and it escheated. The Supreme Court of the United States held that as no time was mentioned, a reasonable time was presumed to have been meant.

"There was no conflict here between the Virginia law and the treaty, but it was a mere question of construction.

"Two cases involving the right of inheritance by foreigners were decided by Justice Storey, Orr *v.* Hodgson (4 Wheat. 453), and Fairfax, devisee, *v.* Hunter (7 Cranch, 603). In both of these cases the treaty between the United States and Great Britain of 1794 was involved. That treaty provided that British subjects in this country in reference to land might 'grant, sell, or devise the same to whom they pleased, in like manner as if they were *natives*, and that neither they nor their heirs or assigns should, so far as respects the said lands and the legal remedies thereto, *be considered as aliens*.' In both of these cases Judge Storey took the position that the treaty removed the badge of alienage and did not decide that the treaty annulled the local law of the State. Indeed, Judge Storey has emphasized his position on this subject in his great work on the Constitution, volume 1, 359, where he says:

"Independent of all other considerations, the fact that the States possess a concurrent power of taxation and an *exclusive* power to regulate the descents, devise, and distribution of estates (a power the most formidable to despotism, and the most indispensable in its right exercise to republicanism) will forever give them an influence which will be as commanding as, with reference to the safety of the Union, they could deliberately desire.

"If the States possessed the exclusive power to regulate descents, etc., as Judge Storey says, and which he says is most indispensable in its right exercise to republicanism, it would require very clear language in any opinion by this learned judge to show that he has falsified his opinion thus expressed in favor of the treaty power of the United States.

"Mr. Charles Henry Butler, in his admirable book on the treaty power, says that it can regulate 'the descent or possession of property within the otherwise exclusive jurisdiction of the States.' The cases that we have referred to in no wise claim the power of the treaty to change the laws of descent of the States. These remain in force, and the foreign heirs who secured their inheritances in these cases made claim for them under the laws of descent of the States and secured them under such laws. If a treaty between the United States and France provided that the citizens of each country could inherit property in that of the other under the law of descent of their own country, and such treaty were held valid, then, indeed, would the treaty annul the law of descent of the States. (See also Gonzales *v.* Williams, 192 U. S. 1.) On this branch of the subject, therefore, we conclude that no case has arisen in the Supreme Court where the court has decided that the treaty had annulled the law of the State. There are undoubtedly expressions by the judges which are mere dicta, declaring that the treaty is the supreme law of the land and therefore superior to the law of the State, but the cases I have cited produce no such conflict and no such decision.

"On the other hand, we think the court has practically decided that a treaty can not overrule and annul the police law of a State enacted in the interest of the health or safety of the people of the State. The case of Compagnie Francaise *v.* The Board of Health (186 U. S. 380) is a case of great interest.

"The *Britannia*, a French vessel, with 400 Italian immigrants on board, entered the mouth of the Mississippi River en route to New Orleans and was stopped by the quarantine officer of the State and denied entrance to the port of New Orleans. The ground for his action was based upon the action of the board of health of the State, as set forth in the following resolution:

"That hereafter, in the case of any town, city, or parish of Louisiana being declared in quarantine, no body or bodies of people, immigrants, soldiers, or others, shall be allowed to enter said town, city, or parish so long as said quarantine shall exist, and that the president of the board shall enforce this resolution.

"Yellow fever was in New Orleans. It was quarantined. Acting under this resolution the board of health instructed the quarantine officer as follows:

"Referring to the detention of the steamship *Britannia* at the Mississippi River quarantine station with 408 Italian immigrants on board, I have to inform you that under the provisions of the new State board of health law, section 8, of which I inclose a marked copy, this board has adopted a resolution forbidding the landing of any body of people in any town, city, or parish in quarantine.

"The *Britannia* relied upon her rights under a treaty between the United States and France to justify her entrance into the forbidden port. That treaty provided for her treatment on the footing of the most favored nation, and an appeal was had to the treaty between the United States and Greece with the following provision in it:

"It is agreed that vessels arriving directly from the United States of America at a port within the dominion of His Majesty the King of Greece, or from the Kingdom of Greece at a port of the United States of America, and provided with a bill of health granted by an officer having competent power to that effect at the port whence such vessel shall have sailed, setting forth that no malignant or contagious diseases prevailed in that port, *shall be subjected to no other quarantine than such as may be necessary for the visit of the health officer of the port where such vessel shall have arrived, after which said vessel shall be allowed immediately to enter and unload their cargoes;* provided always that there shall be on board no person who during the voyage shall have been attacked with any malignant or contagious disease; that such vessel shall not during the passage have communicated with any vessel liable itself to undergo quarantine; and that the country whence they came shall not at any time be so far infected or suspected that before their arrival an ordinance had been issued in consequence of which all vessels coming from that country should be considered as suspected and consequently subjected to quarantine.

"Under the provision of this article, the papers of the *Britannia* were found to be correct. She was provided with a bill of health from the competent officer of the port from which she had sailed. It was also shown that none on board had during the voyage been sick with any contagious disease; that she had had no communication with any vessel during the voyage liable to undergo quarantine, and that the country from which she had sailed had not been infected with malignant disease since the departure from that country.

"Justice White delivered the opinion of the court and said:

"Conceding, *arguendo*, this latter proposition, and therefore assuming that all the treaties relied on are applicable, we think it clearly results from their context that they were not intended to and did not deprive the Government of the United States of those powers necessarily inhering in it and essential to the health and safety of its people. We say the United States, because if the treaties relied on have the effect claimed for them that effect would be equally as operative and conclusive against a quarantine established by the Government of the United States as it would be against a State quarantine operating upon and affecting foreign commerce by virtue of the inaction of Congress. * * *

"Nothing in the text of the treaty, we think, gives even color to the suggestion that it was intended to deal with the exercise by the Government of the United States of its power to legislate for the safety and health of its people or to render the exertion of such power nugatory by exempting the vessels of the Kingdom of Greece, when coming to the United States, from the operation of such laws. In other words, the treaty was made subject to the enactment of such health laws as the local conditions might evoke, not paramount to them.

"Justice White in his opinion states clearly that the treaty did not attempt to annul the police power of the State in the health laws of Louisiana, and his reason for it is quite convincing, because 'the treaty was made subject to the enactment of such health laws as the local conditions might evoke, not paramount to them.' When he says that the treaty was made subject to the enactment of health laws, and so construes the treaty as having been thus made, clearly there is no conflict between the treaty and the law, but for the reason, as he says, that the treaty was made *subject to the law*. The conflict between a treaty and a law may be evaded always on these terms, that the one is subject to the other, but if the quarantine law was sustained, as it was, it was because the treaty must have been made subject to its provisions.

"The case of Rocca *v.* Thompson (223 U. S. 318), decided in 1912, is of interest. The case came up from California and presented a conflict between the law of California providing for a public administrator and a treaty between Italy and the United States. Under this treaty Italy enjoyed the most favored nation clause in reference to rights, prerogatives, and privileges of consular officers, and when on the death of an Italian subject of California the public administrator sought to take charge of the estate the Italian consul invoked a clause of a treaty between the United States and the Argentine Republic which he relied upon under the most favored nation clause, which was as follows:

"If any citizen of either of the two contracting parties shall die without will or testament in any of the territories of the other, the consul general or consul of the nation to which the deceased belonged, or the representative of such consul general or consul in his absence, shall have the right *to intervene in the possession, administration, and judicial liquidation of the estate of the deceased* conformably with the laws of the country, for the benefit of the creditors and legal heirs.

"This clause of the treaty and the law of California in establishing a public administrator would seem to create a direct conflict. If the consul had the right to intervene 'in the possession, administration, and judicial liquidation of the estate of the deceased conformably with the laws of the country, for the benefit of the creditors and legal heirs,' it would seem that such right would certainly exclude the right of the public administrator. The court sustained the right of the public admin-

istrator, but did so by holding that the California law did not conflict with the language of the treaty.

"Judge Day's opinion in the case seems to me to have been a masterpiece of critical dissection of the treaty that it might not collide with the law of the State. The decision of the court sustained the State law, but it would seem that the words quoted above from the treaty are complete in giving the right to the consul above the public administrator. Certainly this is true that if it had been settled by the court from the day of Ware *v.* Hylton up to the time of the decision of this case, that a law of a State was annulled by a treaty which conflicted with it, the case could never have been decided as it was. (Following this decision two strong State courts have decided the same question in the same way. In re D'Adams, 212 N. Y. 214, 106 N. E. 81; Pegano *v.* Cerri, 112 N. E. 1037.)

"Another case of interest on this question is that of Patsone *v.* The State of Pennsylvania (232 U. S. 245), decided in 1913. In this case the State of Pennsylvania, nominally for the protection of game, passed a law making it 'unlawful for any unnaturalized foreign-born resident to kill any wild bird or animal except in defense of person or property, and to that end makes it unlawful for any such foreign-born person to own or be possessed of a shotgun or rifle, with a penalty of $25.' In an indictment against an Italian for owning a shotgun, he plead the treaty between the United States and Italy of 1871, which provided that in reference to the person and property of Italians they 'shall enjoy in this respect the same rights and privileges as are or shall be granted to the natives, on their submitting themselves to the conditions imposed upon the natives.'

"Justice Holmes, in delivering the opinion of the court, said:

> "There remains then only article 3 (of the treaty). With regard to that it was pointed out below that the equality of rights that it assures is equality only in respect of protection and security for persons and property. The prohibition of a particular kind of destruction and of acquiring property in instruments intended for that purpose established no inequality in either respect. It is to be remembered that the subject of this whole discussion is wild game, *which the State may preserve for its own citizens if it please.*

"The State law was upheld. There was no question that the law of Pennsylvania discriminated against the Italians for the citizens of Pennsylvania were not denied the right to own shotguns, though they might kill game with them also, and the treaty distinctly declared that the Italians should have the same rights and privileges as the natives. It is true Judge Holmes seeks to justify the judgment of the court on the ground that the object of the law was to preserve wild game, 'which the State may preserve for its own citizens if it pleases.' If the State might do this for its own citizens, then no treaty can invade that right, and if no treaty can invade that right the treaty must be made subject to that right.

"The case of Heim *v.* McCall (239 U. S. 175) is the last case on the subject. The law of New York provided, 'In the construction of public works by the State or a municipality, or by persons contracting with the State or municipality, only citizens of the United States shall be employed.' The treaty between the United States and Italy, 1871, provided:

> "That the subjects of the King of Italy residing in the United States shall have and enjoy the same rights and privileges with respect to persons and property as are secured to the citizens of the United States residing in the United States.

"The court decided that the law of New York was valid and that the State of New York on its public works was not obliged to employ Italians who applied under the treaty. Justice McKenna rendered the decision of the court. Commenting upon the case of Patsone *v.* Pennsylvania (232 U. S. 145), Justice McKenna says, 'Adopting the declaration of the court below it was said "that the equality of rights that the treaty assures is equality only in respect of protection and security for persons and property." And the ruling was given point by a citation of the power of the State over its wild game which might be preserved for its own citizens. In other words, the ruling was given point by the special power of the State over the subject matter, a power which exists in the case at bar, as we have seen.' Now, if the State has the power over the subject matter, then clearly rights claimed under a treaty against such power of the State are void, and if void they are void because the State power which collides with the treaty power is superior to it.

"The cases which I have referred to are divided into two distinct classes, the first beginning with Ware *v.* Hylton and ending with Geofroy *v.* Riggs. The advocates of the unlimited treaty-making power uniformly claim that these cases have forever settled the question that a treaty annuls the laws of a State which are in conflict with it. I have sought to show you that in Ware *v.* Hylton this question was not decided, because the court had eliminated the question by deciding that the law of the State of Virginia was invalid and void, and of course therefore there could be no conflict between the treaty and the law, as the law was void. In Geofroy *v.* Riggs, Judge Field's expressions in his opinion of the supremacy of a treaty over a law of a State in conflict with it were clearly *dicta*, because the law of Congress of 1887, which controlled real estate in the District of Columbia, repealed the law of Maryland, and was not in conflict with the treaty but in entire accordance with the treaty (see Ward *v.* Race Horse, 163 U. S. 514), while his opinion was based largely on the effect of the laws of Maryland, which had been adopted by Congress in 1801 as the laws of the District of Columbia applying to realty, but which had been changed by the act of Congress of 1887, passed a year before Riggs died. Congress had a right to pass such an act, and *that act specifically gave the right to aliens to acquire property by inheritance.* If so, the laws of Maryland adopted by Congress for the District of Columbia in 1801, which denied the right of inheritance to aliens, were repealed by the act of 1887, which in direct language gave the right of inheritance to them. Judge Field refers to the act of 1887 in the latter part of his opinion. How can it be said that this case decided a conflict between a treaty and the State law of Maryland when Congress by the act of 1887 supplanted the law of Maryland and enacted its own law giving aliens the right of inheritance in the District of Columbia?

"If my conclusions about these cases be not correct, this anomaly is presented that the Supreme Court from Ware *v.* Hylton to Geofroy *v.* Riggs has decided uniformly that a treaty annulled State laws in conflict with it and yet has recently decided the cases of Compagnie Francaise *v.* The Board of Health, Rocca *v.* Thompson, Patsone *v.* Pennsylvania, and Heim *v.* McCall, sustaining the laws of States which conflicted with existing treaties between the United States and foreign countries. To adopt such a conclusion is to hold that the Supreme Court has reversed its position on this question. This I do not believe, but more rationally these later decisions serve to interpret the earlier ones, making the action of the court throughout its history consistent and uniform."

Mr. HICKS. Mr. Chairman, I yield 30 minutes to the gentleman from Ohio [Mr. BURTON], and I think the gentleman from Tennessee [Mr. PADGETT] will also yield him 10 minutes.

Mr. PADGETT. I yield to the gentleman from Ohio 10 minutes additional.

The CHAIRMAN. The gentleman from Ohio [Mr. BURTON] is recognized for 40 minutes. [Applause.]

Mr. BURTON. Mr. Chairman and gentlemen of the committee, I am unable to agree with my learned and eloquent friend [Mr. TUCKER] in his assertion of the limitations on the treaty-making power. I recognize that he has written a very able work on this subject, and that he has behind him three generations of the notable names of Tucker and Randolph, all of whom have maintained the same view which he holds.

I do not believe the first section of this bill is necessary. It assumes to grant to the President power for the scrapping of ships of the Navy, which he already possesses under the treaty. It may do no harm to include this section in the bill. The second and third sections are altogether desirable, but I believe the first to be superfluous. What is the history of the position in which we now are, and what has led up to it?

After the World War there was a yearning for the inauguration of an era of peace and cooperation among the nations. The Conference on Limitation of Armament, convened at the call of President Harding last November, was in response to a universal wish and in compliance with the practically unanimous approval of the Congress of the United States.

The central idea of the call was that the most promising and effective beginning and at the same time the most practical results could be accomplished by a limitation of naval armaments, in the enlargement of which at least three great powers were manifesting the liveliest competition.

The results of the conference have merited and received the acclaim of the whole world.

It was anticipated by some, maybe a majority, that in the meeting of the nations there would be an unprecedented display of diplomatic amenities; that the representatives of the various nations, including orators of world-wide distinction, would utter resonant declarations of good will. They would proclaim an undying desire for the avoidance of future bloodshed, pass resolutions breathing a spirit of amity, appoint committees to deliberate upon the welfare of the nations, decide to report at a future time, maybe at a different place, and then each go home to pursue old policies of national selfishness and repulsion. But all these anticipations were dispelled—it may be said rudely dispelled—by the speech of Secretary Hughes. The

keynote of his address was the statement that the time had come, not for general resolutions or mutual advice but for action. He also said, "Preparation for offensive naval warfare will stop now," and laid down a definite, clean-cut program which contemplated the cessation of naval construction, the scrapping of hundreds of thousands of warship tonnage, and the abandonment of ships upon which hundreds of millions had been expended.

Now, all will agree that the provisions of that treaty and of the other treaties, including that regulating submarines, and the treaty providing for the integrity of China and for giving to that great country an opportunity in the world should receive the support of this whole people.

It will be profitable to briefly recapitulate what was accomplished in the limitation of armament and the regulation of naval warfare.

By treaty No. 1, signed at Washington February 6, 1922, the contracting nations expressed themselves as desiring to contribute to the maintenance of a general peace and to reduce the burdens of competition in armament, and resolved, with a view to accomplishing these purposes, to conclude a treaty to limit their respective naval armaments. By chapter 1, article 3, they agreed to abandon their respective capital-ship building programs. The total capital-ship replacement tonnage must not be in excess of 525,000 tons for the United States and British Empire, respectively, and 175,000 tons for Italy and France, respectively, and 315,000 tons for Japan. No capital ship exceeding 35,000 tons shall be acquired by, or constructed by, for, or within the jurisdiction of any of the contracting powers. No capital ship of any of the contracting powers shall carry a gun with a caliber in excess of 16 inches.

Vessels of war other than a capital ship must not be constructed or acquired of a tonnage exceeding 10,000 tons nor carry a gun of a caliber in excess of 8 inches. The total naval tonnage to be scrapped by the United States is 845,000 tons; the amount expended on ships to be abandoned is $332,000,000. No preparations shall be made upon merchant ships in time of peace for the installation of warlike armaments for the purpose of converting such ships into vessels of war, other than the necessary stiffening of decks for the mounting of guns not exceeding 6 inches. Ships under construction within the jurisdiction of any power for another power shall not be used in case such country becomes engaged in war. Part 2 of chapter 2 of the treaty gives rules for scrapping vessels of war, laying down as a general principle that the vessel to be scrapped must be placed in such a condition that it can not be put to combatant use in any one of the following ways: Permanent sinking of the vessel; breaking the vessel up by removing machinery, boilers, and so forth; converting the vessel to target use exclusively, for which purpose not more than one capital ship may be retained. It is provided that the so-called first stage of scrapping shall be immediately undertaken. There are definitions of capital ships and aircraft carriers. The treaty shall remain in force until December 31, 1936.

On the same day another treaty was concluded containing a declaration of the principles of international law for the protection of neutral and noncombatants at sea in the time of war. It is provided that a merchant vessel must not be attacked unless it refuse to submit to visit and search after warning, or to proceed as directed after seizure. A merchant vessel must not be destroyed unless the crew and passengers have been first placed in safety. Belligerent submarines are not under any circumstances exempt from the rules above stated. All other civilized powers are invited to express their assent to this statement of established law, and it is declared that in case any person in the service of any power who shall violate any of these rules shall be deemed to have violated the laws of war and shall be liable to trial and punishment as if for an act of piracy. The treaty, so comprehensive in its nature, assents to the prohibition in war of the use of asphyxiating, poisonous, or other gases, and all analogous liquids, materials, or devices.

This treaty, eclipsing The Hague confreences of 1899 and 1907, may be confidently termed the greatest step ever taken by any agreement among nations for humane conditions in warfare and for staying the inhuman development of means for destruction.

No one can deny that this treaty with other treaties concluded at the conference is far and away the most potent achievement for peace accomplished since the war.

THE TREATY-MAKING POWER—ITS SCOPE AND IMPORTANCE.

Events of the time, closer international relations, the late conference, all emphasize the importance of the treaty-making power. How shall it be exercised and what are its limits? It is claimed the late treaty is not valid without action by the House, such as by the passage of this bill. Is this correct?

In the material which I will present to the House—and I am not intending to take a specially partisan stand—I must acknowledge my obligations to the gentleman from Virginia, Mr. TUCKER, to the excellent works of Charles H. Butler and Mr. Crandall, and to the two speeches delivered in the Senate by Senator KELLOGG and Senator WALSH, both of whom maintain the strongest ground for the validity of treaties when negotiated by the President and ratified by two-thirds of the Senators present. In this connection I desire to revise and extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Ohio asks unanimous consent to revise and extend his remarks in the RECORD. Is there objection?

There was no objection.

The following are the provisions of the Constitution which have the most obvious bearing upon this question:

Article II, section 2, clause 2: He—

The President—

shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur.

Article VI, clause 2: This Constitution and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the constitution or laws of any State to the contrary notwithstanding.

Article I, section 8, clause 18: Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States or in any department or officer thereof.

Those which give powers to Congress which, it has been alleged, are limitations on the treaty-making power are:

Article I, section 7, clause 1: All bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments as on other bills.

Article I, section 8, clause 1: The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States, but all duties, imposts, and excises shall be uniform throughout the United States.

Clause 3: To regulate commerce with foreign nations and among the several States and with the Indian tribes.

Clause 4: To establish an uniform dule of naturalization and uniform laws on the subject of bankruptcies throughout the United States.

Clause 11: To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water.

Clause 12: To raise and support armies, but no appropriation of money to that use shall be for a longer term than two years.

Clause 13: To provide and maintain a Navy.

Clause 14: To make rules for the government and regulation of the land and naval forces.

Article I, section 9, clause 7: No money shall be drawn from the Treasury but in consequence of appropriations made by law, and a regular statement and account of the receipts and expenditures of all public moneys shall be published from time to time.

Article IV, section 3, clause 2: The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States.

Other provisions of the Constitution which have a bearing on the subject are:

Article I, section 10, clause 1: No State shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal.

Article I, section 10, clause 3: No State shall without the consent of Congress lay any duty of tonnage, keep troops or ships of war in time of peace, enter into an agreement or compact with another State or with a foreign power, or engage in war unless actually invaded or in such imminent danger as will not admit of delay.

THREE DISTINCT THEORIES ON THE BINDING FORCE OF TREATIES.

In determining the respective powers of the President, acting with the concurrence of the Senate, on the one hand, and of the Congress, or the House of Representatives, on the other, three distinct theories have been advanced: First, this treaty-making power is final and binding on every subject for negotiation with a foreign power. The concurrence of the House of Representatives is obligatory, and in its essential nature only formal or perfunctory. In the language of Justice Daniel in a Supreme Court opinion opposing this view, it would be a power single, universal, engrossing, absolute. Second, that it is the right of the House of Representatives to nullify a treaty which contains provisions which in any way infringe upon the powers of the House or may require its separate action, as in making appropriations or fixing duties upon imports, and that this right of confirmation or rejection is a salutary check upon the Executive and the Senate which may be exercised at will. Third, that while the right of the House to disapprove or nullify exists, there is, nevertheless, a necessary comity between the respective departments of the Government, a binding moral obligation, and it would be in violation of the established division of powers to withhold action; also that the observance of good faith in dealing with other countries requires that stipulations contained in any treaty ratified in the manner prescribed by the Constitution be made effectual by action of the House.

The first view was strenuously maintained by President Washington in a letter transmitted to the House of Representatives March 30, 1796, in response to a request for the papers relating to the Jay treaty. In this letter he expressed himself as follows:

> Having been a member of the general convention and knowing the principles on which the Constitution was formed, I have ever entertained but one opinion on this subject; and from the first establishment of the Government to this moment my conduct has exemplified that opinion—that the power of making treaties is exclusively vested in the President, by and with the advice and consent of the Senate, provided two-thirds of the Senators present concur; and that every treaty so made and promulgated thenceforward became the law of the land. It is thus that the treaty-making power has been understood by foreign nations, and in all the treaties made with them we have declared and they have believed that, when ratified by the President, with the advice and consent of the Senate, they became obligatory. In this construction of the Constitution every House of Representatives has heretofore acquiesced, and until the present time not a doubt or suspicion has appeared, to my knowledge, that this construction was not the true one. Nay, they have more than acquiesced, for till now, without controverting the obligation of such treaties, they have made all the requisite provisions for carrying them into effect.

The same contention was supported by Alexander Hamilton in a series of letters and at other times. Mr. Hamilton asserted that the making of treaties was an essential fact incident to the existence of a nation; that its proper prerogatives could not be exercised unless complete authority was given to some agency of the Government to negotiate agreements with other countries and included all proper subjects of compacts with foreign nations. He argued with great force that the contention of those who objected to the right of the President to make treaties with the concurrence of the Senate leads to an absurdity. Such a principle would interfere with the making of treaties of commerce, treaties of alliance, and treaties of peace, and that on a minute analysis there were hardly any treaties which would not in some way clash with these objections, and thus the power to make treaties granted in such comprehensive and indefinite terms and guarded with so much precaution would become essentially nugatory. He said:

> But the construction which is advanced would cause the legislative power to destroy the power of making treaties. Moreover, if the power of the executive department be inadequate to the making of the several kinds of treaties which have been mentioned, there is then no power in the Government to make them, for there is not a syllable in the Constitution which authorizes either the legislative or judiciary departments to make a treaty with a foreign nation. And our Constitution would then exhibit the ridiculous spectacle of a Government without a power to make treaties with foreign nations, a result as inadmissible as it is absurd, since, in fact, our Constitution grants the power of making treaties in the most explicit and ample terms to the President, with the advice and consent of the Senate.

The same view was maintained by many leading men of that time. Mr. Ellsworth, who was later appointed Chief Justice and was a member of the Constitutional Convention, said:

> The grant of the treaty-making power is in these words: "The President, with the advice and consent of the Senate, shall make treaties." The power goes to all kinds of treaties, because no exception is expressed, and also because no treaty-making power is elsewhere granted to others, and it is not to be supposed that the Constitution has omitted to vest sufficient power to make all kinds of treaties which have been usually made or which the existence or interests of the Nation may require.

Mr. Oliver Wolcott, Secretary of the Treasury in President Washington's administration, under date of March 26, 1796, wrote:

> The obligations arising from public faith when pledged by the representative organ of our Nation in all foreign concerns, agreeably to the mode prescribed by the Constitution, are justly and properly declared to be laws. The legislative power is bound not to contravene them; on the contrary, it is bound to regard and give them effect.

Chancellor Kent sustained this theory. He wrote (vol. 1 of his Commentaries, early edition, p. 165):

> If a treaty requires the payment of money or any other special act which can not be done without legislation, the treaty is still binding on the Nation, and it is the duty of the Nation to pass the necessary laws. If that duty is not performed, the result is a breach of the treaty by the Nation, just as much as if the breach had been an affirmative act by any other department of the Government. Each nation is responsible for the right working of the internal system by which it distributes its sovereign functions, and as foreign nations dealing with it can not be permitted to interfere with or control these, so they are not to be affected or concluded by them to their own injury.

Mr. Caleb Cushing, Attorney General, in interpreting a treaty with Great Britain, said on February 16, 1854:

> The conventions being a contract between the two nations, duly entered into and ratified by the President of the United States, by and with the advice and consent of the Senate, it thereby is a law of the United States without any further action by the Government of the United States. No act of Congress is necessary to create or perfect the vinculum juris. The stipulations of the convention operate as a law to the courts of justice, State and Federal; they are of a character to operate of themselves as constitutionally obligatory, without the aid of any legislation by Congress. Such is the effect of the Constitution of the United States. A treaty, it is true, though it be as such a portion of the supreme law of the land, yet may require the enactment of a statute to regulate the details of a process or of a right embraced in its stipulations; but such necessity, if it exists, does not affect the question of the legal force of the treaty per se. 1. A treaty constitutionally concluded and ratified abrogates whatever law of any one of the States may be inconsistent therewith.

So recently as the time when the payment of $20,000,000 to Spain under the treaty of 1898 was under consideration in the House of Representatives, on February 14, 1899, Mr. Joseph W. Bailey, a very thorough student of the Constitution, afterwards Senator, said:

> Mr. Chairman, I would like to submit this proposition to the gentleman from Kentucky. The Constitution makes the Senate and the President "the Government" in the making of treaties. Now, when the President and the Senate make a treaty with a foreign nation, that foreign nation deals with the Government. The Government, as recognized by the Constitution, obligates itself to pay a given amount of money. That obligation is complete. The Constitution itself says that the Senate and the President can make the treaty, and when made it is the supreme law of the land. Every nation in the world has a right to deal with us on the ground that the Senate and the President constitute our Government in the making of treaties.

Mr. Carmack, of Tennessee, afterwards Senator; Mr. Henry, of Texas; and Mr. Clayton, now a Federal judge, though all opposed the treaty, supported the same view.

It was plainly not the intention of the framers of the Constitution to require legislative approval to insure the validity of treaties. On August 23, 1787, Mr. Gouverneur Morris moved in the Constitutional Convention to add to the section defining the treaty-making power the words—

> but no treaty shall be binding on the United States which is not ratified by law.

In the vote on this proposed amendment Pennsylvania alone voted in the affirmative with North Carolina divided, New York and New Hampshire not voting. On September 7, James Wilson, of Pennsylvania, having stated that treaties were to be the "laws of the land," moved to insert, after the words "by and with the advice and consent of the Senate," the words "and the House of Representatives," maintaining that "as treaties have the operation of laws they ought to have the sanction of laws also." This motion received only the support of his own State of Pennsylvania. A proposition that no rights acquired by the treaty of peace should be ceded without the consent of the legislature was not pressed to a vote. Also, when a proposed draft of what is now clause 15 of section 8, article 1, was reported so as to read: "To execute the laws of the Union, enforce treaties, suppress insurrections, and repel invasions," the words "enforce treaties" were stricken out on the suggestion that they were superfluous, since treaties were to be laws.

Mr. Crandall, in his review of the discussions in the convention, concludes:

> From these debates it appears that the House was excluded from participation in the making of treaties by the framers of the Constitution, with the understanding that treaties were to have the force of laws. (Crandall, p. 48.)

One argument in favor of limiting consideration of treaties to the President and Senate frequently expressed in the convention was the necessity for secrecy and dispatch. In the later debates on the ratification of the Constitution in State conventions and among the people it was taken for granted that the negotiation and ratification of treaties was vested exclusively in the President and the Senate, and this fact was one of the principal objections to ratification.

The second, or opposing, theory is to the effect that the Constitution, laws passed in pursuance thereof, and treaties are all upon an equal footing and each must be taken into account in determining the validity of a treaty. These three fundamental features relating to governmental action constitute, as it has been termed, a trinity. Attention is called to the fact that a statute may nullify a treaty and a treaty may nullify a statute, the one last ratified or enacted becoming binding. Under this theory, in order that a treaty may become operative, it must have the support of Congress if any action is contemplated upon which the legislative branch has power to act, such as the raising of revenue or the making of appropriations, control of the territory or property of the United States, regulations relating to commerce, provisions pertaining to the Army and Navy—in fact, upon any subject on which Congress has authority to legislate. This means practically the House of Representatives, as the approval of the Senate may be taken for granted if two-thirds of the Members present have already advised ratification. Foreign nations, it is alleged, must be held to understand the limitations upon the treaty-making power as interpreted under the Constitution, and while the failure to comply may create international complications—indeed, may even lead to war—the agreement is not binding upon the people of the United States until the necessary action has been taken by Congress. There is also the argument that certain forms of legislative action, as in the case of the levying of duties, must

originate in the House of Representatives. Mr. Jefferson was a supporter of this view. Perhaps the best statement of his opinions may be found in a letter to James Monroe of March 21, 1796, in which he says:

We conceive the constitutional doctrine to be that though the President and Senate have the general power of making treaties, yet whenever they include in a treaty matters confided by the Constitution to the three branches of legislature, an act of legislation will be requisite to confirm these articles, and that the House of Representatives, as one branch of the Legislature, are perfectly free to pass the act or to refuse it, governing themselves by their own judgment whether it is for the good of their constituents to let the treaty go into effect or not. On the precedent now to be set will depend the future construction of our Constitution and whether the powers of legislation shall be transferred from the President, Senate, and House of Representatives to the President and Senate, and Piarningo or any other Indian, Algerine, or other chief.

This differs somewhat from an earlier expression of his recorded in the Anas under date of April 9, 1792, which was as follows:

The President has wished to redeem our captives at Algiers and to make peace with them on paying an annual tribute. The Senate were willing to approve this, but unwilling to have the lower House applied to previously to furnish money; they wished the President to take the money from the Treasury, or open a loan for it. * * * He asked me if the treaty stipulating a sum and ratified by him, with the advice of the Senate, would not be good under the Constitution and obligatory on the Representatives to furnish the money? I answered it certainly would, and that it would be the duty of the Representatives to raise the money; but that they might decline to do what was their duty, and I thought it might be incautious to commit himself by a ratification with a foreign nation, where he might be left in the lurch in the execution; it was possible, too, to conceive a treaty which it would not be their duty to provide for.

He was violently opposed to the Jay treaty and used the strongest expressions against the treaty-making power while it was under consideration.

In a letter to Madison, of March 17, 1796, he writes:

The objects on which the President and Senate may exclusively act by treaty are much reduced, but the field in which they may act, with the sanction of the Legislature, is large enough, and I see no harm in rendering their sanction necessary and not much harm in annihilating the whole treaty-making power except as to making peace.

In a message to the Congress in 1803, stating that a treaty had been concluded with France for the cession of Louisiana, Mr. Jefferson conceded that action by the House and Senate was necessary for the fulfillment of the treaty in this language:

You will observe that some important conditions can not be carried into execution but with the aid of the Legislature and that time presses a decision on them without delay.

Another expression by Mr. Jefferson was on the occasion of a treaty with an Indian tribe for the acquisition of lands for which a consideration was to be paid. He said:

As the stipulations in this treaty also involve matters within the competence of both Houses only, it will be laid before Congress as soon as the Senate shall have advised its ratification.

Mr. Calhoun while a Member of the House of Representatives concurred in the same view. In a debate in January, 1816, he said:

To talk of the right of this House to sanction treaties and at the same time to assert that it is under a moral obligation not to withhold that sanction is a solecism. No sound mind that understands the terms can possibly assent to it. I would caution the House, while it is extending its powers to cases which I believe do not belong to it, to take care lest it lose its substantial and undoubted power. I would put it on its guard against the dangerous doctrine that it can in any case become a mere registering body. * * * The treaty-making power has many and powerful limits, and it will be found, when I come to discuss what those limits are, that it can not destroy the Constitution, or our personal liberty, or involve us, without the assent of this House, in war or grant away our money.

But as Secretary of State in 1844, when a commercial treaty had been negotiated with the German States in 1843 and the Senate committee reported adversely on the ground of "want of constitutional competency" to make it, Mr. Calhoun thus commented on this action:

If this be a true view of the treaty-making power it may be truly said that its exercise has been one continual series of habitual and uninterrupted infringements of the Constitution. From the beginning, and throughout the whole existence of the Federal Government, it has been exercised constantly on commerce, navigation, and other delegated powers.

In treating of necessary appropriations he said:

It—the power—is expressly delegated to Congress, and yet scarcely a treaty has been made of any importance which does not stipulate for the payment of money.

Mr. Clay, in a discussion on a treaty relating to a boundary between Louisiana and Mexico, in 1820, expressed himself very vigorously against the binding power of treaties without the concurrence of the House. He said:

The Constitution of the United States has not defined the precise limits of that power, because from the nature of it they could not be presented. It appears to me, however, that no safe American statesman will assign to it a boundless scope. * * * If the concurrence of this House be not necessary in the cases asserted, if there be no restriction upon the power I am considering, it may draw to itself and absorb the whole of the power of the Government. To contract alliances, to stipulate for raising troops to be employed in a common war about to be waged, to grant subsidies, even to introduce foreign troops within the bosom of the country, are not infrequent instances of the exercise of this power; and if in all such cases the honor and faith of the Nation are committed by the exclusive act of the President and Senate, the melancholy duty alone might be left to Congress of recording the ruin of the Republic.

Mr. Blaine, on the occasion of a claim by the Chinese Government for indemnity under treaty provisions for Chinese killed within the jurisdiction of one of the States, said in a letter to the Chinese minister:

Your observations to the effect that treaties form a part of the supreme law of the land equally with the Constitution of the United States is evidently based on a misconception of the true nature of the Constitution. * * * Such is the language of the Constitution, but it must be observed that the treaty no less than the statute law must be made in conformity with the Constitution, and were a provision in either treaty or a law found to contravene the principles of the Constitution, such provision must give way to the superior force of the Constitution, which is the organic law of the Republic, binding alike on the Government and the Nation.

Judge Cooley, in his work on Principles of Constitutional Law, said:

The Constitution imposes no restriction upon this power, but it is subject to the implied restriction that nothing can be done under it which changes the Constitution of the country, or robs a department of the Government or any of the States of its constitutional authority.

Perhaps the most extreme statement asserting the limitations on the treaty-making power of the President and the Senate is contained in an article by a German publicist, Prof. Ernest Meier, of the University of Halle, as follows:

Congress has under the Constitution the right to lay taxes and imposts, as well as to regulate foreign trade, but the President and Senate, if the treaty-making power be regarded as absolute, would be able to evade this limitation by adopting treaties which would compel Congress to destroy its whole tariff system. According to the Constitution, Congress has the right to determine questions of naturalization, of patents, and of copyright. Yet, according to the view here contested, the President and Senate by a treaty could on these important questions utterly destroy the legislative capacity of the House of Representatives. The Constitution gives Congress the control of the Army. Participation in this control would be snatched from the House of Representatives by a treaty with a foreign power by which the United States would bind itself to keep in the field an Army of a particular size. The Constitution gives Congress the right of declaring war; this right would be illusory if the President and Senate could by a treaty launch the country into a foreign war. The power of borrowing money on the credit of the United States resides in Congress; this power would cease to exist if the President and Senate could by treaty bind the country to the borrowing of foreign funds. By the Constitution "no money shall be drawn from the Treasury but in consequence of appropriations made by law"; but this limitation would cease to exist if by a treaty the United States could be bound to pay money to a foreign power. * * * Congress would cease to be the law-making power as is prescribed by the Constitution; the law-making power would be the President and the Senate. Such a condition would become the more dangerous from the fact that treaties so adopted being on this particular hypothesis superior to legislation, would continue in force until superseded by other treaties. Not only, therefore, would a Congress consisting of two Houses be made to give way to an oligarchy of President and Senate, but the decrees of this oligarchy when once made could only be changed by concurrence of President and of senatorial majority of two-thirds.

Professor von Holst, in his work entitled "Constitutional Law of the United States," says:

As to the extent of the treaty-making power the Constitution says nothing, but it evidently can not be unlimited. The power exists only under the Constitution, and every treaty stipulation inconsistent with a provision of the Constitution is therefore inadmissible and according to constitutional law ipso facto null and void.

According to the third theory, while it is conceded that the House of Representatives can refuse to render operative the provisions of a treaty, it is nevertheless maintained that there is a moral obligation to do so. The treaty is in the international forum a binding agreement, and every consideration of good faith requires its fulfillment. On this subject at the time of the conference between the President and the Foreign Relations Committee of the Senate on August 19, 1919, President Wilson contended that Article 10 of the Versailles treaty constituted a very grave and solemn moral obligation. He said:

It is a moral, not a legal, obligation.

When asked by Senator Knox if in case of external aggression against some power which could not be repelled except by force of arms we would be under any legal obligation to participate, he answered:

No, sir; but we would be under an absolutely compelling moral obligation.

Senator—now President—Harding asked him as to the scope of the obligations proposed to be incurred, and President Wilson replied:

There is a national good conscience in such a matter. * * * Now, a moral obligation is of course superior to a legal obligation, and, if I may say so, has a greater binding force.

And during the presidential campaign of 1920 President Harding said, in speaking of the right to refuse to perform a treaty obligation:

Technically, of course—

Congress—

could do so. Morally, with equal certainty, it could not do so, nor would it ever do so. The American people would never permit a repudiation of a debt of honor. No Congress would ever dare make this Nation appear as a welcher, as it would appear and would be in such an event before the eyes of the world.

Judge Cooley, when asserting that the House of Representatives may in its discretion at any time refuse to give assent to legislation necessary to give a treaty effect, adds:

This would be an extreme measure, but it is conceivable that a case might arise in which a resort to it would be justified.

The facts which militate against the unqualified admission of the first theory are perfectly plain. There are three departments in the Federal Government. There are two legislative bodies. In the performance of the conditions of a treaty action by the House in numerous cases is essential. That action may be withheld. The different legislative bodies or the departments of the Government may clash, but the question arises whether the omission or refusal of the House to act differs from failure to act by an official or by Congress in other activities of the Government. The President after the ratification of a treaty might decide not to carry it out. It is conceivable he might omit to enforce a law passed by Congress.

President Jackson is said to have remarked of a decision of the Supreme Court:

John Marshall has made a decision, now let him enforce it.

Congress might refuse to make appropriations for the established salaries of Federal officials, or might decline to take action in pursuance of the laws of the land. Committees of the House such as those on naval or military affairs might recommend substantive legislation which afterwards would become law, and the Committee on Appropriations might postpone or refuse the insertion of the necessary amounts in appropriation bills. The whole theory of the machinery of government contemplates the possibility of failure in cooperation, or in the performance of duties by different organs of the Government. That, however, does not render laws or treaties less obligatory, and it must be reiterated that there are no obligations of a higher type than those which pertain to our relations with other countries.

Acceptance of the second theory is equally out of the question as contrary to the intention of the framers of the Constitution and as creating a situation which would hopelessly embarrass us in our foreign relations. Stated briefly, there is, in the enforcement of treaties, a possible conflict between international and municipal law. Which shall prevail? Opinions expressed upon this subject have not been free from confusion. But if we expect to maintain good faith in our dealings with other nations and to secure the fulfillment of promises made by them, every consideration of national interest as well as of national honor demands strict compliance with agreements or treaties made in conformity with the provisions of the Constitution.

The question of the function of the House of Representatives in passing upon treaties has been repeatedly under discussion. The first instance was on the occasion of the Jay treaty. This treaty was held to require action by Congress and on March 24, 1796, a resolution was carried by a vote of 62 to 37 requesting President Washington to lay before the House copies of the instructions to the minister who had negotiated the treaty with Great Britain, together with the correspondence and other documents relating thereto. President Washington on the 30th of March, 1796, in the message from which quotation has already been made, declined and a heated debate ensued. Two resolutions were voted upon, one to the effect that the treaty was highly objectionable and another that it was objectionable. The vote on both of these was a tie, 48 to 48 and 49 to 49, respectively, the deciding vote being cast against the resolutions by the Speaker. A resolution to carry the treaty into effect was passed by a vote of 51 to 48.

In 1803, when Mr. Jefferson transmitted his message asking for an appropriation for the purchase of Louisiana, a similar resolution asking for papers was adopted. There was a difference in party alignment in the support and opposition to this resolution. It was rejected. Similar discussion occurred upon the commercial treaty of 1815 with Great Britain. Among other provisions, this treaty abolished discriminating duties. It was contended that no commercial regulation could be made by treaty without the concurrence of Congress.

After the purchase of Alaska in 1867, which required a payment of $7,200,000 in gold, there was opposition to making the appropriation on two grounds; first, that the Territory was worthless and it was a waste of money, and, second, that the treaty for the acquisition should not have been enacted without the action of the House. This led to a conference report, the House asserting its rights in the premises, and the Senate finally made the concession that under some circumstances treaty stipulations can not be carried into full force and effect until the House shall take action.

Again, in 1887 the question was before the House of Representatives upon the question of an extension by a later treaty of the reciprocity treaty of 1875 with the Hawaiian Islands, which provided for the free importation of rice, unrefined sugar, and other products. The first treaty was not to take effect until a law to carry it into operation should be passed by Congress. The second omitted this provision. A very able report was prepared on this subject by Mr. J. Randolph Tucker, which is printed as Report No. 4177, Forty-ninth Congress, second session. This is monumental in scholarship and strength of reasoning, and sets forth as clearly as any document the arguments favoring the necessary concurrence of the House of Representatives in treaties whenever modification of duties, appropriations, or supplemental legislation are required.

The appropriation of $20,000,000 for the purchase of the Philippines in the treaty with Spain, which was ratified by the Senate on February 6, 1899, was adopted, and but slight opposition arose. Another treaty of recent date, under which the amount promised was appropriated without substantial opposition in the House, was that of November 18, 1903, with Panama. This treaty contained an agreement that $10,000,000 should be paid for the necessary rights acquired for the building of the canal and for further payments of $250,000 per annum beginning nine years later. These later payments have been appropriated without question. A substantial argument for the binding force of treaties is found in this provision for deferred installments of $250,000 per year. How could Congress have appropriated for these installments in advance? On the other hand, such a provision was an essential part of the treaty. Very recently the treaty with Colombia, involving the appropriation of $20,000,000, was regarded as conclusive, and no objection was made in the House to an appropriation of $5,000,000 for the first payment required.

It has been said that every President from John Adams down to date, in treaties requiring appropriations, has asked Congress for action, but the question may well be raised whether messages asking for appropriations have been in the nature of a request or of an injunction to perform a duty.

President Johnson, in notifying Congress of the treaty for the purchase of Alaska, said, in a message of July 6, 1867:

The attention of Congress is invited to the subject of an appropriation for this payment.

And President Grant, in a message on the 8th of March, 1870, transmitted a communication from the Secretary of the Interior relative to what he termed the obligation of Congress to make the necessary appropriations to carry out the Indian treaties made by what is known as the Peace Commission of 1867. Mr. Crandall in his work on treaties, page 179, enumerates some 30 treaties carrying appropriations, all of which have been approved by the House. He adds that in no case has the necessary amount been refused, and that since 1868 little question has been raised. In fact, there has never been a failure to pass the necessary legislation.

It will be seen from these facts that in recent years the authority of the President and the Senate in the making of treaties has aroused little question.

Another class of treaties should be named in which a condition has been inserted in the treaty itself to the effect that duties should not be changed without the concurrence of Congress. There is a considerable number of these. They create a condition, and notice is given to foreign countries that the agreement is not binding until Congress acts. In this regard there has been a marked difference between treaties relating to duties and those which require appropriations. In almost every treaty, beginning in 1854, with the treaty with Great Britain for reciprocity with Canada, followed by that with Hawaii in 1875, and then by the treaty with Cuba in 1902, in all of which there were regulations as to duties, the provision is inserted that the treaty must be approved by Congress or by the appropriate authorities. Section 3 of the tariff act of 1897 authorized the President to enter into reciprocal commercial conventions with other countries. The proposed reciprocity treaty with Canada in 1911, which failed because of the nonconcurrence of Canada, was submitted to the Congress for approval.

SOME JUDICIAL DECISIONS WOULD SEEM TO LIMIT THE BINDING FORCE OF TREATIES.

As regards action by the Supreme Court, it must be understood that the judiciary have to do merely with interpretations in accordance with the action of the legislative and executive departments of the United States. With the question of observance of good faith they have nothing to do. This fact was most clearly

stated in what is called the Cherokee Tobacco case (11 Wall., pp. 616, 620, and 621), to the effect that an act of Congress may supersede a prior treaty and a treaty may supersede a prior act of Congress. This was a very strong case. A treaty with the Cherokee Nation exempted the produce of the farmers from taxation. Afterwards an internal-revenue tax was levied on tobacco, and it was held not only that the law imposing the tax applied to the Cherokee Nation but that it annulled the previous treaty. The treaty was made in 1866 and the act levying the tax was passed in 1868.

As a result of its distinctive position the Supreme Court has repeatedly stated that treaties must be in accordance with the Constitution, and while as regards private rights of individuals under treaties it has frequently asserted that their construction is the peculiar province of the judiciary, the court has limited its decisions upon political questions. The general scope of the treaty-making power from the standpoint of the judiciary is nowhere better stated than by Chief Justice Marshall in the case of Foster *v.* Neilson (2 Peters, 233, 314):

A treaty is in its nature a contract between two nations, not a legislative act. It does not generally effect, of itself, the object to be accomplished, especially so far as its operation is infraterritorial, but is carried into execution by the sovereign power of the respective parties to the instrument.

In the United States a different principle is established. Our Constitution declares a treaty to be the law of the land. It is, consequently, to be regarded in courts of justice as equivalent to an act of the legislature whenever it operates of itself without the aid of any legislative provision. But when the terms of the stipulation import a contract, when either of the parties engages to perform a particular act, the treaty addresses itself to the political, not the judicial, department; and the legislature must execute the contract before it can become a rule for the court.

It has been asserted by the Supreme Court, as in United States *v.* Arredondo (6 Peters, 691), that a treaty is in its nature a contract between two nations and the legislature must execute the contract before it can become a rule for the court.

That treaties are subject to such acts as Congress may pass for the enforcement, modification, or repeal is maintained in Edye *v.* Robertson (112 U. S. 580), in which last case Justice Miller says:

The Constitution gives it—

A treaty—

no superiority over an act of Congress * * * nor is there anything in its essential character, or in the branches of the Government by which the treaty is made, which gives it this superior sanctity. A treaty is made by the President and Senate. Statutes are made by the President, the Senate, and the House of Representatives.

On this subject Justice Field says in One hundred and thirty-third United States, 266, 267—

The treaty power, as expressed in the Constitution, is in terms unlimited except by those restraints which are found in that instrument against the action of the Government or of its departments, and those arising from the nature of the Government itself and that of the States. It would not be contended that it extends so far as to authorize what the Constitution forbids, or a change in the character of the Government or in that of one of the States, or a cession of any portion of the territory of the latter without its consent. But with these exceptions, it is not perceived that there is any limit to the questions which can be adjusted touching any matter which is properly the subject of negotiations with a foreign country.

One of the latest discussions in which the question of the duties of Congress to take steps for the enforcement of a treaty is in the case of De Lima *v.* Bidwell (182 U. S. 1). By the treaty of Paris Porto Rico was ceded to the United States. After the treaty had been duly ratified goods were imported into the United States which if brought from a foreign country would be subject to a duty. It was maintained by the Government that until legislation was enacted for the administration of the island and a recognition of its position as a Territory of the United States, duties must be imposed as in the case of all importations from a foreign country. This case was elaborately discussed, and by a majority the court decided that Porto Rico became domestic territory on the ratification of the treaty and no further action by Congress was necessary to make it such.

In the majority opinion, on page 198, Justice Brown said:

We express no opinion as to whether Congress is bound to appropriate the money to pay for it. This has been much discussed by writers upon constitutional law, but it is not necessary to consider it in this case, as Congress made prompt appropriation of the money stipulated in the treaty.

He refuted the contention that ceded territory might be treated in every particular except for tariff purposes as domestic territory, and that until Congress enacts otherwise it would remain a foreign country. Yet the Supreme Court has sustained treaties contravening State laws, for illustration, relieving aliens from disabilities under State laws pertaining to land ownership; also in annulling discriminatory taxes upon foreigners. Laws of States and municipal ordinances under State authority discriminating against foreign immigrants protected by treaties have been declared void. The same is true of the enforcement of treaties superseding or contrary to Federal laws.

There is a collateral question, which assumes especial importance, of the right of the Federal Government to assume jurisdiction for the protection of aliens under treaty rights. On this subject President Harrison, in his message of December 9, 1891, said:

It would, I believe, be entirely competent for Congress to make offenses against the treaty rights of foreigners domiciled in the United States cognizable in the Federal courts.

Presidents McKinley and Roosevelt sustained this contention in messages; also President Taft, in both his inaugural address and his annual message of December, 1910. He also expresses himself to the same effect in an address to the members of the American Society of International Law, in April, 1910, saying:

I can not suppose that the Federal Constitution was drawn by men who proposed to put in the hands of one set of authorities the power to promise and then withhold from them the means of fulfilling them.

In a report to the Lake Mohonk Conference of May 26, 1911, Senator Root with Messrs. Baldwin and Kirchwey say:

After careful deliberation we have come unanimously to the conclusion that the power to make good its treaty obligations is now vested in the Government under the Constitution.

Extended references on this subject are contained in chapter 17 of Mr. Crandall's book on Treaties.

It is said that there are two classes of treaties, executed and executory. The fact is practically all treaties are executory. They do not pertain to something that has been done. They pertain to something that is to be done. They constitute a contract which is to be carried into effect, and are quite as binding as any agreements, so we can not, in judging of the treaty-making power, give any especial weight to this distinction. When the treaty is negotiated by the President and has the advice and consent of two-thirds of the Senate, either it is complete or not complete. There is no time when, like Mahomet's coffin, it is suspended in the air. There must be a time when those with whom we are dealing know whether minds have met. How desirable that is, because if another nation knows that the treaty must be mulled over by at least two legislative bodies, that country by its representatives will not make the concessions to which it would otherwise agree. There will be certain reservations made to meet reservations.

I can not agree to the argument just advanced that a treaty should be submitted to the House of Representatives. What would the House do with it? When would it be submitted? When the parties first meet for negotiations, should the President transmit the subject under consideration and ask for instructions, although this House has no power to make treaties? Should he transmit it when the first draft is completed? Should he send it here before or after it is approved by the Senate? There is no possible warrant for such a course. What good would it do? What could happen except that it would create confusion and interfere not merely with the orderly course of proceedings but with securing a favorable result. I recognize very clearly that it is a bit ungracious for a Member of the House to in any way decry its powers in treaty making. In view of our larger relations with other countries I regard it as one reason why this House is at a disadvantage, that it does not have more to do with foreign relations, and I am always loath in any way to say anything which would in the least diminish the powers and prerogatives of this House. Mr. Fisher Ames, the eloquent orator, expressed himself very aptly upon the desire of a legislative body to maintain its prerogatives. He said:

The self-love of an individual is not warmer in its sense or more constant in its action than the self-love of an assembly—that jealous affection which a body of men is always found to bear toward its own prerogatives and powers. I will not condemn this passion.

Following him, no more shall I. But there is a point where our powers have a limit.

I may add that I can not agree with the argument which has been made on this subject by the gentleman from Virginia that a treaty can not override a statute of the State in regard to the rights of aliens. In addition to the general statements I have made, reference may be had to the case of Ware against Hylton (3 Dal., p. 199), decided in 1796 and repeatedly referred to with approval. Anyone who will read that decision must come to a different conclusion from that which the gentleman has expressed. That involved the question of a British subject.

Mr. TUCKER. Will the gentleman yield?

Mr. BURTON. I would like to complete some other arguments.

Mr. TUCKER. As the gentleman has mentioned that case I merely want to say that case did not decide what is so generally understood it decided; that the treaty overrode the law of the State. It not only did not decide, but it could not have

decided it, because the court held that there was no law of the State; that the law of the State was invalid.

Mr. BURTON. I can not agree with that statement.

Mr. MONDELL. Will the gentleman yield?

Mr. BURTON. I will yield.

Mr. MONDELL. In carrying out a treaty involving an appropriation it is wholly within the power of the House by withholding its approval to prevent the carrying out of the treaty. I think the gentleman in discussing that said that he considered it the duty of the House under those circumstances to make the appropriation to be bound by the treaty.

Mr. BURTON. The matter of terms employed is immaterial. If we make a treaty, it is binding, and our faith is pledged to the foreign nations by that treaty, and as to the necessary amount it is just as important that provision be made as is any action involving good faith between nations.

Mr. TUCKER. It is just as important, I agree; but are we obliged, are we bound, have we no discretion, that is the point?

Mr. BURTON. Of course, you can conceive of a case where a treaty would be made which would violate not merely the Constitution but the fundamental rights which belong to popular government. In such a case the House might say, We will not carry it out. But let me say to the gentleman from Virginia we never should judge the scope of powers by the possibilities of their abuse. We never should conjure up possibilities to destroy the plain law of the land in the obligation of treaties. It is not conceivable that the President and two-thirds of the Senators present would heedlessly disregard the Constitution or be unmindful of the public interest. Let us consider the question of cession of territory.

Suppose that which we regard as improbable might occur and we were at a disadvantage in a terrible war, and our opponent might demand a portion of the State of Texas. It is as if a human being sacrificed a limb to save his life. This Government in an extreme case like that might by treaty give away a piece of its property. That, however, is an extreme and practically impossible case. Now, I wish to call attention to some things which we have done. We have made treaties which have bound us to use the military and naval forces of the United States. Let me read a section from the Webster-Ashburton treaty of August 9, 1842, in regard to the slave trade:

> The parties mutually stipulate that each shall prepare, equip, and maintain in service on the coast of Africa a sufficient or adequate squadron, or naval forces of suitable numbers and descriptions, to carry in all not less than 80 guns, to enforce separately and respectively the laws, rights, and obligations of each of the two countries for the suppression of the slave trade.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BURTON. I understood that I had 40 minutes, 30 minutes from the gentleman from New York and 10 minutes from the gentleman from Tennessee.

In 1846 we made a treaty with New Granada guaranteeing the neutrality of the Isthmus of Panama, and after the Boxer rebellion of 1900 we joined with other powers and agreed to maintain a military force at Peking and at Tientsin in China, and those forces are there until this day. In 1904 we guaranteed the independence of Panama. At one time our warships were sent there to carry out treaty provisions.

Let us look at the other side of the shield, that in regard to treaties of arbitration and for the promotion of peace. In the Rush-Bagot agreement of 1817 we agreed that there should be maintained a warship of not more than 100 tons on each of the lakes, Champlain and Ontario, and two on the "upper" lakes, and no more. Each of these ships, as I recall it, was to carry one 18-pounder gun. We did more than that. We agreed to scrap, as in this treaty, the rest of our naval armament upon those lakes, and President Monroe issued a proclamation in 1817 saying that the treaty, or arrangement as he termed it, having been approved by the Senate, was of full force and effect.

He did not ask the concurrence of the House. We have entered into arbitration treaties almost without number, and it is the most splendid phase in all of our diplomacy. I need go no further than to refer to the so-called Bryan treaties, some 20 in number. Those treaties provide that when a dispute arises between our country and any other which can not be settled by the ordinary processes of diplomacy the questions of law and fact shall be submitted to a commission of inquiry, and no step looking toward war shall be taken until that commission reports. Will some Member come in here and say that those treaties are invalid because they disable the House of Representatives from sending bristling bayonets into the field? They are binding on the country, and they should be binding. Suppose Mr. Hughes while he was speaking before that great gathering and was received with so much acclaim had said, "We are moving to stop this made race of naval expansion right now." "The time for action has come," as he did actually say. "We will scrap certain of our ships; we will abate our naval program. We will take hold of every golden chain to bind us in amity and cooperation with those nations between which and us there has been friction." These were inspiring thoughts, but suppose he had punctuated his remarks by saying, "All this can be done, provided the House of Representatives comes to the conclusion it is not an interference with a bill they passed in 1916 for an ambitious naval program." What kind of a position would have been occupied before the nations of the earth if such a postscript had been added? And in this day, this day when the threat of chaos still hangs over the world, I most earnestly desire to impress upon the Members of this House the importance of contracting in the easiest and readiest way any treaty that looks toward peace with nations. We no longer can say, as did a distinguished United States Senator, "What have we to do with abroad?"

Our relations extend to the remotest bounds. Whatever happens in Petrograd or in Tokyo or in far-off Bagdad is of the utmost interest to the United States. Our trade relations, our social relations, all those things which make for the betterment of humanity, are bound up with the hopes and fears of all the peoples of the earth. The most ardent hope is that the movement for peace may be a mighty procession, ever moving onward. Gentlemen of the committee, it is not altogether a constitutional proposition which concerns us, though I think these treaties are clearly binding under the Constitution. If we concede it is within the power of this House to stand in the way and stop progress toward peace, we surely will never do it. I hope this bill will pass by a unanimous vote. This question of treaties is of the utmost consequence to us in our international relations, which are assuming ever-increasing, almost supreme, importance among our national policies. We will not neglect the home life of the Nation; we will not neglect the welfare of the weak and of the struggling. We will endeavor in all our legislation to hold the scales equally and to devise such laws as, like gracious drops of dew, shall spread their blessings all abroad.

But there is need of the broadest vision. Our larger outlook is beyond the windows which look out upon a narrow landscape. It is upon the whole world, and in the making of treaties we should define clearly where that power rests. And may the time never come when in pursuance of any constitutional theory or any policy of obstruction this House shall for one moment stand in the way of that great mission which we have to perform for peace, for good will, and for an advancing civilization. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. HICKS. Mr. Chairman, I yield 15 minutes to the gentleman from Wyoming [Mr. MONDELL].

Mr. MONDELL. Will the gentleman from Tennessee [Mr. PADGETT] yield me five minutes?

Mr. PADGETT. Yes; I yield to the gentleman five minutes.

The CHAIRMAN. The gentleman from Wyoming is recognized for 20 minutes.

Mr. MONDELL. Mr. Chairman, when the doctors disagree it may seem presumptuous for a mere layman to suggest an opinion. I am not a lawyer, much less a constitutional lawyer, and yet I have some rather definite opinions with regard to the matters that have been so ably discussed by the gentleman from Virginia [Mr. TUCKER] and the gentleman from Ohio [Mr. BURTON], and while I have some hesitancy in venturing an opinion that may not be in harmony with that of one or the other of these gentlemen on a subject like this, I feel it somewhat incumbent upon me to express my views because of the fact that I am responsible—perhaps more responsible than any other one individual—for the presence in this bill of the first section, which is the basis of this discussion.

As I understand the attitude of the gentleman from Virginia [Mr. TUCKER], it is that this treaty at least could not under the Constitution be legally executed without action by the House of Representatives in approving and accepting its terms.

The gentleman from Ohio [Mr. BURTON] takes the position, as I understand it, that this is absolutely superfluous and unnecessary; that without any action by the House of Representatives the President could proceed to put into effect the declarations, and decisions, and agreements of the treaty. I am not sure that I fully agree with either of these learned and distinguished gentlemen. My own thought with regard to the matter is, speaking now of the case before us, that the treaty would be binding and effective, and the President justified—I am not absolutely certain that he would be—in enforcing the treaty and putting it into effect by the scrapping of ships, without action by the House of Representatives. In other words, that our failure to act might amount to an acquiescence in the treaty provisions. And in that event the President be justified

in proceeding to carry the treaty into effect even to the extent of scrapping ships and otherwise making effective the terms of the treaty.

I have no manner of doubt, however, that it is wise and proper and seemly and in accordance with the theory of our Government that in a matter affecting the destruction of property created through appropriations, and involving the fixing of the limit and extent of the national defense, that the House of Representatives should act affirmatively or otherwise.

Mr. MOORE of Virginia. Does not the gentleman mean that Congress should express its opinion?

Mr. MONDELL. I am speaking now of the House. This discussion is as to the power of the House, the duty of the House, the authority of the House, in the premises.

The rule with regard to the relative force and effect of treaties and laws is laid down by the Supreme Court as follows:

That a treaty may supersede a prior act of Congress and an act of Congress may supersede a prior treaty is elementary.

In other words, a treaty may be valid notwithstanding the fact that it does nullify an act of Congress; likewise an act of Congress may nullify a treaty.

In a case with which we are very familiar in the western country, the case of Ward against Racehorse, the court held that an act of Congress admitting a State into the Union nullified and rendered of no effect the provisions of a treaty.

Mr. CONNALLY of Texas. Mr. Chairman, will the gentleman yield?

Mr. MONDELL. Yes.

Mr. CONNALLY of Texas. That was on the theory, was it not, that when a State came into the Union it came in as a State, and that this treaty affected the internal affairs and police regulations of that State, and consequently it was in conflict with our theory of government?

Mr. MONDELL. Yes; the act of Congress brought the operation of the treaty to an end, and an act of Congress would supersede and set aside this treaty as well as any other treaty.

Mr. TUCKER. Mr. Chairman, may I interrupt my friend merely to call attention to the fact that Judge Marshall, in Foster against Neilson and the Cherokee tobacco case, affirmed exactly what my friend is setting forth now?

Mr. MONDELL. Now, whether or no it is absolutely essential to the execution of the naval treaty that the House and the Congress shall act affirmatively, it is certainly proper and wise that the Congress should so act. Such action places the matter on the broad, firm, and, under our Constitution, the more secure foundation of acquiescence and approval by all of the coordinate branches of the Government.

In suggesting the wisdom and propriety of a provision of this kind I had in mind two things: First, that the House and its Members should have an opportunity to voice their approval of the treaty clearly, definitely, and by official action; and, second, that this procedure serves to aid in maintaining the prestige and authority of the House under our form of Government. In my philosophy the theory that the President and the Senate may bind the Nation by a treaty contrary to the will of the elected Representatives of the people is scarcely tolerable. A treaty may become effective by our mere failure to act, but I can not agree that the House is under any binding obligation, regardless of its view of the merits of the matter, to do what may be necessary for the Congress to do in making appropriations or otherwise for the carrying out of a treaty that it does not approve.

I do not say that the House might not be under such an obligation if, having taken the matter up in the form of modifying legislation and having expressed an adverse view of the matter, the coordinate branches of the Government, one or both, declined to agree with the position thus taken. We have never met just that situation; I hope we never shall. I do believe, however, that in every case where a treaty involves, as it does in this case, property of great value and importance, policies which the Congress has deliberately entered upon and adopted, and far-reaching questions of national defense, there should be a recognition of the voice and opinion of the House.

Mr. NEWTON of Minnesota. Mr. Chairman, will the gentleman yield there?

Mr. MONDELL. I will.

Mr. NEWTON of Minnesota. If the decision of the Supreme Court is the law, and that is that a treaty can repeal a statute, why then would not the statute authorizing this Navy which is under construction be repealed by the ratification of these treaties? And why, then, the necessity of action by Congress acting as a legislative body?

Mr. MONDELL. Well, the courts have held that neither a treaty nor a law can be repealed by implication. There is nothing in the treaty itself which repeals the acts of Congress providing for the construction of these ships, but there are provisions in the treaty under which the President might be held to be authorized to destroy the ships the Congress ordered built, and under which the Congress is bound not to make further provision for vessels of a certain character; and that being true, whether or no it be absolutely essential, it is certainly seemly and proper and, I think, essential for the maintenance of the position of the House that we shall take definite action.

Mr. BURTON. Mr. Chairman, will the gentleman yield for a question?

Mr. MONDELL. Certainly.

Mr. BURTON. While repeals by implication are not favored, I wish to say to the gentleman that it is laid down by the textbook writers that a treaty may by implication be repealed by a statute.

Mr. MONDELL. Well, an implication that is so clear that there can be little or no question as to the intent may, of course, effect a repeal, but neither a statute nor the treaty may be set aside by mere implication. That is the position of the courts, as I understand it.

Mr. WALSH. Mr. Chairman, will the gentleman yield?

Mr. MONDELL. Yes.

Mr. WALSH. Will the gentleman contend that the House could provide for scrapping less than is provided by the treaty?

Mr. MONDELL. The House could express its view to that effect, undoubtedly.

Mr. ANDREWS of Nebraska. Mr. Chairman, will the gentleman yield?

Mr. MONDELL. Yes.

Mr. ANDREWS of Nebraska. Has the executive branch of the Government any right to destroy public property without legislative authority from Congress so to do?

Mr. MONDELL. That is the question. Some of the gentlemen are contending that that can be done under a treaty. I think it might be accomplished under a treaty in the absence of any action by the Congress to the contrary. But I am persuaded that in a case like this there should be a definite acceptance and approval by the Congress in order that the House may share, as is its right, in the determination of the limitations that may be placed on the character and extent of the national defense.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

Mr. NEWTON of Minnesota. Will the gentleman yield?

Mr. MONDELL. If I can have one minute more I will yield.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HICKS. I yield to the gentleman one minute more.

Mr. NEWTON of Minnesota. Suppose the House takes affirmative action and passes this measure, and that it does not receive the approval of the Senate or the Executive. Then the legislation will fail. What, in that event, will happen to the scrapping program?

Mr. MONDELL. If the Senate did not pass it or the Executive did not approve it, then the same power that ratified the treaty would have repudiated an approval of it, as there are provisions in the bill which clearly require the action of Congress. I do not understand how the treaty could legally be fully executed without the legislation. [Applause.]

Mr. PADGETT. I yield 10 minutes to the gentleman from Texas [Mr. BLACK].

Mr. BLACK. Mr. Chairman, on May 4 the bill to extend the operation of the War Finance Corporation was taken up in the Senate, and during the debate on the bill the statement was made that the Federal Reserve Board had sent out an order to the Federal reserve banks prohibiting the rediscounting of agricultural paper which was secured by warehouse and cotton and wheat while such products were being held for a higher price. During the debate one Senator made a statement substantially equivalent to what I have just stated, and another inserted in the CONGRESSIONAL RECORD a similar statement which had recently been made by Mr. Harvie Jordan, secretary of the American Cotton Association.

As soon as I read the debate and Mr. Jordan's printed statement I knew that if the Federal Reserve Board had issued an order of that kind it was a matter of very great concern to the agricultural interests of the United States. I knew that if such an order had been issued it was in direct violation of the Federal reserve act, which provides for the rediscounting of agricultural paper secured by proper warehoused products, where the paper has a maturity within six months. So I took the matter up with the governor of the Federal Reserve Board, Mr. W. P. G. Harding, and he says that the statement to which I have referred is entirely unfounded. Evidently the gentlemen

who made it were mistaken. I think Mr. Harding's statement should go into the RECORD at this place, and with the permission of the House I would like to read it. The statement of Governor Harding says:

I wish to point out that the Federal Reserve Board has never interpreted the Federal reserve act in the manner suggested in the statement in quotation. On the contrary, the Federal Reserve Board, in its ruling and on every appropriate occasion, has taken the position that such holding of agricultural products as is incident to orderly marketing is a legitimate and necessary part of the business of agriculture, and that a loan made to a producer or farmer for the purpose of financing such holding is clearly an agricultural loan which is eligible for rediscount by Federal reserve banks within six months of maturity. Furthermore, the Federal Reserve Board and the Federal reserve banks have recognized that in determining to what extent the holding of agricultural products is incident to orderly marketing the condition of the market for such products or the market demand must be taken into consideration, and that renewal loans made necessary by reason of inability to dispose of products at a reasonable figure and in orderly manner during the period of the original loan may also be eligible. In other words, in direct contradiction of the published statement of Mr. Jordan, the Federal reserve act has been interpreted by the board so as to permit the gradual and orderly marketing of agricultural products as and when there is a demand for them, instead of requiring the farmers to market their products by the so-called "dumping method."

Mr. Chairman, there is one feature of the Federal reserve act that a great many of our people seem to have overlooked, and that is that no paper having a maturity of longer than six months can be legally rediscounted by the Federal reserve banks; and in order to provide for agricultural and live-stock paper having a maturity of more than six months and not more than three years Congress has found it necessary to set up the War Finance Corporation as a temporary measure and which, up until this time, has made advances of about $350,000,000 for agricultural and live-stock loans in the different sections of the country. The proposition that confronts Congress now—and I regard it as one of very great importance—is that if we are to provide adequate and permanent financial machinery for the future to take care of this particular class of loans we must either amend the Federal reserve act so as to permit the rediscounting of paper having a longer maturity than six months, or else we must provide some other adequate machinery for doing it.

It is for this reason that our Committee on Banking and Currency has thought it necessary to extend the life of the War Finance Corporation for another year, until July 1, 1923. Meanwhile committees of Congress will have before them the proposition as to whether we should amend the Federal reserve act or whether we should amend the farm loan act, or whether we should set up some independent agency to take care of the situation. The question is not free from difficulty. It must be carefully studied. One thing we should always bear in mind is that there are two kinds of credit. One of them is the mother of production, to wit, credit based on production. The other is credit based on consumption. In the framing of the law which I have just been discussing we should be careful to see that the proposed credit facilities for paper of this kind are framed strictly to take care of production and orderly marketing. That should be the fundamental object in view.

Credit can not fill the gap that is created by the failure of production; it can only bridge it over; and so the big task of Congress now is to provide some adequate effectual method to finance farm and live-stock production requiring a maturity of more than six months and not more than three years. I have confidence that Congress will solve it. As a member of the Banking and Currency Committee of the House I stand ready and willing to do my part. [Applause.]

Mr. HICKS. Mr. Chairman, I yield 10 minutes to the gentleman from Iowa [Mr. TOWNER].

Mr. TOWNER. Mr. Chairman, I am in entire agreement with the gentleman from Virginia [Mr. TUCKER] in his statement that regardless of the question of the necessity of this legislation it is perfectly proper that this legislation should be enacted. I am also in entire accord with the statement made by the gentleman from Wyoming [Mr. MONDELL] to the same effect. If I understood the position of the gentleman from Ohio [Mr. BURTON] that the treaty would be ample for the purpose of carrying out all its terms without legislation, then I certainly have to take issue with the position.

Let us examine briefly where we would find ourselves in carrying out some of the provisions provided for under the terms of this bill. The first section gives the President power to make disposition, as in his judgment may be proper, of the capital ships. That is not scrapping. The terms of the treaty are an authorization for an appropriation to scrap ships but not to dispose of them. This goes beyond that proposition. It proposes to give the President power to dispose of ships by selling them or otherwise, and in that sense carry out scrapping. But certainly the President would not be authorized to do that without the authorization of Congress. I do not know how far the President's power to destroy may go. We know that the President can destroy any battleship in existence in time of war under his war powers. I think we also know just as well that if we build a new battleship and the President orders it destroyed in time of peace he would not have the power to do so. So I think it is always a question as to how far the power of the President to destroy may go without authority from Congress.

We must remember that back of all of these provisions lies the necessity of appropriating money, and that power is exclusively in the hands of Congress, exclusively in the hands of the body of which the House is a component part.

If to carry out the provisions of any treaty an appropriation of money is necessary, the consent of the House is required, and it may be either granted or withheld as the House shall determine. So if a treaty provides that we will scrap ships and it requires an appropriation of money to scrap them, then there must be authority somewhere upon which that appropriation shall be based. It may be said that it can be done under the treaty. If the treaty itself be considered as an authorization item, the terms of the treaty must be strictly complied with. It certainly could not be held that the terms of a treaty made between the five powers that the United States would scrap or destroy certain ships could be construed as giving the President the power to sell some of the battleships. That would be going too far. If we consider the provisions of the second section we find a still stronger showing of the necessity of legislation. We have already authorized, we have already provided for, we have already entered upon, the construction of seven first-class battleships and six battle cruisers. What do we do now? We now say that the contracts for the building of these ships shall be canceled. Would there be any authority for the cancellation of the contracts in a provision for scrapping ships? This method of disposition is extraneous to that employed by the treaty, and therefore the necessity for legislation for carrying it into effect.

Now, if we come to the third section we find like conditions arising; we are to take two cruisers intended for battle cruisers and reconvert them into airplane carriers. Is there any authority for that in the treaty? Certainly not. It provides that we may have airplane carriers, but it does not provide for the transformation of battle cruisers into airplane carriers, and in doing so we are compelled to legislate and to cancel the contracts and give the Executive power to do so.

So we are confronted all the way along with things that must be provided for by legislation, and it seems to me that if we desire to carry out our wishes as to methods of carrying out the provisions of the treaty, legislation is required. It is not safe to depend on the treaty regarding matters of this kind. They are properly matters of legislation that ought to be taken up and discussed by Congress as well as the treaty-making power. By that means we can arrive at a conclusion that is agreed to by all, and which will effectually carry out what is intended both by the treaty and by the legislative power as the methods of carrying it out.

Mr. MILLER. Will the gentleman yield?

Mr. TOWNER. I beg the gentleman's pardon, I can not yield. I want to make one other short statement and I have but little time. Let us remember all the time this proposition, that we are simply one of five individual nations agreeing to a contract between these nations.

We can violate the contract at any time, and that ends the treaty so far as we are concerned. We can violate any treaty at any time, either by act of Congress or by nonperformance, or by laches, or any other means we choose to adopt. Good faith is all that is necessary on our part, and good faith is all that is necessary on the part of any nation to carry out any treaty. Good faith is required, and that is what we expect to use toward this treaty. It meets with the approval of the Congress, its meets with the approval of the United States of America, it carries out the purposes of the nations of the earth to take as immediate and as far-reaching steps as can be secured in order to bring about not only a limitation of armament, but eventually the cessation of wars among the nations of the world. We want to do that. We want to do it well, we want to do it effectually, we want to do it with the sanction of the people of the United States, and I am very glad that this opportunity is afforded the House of Representatives of the United States to give its approval to this treaty in this marked and distinctive manner.

I hope that not one single word of this act will be changed by amendment. I can not believe that it is necessary. I would like to have it stand just as it does now, as an effective and complete approval, put into practical form of the treaty. In doing this I think we will be doing no more than our duty.

and in doing less than that I think we would not be carrying out the best interests of the people and the objects and purpose of the people.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. PADGETT. Mr. Chairman, I yield 15 minutes to the gentleman from New York [Mr. LONDON].

Mr. LONDON. Mr. Chairman, from whatever viewpoint you approach the scrapping bill one must welcome it as a step forward. Although in their entirety the treaties which make the scrapping necessary provide a truce for only 10 years, although they may merely provide for the limitation of the use of only a certain kind of weapon of destruction during that period, the proposed scrapping is a step forward.

I want to present to the House, now that you are all singing the praises of those who love peace, of those who advocate international concord, of those who seek the abolition of war, the question of amnesty for the men who had the courage to speak their true convictions about war during the war. Everyone can be a hero now. Everyone can bravely proclaim his love of peace. I want to submit to you the cases of those men and women to whom the love of peace was a life passion, to whom it was a religion, to whom it was the meaning of their existence—the case of men and women who believed that it was their mission to preach peace on earth when men were killing one another.

There are hundreds of them in jail. There are 113 political offenders of the kind I have described in the Federal jails. There are hundreds of them in the State prisons, over which Congress has no jurisdiction. The men on whose behalf I speak have been convicted under section 3 of the espionage act. Let us see what Thomas Jefferson, a fairly good Democrat, said about the espionage law of his days—the sedition law of 1798. Thomas Jefferson was replying to Mrs. Adams, who had complained to him that he, Jefferson, had pardoned a certain individual who had said scurrilous and mean things about her husband. Here is the exact language of Thomas Jefferson:

> I do not know who was the particular wretch alluded to; but I discharged every person under punishment or prosecution under the sedition law, because I considered, and now consider, that law to be a nullity, as absolute and as palpable as if Congress had ordered us to fall down and worship a golden image; and that it was as much my duty to arrest its execution in every stage as it would have been to have rescued from the fiery furnace those who should have been cast into it for refusing to worship the image. It was accordingly done in every instance, without asking what the offenders had done, or against whom they had offended, but whether the pains they were suffering were inflicted under the pretended sedition law.

I want you to bear in mind the distinction between the constitutionality of a law, so far as the phrases making up the law are concerned, and the constitutionality of a law in its actual effect. The espionage law was in its effect a violation of every constitutional right. War, with its peculiar psychology, or rather psychopathy, when the souls of men are sick, when all wear masks, when they do not say what is in their hearts, when they all obey commands from above, when they do not reason, when passion rules, when the wisest behave like foolish children, makes it utterly impossible that any law which in anywise restricts freedom of expression should not become an instrument of oppression.

The espionage law was wicked. It copied the worst features of the law of 1798. It made it a crime to employ abusive language about the Constitution, as if one could insult a constitution. The law of 1798 prohibited the employment of scurrilous language about individuals. The espionage law imposed cruel penalties upon critics of policies or institutions. It was impossible for a man to get a square deal when charged with a violation of the espionage law, if it was known that he had at one time or another opposed the entry of the United States into the war.

But if in addition to that the man happened to be an advocate of an unpopular economic doctrine, if in addition to that the jury was composed of employers of labor, if the prisoner at the bar chanced to be a member of a union which had conducted a strike in the locality, he had no chance on earth; and of the 113 political offenders now in Federal jails the great majority, almost all of them, are in that class.

Mr. MICHENER. Mr. Chairman, will the gentleman yield?

Mr. LONDON. Yes.

Mr. MICHENER. Of these 113 men, how many of them are members of the I. W. W.?

Mr. LONDON. A great majority of them are either members of the I. W. W. or were members of the I. W. W. at some time or other. A most interesting thing is that many of them have been convicted because at one time they had been members of the I. W. W. They convicted men whose names were on the rolls of some secretary of an I. W. W. local. Since when is it a crime to be a member of that body? It may be a crime from the standpoint of a business man against whom there has been organized a strike.

Mr. MICHENER. Did not many of these same prisoners advocate the evading of the draft law?

Mr. LONDON. They have been convicted under section 3 of the espionage law, and that section deals with offenses——

Mr. MICHENER. Like the Kansas rebellion, where they all went up into the hills.

Mr. LONDON. Oh, the gentleman is mixing up the Kansas case with the Oklahoma case.

Mr. MICHENER. Yes; the Oklahoma case.

Mr. LONDON. The Oklahoma case involves only three men, and it is an exception. We can not expect much from Oklahoma, whether it be an Oklahoma Democrat, an Oklahoma Republican, or an Oklahoma Socialist. That case is distinct from the others. Two organizations formed prior to the war for the purpose of protecting tenant farmers against excessive rentals and usurious interest furnished several hundred defendants.

There were two cases in Oklahoma. In one there were 175 defendants, and only 3 of them are still in prison. It seems that they had organized a meeting to protest against the war and against the draft. According to the statement of a witness who made a special investigation of the Oklahoma cases and who testified before the Judiciary Committee of the House, all the accused pleaded guilty under a promise that they would be dealt with leniently. As I said, there are only three of them in prison now. Out of the other case, which the same witness declared to be a case of expression of opinion, there are only two prisoners now.

With the exception of the one Oklahoma case, all the other cases are cases of expression of opinion.

The children of some of these prisoners have been for some time in Washington. The President has refused to see them. I have a sort of suspicion that the President has been advised by his friends not to see them. It is very likely that he could not have seen the children without granting their request, and his advisers, the Wall Street clique, the open-shop supporters, the enemies of every progressive thought, see to it that the President should not be influenced by the plea of the children, and that the appeal of the victims of the espionage law should not reach his heart.

I have introduced a bill dealing with this subject. Three Members have introduced resolutions for amnesty, Mr. GRIFFITH, of New York, a Democrat, Senator LADD in the Senate, a Republican, and myself. We have introduced three identical bills calling upon the Congress to grant amnesty. It is evident that the interests which surround the President just now are too strong for him to consider this proposition. I want the Congress to act upon it. There are enough of historical precedents for such action.

Mr. JOHNSON of Mississippi. If the gentleman will yield, how many political prisoners are there now——

Mr. LONDON. There are now in the Federal jails 113.

Mr. ANDREWS of Nebraska. If the gentleman will yield for a short question; does the gentleman think those 113 prisoners should be scrapped along with the ships which come under this bill?

Mr. LONDON. I think with the ships you should scrap your hatreds, your passions, your prejudices, and bring the human element into our legislation. That is what we need.

Mr. MILLER. Will the gentleman yield?

Mr. LONDON. I will.

Mr. MILLER. Why does not the gentleman introduce a bill for some of these other folks to scrap their hatred?

Mr. LONDON. They have been preaching international love, and that has been called a crime. They preached international cooperation when the cowards kept their mouths shut, and I want you Republicans——

Mr. ANDREWS of Nebraska. Will the gentleman yield for just one question?

Mr. LONDON. I have very little time and I am more interested in what I shall say than what the gentleman will say. [Applause.] Please sit down.

Mr. ANDREWS of Nebraska. If the gentleman will just yield for one more question. Do you think it is right for any person when our Nation is at war to seek by any means to thwart the Government of the United States in winning the war?

Mr. LONDON. The doctrine that during war all lips must be sealed lies at the basis of monarchial institutions. There is nothing more dangerous than the theory that the mere declaration of war deprives one of the right to criticize. That is how monarchies came to be established. The government that will say to the citizen, "Keep your mouth shut; I will

decide for you; you have no voice," puts the country in danger. If you will take the trouble to study the history of the origin of monarchical institutions, you will find where——

Mr. MILLER. Will the gentleman yield for just a question? Is the gentleman undertaking to defend the principles of Trotski and Lenin in the Congress of the United States?

Mr. LONDON. The question is too absurd to require an answer.

Mr. MILLER. Answer it then.

Mr. LONDON. The question shows an amazing ignorance.

The ideas I have just expressed here were expressed many generations ago by Sumner, Webster, and others. Lenin was still unborn and Trotski's name was unknown. This form of insinuation appeals only to the very ignorant, and it has no place here. It might have worked three years ago. Even war should not be permitted to destroy the essence of a democratic form of government. Even during war the people are the principal and the Government is the agent. There can be no people's rule when the people are not allowed to speak their minds.

Mr. ANDREWS of Nebraska. Will the gentleman yield for one more question?

Mr. LONDON. Yes.

Mr. ANDREWS of Nebraska. Can the gentleman cite any Government of any form that has practiced more cruelty than Lenin and Trotski?

Mr. LONDON. What in the world has that got to do with it? If it be true, does the gentleman want to imitate them?

The CHAIRMAN. The time of the gentleman has expired.

Mr. HICKS. Mr. Chairman, I yield 20 minutes to the gentleman from Michigan [Mr. FORDNEY].

Mr. FORDNEY. Mr. Chairman and gentlemen, I will be grateful to the gentlemen if they will permit me to make my statement without interruption, as I have but 20 minutes. About three months ago I made a speech in the House and I placed in the RECORD at that time copies of invoices of certain imported foreign-made goods. I stated to the House that I also had in my possession sales slips from the house where those goods were sold, retailed in this country at prices far in advance of the invoice value or the landed value, duty paid, of those goods. I was obliged to and did refer to one of the great importing houses of this country, Marshall Field & Co. Later on, the 19th of January, my very beloved friend from Chicago [Mr. MANN] made a speech on the floor of the House. He presented to the House statements furnished him by Marshall Field & Co. in which that company claimed that all of my statements were incorrect or false. I do not criticize Mr. MANN, but I criticize the people who furnished him with the information which he placed in the RECORD at that time denying the correctness of the statement made by me. Mr. MANN, however, was severe in his remarks and concluded by saying that what the gentleman from Michigan had said was pure bunk. He was prompted to make that statement from the information given him by that company's manager, John G. Schedd. All right. So much for that. I wish to prove to the House whether or not what I said at that time was pure bunk. I never did say that Marshall Field & Co. imported these goods, these particular articles, pocketknives. I did say the invoice value of those goods was, in round numbers, $1.50 per dozen knives.

I hold in my hand one of the knives I then spoke about, manufactured by J. A. Henkel in Germany. Marshall Field & Co., in the statement put in the RECORD by the gentleman from Illinois [Mr. MANN], say they did not import those knives, but purchased them in New York, and paid twenty-five times as much as Mr. FORDNEY stated they were imported for. That would be $37.50 a dozen or thereabouts. I stated that the import value of the knives was about $1.50. I sent a man to Chicago, who purchased this knife which I have here, and paid Marshall Field & Co. $5 for it. I have the sales slip. I have taken time and finally located J. A. Henkel's agent in New York, and from that representative of J. A. Henkel, where undoubtedly Marshall Field & Co. purchased these knives, this man purchased a dozen knives for $2.70. Here is a list of the prices at which these knives were purchased in New York. So much for "bunk" that they, Marshall Field & Co., paid $37.50 a dozen for. I assume that when any merchant can purchase knives from the agent of J. A. Henkel in New York for $2.70 a dozen, Marshall Field & Co. can purchase them just as cheaply. I am going to leave it to you as to whether or not what I said before about these knives was "bunk."

I have another knife made by the same man, J. A. Henkel, of Germany, sold by Marshall Field & Co. to me through the agent I sent to their store. He paid $8.50 for that knife [exhibiting the knife]. It carries one blade, one file blade, and a small pair of scissors. The price quoted by the New York agent for one dozen of these knives is $7.62. So much for "bunk" on this knife.

I have never made a statement about any of these imported articles where I did not have proof of the correctness of the statement, and I never will. By the way, here is one of the knives made by J. A. Henkel, purchased in Germany in July of last year, a more valuable knife, with three blades and a file, purchased by a friend of mine for 18 paper marks in Germany. At that time the mark had a value of 9.6 cents in gold—sold at retail for $5 over here. I stated that I had in my possession a cup and saucer imported from Japan. The invoice value is 48 sen. A sen is a fraction less than half a cent of our money. The gentleman is in this room that made this purchase for me; and the correctness of my statement was disputed by one man, an importer of chinaware. But he is in error; they were imported for 48 sen, or a fraction less than 24 cents a dozen cups and a dozen saucers. I made a speech at Peoria, Ill., and a man came on the platform afterwards and said that my information was not correct; that he was an importer and dealer in Japanese goods of that kind and that he paid more money for them than the price stated by me to be in the invoice. I do not know what the purchaser paid for these goods in Japan. I only know the invoice value—what they were entered at our customs office for. But to bear out my statement, I have here the original invoice furnished to me by the Secretary of the Treasury, and the invoice value is 48 sen, as set out in the original invoice and as I formerly stated. I did make a correct statement—that my friend paid $4.20 a dozen at retail for those cups and saucers, or 35 cents for one cup and one saucer, where the dozen cups and dozen saucers, duty paid, were imported for about 37½ cents. The duty is 55 per cent ad valorem.

I am making these statements, gentlemen, to substantiate my position that in our new tariff law we should carry a provision for collecting ad valorem duties based on American values and not on foreign values. [Applause.]

I will show you another imported article. Here is an electric flatiron. It weighs six and three-fourths pounds. It was imported from Germany. Here is a copy of the invoice. Three thousand five hundred of them came in one shipment; to be exactly correct, 3,496. I am told they are retailing for $1.12½ per pound; that is, $6.75 for a 6-pound flatiron. That iron, including the cord, was imported for 19 cents, which is an absolute, clean-cut case of undervaluation—fraud. That flatiron paid 3.8 cents duty, or 20 per cent ad valorem. I have in my office three flatirons made in the United States, comparable with this one here. The wholesale selling value of one is $3.51; of another, $3.58; and of another, $3.65. A manufacturer of this part, namely, the part that enters the electric socket, was in my office yesterday, and says that he can not manufacture that part alone for less than 50 cents, and these two smaller pieces at 8 cents each.

Mr. FREAR. Can not manufacture what?

Mr. FORDNEY. This part; the fixture that connects the cord with the electric lamp or fixture; and the two smaller pieces that connect the cord with the iron.

Mr. FREAR. What is the idea? Describe it.

Mr. FORDNEY. He tells me the cord is of very poor quality, and would not be accepted by our insurance companies here where they carry policies on a building in which that cord would be used. But my good wife paid the other day in this city $2 for a cord alone, while this iron, cord, and the whole apparatus was imported at a cost of 19 cents.

Mr. TIMBERLAKE. Will the gentleman yield?

Mr. FORDNEY. Yes.

Mr. TIMBERLAKE. Did the cord that was purchased by your wife have that attachment to it?

Mr. FORDNEY. It had, but the attachment was not as modern—this one is in two pieces, while the one purchased by Mrs. Fordney is all one piece. This can be put in the socket without twisting the cord, the other can not.

But most striking of all the samples which I have is this clock. I have in my home a clock like this one here [exhibiting]—I believe the exact duplicate. I do not know where the clock that I own was made. I have had it in our home for 10 or 15 years, and I am not clear what price I paid for it, but it is my recollection that I paid $38. Here is a copy of the invoice, as you see here. This clock was imported recently at $1.10. That is the foreign value. Yesterday morning I went down town and in two stores in this city I was asked $40 for that kind of a clock.

Mr. FREAR. Describe the clock. How often do you wind it?

Mr. FORDNEY. It runs 400 days with one winding. It is a remarkable piece of machinery, known as the "four-hundred-day clock." The board of general appraisers over at New York revalued that clock and admitted it at $1.66 instead of at $1.10—a wonderful increase. [Laughter.]

I have in my possession a lady's wrist watch furnished me by the Treasury Department, billed, of course, guaranteed for

20 years; invoiced at $1.33, an undervaluation, of course; imported from Germany.

Mr. RAMSEYER. Mr. Chairman, will the gentleman yield right there?

Mr. FORDNEY. Yes.

Mr. RAMSEYER. Is that what it cost to make the article over there, or what it is invoiced at, for the purpose of valuation?

Mr. FORDNEY. The invoice value. I have no means of knowing the actual selling value over there, or the actual cost of production. I am confining myself to the invoiced value to show you how those goods are undervalued and the United States Treasury robbed of the correct amount of duty.

Mr. MILLER. Mr. Chairman, will the gentleman yield there?

Mr. FORDNEY. Yes.

Mr. MILLER. Is not the invoiced value supposed to be based on the production value?

Mr. FORDNEY. No; the invoiced value is supposed to be based on the wholesale selling value in the country of origin.

I have here a safety razor. The handle is in two pieces, so as to be inclosed in this little box, invoiced at 72 cents a dozen.

Mr. MONDELL. That is the invoiced value?

Mr. FORDNEY. Yes. I am speaking altogether, brother, of the invoiced value. Goods exported to the United States when invoiced are supposed to carry the actual wholesale selling value. I know of no way by which we can prevent the undervaluation of these goods under existing law.

I have in my possession in my office in this Capitol some 40 articles of import, not selected for the purpose of extreme illustration but selected because they were the only available articles that we could run down from the actual invoice to the counter where they were sold. These goods here are among the many articles that I have collected.

Now I want to go a little further——

Mr. ANDREWS of Nebraska. Mr. Chairman will the gentleman yield?

Mr. FORDNEY. Yes.

Mr. ANDREWS of Nebraska. The duties imposed on those articles are ad valorem duties not specific.

Mr. FORDNEY. Yes. The duties are ad valorem.

I have here some imported pocketknives which were sold at wholesale at $7.62 a dozen. A friend of mine paid $8.50 for one of them at retail—a single knife—or 88 cents more for that one knife purchased at Marshall Field & Co.'s at Chicago, than a dozen was purchased for at J. A. Henkle's agents at New York.

Mr. FREAR. Where did you get it?

Mr. FORDNEY. From J. A. Henkle's agents in New York.

Mr. SMITH of Michigan. That was the wholesale price?

Mr. FORDNEY. Yes; that was the wholesale price in New York, and undoubtedly any merchant can buy them at that price.

Mr. KINCHELOE. Mr. Chairman, will the gentleman yield?

Mr. FORDNEY. Certainly.

Mr. KINCHELOE. Do your customs agents under the present law have to levy the duty on articles at the invoice price that they say?

Mr. FORDNEY. No; our agents can hold up those things and investigate and revalue.

Mr. KINCHELOE. I wondered how that was, and that is the reason why I asked the question.

Mr. FORDNEY. A man has been appointed, I believe, to go to Germany and run down the value of this clock and many of the other things that I and others have here, and it is proposed to trace these goods to the selling price in this country and see who is the crook.

Mr. ANDREWS of Nebraska. Mr. Chairman, will the gentleman yield again?

Mr. FORDNEY. Yes.

Mr. ANDREWS of Nebraska. Are we not spending millions of dollars to detect these undervaluations?

Mr. FORDNEY. Yes, sir.

Mr. GARNER. The gentleman speaks of knives selling at $7.62 a dozen in New York.

Mr. FORDNEY. Yes.

Mr. GARNER. Have you the invoice price of those knives?

Mr. FORDNEY. No; I have the wholesale selling price at New York and the retail price in Chicago. By the way, I have obtained from the Department of Commerce the average value of knives imported from Germany; but that does not prove anything in these cases. We imported last year during the calendar year 1921 about $600,000 worth of pocketknives from Germany, at an average value of $1.41 a dozen.

Mr. GARNER. It would be interesting to have the invoice value of those knives that you bought for $7.62 per dozen.

Mr. FORDNEY. The invoice value of this other knife is about $1.49 a dozen, retailed in this country at $5 each.

Mr. ANDREWS of Nebraska. Would the gentleman give us some idea of the increased revenue that we would receive if we had received the proper duty on those goods?

Mr. FORDNEY. I have no doubt that clock cost $15 to make. The duty would be, at 30 per cent, on a valuation of $15, some $4.50. They, the importers, paid 50 cents duty. That is the difference. They paid less than one-ninth the duty that they should have paid. In my opinion, if we could only compel the importers to pay the duties provided by law we would collect twice as much as we collected last year, or $600,000,000, instead of $300,000,000, which is about the amount collected.

Mr. ANDREWS of Nebraska. Does not that practice of undervaluation compel the taxpayers of this country to pay the difference in the internal-revenue taxes that ought to be paid otherwise?

Mr. FORDNEY. Yes. The taxpayer in this country must go down in his pocket and dig up the difference to cover such frauds.

Here is a statement from a professor in one of our colleges to the effect that the tariff law now pending before the Senate, which has been slumbering there for nearly 11 months and is now being pulled out of the dust, when enacted will be a detriment to our own people. He is a free trader. He states that we exported more goods to Germany than we imported from there. I looked that matter up to-day, and I find that if our goods which are exported on the basis of our values were based upon the foreign values which those imports are based upon, our exports would prove to be about one-half of the value of the imports. In other words, as an illustration, during the war we exported horses and at the same time imported horses from Canada; the best horses in the world imported into the United States came from Canada. We imported those horses from Canada at $27 a head and exported them at a value of $225 a head. That is a good illustration of import and export value in many cases. Horses paid an ad valorem duty. Our Government was deprived of the correct amount of revenue that should have been paid as import duty on those horses.

Mr. FREAR. Mr. Chairman, will the gentleman yield?

Mr. FORDNEY. Yes.

Mr. FREAR. Will that be cured under the American valuation?

Mr. FORDNEY. Under American valuation we would not only fix the rate of duty but we would fix the basis of value on which that duty is collected, while now the foreigner fixes the value. [Applause.]

Gentlemen, I have given you these illustrations as evidence that the basing of ad valorem duties on foreign valuation opens the door to fraud. It is common knowledge to men informed on the subject that undervaluation of imports is practiced freely. Last year, in the customs office at New York alone, nearly 6,000 cases of undervaluation were uncovered. The lower the value of the imported article, the less the duty to be paid to the Government of the United States.

It is the usual practice of the firms abroad from whom goods are purchased for importation to the United States to furnish the purchaser with two separate invoices, one showing the actual purchase price and the other a much smaller figure. When the goods reach the customs office in this country the importer may present to the officials the invoice showing the undervaluation. If he succeeds in getting past the officials at the customs office, then he not only makes a profit at the expense of the United States Treasury but becomes a most dangerous competitor to the honest importer who enters his merchandise at its true value and pays the full amount of duty to which the Treasury is entitled under the law. In disposing of his goods when undervalued the merchant either takes advantage of the opportunity to make excessive profits or he undersells the honest merchant.

It is said by those who oppose the American valuation plan that such a plan would be impractical. In this they are in error, for many other countries are now collecting duties upon the value of the goods in the country to which the goods are shipped and not their value in the country of origin. Canada, just across the border to the north, imposes a duty on the wholesale selling value in Canada of the imported article. If Canada can successfully levy duties on the home value, why can not we?

Mr. PADGETT. I yield 10 minutes to the gentleman from Mississippi [Mr. SISSON].

Mr. SISSON. Mr. Chairman and gentlemen of the committee, I think the scrapping bill, so called, is properly before the House. I agree absolutely with the gentleman from Virginia

[Mr. TUCKER] in his construction of the treaty-making power under the Constitution, and also I agree with the gentleman from Iowa [Mr. TOWNER].

When George Washington was President of the United States there was a young man by the name of Albert Gallatin, a Representative from the State of Pennsylvania, a young man of great learning and great powers, who, but for the fact that he was not born in America, might have been President of the United States. The only other thing that stood in the way of his being President was the fact that he was perhaps too brilliant and too wise and too well known to be President. With few exceptions our wisest and strongest men have not been Presidents of the United States. Washington was a very strong man, Jefferson was a very strong man, and Jackson and Lincoln were strong men. The others have been rather mediocre men, but I think it is best that they be so. But George Washington was absolutely supreme in both Houses of Congress until there was presented to this House from the Senate a bill to pay a certain amount of money which was provided for in a treaty that had been ratified by the Senate. Young Gallatin made his national reputation on that bill, and from that day became a leading Democrat of the Nation and remained so until he died. He there took the position, contrary to the position assumed by Washington in his administration, that no treaty was binding upon this country which carried in it an appropriation of money without the treaty having been submitted to and agreed upon in the House. I do not know that that principle has been violated from that day to this. When Mr. Taft negotiated the reciprocity treaty with Canada the same principle was involved, except that in the Canadian reciprocity treaty it was a question of revenue and not a question of appropriation.

Mr. Gallatin assumed the position contrary to that taken by Washington, and one of the most learned debates that ever occurred on the floor of this House occurred at that time. Young Gallatin carried the House of Representatives with him and won by more than 2 votes to 1, and for the first time in his history the then great President of the United States found his prestige and control of both Houses taken from him.

I do not agree with the gentleman from Ohio [Mr. BURTON] that it adds any very great difficulty to the negotiating of a treaty by saying that it shall be submitted to Congress if it happens to be a matter in which the concurrence of the House of Representatives is essential to give validity to the legislation. Anything that involves the taxing power, or what is an et sequator, that involves the appropriation of money, must be submitted to this House, and does not in any way interfere with the dignity of our commission when they go abroad, that they shall stand up and vindicate the Constitution of the United States. Do you know that any treaties made by the English Government before they are binding upon the English people are submitted to Parliament? It is not a new proposition in other free countries, and the fathers of the country could just as well have provided that all these treaties shall be approved by Congress as that they shall be approved by the Senate. It was seriously contended by some men that the President should have the right to negotiate treaties without consulting either branch of the Congress. Other members of the Constitutional Convention contended that they should be submitted to both Houses of Congress, and the compromise was reached that they agreed that a treaty should be submitted to one House, to wit, the Senate.

I also deny the proposition argued by some that in all matters a treaty becomes the supreme law of the land. I do not suppose that anyone would contend that a treaty made between our diplomatic representatives and the representatives of foreign nations and ratified by the Senate, which provided for the abolition of the Constitution of the United States, would actually abolish it. You say, that is absurd. Yes; and some of the contentions of the men who endeavor to hold that the treaty-making power is the supreme law of the land in the broadest sense of the word are just as absurd as the proposition I have just laid down. Within the scope of the treaty-making power, when the treaty is negotiated by our representatives and is approved by the President and sent by him to the Senate for the ratification and the Senate ratifies the treaty, then the treaty is the supreme law, but always with the limitation that it shall be within the treaty-making power as prescribed in the Constitution. There are certain matters which are not within the scope of the treaty-making power of the Constitution, and if you will read the debates in the Constitutional Convention, you will find that when these questions arose those men said it was almost impossible, if not entirely impossible, to define exactly those matters which could or should be submitted to treaties between nations. It was the difficulty of definition that prevented their putting in the Constitution a correct definition of those things which might be submitted to treaty. But they all finally concluded, or the majority of them finally concluded, that there were only certain matters that could go into a treaty, and that if our representatives should agree on an absurd matter, when the high contracting parties were framing the treaty, the Senate being the representatives of the States would not permit it to be ratified, and they thought that was a sufficient safeguard. I think the language of the Constitution is unfortunate for it is not always construed as our fathers intended.

I am frightened at the position that men now take on the treaty-making power, that it can overturn statutes and become the supreme law of the land, when a treaty may be made by a bare majority of a majority of the Senate, in secret, when the American people who are most vitally interested in the provisions of the treaty can not themselves know who vote for or against or who debate for it and who debate against it. I am in favor of open diplomacy. Why, it was contended at one time that there could be no such thing as open legislative bodies. All legislation was enacted in star-chamber proceedings, and we had no knowledge of how it was made, and who voted for it or who spoke for it, and we had no good legislation. We had no open forums where men could know what was going on, until in this great Government of ours we tore from the House of Representatives and the Senate the secrecy of debate and the secrecy of the vote and put these galleries here and put the newspaper boys up there so that people could know what was going on. One of the most diabolical things on earth was the secret trials that they used to have, when men never knew perhaps what they were charged with until the day and hour of trial, when they were dragged into court and called upon to answer in secret and were not confronted with the witnesses. Thousands of innocent men were sent to prison there to rot and die. Our English people provide for an open court, and that the accused should be confronted with their witnesses, and glorious America has protected that right, thanks to Thomas Jefferson, in our organic law. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. HICKS. I yield to the gentleman three minutes more.

Mr. GARNER. May I ask the gentleman a question?

Mr. SISSON. Certainly.

Mr. GARNER. Is there any thought in this country that a treaty is superior to the Constitution?

Mr. SISSON. There was a gentleman on the floor—he is not present now—that took the position that it was the supreme law of the land.

Mr. GARNER. Well, take a concrete illustration: Suppose the Republic of France and this Republic should enter into a treaty wherein they agreed to ship all the liquor that they wanted to this country.

Mr. SISSON. Well, some people contend that that would be the supreme law of the land, and it would prevail unless Congress at once passed a law repealing such a treaty, but I do not believe a word of that. I think such a treaty would be void.

Now, to come back to what I was saying. Men did not have an opportunity to have their liberties protected until they were confronted by witnesses and tried by a jury of their peers in open court. Many people do not know why now an indictment states that it is presented in open court. And yet it involves one of the sacred rights of men in this free country that all presentments must be made in open court.

If I had my way about it, I would provide that treaties should be made in the open. When President Wilson went to Paris he made that proposition and they delayed doing anything for 30 days, and when Wilson saw that they would not proceed in the open he agreed and they went into secret meetings, and what was said and done was not given out except by the respective parties themselves, each, of course, coloring everything to suit themselves. No; you will have no honesty and integrity among nations, you will have no fair treatment of the people throughout the world until you get treaties made in the open. If I had the time, I would like to discuss this matter further. Long before this World War I made a speech on this floor against secret treaties and against making them in secret. That which must be done behind closed doors is because there is something unfair or bad about it. Finally, let me say that you are going to have no honesty among the nations, no fair treatment among the nations until representatives of all nations shall come out in the open before their own people and before the people of the world, and I say that they have no right to bind you and your liberties, no right to bind your purse, no right to bind your blood, no right to bind the blood and treasure of the whole Nation to any proposal unless

the people of these nations and the people of the earth know to what they are bound and what their posterity is bound to. Let us have open treaties. [Applause.]

MESSAGE FROM THE SENATE.

The committee informally rose; and Mr. CRAMTON having taken the chair as Speaker pro tempore, a message from the Senate, by Mr. Craven, its Chief Clerk, announced that the Senate had agreed to the amendments of the House of Representatives to bills of the following titles:

S. 3505. An act in reference to the summoning of grand juries in the District of Columbia; and

S. 1162. An act declaring Lake George, Yazoo County, Miss., to be a nonnavigable stream.

The message also announced that the Senate had passed without amendment the bill (H. R. 11645) making an appropriation to enable the Department of Justice to investigate and prosecute war frauds.

SCRAPPING NAVAL VESSELS.

The committee resumed its session.

Mr. HICKS. Mr. Chairman, I yield 10 minutes to the gentleman from Indiana [Mr. DUNBAR].

Mr. DUNBAR. Mr. Chairman, I thank the gentleman from New York, but 10 minutes will do me no good. I therefore yield back the balance of my time.

Mr. HICKS. Will 12 minutes answer the gentleman's purpose?

Mr. DUNBAR. No.

Mr. HICKS. Mr. Chairman, I yield 10 minutes to the gentleman from Nebraska [Mr. ANDREWS].

Mr. ANDREWS of Nebraska. Mr. Chairman, we have been discussing American valuation, foreign valuation, the scrapping of ships, the bonus bill, and so forth, and in the midst of it all we are frequently asked the question, Where will we secure the money to pay the soldiers' bonus? I desire to offer a few suggestions and figures based upon the House bill now pending in the Senate. Let me preface that with the statement that the press reports indicate that the British Government is preparing to pay the interest on her debt to the United States. With the assurance given in the British Parliament that their debt to the United States will be paid, I submit the following computations, which are based upon official reports:

"The annual interest due on the British loan, at 4½ per cent, is $207,527,500, and the total amount of interest due for 20 years will be $4,150,055,000. The largest annual charge under the bonus bill (H. R. 10874, 67th Cong., 2d sess.) will appear in 1926 and will be $136,825,000, and the total cost of that bill at maturity will be $4,098,719,350.

"Thus it appears that the interest due each year will exceed the largest annual payment under the bonus bill by $70,702,500 and that interest due for 20 years will exceed the total cost of that bill by $51,830,650.

"If the British debt should be funded at 4½ per cent for 25 years, there will still be, after the bonus bill is paid in full, an available balance of $5,972,000,000 for our National Treasury from that source."

Thus it is clearly disclosed that the largest annual charge prior to 1942 would be $70,000,000 less than the annual interest due from Britain, and that the total liability of the National Treasury under the House bill would be $51,000,000 less than the total amount of interest due on the British debt for a period of 20 years.

If the Foreign Debt Commission should extend the loan for a period of 25 years, as authorized in the act creating the Foreign Debt Commission, there would still be due at the end of that period from Britain, principal and interest, $5,972,000,000.

Where, then, is there any necessity to be uneasy about additional taxation to pay the bill? There is the source of money to pay it, and the terms of that bill will cancel the obligations for the bonus and leave at the end of 25 years $5,972,000,000, in principal and interest, still due to the Government of the United States.

Mr. CABLE. Will the gentleman yield?

Mr. ANDREWS of Nebraska. Yes.

Mr. CABLE. As chairman of the committee, I would like to know if you can give the House any idea when you expect to report out the bill.

Mr. ANDREWS of Nebraska. That question will be answered in due time.

Mr. LOWREY. Will the gentleman yield?

Mr. ANDREWS of Nebraska. Certainly.

Mr. LOWREY. Are we not obligated to use the interest on the foreign debt for the purpose of paying the interest on the bonds to our own people?

Mr. ANDREWS of Nebraska. No. The interest on the foreign loans is not pledged to any purpose whatever. We are obligated to pay our own bonds as they mature. This may be done, and probably will be done, by funding them at their maturity into long-time bonds. I think that should be done and the plan is now under consideration. It will be observed that my statements involve the use of interest only. None of the principal will be needed to pay any part of the bonus bill.

As payments are made by our creditors, the money will be deposited into the National Treasury as miscellaneous receipts or unappropriated funds to be drawn upon by appropriation bills in the regular order. As liabilities accrue under the bonus bill, unappropriated funds received from the British debt will thus be available for their payment without additional taxation for that purpose.

Why should anyone object to this plan? The interest on the British debt alone would thus take care of all charges under the bonus bill and the principal would remain for the retirement of a like amount of our own Liberty bonds.

A vast majority of the people of this country have virtually pledged themselves to the main features of that bill. Of course those who deliberately repudiate that pledge and deny the right of the ex-service men to any additional compensation will oppose this or any other plan for a like purpose.

Mr. LOWREY. I am not opposing the gentleman's proposition, but I am asking for information.

Mr. ANDREWS of Nebraska. We can arrange that matter without any difficulty.

Mr. LOWREY. But if you use the interest to pay the bonus we have to go somewhere else to get the money to take the place of it.

Mr. ANDREWS of Nebraska. The maximum amount liable under this bill each year after 1926 will be $42,000,000, and for the remainder of the period it will run from $27,000,000 to $34,000,000. As I have already stated, the interest that will accrue on foreign loans is not pledged to any specific purpose and is available to pay the bonus.

Mr. CHALMERS. Mr. Chairman, I want to say that I think the gentleman from Nebraska is absolutely correct, and that we are under obligations to him for working out these figures. In my judgment, those who are trying to amend the House bill and change its provisions are not friendly to the bonus. They are not the real friends of the World War soldiers. They are trying to delay bonus legislation or make the passage of the law impossible. I congratulate the gentleman on the showing and thank him for the figures he has given the House.

Mr. ANDREWS of Nebraska. I am grateful to the gentleman from Ohio for his compliment.

The following table, quoted from the report of the Committee on Ways and Means, will give at a glance the total cost of the bill to the Government for each and all of the various options specified in the bill, the grand total being $4,098,719,350:

Cost of bonus on basis of (1) paying all adjusted compensation that amounts to $50 or less per veteran (approximately 10 per cent of the men will come under this provision); (2) issue adjusted service certificates to 70 per cent of the remaining veterans; (3) 2½ per cent to receive vocational training aid; (4) 10 per cent to receive farm and home aid; (5) 7½ per cent to receive land settlement aid.

Fiscal year.	Cash (10 per cent).	Certificates (70 per cent) (no borrowing).		Vocational training (2½ per cent).	Farm and home aid (10 per cent).	Land settlement aid (7½ per cent).	Total.
		Deaths.	Maturity.				
1923	$16,000,000	$26,604,000		$31,675,000			$74,279,000
1924		26,440,000		20,000,000	$72,000,000	$6,000,000	124,440,000
1925		26,720,000		650,000	64,000,000	30,000,000	121,370,000
1926		26,825,000			50,000,000	60,000,000	136,825,000
1927		26,936,000				16,000,000	42,936,000
1928		27,046,000					27,046,000
1929		27,233,000					27,233,000
1930		27,415,000					27,415,000

Cost of bonus on basis of (1) paying all adjusted compensation that amounts to $50 or less per veteran (approximately 10 per cent of the men will come under this provision); (2) issue adjusted service certificates to 70 per cent of the remaining veterans; (3) 2½ per cent to receive vocational training aid; (4) 10 per cent to receive farm and home aid; (5) 7½ per cent to receive land settlement aid—Continued.

Fiscal year.	Cash (10 per cent).	Certificates (70 per cent) (no borrowing).		Vocational training (2½ per cent).	Farm and home aid (10 per cent).	Land settlement aid (7½ per cent).	Total.
		Deaths.	Maturity.				
1931		$27,674,000					$27,674,000
1932		27,932,000					27,932,000
1933		28,265,000					28,265,000
1934		28,600,000					28,600,000
1935		29,004,000					29,004,000
1936		29,448,000					29,448,000
1937		30,003,000					30,003,000
1938		30,593,000					30,593,000
1939		31,333,000					31,333,000
1940		32,144,000					32,144,000
1941		33,105,000					33,105,000
1942		34,251,000					34,251,000
1943			$3,154,823,350				
Total	$16,000,000	577,571,000	3,154,823,350	$52,325,000	$186,000,000	$112,000,000	4,098,719,350

Mr. ANDREWS of Nebraska. Mr. Chairman, I ask unanimous consent to extend and revise my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Virginia [Mr. TUCKER].

Mr. TUCKER. Mr. Chairman, I was prevented from hearing the remarks of my friend, Mr. BURTON, of Ohio, until the latter part of his speech, and I found that he was basing his argument upon the old case of Ware against Hylton, a case that has been more misunderstood than any case ever reported in the books. Therefore, I want to give to the committee just exactly what that case decided. My friend declared that it decided that when a State law conflicted with a treaty, the treaty annulled the law of the State. My contention is that that was not decided in the case, and that it could not have been so decided. That was the British debt case—a suit brought by an English creditor about 1796 against a Virginia debtor on a note. The Virginia debtor, when the suit was brought, filed a plea in which he set up the law of Virginia confiscating English debts. The British creditor replied by replication to that plea that the treaty of peace which had been ratified between the United States and Great Britain pledged specifically that there should be no legal impediment to the collection of debts by parties in either country against those in the other. To that replication there was a rejoinder by the Virginia debtor in which he said that the treaty of peace was of no value or effect, because it had been violated in a half dozen instances by Great Britain, and therefore it was valid in no respect. To that rejoinder to the replication there was a demurrer, and that demurrer, as the lawyers of this House know, was not only applicable to the rejoinder, but it went back to the beginning of the case and challenged the validity of each one of the pleadings and stopped where the first fault was found in the pleadings. The court found that the declaration was right, but when it came to the plea of the Virginia debtor of the act of Virginia confiscating English debts, three out of the four judges on the court declared that Virginia could not confiscate debts, that she had no power to confiscate debts, and that the act was void.

Of course, the plea then fell, and with the plea the replication, and with the replication the rejoinder, and the British creditor was left with a clear field to judgment without the interposition of any pleading. So far from that case holding that the treaty overrode the law of Virginia, three out of the four judges held that there was no law of Virginia, and therefore there could be no conflict between the treaty and the law.

Mr. STEVENSON. On what ground did they hold that the Virginia law was void? It was not on the ground that it was in conflict with a treaty of the United States.

Mr. TUCKER. Oh, no; not at all. They held that Virginia had no power to confiscate debts. That case has been quoted by every author that has ever written on this subject, and there has been a great misunderstanding about it. The idea seems to be that Judge Chase, who delivered one of the opinions of the court, delivered the opinion of the court. There was no opinion of the court. There were four opinions, but no opinion of the court, each judge delivering a separate opinion. At a meeting of the International Bar Association in this city a few years ago so great a lawyer as Secretary Root referred to Judge Chase's opinion as the opinion of the court, and Mr. Justice Swayne, of the Supreme Court, in the case of Hauenstein against Lynham, referred to this old case of Ware against Hylton and spoke of Judge Chase's opinion as the opinion of the court. He rendered the best opinion of all of the four, but it was not the opinion of the court.

I wanted to make this statement because my friend's argument seems to have been based upon the validity of that case and the fact that the treaty had been decided to override the law of the State. Had Judge Chase's opinion been the opinion of the court, Mr. BURTON's contention would be correct, but my friend has fallen into the same error that many others have who have preceded him in the discussion of this question.

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Virginia [Mr. MOORE].

Mr. MOORE of Virginia. Mr. Chairman, I am sure that we have all been greatly impressed by the very able discussion which has been heard here to-day. It takes us back to the early days of the Republic and suggests some of the names of the very greatest men who figured in those times. For instance, a moment ago my valued friend from Virginia [Mr. TUCKER] cited a case in which Patrick Henry was counsel, where he showed not only his remarkable gifts as an orator but his profound knowledge of the law.

It seems to me that a very simple proposition relieves this bill of any constitutional question. The treaty can not be executed and none of the provisions of the bill can be executed without the appropriation of money, and we deduce at once from this fact that congressional action is necessary. I may say in passing that it seems that the bill should be amended so as to make the act effective upon the treaty being ratified. The truth is that thus far there is no treaty, and until ratifications are exchanged there can be no treaty, and it is, of course, not in the contemplation of the House that the President shall perform the duties specified in the bill until there is an actual treaty in force.

I am very much in favor of the bill just as I very heartily approve the results of the recent conference. I am glad that the conference was able to take a positive step in the direction of international peace.

I rose, however, mainly for the purpose of calling attention to what occurred while the naval appropriation bill was recently under discussion. While that bill was in the House, in another body one of the ablest of our public men used this language:

> * * * the most powerful influences in the administration, outside of the President himself, are in favor of the United States entering the League of Nations. * * *

I can not pass upon the accuracy of that statement. But a little later it was followed by a statement made by the President that is to me full of encouragement. In the letter from the President, which the gentleman from Ohio [Mr. LONGWORTH] read to the House while we were considering the naval bill, there was a very significant expression, to which no attention was at the time particularly called.

With reference to the size of the enlisted personnel of the Navy the President said:

> Ultimately, perhaps, the lower figures proposed may be reached, and I hope it will be possible through later international concerts. * * *

The President's thought evidently was that the Government is not going to stop with what has been done but is going forward with the effort to create international concert of action by some sort of an association of nations into which all nations will be drawn and which will give promise of that general peace for which the world longs. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. HICKS. Mr. Chairman, in view of the fact that the hour is rather late and that many gentlemen who are not here this afternoon would like to listen to the discussion in reference to airplanes and the conversion of battle cruisers, that part of the debate will take place to-morrow morning. Therefore I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and Mr. CAMPBELL of Kansas having taken the chair as Speaker pro tempore, Mr. HUSTED, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee having had under consideration the bill (H. R. 11214) authorizing the President to scrap certain vessels in conformity with the provisions of the treaty to limit naval armaments, and for other purposes, had come to no resolution thereon.

LEAVE TO EXTEND REMARKS.

By unanimous consent, Mr. TUCKER and Mr. HICKS were given leave to extend their remarks in the RECORD.

APPROPRIATIONS FOR INTERIOR DEPARTMENT.

Mr. CRAMTON, from the committee of conference, presented a conference report on the bill (H. R. 10329) making appropriations for the Department of the Interior, which was ordered printed under the rules.

Mr. GARNER. Mr. Speaker, may I ask the gentleman when he expects to call up this conference report for consideration?

Mr. CRAMTON. I wish to call it up as early as will be consistent with the program of the House. I should be very glad if I could call it up to-morrow or the following day.

Mr. MONDELL. May I suggest to the gentleman that if we conclude the consideration of the so-called scrapping bill early enough to-morrow we hope to give some time to conference reports, and it is possible that we may be able to dispose of the conference report presented by the gentleman from New York and that presented by the gentleman from Michigan also.

Mr. GARNER. May I ask the gentleman from Wyoming what is the necessity for a prolonged consideration of the scrapping bill? There appears to be no opposition to it on either side of the House.

Mr. MONDELL. Gentlemen sometimes desire to discuss the features of a bill to which they have no objection.

Mr. GARNER. How much time remains for general debate on this bill, Mr. Speaker?

The SPEAKER pro tempore. Thirty-eight minutes.

Mr. GARNER. So if there is no material opposition or discussion or amendment, it occurs to me that you might pass the bill within an hour.

Mr. MONDELL. I should be very glad to see that done if possible, but the bill is exceedingly important, and it has occurred to me that probably gentlemen would like to have some time under the five-minute rule, so that we may not be able to dispose of it as soon as the gentleman suggests.

Mr. GARNER. You do hope to take up conference reports to-morrow if time will permit?

Mr. MONDELL. Yes.

ADJOURNMENT.

Mr. HICKS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

Accordingly (at 4 o'clock and 40 minutes p. m.) the House adjourned until Wednesday, May 17, 1922, at 12 o'clock noon.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. FOSTER: Committee on the Judiciary. H. R. 10817. A bill to amend section 100 of the Judicial Code of the United States; with amendments (Rept. No. 1011). Referred to the House Calendar.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Invalid Pensions was discharged from the consideration of the bill (H. R. 11530) granting an increase of pension to Raymond P. Snow, and the same was referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. DYER: A bill (H. R. 11673) to amend the act of June 30, 1906, creating a United States Court for China, and so forth; to the Committee on the Judiciary.

By Mr. WINSLOW: A bill (H. R. 11674) for the purchase of the Cape Cod Canal property, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. SINCLAIR: A bill (H. R. 11675) to continue the land offices at Minot, Williston, and Dickinson, in the State of North Dakota, and for other purposes; to the Committee on the Public Lands.

By Mr. REECE: A bill (H. R. 11686) to direct railroads engaged in interstate commerce to issue mileage books; to the Committee on Interstate and Foreign Commerce.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BROWN of Tennessee: A bill (H. R. 11676) granting a pension to R. B. Hendrickson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11677) for the relief of W. B. Davis & Son (Inc.); to the Committee on Claims.

By Mr. FOSTER: A bill (H. R. 11678) for the relief of Albert Bowen; to the Committee on Military Affairs.

Also, a bill (H. R. 11679) granting a pension to M. Lavina Porter; to the Committee on Invalid Pensions.

By Mr. KEARNS: A bill (H. R. 11680) granting an increase of pension to Azubeth Srofe; to the Committee on Invalid Pensions.

By Mr. KING: A bill (H. R. 11681) granting a pension to Joseph Houser; to the Committee on Pensions.

By Mr. MOORE of Illinois: A bill (H. R. 11682) granting a pension to Cora De Baun; to the Committee on Invalid Pensions.

By Mr. PURNELL: A bill (H. R. 11683) granting an increase of pension to Nancy Veatch; to the Committee on Invalid Pensions.

By Mr. RHODES: A bill (H. R. 11684) granting a pension to W. A. Duncan; to the Committee on Invalid Pensions.

By Mr. RYAN: A bill (H. R. 11685) for the relief of Charles F. Brown; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5630. By Mr. BARBOUR: Petition of the Visalia (Calif.) Board of Trade, urging that the land which it is proposed to eliminate from Sequoia National Park, in California, be made a game preserve; to the Committee on the Public Lands.

5631. By Mr. GALLIVAN: Petition of Rover Legion, No. 2, Private Soldiers and Sailors' Legion, Washington, D. C., recommending the passage of H. R. 6309; to the Committee on the District of Columbia.

5632. Also, petition of Houghton Mifflin Co., Boston, Mass., urging the passage of H. R. 11476; to the Committee on Patents.

5633. By Mr. KISSEL: Petition of the New York Commercial, New York City, relative to the existing conditions in Bolivia; to the Committee on Foreign Affairs.

5634. Also, petition of the United Mine Workers' Journal, Washington, D. C., relative to mines and miners; to the Committee on Labor.

5635. Also, petition of Adam Mann, Brooklyn, N. Y., relative to the duty on reeds and chair cane; to the Committee on Ways and Means.

5636. By Mr. LINTHICUM: Petitions of Metal Package Corporation, Baltimore, and many others, requesting increased tariff on canned goods; Carnegie Institute of Washington, D. C., protesting against increase of tariff on scientific instruments; and Standard Guano Co., and Rasin Monumental Co., Baltimore, protesting against duty on potash; to the Committee on Ways and Means.

5637. Also, petition of Alpha Photo Engraving Co., Baltimore, Md., favoring passage of House bill 5823; to the Committee on Agriculture.

5638. Also, petitions of J. Wallace Bryan, Baltimore, and Harry L. Glackin, Rising Sun, Md., favoring passage of Voigt bill; to the Committee on Agriculture.

5639. Also, petition of No-Leak-O Piston Ring Co., Baltimore, favoring Stephens-Kelly bill; to the Committee on Interstate and Foreign Commerce.

5640. Also, petition of W. E. Robinson & Co., Bel Air, Md., protesting against the Moses bill, S. 3509; to the Committee on Labor.

5641. By Mr. OSBORNE: Memorial of Mr. George Lincoln Bossemeyer, 1565 West Twenty-second Street, Los Angeles, setting forth the advantages to be gained by the adoption of a new calendar in which all the months are to be alike, consist-

ing of 28 days each, 13 months to each year; to the Committee on the Library.

5642. By Mr. SMITH of Michigan: Petition of the Woman's Home Missionary Society of the Methodist Episcopal Church at Coldwater, Mich., protesting against the passage of Senate bill 3083; to the Committee on the District of Columbia.

5643. By Mr. WATSON: Resolution passed by the George N. Althouse Post, No. 39, the American Legion, Norristown, Pa., urging an Army and Navy such as the majority of the citizens of this country recognize as necessary during the present upset world conditions; to the Committee on Appropriations.

SENATE.

WEDNESDAY, *May 17, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

The VICE PRESIDENT. The unfinished business, House bill 7456, is before the Senate and will be proceeded with.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. MCCUMBER. The pending amendment is in paragraph 64, on page 26, line 9. I wish to state that when we come to the next subdivision, the second amendment in the paragraph, the committee will ask that the Senate disagree to the committee amendment.

Mr. WALSH of Massachusetts. Mr. President, I make the point of order that there is no quorum present.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll and the following Senators answered to their names:

Ashurst	Glass	McKinley	Shields
Ball	Gooding	McNary	Simmons
Borah	Hale	Moses	Smoot
Brandegee	Harris	Myers	Spencer
Broussard	Harrison	Nelson	Stanley
Bursum	Heflin	New	Sterling
Capper	Hitchcock	Newberry	Sutherland
Caraway	Johnson	Norris	Swanson
Colt	Jones, Wash.	Oddie	Townsend
Culberson	Kendrick	Overman	Underwood
Curtis	Keyes	Page	Wadsworth
Dial	King	Phipps	Walsh, Mass.
Dillingham	Ladd	Pomerene	Walsh, Mont.
du Pont	Lenroot	Ransdell	Watson, Ga.
Edge	Lodge	Rawson	Watson, Ind.
Elkins	McCormick	Robinson	Weller
Ernst	McCumber	Sheppard	Willis

Mr. DIAL. I wish to announce that my colleague [Mr. SMITH] is unavoidably absent. I ask that this announcement may continue through the day.

The VICE PRESIDENT. Sixty-eight Senators have answered to their names. There is a quorum present.

VISIT TO MARINE CORPS POST AT QUANTICO.

Mr. PAGE. Mr. President, I am receiving numerous inquiries from Senators who desire to make the trip to Quantico to-morrow on the *Mayflower*. For the information of Senators I ask that the Secretary may read the announcement which I send to the desk.

The VICE PRESIDENT. The Secretary will read the announcement.

The reading clerk read as follows:

VISIT TO QUANTICO.

On Saturday afternoon last there was read to the Senate a letter from the Secretary of the Navy inviting the Members to visit the Marine Corps post at Quantico, Va.

This visit had to be postponed when it was first contemplated on account of wet weather.

The trip has now been arranged for to-morrow, Thursday.

The *Mayflower* will leave the navy yard at 8.30 a. m., standard time, and will return from Quantico leaving there at 6 p. m.

Members who desire to return earlier will find convenient railroad service.

Tickets for the trip have been sent to the Committee on Naval Affairs, where they can be procured by any Senator desiring to go. These tickets are to be presented at the navy yard when the holders board the ship.

The accommodations both on the ship and at the mess halls, where the visitors are to be the guests of the officers and men, will not permit of this invitation being extended to others than Members of Congress.

The program has been arranged to cover a review of the troops, inspection of the barracks and schools, airplane flights, trench warfare, concert by the enlisted men, and outdoor vaudeville performance.

SCHOOLS FOR AERONAUTICS (S. DOC. NO. 202).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of War, transmitting in response to Senate Resolution 266, agreed to April 5, 1922, information relative to schools for aeronautics, etc., which was referred to the Committee on Military Affairs and ordered to be printed.

DISPOSITION OF USELESS PAPERS.

The VICE PRESIDENT laid before the Senate a communication from the Public Printer, transmitting, pursuant to law, a list of papers on the files of the Government Printing Office not needed in the transaction of business and having no permanent value or historic interest, and asking for action looking to their disposition, which was referred to a Joint Select Committee on the Disposition of Useless Papers in the Executive Departments. The Vice President appointed Mr. CAPPER and Mr. ROBINSON members of the committee on the part of the Senate, and ordered that the Secretary notify the House of Representatives thereof.

PETITIONS.

Mr. NEWBERRY presented petitions of sundry citizens of Saginaw, Unionville, Colling, Akron, Pinconning, Bay City, Rhodes, Linwood, Fairgrove, Gilford, Munger, Cass City, Caro, Gagetown, and Reese, all in the State of Michigan, praying for the imposition of a tariff duty of $2 per hundred pounds on imported Cuban sugar, which were referred to the Committee on Finance.

Mr. TOWNSEND presented petitions of sundry citizens of Ithaca, St. Louis, East Jordan, Charlevoix, Pompeii, Perrinton, St. Johns, Davison, Decker, Marlette, Hemans, Elwell, Shepherd, Alma, Berville, Armada, Allenton, Pinconning, Coleman, Clare, North Bradley, Reese, Munger, Saginaw, Essexville, Bay City, Linwood, and Kawkawlin, and sundry other citizens, all in the State of Michigan, praying for the imposition of a tariff duty of $2 per hundred pounds on imported Cuban sugar, which were referred to the Committee on Finance.

Mr. WILLIS presented the petition of Elizabeth Magargal and sundry other citizens of Toledo, Ohio, praying that only a moderate duty be imposed in the pending tariff bill on kid gloves, which was referred to the Committee on Finance.

He also presented the petition of Leo L. Crago, of Milbury, Ohio, and sundry other citizens of the States of Ohio and Michigan, praying that a tariff duty of $2 per hundred pounds be imposed on Cuban sugar, which was referred to the Committee on Finance.

He also presented a letter in the nature of a petition of the Toledo (Ohio) Chamber of Commerce, praying for the passage of the so-called ship subsidy bill, with an amendment tending to discourage monopolies in the American merchant marine by the organization of local companies to purchase and operate vessels, etc., which was referred to the Committee on Commerce.

Mr. COLT presented a petition of sundry citizens of the State of Rhode Island, praying that only a moderate duty be imposed in the pending tariff bill on kid gloves, which was referred to the Committee on Finance.

He also presented the following resolution of the Legislature of the State of Rhode Island, which was referred to the Committee on Foreign Relations:

STATE OF RHODE ISLAND,
In General Assembly, January Session, A. D. 1922.

Resolution relative to recognizing Palestine as the homeland of the Jewish people. (Approved April 28, 1922.)

Whereas the Supreme Council of the Allied Peace Conference, meeting at San Remo, recognized the right of the Jewish nation to a national existence in Palestine and conferred upon Great Britain a mandate over Palestine; and

Whereas the various great nations of the world have approved the establishment of the national homeland for the Jews in Palestine; and

Whereas the people of the United States, individually and through their spokesmen in Congress and by leading men in all walks of life, have expressed their gratification at the realization of the national hopes of the Jews; and

Whereas the General Assembly of Rhode Island views with pleasure the progress of the Jewish people in Palestine in developing the economic resources of the country, in founding institutions of learning, and in creating a spiritual center so that it may the better serve mankind: Therefore be it

Resolved, That the General Assembly of Rhode Island urges the Government of the United States of America formally to recognize the present status of the Jewish people in Palestine, and thus to approve the fulfillment of its yearning desire for a national home in the land of its forefathers; and be it further

Resolved, That copies of this resolution be sent by the secretary of state to the President of the United States, to the presiding officers of both branches of Congress, to each of the Senators and Representatives in Congress from Rhode Island, and to the Zionist Organization of America.

STATE OF RHODE ISLAND,
OFFICE OF THE SECRETARY OF STATE,
Providence, May 8, 1922.

I hereby certify the foregoing to be a true copy of the original resolution relative to recognizing Palestine as the homeland of the Jewish people, passed by the general assembly and approved by the governor on the 28th day of April, A. D. 1922.

In testimony whereof I have hereunto set my hand and affixed the seal of the State aforesaid this 8th day of May, in the year 1922.

[SEAL.] J. FRED PARKER,
Secretary of State.

REPORTS OF COMMITTEES.

Mr. WADSWORTH, from the Committee on Military Affairs, to which was referred the bill (S. 3371) for the relief of Capt. Sven Christenson, Quartermaster Corps, United States Army, asked to be discharged from its further consideration and that it be referred to the Committee on Claims, which was agreed to.

Mr. NEW, from the Committee on Territories and Insular Possessions, to which was referred the bill (S. 3617) to fix the salaries of the auditor and deputy auditor of the Philippine Islands, reported it without amendment.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SHIELDS (for Mr. REED):

A bill (S. 3618) to amend section 135 of the Judicial Code; to the Committee on the Judiciary.

By Mr. RANSDELL:

A bill (S. 3619) to place John R. Harrell, of New Orleans, La., on the retired list of the Navy with the rank of lieutenant; to the Committee on Naval Affairs.

By Mr. HARRISON:

A bill (S. 3620) to authorize the construction of a bridge across Pearl River at Tilton, Lawrence County, Miss.; to the Committee on Commerce.

TARIFF BILL AMENDMENT.

Mr. SMOOT submitted an amendment intended to be proposed by him to House bill 7456, the tariff bill, which was ordered to lie on the table and to be printed.

THE ROESSLER & HASSLACHER CHEMICAL CO.

Mr. EDGE. Mr. President, on May 3 instant, while the schedule relative to the duty on cyanide was under consideration in the Senate, some inferences were drawn adverse to the patriotism of the members and stockholders in a very prominent industrial firm in New Jersey. The firm's name is the Roessler & Hasslacher Chemical Co., which is located in Perth Amboy, N. J. I have here two telegrams, one from the president of the Perth Amboy Chamber of Commerce and the other from a representative citizen of Perth Amboy, bearing upon that part of the debate to which I have referred relative to the attitude of the members of this firm during the World War, and I ask unanimous consent that the telegrams be read and placed in the RECORD.

The VICE PRESIDENT. Is there objection? The Chair hears none. The telegrams will be read.

The reading clerk read the telegrams, as follows:

PERTH AMBOY, N. J., *May 15, 1922.*

Hon. WALTER EDGE,
United States Senate, Washington, D. C.:

We resent charges made on floor of Senate against patriotism of the Roessler & Hasslacher Chemical Co. We who know the facts know that the war record of that company and its employees is one to be proud of. We continue to support their efforts to secure tariff protection for their manufactured articles. The company is one of the largest taxpayers in the county. They paid their Perth Amboy employees during full-time operation in one year over $900,000. Help us to keep this industry going.

PERTH AMBOY CHAMBER OF COMMERCE,
ISAAC C. ALPERN, *President.*

—

PERTH AMBOY, N. J., *May 15, 1922.*

Hon. WALTER EDGE,
United States Senate, Washington, D. C.:

I am advised that the Roessler & Hasslacher Chemical Co. has been attacked on the floor of the Senate by persons who assert that this company is controlled by Germans and have intimated that its officers were not patriotic during the war. Both charges are absolutely untrue. The story of German control is completely refuted by the statement of January 7, 1922, by Thomas W. Miller, Allen Property Custodian, which you have already seen, regarding the loyalty of the company's officers. I am well acquainted with its president. He is an American citizen and a resident of my own city. He has taken an active part in every patriotic movement here for over 30 years, including the war period. His oldest son served in our Army in France; his son-in-law made the supreme sacrifice. At the close of the war this company was officially decorated by the War Department for distinguished service rendered in the prosecution of the war.

MORGAN F. LARSON.

TARIFF ON OLIVE OIL.

Mr. WALSH of Massachusetts. Mr. President, on yesterday I received a communication from the Olive Oil Association of America inclosing several telegrams received from canners of sea products in the State of California. These telegrams are all of recent date, and tend to show that the olive oil which is produced in California is of very small amount and not suitable for use in the canning of fish. One of the telegrams, in reply to information requested by the Olive Oil Association, I shall read. It is from the Westgate Sea Products Co., of San Diego, Calif., and reads as follows:

(Copy of telegram received from Westgate Sea Products Co., San Diego, Calif., dated May 6, 1922.)

"To the OLIVE OIL ASSOCIATION OF AMERICA,
New York City:

"We are successors Wheeler-Chase Fisheries Co. This is our second year. We are purchasing for this year's requirement 3,500 gallons imported olive oil. Fishing interests of California do not use California oil; it is not suitable for our purposes. Fishing interests alone of California use more olive oil than is produced in California."

The other telegrams are of like nature. I ask that they be referred to the Committee on Finance and inserted in the RECORD, together with the communication accompanying them.

There being no objection, the communications and telegrams were referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

THE OLIVE OIL ASSOCIATION OF AMERICA,
New York, May 15, 1922.

Senator DAVID I. WALSH,
Care of United States Senate, Washington, D. C.

DEAR SIR: Supplementing the conversation that our Mr. L. J. Scaramelli had with you on Friday in Washington, inclosed you will please find duplicates of telegrams received from the fish packers in California concerning olive oil; and particular attention is called to the one from the Westgate Sea Products Co., of San Diego, wherein they themselves state that the fish packers use more olive oil than is produced in California.

Yours respectfully,

LOUIS J. SCARAMELLI.

—

(Copy of telegram sent to the sardine-packing interests of California by the Olive Oil Association of America on May 6, 1922.)

For the purpose of completing our brief to be presented to the Senate Finance Committee in an endeavor to have the duty on olive oil lowered, may we ask you to wire us at our expense your average annual consumption for the past five years of imported olive oil; also your annual consumption of California olive oil?

THE OLIVE OIL ASSOCIATION OF AMERICA.

—

(Copy of telegram received from F. E. Booth Co., San Francisco, Calif., dated May 8, 1922.)

To the OLIVE OIL ASSOCIATION OF AMERICA,
New York City:

Your night letter date—average annual consumption imported Italian Spanish olive oil for past five years, 2,000 gallons. We use no California olive oil in processing our sardines, but prefer Spanish olive oil.

—

(Copy of telegram received from Red Salmon Canning Co., San Francisco, Calif., dated May 6, 1922.)

To the OLIVE OIL ASSOCIATION OF AMERICA,
New York City:

This company and the Naknek Packing Co., under same management, consumed about 312 gallons imported olive oil. Do not use California olive oil.

—

(Copy of telegram received from C. E. Van Landingham Co., Los Angeles, Calif., dated May 6, 1922.)

To the OLIVE OIL ASSOCIATION OF AMERICA,
New York City:

Your wire 6th—we used approximately 40,000 gallons per year imported olive oil during past five years. No California olive oil.

—

(Copy of telegram from San Pedro, Calif., dated May 9, 1922.)

OLIVE OIL ASSOCIATION OF AMERICA,
New York City:

Your night letter 6th—average annual consumption for the past five years, 6,000 gallons of imported olive oil. Have never used California olive oil for fish-packing purposes, because it is not adaptable for that purpose.

NIELSEN & KITTLE CANNING CO. (LTD.).

—

Olive Oil (paragraph 59).

PROPOSED NEW TARIFF.

	Underwood.	Emergency.	Fordney (House).	Senate amendment.
In containers less than 44 pounds	*Per gallon.* $0.30	*Per gallon.* $0.50	*Per pound.* $0.07½	*Per gallon.* $0.6[illegible]
In containers more than 44 pounds	.20	.40	06½	50

Price: The selling price of olive oil per gallon before the emergency tariff was from $2.75 to $3.25. The present price is from $2 to $2.50 per gallon, according to quality. The price being lower now shows that the high protective tariff of the emergency bill did not help the farmers as it was intended to.

Consumption: Average imports for the last 10 years to the United States over 6,000,000 gallons per annum.

Production: California's average production is about 200,000 gallons per year. California imports alone over 1,000,000 gallons per year for fish packing and table use. As it is well known that an olive

tree takes 15 years before bearing fruit and 25 to 30 years to produce a crop, a high tariff at this time would be an injustice to the American people, and principally to the laboring classes, which are the largest consumers of olive oil.

THE OLIVE OIL ASSOCIATION OF AMERICA,
L. J. SCARAMELLI, *President.*

AGRICULTURAL CREDITS.

Mr. SIMMONS. Mr. President, I ask to have inserted in the RECORD, without reading, a letter from the secretary of the Country Bankers' Association with reference to the rural credit bills now pending before the Senate. In this connection I also ask permission to have printed in the RECORD, without reading, a letter from Mr. J. S. Wannamaker, president of the American Cotton Association, also discussing the two bills now before the Senate. Both these letters, speaking for the organizations, approve Senate bill 3390, introduced by myself, with reference to national farm credits.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

ST. MATTHEWS, S. C., *May 15, 1922.*

Hon. F. M. SIMMONS,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR SIMMONS: I have noted with much interest the result of the hearings before the Senate Committee on Agriculture and the discussion of short-term farm finance on the evening of the 8th instant. I note also that a special committee of Senators was appointed to consider the various bills on that subject already introduced and to draft a suitable measure containing provisions that will meet the needs of the agricultural industry along broad and comprehensive lines.

We believe that your bill, with a few minor amendments and an added section to more fully cover live-stock financing, will meet the general approval of the entire agricultural industry of the Nation.

I am inclosing for your information copy of a letter which is being mailed to Senator PAT HARRISON. I would thank you to discuss the matter with Senator HARRISON and urge that his committee authorize me to invite and secure the presence and testimony of Mr. Thomas A. Edison before the committee, as he is deeply interested and is devoting much thought and study to the matter of short-term farmers' credits.

I feel that your valued services are of the greatest benefit, not only to the farmers of your State but to those of the entire Nation. We are anxious to secure a large number of copies of the committee's bill so soon as it has been agreed upon and printed, to mail out over the country and bring all possible cooperation for speedy enactment of the measure into law.

With highest regards, sincerely yours,

J. S. WANNAMAKER,
President American Cotton Association.

—

THE COUNTRY BANKERS' ASSOCIATION OF GEORGIA,
Atlanta, Ga., May 15, 1922.

Hon. F. M. SIMMONS,
United States Senator, Washington, D. C.

DEAR SENATOR SIMMONS: At a meeting of the executive council of the Country Bankers' Association of Georgia, held in Atlanta on May 11, resolutions of indorsement were adopted on the subject of rural credits as embodied in the Simmons bill, No. 3390. In accordance with directions contained in resolutions, I am sending you copy of same.

The rural credits legislation proposed is intended for permanency and will doubtless stand for a great many years. Its importance warrants the greatest care on the part of our lawmakers in seeing that its provisions are sound and that it will adequately provide for the situation it is intended to cover.

Very truly yours, L. R. ADAMS, *Secretary.*

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Utah [Mr. KING] to the amendment of the committee, which will be stated.

The ASSISTANT SECRETARY. In paragraph 64, page 26, line 9, strike out "$5 per ton" and insert in lieu thereof "15 per cent ad valorem," so as to read:

Barytes ore, crude or unmanufactured, 15 per cent ad valorem.

DISHONEST TARIFF PROPAGANDA.

Mr. LADD. Mr. President, a large amount of propaganda and misrepresentation is being published about tariff matters that is clearly intended to misinform and deceive the people. Misstatements are being sent into my own State connecting my name as well as that of others in the Senate with tariff matters that are intended to mislead and which statements are false and were undoubtedly known to be false by the propagandists when the same were sent to the shoe dealers, farmers, and others whom they hoped to influence.

It is claimed that the tariff on shoes, for example, will add $2 to the cost of each pair of shoes the farmer purchases. This is absolutely false, for the facts are the total tariff to be added on the average is less than 30 cents to the cost of each pair of average shoes of which at most only 6 to 12 cents would be the result of tariff on hides. This is quite different than the charge that it is $2.

Here are the facts: For nine months for 1921 there were imported into this country under abnormally high price for shoes and boots 104,725 pairs for men, women, and children at an average value of $4.03 per pair. It is stated the wholesale cost abroad was, however, considerably less, but let us see what the real facts are regarding the tariff.

The tariff provides for an ad valorem duty of 5 per cent on shoes, and on $4.03 this would be slightly more than 20 cents per pair or, in fact, 20.15 cents, to which is to be added 12 cents as a compensatory duty as the result of tariff on hides, or a total of 32 cents per pair of shoes. If the uppers are not of leather, then the total duty would be 26 cents per pair.

We are, however, informed that the cost of shoes will be increased not less than $2 per pair, when the fact is it amounts to only 32 cents, or less than one-sixth of what the people are being told, and this is presented as a solemn truth about the effects of the tariff on boots and shoes.

I ask that there be included as a part of my remarks an article appearing in the New York Tribune under date of May 5, 1922.

The VICE PRESIDENT. Without objection, it is so ordered.

The article referred to is as follows:

SHOES, HIDES ON FREE LIST, SENATE PLANS—FARM BLOC, WHICH FORCED IMPOSITION OF DUTY BY COMMITTEE, IS ROUTED BY CONSUMERS' PROTEST—AVERTS $2 BOOST IN FOOTWEAR PRICE—LODGE SEES HIS ELECTION CHANCES ENHANCED BY AID TO MANUFACTURERS.

[By Carter Field.]

WASHINGTON, May 14.—Both shoes and hides will be on the free list. A careful canvass of the Senate just completed shows that there has been a complete reversal of this, one of the most important schedules of the tariff bill, in that its rates affect every man, woman, and child who does not go barefoot.

The House put shoes and hides on the free list, but when the bill got to the Senate the farm bloc decided that the interests of the stock raisers among their constituents demanded a duty on hides. Otherwise, they reasoned, the cheap hides from Argentina and elsewhere would result in the hides of American cows and steers rotting on American farms, or else in the yards of the packers in Chicago and Kansas City.

COMMITTEE IMPOSES DUTY.

This would never do, they figured, so they descended upon the Senate Finance Committee, and when the smoke cleared away a duty of 2 cents a pound on raw, green, uncured, and pickled hides and 4 cents on dried hides had been imposed. This might not have aroused so much clamor from Mr. Average Citizen, but in its wake, logically enough, if the American shoe manufacturing industry were not to be destroyed, there was a duty on shoes.

This duty is what hit the voters squarely in the face, for it was 40 per cent. It would boost a $5 pair of shoes to $7, even if none of the middlemen added anything in passing it along.

There were loud protests at this, and even the stock raisers out West began to wonder if this duty on hides would do them very much good if they had to pay 40 per cent more for their shoes in order to keep the price of hides a little higher.

The first political reflection of this change of sentiment out in the heart of farm bloc land was made when Senator ARTHUR CAPPER, of Kansas, than whom no one in either branch of Congress keeps his ear more closely glued to the ground of the State whose voters pass, ever so often, on his fitness to continue serving them, suddenly changed front. He came out in smashing editorials in his various farm papers declaring for both free hides and free shoes, with much emphasis on the shoes. Other members of the farm bloc have been making the same kind of explanation to their constituents.

FARM BLOC CHANGED FRONT.

They have gotten to the point where, surprising as it may seem in view of their recent clamor for a duty on hides to protect the farmers, they contend that a duty on hides would benefit no interest save that of the packers.

All of which is very satisfactory to Senator HENRY CABOT LODGE, the Republican leader of the Senate, for the Massachusetts Senator, who is up for reelection this fall and facing a hard fight, has just been informed by a most important element in his State that it will hold him personally responsible if hides are not put on the free list.

This element is the shoe manufacturers. They are not worried at all at the prospect of free shoes, provided they can get hides at the same price for which manufacturers in other countries get them.

They say flatly that they don't need a duty on shoes to protect them from foreign competition, and don't want it, if only Congress will let them buy foreign hides without paying any duty.

In the old days, when all of the shoes they manufactured were sold in the United States, they would have been glad enough to have as high a duty on shoes as possible, and would not have cared very much whether there was a duty on hides or not. But the shoe manufacturers at present have grown to the point where they must sell abroad in addition to supplying practically the entire American demand, if they are to keep their factories running full time.

They fear that if a high duty is imposed on shoes the countries to which they are now selling will retaliate and make it impossible for American shoes to come in. A duty on hides, they fear, is apt to build up a shoe manufacturing industry in Argentina, which would find it impossible to sell its hides to America, and might therefore decide to manufacture its own footwear, and perhaps that for all South America, out of the hides produced right at home.

That is why the New England shoe manufacturers, and everywhere else in the country for that matter, are worried at the Senate Finance Committee's submission to the original demands of the farm bloc. That is why the Massachusetts shoe manufacturers have told Senator LODGE they would hold him personally responsible for defeating this duty. It is understood that they laid aside old school diplomatic methods entirely in their negotiations with Senator LODGE and said frankly his reelection might easily depend on his performance in this matter.

This action of the manufacturers, a complete reversal of their attitude in the old Dingley and Wilson tariff days, is typical of many industries and is slowly working a revolution in the tariff lines in this country.

AUTO MAKERS LED WAY.

The first indication of the change came when the automobile manufacturers, considerably more than a year ago, took the stand that they wanted no tariff protection. They pointed out that they exported many hundred cars for every one imported; that the only cars brought in from abroad were expensive makes which no duty would keep out, whereas American automobile manufacturers were selling abroad thousands of cheap and medium-priced cars, running all the way from the Ford to the Cadillac class, and some even more expensive. A high duty on cars, they feared, would result in retaliatory duties by the countries to which they were selling and would thus destroy their export business.

A curious phase is that the late Senator Penrose, during his long illness before returning to Washington, realized this situation fully, and talked about it to newspapermen freely just before taking up his duties as chairman of the Finance Committee. In a few weeks after his return, however, the farm bloc showed the shrewd old politician its strength, and he yielded to the old-time tariff ideas, beginning with the emergency tariff, despite his own conviction that times had changed and that the industrial East no longer wanted a high tariff.

Mr. LADD. Mr. President, this is the kind of propaganda being furnished the press and doled out to the public for their misinformation. Is it any wonder that the people do not know whom to trust? The tariff may be good or bad, but there is no excuse for the many untruths now being fed the public, and it does not reflect great credit on statesmen, or, for that matter, upon politicians, who are willfully perverting the facts.

The following day there appeared in the same paper an editorial along the same line entitled "Free hides and shoes," which I ask to be included in my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

The article referred to is as follows:

FREE HIDES AND SHOES.

Chairman FORDNEY, not commonly rated as tainted with free-trade ideas, put hides and shoes on the free list of his tariff bill.

Then the farm bloc hammered on the door of the Senate committee, demanding duties on hides. The committee promptly did as it was told. On the next train arrived the shoe manufacturers, saying that the hide duty not only meant the loss of their foreign trade but also a loss of the home market unless a countervailing duty on shoes were imposed. The argument was irresistible, and an ad valorem of 40 per cent was written into the bill.

Now comes another shift. The farm bloc has become persuaded that to pay $2 more for a pair of shoes will lose them more than the hide duty will bring to them. So both duties are to go, and Senator LODGE and the shoe manufacturers of Massachusetts are pleased, for their foreign trade will be saved.

The incident is another argument for the postponement of the enactment of a permanent tariff. Neither the farmers of America nor the ranchers of Argentina nor the shoemakers of Lynn know the conditions of the early future. Production throughout the world is still abnormal. There are surpluses in some places and dearths in others. As it is with respect to shoes and hides, so it is as to other commodities. The time is one that demands waiting before leaping.

Mr. LADD. Here again it is stated that a tariff of 40 per cent ad valorem is proposed, when in fact the duty proposed is 5 per cent ad valorem plus 12 cents maximum as a compensatory duty on account of the proposed duty on hides. Some difference between 40 per cent and 5 per cent, or, as already pointed out, not $2 per pair but less than 32 cents per pair, while the stock industry is protected under the proposed tariff and encouraged, in place of being driven out of the country to benefit a few importers and middlemen, who have taken big profits for their pockets while destroying the great agricultural industry of this country.

Honest discussion is commendable, but deceptive, sugar-coated propaganda should be beneath the dignity of any honorable man or group of men; but this is what is being fed to the honest but uninformed voters of this country at the present time.

I might refer to numerous other articles published in New York and eastern papers along the same line, but I will not take the space. While I am on my feet I desire also to call attention to the propaganda that comes to my table—and presumably every other Senator at the present time—from the soap manufacturers and allied interests asking for free oils, which would result in destroying the agricultural output of oils in this country, since these imported oils are used as displacement oils. The letters clearly show the earmarks of one mind; they emanate from the same source; they are couched in the same language, and parties sending them undoubtedly have not informed themselves as to the real facts, but have taken for granted that the propaganda furnished them to be used as an appeal to the Senate is based on sound reasoning, while in reality it is a sheer distortion of facts.

Mr. McCUMBER. Mr. President, there is one thing in relation to the tariff upon hides which the American people generally do not understand, and as my colleague [Mr. LADD] did not mention it in his discussion this morning I think it may well be stated at this time.

There is a general impression that if a duty of 2 cents per pound on raw hides or 4 cents per pound on dried hides shall be imposed the price of all shoes will thereby be increased. The country generally does not understand that the shoes that the American people wear are not made of cowhide; nothing but the heels and soles are of cowhide; the other portions of the shoes are generally calfskin or some other material. If a rawhide weighs 25 pounds or less, it does not come in as a hide at all under the general term that is used; it comes in free under the pending bill, just as it has done heretofore.

I think that practically 99 per cent of the shoes that are made and worn in the United States have for their uppers calfskin or some other material. The only part that is taxed or affected by reason of the tariff is the sole and the heel; and I do not think that that will, as a rule, add more than 8 cents on a pair of shoes. In estimating the additional charge at 8 cents, I am placing it at an extraordinarily high figure on the cowhide or the sole leather that comes in, because, as a rule, I do not think the added cost will amount to even 5 cents. Some years ago in making a statement of the additional costs I figured it very carefully, and at that time the duty which was added would not have amounted to more than 2 cents on an average pair of shoes. To say that under the proposed law the added charge will average 8 cents is giving the extreme figure which would be added to a pair of shoes on account of the proposed duty upon the cowhide.

Mr. KING. Mr. President, I am a little in doubt as to the purpose of the remarks of the Senator from North Dakota. Certainly he can not contend that he is supporting these increases in the tariff rates other than for the purpose of maintaining or increasing domestic prices, and when he refers to a propaganda being carried on in his own State and elsewhere for the purpose of convincing the people that tariff duties increase prices, it seems to me that his contention in favor of a tariff is justification for the statement that this tariff bill will increase prices. Obviously there is no other reason for it other than it may increase domestic prices to the domestic consumer.

Mr. President, yesterday I offered an amendment to paragraph 64. I desire to modify that amendment. I moved to strike out, in paragraph 64, page 26, line 8, the numeral "$4" and to insert "15 per cent." I will withdraw that amendment and submit the following, namely, to strike out the numeral "$4" and to insert in lieu thereof "$1.50."

Mr. WALSH of Massachusetts. Mr. President, will the Senator yield for a moment?

Mr. KING. Yes.

Mr. WALSH of Massachusetts. If the Senator will pardon me, does he not mean to strike out the numeral "$5," in line 9? The numeral "$4" has been stricken out by the committee.

Mr. KING. Yes; I thank the Senator. I move to strike out in the committee amendment the numeral "$5" and to insert in lieu thereof the numerals "$1.50," so as to read:

Barytes ore, crude or unmanufactured, $1.50 per ton.

Mr. President, just a word. The Payne-Aldrich bill gives this very rate, and I am not offering now to the Senate the rate which I think ought to be the one fixed in this bill, for I think it ought to be lower, but I want to respond to the wishes of some of my Republican friends who say they desire some protection. So I am offering to them now the Payne-Aldrich rate. Let me say that when that law was in force this industry developed and reached high proportions; the domestic production of barytes was greater then than it was last year or the year before. In 1910 sales of domestic barytes amounted to 42,975 tons. The production may have been greater, but that quantity was actually consumed; there may have been some held in reserve. In 1911 the sales of the domestic barytes amounted to 38,445 tons; in 1912, to 37,478 tons; in 1913, when the Payne-Aldrich bill was in force, to 45,298 tons; in 1914, to 57,747 tons, when the Underwood bill was in force, which provided a tariff of 15 per cent ad valorem, which would be less than the rate of the Payne-Aldrich bill.

Therefore, Mr. President, I am offering now to the Senate the amendment which I have suggested. May I state that the pre-war foreign price of this product was $2.14 per ton. So the tariff rate which I am now suggesting is approximately 75 per cent of the pre-war foreign price. If the industry developed then, and grew to rather large proportions—indeed, to very large proportions—it seems to me that the tariff which was given then ought to be adequate now.

Mr. WALSH of Montana. Mr. President, I am entirely satisfied that every Member of the Senate who attended the discussion on yesterday is convinced that the disclosures made by the Senator from Nebraska [Mr. NORRIS] have taken away absolutely every foundation whatever for a claim for a tariff upon this article founded upon the cost of transportation from the place of production to the place of consumption.

It appears, without apparent contradiction at all, that the Missouri product is consumed in the industrial centers of Chi-

cago and St. Louis, so that the matter of transportation is negligible. I have no doubt, Mr. President, that further study of the matter will equally disclose that the Georgia product is not shipped to New York at all, or at least only in relatively small quantities, and that the great industrial centers about Cincinnati and elsewhere consume at least a very large part of the Georgia product. However that may be, Mr. President, it is a matter of no particular consequence. It must be obvious that a mineral product, the product of mining operations, which comes from the other side of the ocean and is laid down in New York at $5 a ton, will not stand transportation to the interior of the country, where it is very largely consumed.

Mr. NORRIS. Mr. President——

Mr. WALSH of Montana. So I undertake to say, if the Senator will pardon me for a moment, that the importations to which reference has been made are all consumed on the Atlantic seaboard, and that the products of the mines in the interior of the country to a very large extent are consumed in the interior.

I now yield to the Senator from Nebraska.

Mr. NORRIS. Mr. President, I was going to ask this question either of the Senator from Montana or of the Senator from Missouri yesterday, but while the question was still under discussion the Senate took a recess. Therefore, I did not ask the question.

It was asserted yesterday by the Senator from Montana, and not disputed by the Senator from Missouri or anyone else, that this mineral was mined by steam shovel. I think it is very important to know, and I do not know—I am asking for information—whether it is of such a nature that it can be thus mined. The Senator, without giving any explanation or any authority, made that statement. I wish he would elucidate it somewhat, or give us the source of his information.

Mr. WALSH of Montana. I stated on yesterday that I do not know the mineral; I know nothing about its operation, except that from its general character I should judge that it would be mined by the steam-shovel process.

Mr. NORRIS. The Senator will remember that yesterday the Senator from Missouri said that it cost $10 a ton to mine it in Missouri, and the Senator from Montana said that that could not possibly be true, because of the ease with which it was mined; and it seemed to me that if it was true that it could be mined by the use of a steam shovel, it certainly could not cost $10 a ton to produce it.

Mr. WALSH of Montana. If the Senator will pardon me in that connection, I said also that in the mines in the city of Butte we go down to a depth of nearly a mile, and if we could not raise ore to the surface at a cost of less than $10 a ton we could not operate.

Mr. SMOOT. I will say to the Senator that unless we could produce at less than $7.50 a ton we could not operate.

Mr. WALSH of Montana. Yes.

Mr. SMOOT. In answer to the Senator from Nebraska, I will say that barytes is not mined in Missouri by steam shovel, but in Georgia it is mined in that way. Also, while I am on my feet, I wish to say to the Senator from Montana that most of the Georgia product goes to the Atlantic coast. Very little of it, indeed, is used in Cincinnati or around Cincinnati. In Tennessee and in Georgia barytes is mined by the steam-shovel process, but in Missouri it is not.

Mr. WALSH of Montana. I simply know that Louisville is the center of a great paint industry, and that the State of Ohio is celebrated for its production of rubber products, both of which consume this material.

Mr. SMOOT. I will say to the Senator that over 50 per cent of this material goes into lithopone, and 80 per cent of the lithopone is made in the coast States between Baltimore and New Jersey.

Mr. WALSH of Montana. Mr. President, I merely desire to add that the protective system is a very appealing one. I admire the devotion to it expressed by the Senator from Idaho [Mr. GOODING] in a number of his speeches, and particularly his very forceful one on yesterday. I can understand how a man may very patriotically give his whole adherence to that economic theory. The trouble about the matter, so far as it has addressed itself to me, is that it invites the rapacious and the greedy to come here before Congress and get rates that are shocking in their injustice, the one before us affording a striking illustration of the idea which I desire to express.

Mr. President, it does seem to me that those who are indeed friendly to the system of protection, like my esteemed friend and neighbor the Senator from Idaho [Mr. GOODING], would rise in their places in this body and protest against discrediting the entire system by such an imposition as this. It is such excrescences as this which condemn the policy before the people of America rather than the principle itself. To my mind the majority of the people of America are, rightly or wrongly, wedded to the doctrine of protection as announced by the Republican members; but it is this kind of thing that condemns it, and justly condemns it, before all right-thinking people; and the system can not possibly stand, and the American people will not endure it long, if it is to be contaminated by such an imposition as this.

Think of it! A dollar and a half on this product under the Payne-Aldrich law, and then the industry thrived until, sirs, it commanded two-thirds of the American market; and then gentlemen have the hardihood to come before the Congress of the United States and ask them for a tax upon the people of the United States to the extent of $5 per ton, 250 per cent more than the total pre-war duty on this commodity!

Mr. SMOOT. Mr. President, for the record and as a matter of history I simply want to state that the duty of $1.50 a ton on barytes provided under the Payne-Aldrich law did give the market for that article to St. Louis and Chicago, and the business of mining barytes during that time was confined to Missouri. All that was furnished the Atlantic coast was imported, under the Payne-Aldrich law.

Mr. WALSH of Montana. Will the Senator pardon me for just a moment?

Mr. SMOOT. Yes.

Mr. WALSH of Montana. The Senator from Missouri [Mr. SPENCER] told us yesterday that Missouri had the primacy in the production of this commodity; that it was obliged to yield that primacy to Georgia, but that it had now recovered that primacy. The testimony discloses that it is mined in Georgia at a cost of six dollars and some cents.

Mr. SMOOT. I was not making any statement as to the amount of duty here or defending it in any way.

Mr. WALSH of Montana. Oh, I understand the Senator.

Mr. SMOOT. I simply wanted the record to be straight. Even the Tariff Commission, in making their report upon this commodity, say:

> From 35 to 45 per cent of the domestic consumption of crude barytes prior to 1914 was imported chiefly from Germany. The imported product supplied the Atlantic coast market, as it could be obtained at a cost less than that of domestic crude barytes.

No American barytes ever went to the Atlantic Coast States under the Payne-Aldrich rate of $1.50. That is all I wanted to say—that the producers of barytes in Georgia and Tennessee find the Atlantic coast as their market.

Mr. WALSH of Montana. I think the Senator could equally advise us that no foreign product ever reached the Mississippi Valley as against the Missouri product.

Mr. SMOOT. I think that is right.

Mr. WALSH of Montana. I merely desire to say, in this connection, that if it be true, as the Senator from Missouri told us yesterday—and I have no doubt it is true—that the primacy originally existed with Missouri, but that it passed to Georgia and has come back to Missouri, it means that they can mine this commodity and put it on the market from the mines in Missouri as cheaply as they can in Georgia; and in Georgia, according to the testimony, they can mine it at six dollars and some cents a ton.

Mr. SPENCER obtained the floor.

Mr. KING. Mr. President, will the Senator yield to me for just one moment before he starts?

Mr. SPENCER. Is it for a question?

Mr. KING. I just want to supplement some figures that I put in a moment ago.

Mr. SPENCER. If it would not inconvenience the Senator, I should be glad if he would wait until I put some facts into the record.

Mr. President, I want the Senator from Montana and the Senator from Utah to keep in view the basic facts in this case. They can not be contradicted, for they are acknowledged facts; and here they are:

Germany lays down to-day in New York barytes at $5.20 a ton. There it is, in unlimited amount, in New York. How much does it cost any American producer of barytes, whether in Missouri or in Georgia or in any other of the 12 States that produce it, to lay down barytes in New York? It costs Georgia $11.81 a ton, and Georgia can lay it down there cheaper than Missouri, or perhaps than any other State; so that if this tariff of $5 a ton is not enacted, the barytes mines of these United States close.

Mr. WALSH of Montana. Does the Senator say that is admitted as a fact?

Mr. SPENCER. The latter is a conclusion. The facts are that Germany can put barytes into New York at $5.20 a ton, and the United States can not from any source put barytes into New York at less than $11.81 a ton. I leave the conclu-

sion to the mind of any man as able and fair as the Senator from Montana.

Mr. NORRIS. Will the Senator yield?

Mr. SPENCER. I yield.

Mr. NORRIS. I think it would be interesting if the Senator would give the dates. When he says Germany puts it into New York at $5.20 a ton, does that mean now? When was the Georgia product laid down in New York at the price stated by the Senator?

Mr. SPENCER. I was about to state that in the first week in May of this year, so the trade journals announce, 1,500,000 pounds of German ore, about 700 tons or a little more, were sold in New York at that price, and cut out absolutely the possibility of a single ton from an American mine being sold.

Mr. NORRIS. I am trying to get the date of the cost of the Georgia barytes.

Mr. SPENCER. The figure I gave as to the cost of the German barytes in New York, $5.20, referred to the present time. It was sold there the first week of this month. It can be bought there now and in unlimited amounts.

The cost of production in Georgia dates back to the last of 1920 or 1921, because at that time every American mine was closed, and there has not been a pound produced in the United States since the early part of 1921.

Mr. POMERENE. It might be interesting for the Senator to state the reason for the closing of those mines, too.

Mr. SPENCER. I was about to do that. The reason for the closing of those mines was twofold. In the first place, undoubtedly, as the immediate controlling factor, as I said yesterday, there was the general depression and lack of demand. A mine might run along under a pending depression if the future were bright and the vision for the year or months to come gave some hope; but back of the pending depression, which everyone knew would be temporary, and which, in my judgment, would not of itself have been enough to have closed the Missouri mines, was the specter of Germany producing barytes at a cost which every mine owner in Missouri knew was absolutely prohibitive of American production.

I use Missouri mines as an illustration because I am more familiar with the situation there. A mine in Missouri might produce at $10 a ton, for that is the cost, and I will be glad to explain the reason for it in a moment; it might produce at $10 a ton, even though there was no immediate demand for the ore, precisely as every manufacturer will produce a certain amount of his product, even though it is not salable at the moment of production, if he knows that in the natural, normal condition of affairs there will be a sale for it in the near future. Everyone knew that the demand for barytes was on the increase, that the barytes was a mineral which was to be used more widely, so that they would have continued the production in spite of the temporary depression if it had not been for the outstanding and controlling fact that they knew that under the present law not a pound of barytes which was produced here could ever be sold, because Germany could sell it at half the price in the place where the market for barytes is—on the Atlantic seaboard.

Mr. POMERENE. From what source does the Senator get his figures as to the cost of production in Missouri and Georgia?

Mr. SPENCER. The quotation I made yesterday was from the Government figures. The Senator will find it in the little pamphlet on barytes and barium products, page 190 or 191. The cost in Missouri was $10.51, or something like that.

Mr. POMERENE. At what time?

Mr. SPENCER. When they ceased in 1921; when they were driven out and the production ceased. That was the last cost.

Mr. NORRIS. Is the Senator familiar with the method of mining in Missouri?

Mr. SPENCER. I am.

Mr. NORRIS. Is it on the surface of the ground, or do they have to go down under the ground?

Mr. SPENCER. It is largely on the surface, and that is one of the reasons why the cost is greater than the cost in Georgia, though there may be many others. The Missouri production comes from innumerable little mines. In fact, in the Government report it was stated that in Washington County, Mo., practically every able-bodied man spent some of his time in gathering tiff, or digging for tiff, which is barytes, a few feet under the ground. As I have driven through Washington County I have seen on both sides of the road innumerable little tiff mines. They are not on a railroad. They are about 3 miles from a railroad, and that being exhausted, they are now about 8 miles from the railroad; so that first there is the labor, not in digging deep, but right near the surface, within 6, 10, or 12 feet of the surface. There is the labor of producing it; there is the hauling of it by team, and then there is the railroad transportation. The hauling of it by team to the railroad is included in the cost of production, because the cost of production is supposed to be the cost f. o. b. at the point of shipment, and it costs in Missouri upward of $10 a ton to put barytes ore upon a railroad car.

I do not vouch for it, but my information is that in Georgia the mining is on a larger scale, with railroad facilities, more like the mining of copper in Montana, and the Senator from Montana will correct me if I am wrong. There is a sidetrack which runs right to the mine. There is no hauling or transportation by teams. In Georgia very largely they have colored labor, too, which is very much cheaper, and they have deposits which are larger, which enable them to use steam shovels, while in Missouri it is white men's labor, and it is dug with pick and shovel. Undoubtedly the cost in Missouri is greater than the cost in Georgia.

I am basing the justice of this $5 a ton rate even on the low Georgia cost, as the German competition will drive Georgia absolutely out of the market, and if it drives Georgia out of the market how much greater will be its effect upon Missouri, except in the limited demand which may be contiguous to the mines in Missouri.

One Senator spoke of the fact that there is a chemical company in St. Louis, which is of the highest character, the Mallinckrodt Chemical Works, which use barytes, and undoubtedly they can get barytes from Missouri cheaper, because they are comparatively near to the point of production. But the whole barytes and barium situation has changed. The place of sale is the place of the use, and that is on the Atlantic seaboard.

The Senator speaks about the Payne-Aldrich rate of $1.50 a ton as being sufficient before the war. Barytes was an insignificant mineral before the war. The total consumption of barytes was only 60,000 tons, of which we produced two-thirds, and it was largely used by the Mallinckrodt Chemical Co. and others comparatively near to the mines. When the war came on, and the use of barytes and barium products was increased, the consumption rose to 228,000 tons in 1918. Where was it used? It was not used contiguous to the Missouri or Georgia mines; it was used on the Atlantic seaboard.

Every user of barytes or barium products is on the Atlantic seaboard to-day, and with a single exception or two that is true. Where is the demand for barytes to-day? It is in the 12 great establishments along the Atlantic seaboard. If you shut off American barytes, of course they will get it from the other side, where it can be produced and deposited in New York at less than half of what it costs to produce it in an American mine.

There you have the whole situation. It is not fair to compare the present consumption of barytes on the Atlantic seaboard with what it was in 1914, when the demand was comparatively negligible and when the enterprises on the Atlantic seaboard were not even in existence.

Mr. WALSH of Massachusetts. Will the Senator state what the price was for Missouri barytes in 1913?

Mr. SPENCER. I have not that information at hand.

Mr. WALSH of Massachusetts. I observe from an examination of the chemical schedules that in every instance the price ranged, because of the foreign product being shut out, as high as 300, 400, 500, or 600 per cent, and these manufacturers of chemicals are petitioning Congress to keep the high-tariff rates upon these chemicals for the sole purpose of continuing the high profits which they made during the war. I think the Senator will find, if he can produce the figures, that the same increases in prices obtained on this chemical as in the case of others which have been disclosed here.

Mr. SPENCER. I may say to the Senator that there has been no profit from the mines in Missouri. Whatever may have happened anywhere else in the United States, in the mines of Missouri there has been nothing except struggle, starvation for the employees, and threatened bankruptcy for the mine owners. That is precisely the condition in which the industry is to-day, with the added fact that the mines are closed and there is no employment whatever.

Mr. President, with this I close. Germany is selling barytes to-day at $5.20 a ton in New York. There is no American competition. If you lessen the tariff rate as proposed in this bill, which on the face of the thing is insufficient, below $5 a ton, and if every American mine can stay closed until its machinery becomes rusted, and its employees scattered, and the capital invested is lost, so that nothing could start up again except by a recreation, you will have only one source from which to get barytes, and that is from Germany. You will close every mine in the United States, and the price then, may I say to the Senator from Massachusetts, will soar.

May I add one other statement? If you reduce the tariff on barytes, as proposed in this bill, you will find another thing. If it is necessary to decrease the selling price of German

barytes in New York from $5.20 to $4 a ton until the American mines are closed, it will be done, and when they are closed and the German monopoly is secure, then the price will rise by leaps and bounds, precisely as it did in the case of chloral nitrate.

Mr. WALSH of Massachusetts. Mr. President——

The PRESIDING OFFICER (Mr. ODDIE in the chair). Does the Senator from Missouri yield to the Senator from Massachusetts?

Mr. SPENCER. I yield.

Mr. WALSH of Massachusetts. I simply wanted to make this comment: Without some information as to the cost of production before the war, you can not establish any sound basis for fixing a tariff rate in the bill. On the Senator's own admission, he does not know what barytes was selling for before the war, but he knows what it is selling for now, and he knows the terrific profits made by these concerns during the war. It seems to me the Senator ought to be able to produce some information. The information would show, in my opinion, that as the consumption went up the price went up, and the same story would be repeated here that has been told as to other items in the chemical schedule, an increase of three and four hundred per cent frequently.

Mr. NORRIS. Mr. President——

Mr. SPENCER. I yield to the Senator from Nebraska.

Mr. NORRIS. I want to ask the Senator from Missouri a question that was really suggested by the observation of the Senator from Massachusetts, and that is whether he thinks we ought to put a tariff on this or any other product to make up the difference in the cost of production here and abroad and base the cost of production here upon the war price. Does the Senator believe that if we drafted a bill on that theory the effect of it would be to keep the price up at the war point, which we all admit we want to get away from? It seems to me the Senator is basing his proposition upon the cost of production in America, which we all know was abnormal in all lines of business.

Mr. SPENCER. The pending amendment of the Senate Committee on Finance answers that very question. If a tariff were placed upon the basis of the cost of production during the war and the war prices, instead of a tariff of $5 a ton for barytes it would require a tariff of from $10 to $11 a ton. I may say to the Senator from Nebraska that even at $5 a ton the Missouri mines can not operate except upon the happening of two contingencies, each of which is confidently expected to take place—one of them that the freight rates in the United States will decrease and the other that the cost of labor in Germany will increase. If those two things do not happen the mines can not operate even on a tariff rate of $5 a ton.

Mr. NORRIS. Does not the Senator think he ought to add a third—that the cost of production in Missouri will decrease?

Mr. SPENCER. Quite right; it ought to happen. The leeway for these two is in the difference between $11 a ton, which the present war-time prices would require as a tariff, and the $5 a ton which the committee have submitted.

Mr. OVERMAN. Mr. President——

Mr. SPENCER. I yield to the Senator from North Carolina.

Mr. OVERMAN. Has not the closing down of the mines in Missouri been due to the mining of barytes in Georgia, Tennessee, Virginia, and other States?

Mr. SPENCER. No; I think not.

Mr. OVERMAN. That is what the report of the Tariff Commission says.

Mr. SPENCER. I think not, because before we closed down in 1920 the production in Missouri was more than in any other State. Georgia took the lead in 1916, but only for a year.

Mr. OVERMAN. The Tariff Survey says:

> In 1916 the largest State production of crude barytes was shifted from Missouri to Georgia. This was due to the development of the Georgia deposits by the eastern manufacturers of barium chemicals and lithopone, who had previously depended on Germany for this raw material. Barytes is now mined chiefly in Georgia, Missouri, Tennessee, Kentucky, and Virginia. The mining operations in the East are on a larger scale than those of Missouri, those in the latter State being conducted primarily by individuals on a small scale.

Is not that the reason for the shutting down of the Missouri mines?

Mr. SPENCER. I think what the Senator has read is true, that, except for a single year, Missouri has led and it would now lead if barytes were being produced. If the mines in Missouri were reopened to-morrow I think they would produce more than any other State, with Georgia second.

Mr. LENROOT. Mr. President——

Mr. SPENCER. I yield to the Senator from Wisconsin.

Mr. LENROOT. I would like to ask the Senator where he gets his figures that Germany is laying down barytes in New York at $5 a ton?

Mr. SPENCER. Because 1,500,000 pounds of barytes were bought there the first week in this month.

Mr. LENROOT. Where did the Senator get that figure?

Mr. SPENCER. I know that from the trade journals.

Mr. LENROOT. The Senator must be mistaken, because during the entire year 1921, as reported by the Treasury Department, the imports were not only less than one-half what they were in 1920, but the unit value was $6.02, and to that must be added the ocean rate of $3.60, which makes $9.62.

Mr. SPENCER. The pre-war price was $5.20 laid down in New York.

Mr. LENROOT. It was.

Mr. SPENCER. The importations since the war have been somewhere between $5.20 a ton and $6 a ton.

Mr. LENROOT. Plus the ocean rate.

Mr. SPENCER. No; laid down in New York.

Mr. LENROOT. I have the figures from the Tariff Commission and from the Treasury Department.

Mr. SMOOT. Mr. President, I want to say that not only was it $6.02 in Germany during the whole 12 months of 1921 but for the first three months of 1922 the average was $6.28.

Mr. LENROOT. It is very clear the Senator from Missouri is mistaken. He must be mistaken.

Mr. SPENCER. There is no dispute between the Senator from Wisconsin and myself as to the pre-war price of $5.20 representing the cost, including transportation.

Mr. LENROOT. That is true.

Mr. SPENCER. Then, of course, the proposition of what Germany can do is perfectly manifest.

Mr. LENROOT. No; because there must be added $1.90 a ton, the present increase in the freight rate, and it will not go lower.

Mr. SPENCER. The freight rate from New York to where?

Mr. LENROOT. No; the ocean rate to New York.

Mr. SPENCER. The $5.20 included the ocean rate.

Mr. LENROOT. It included the ocean rate of $1.70. Now the ocean rate is $3.60.

Mr. SPENCER. That is very true.

Mr. LENROOT. So it can not be laid down there for $5 a ton.

Mr. SPENCER. But that is more than made up, I will say to the Senator from Wisconsin, in the decreased cost of labor in Germany. If Germany before the war, even with the transportation rate of $1.70 a ton, could lay it down in New York at $5.20, the difference in the transportation rate is more than doubly made up by the difference in the cost of production in Germany because of labor wages there.

Mr. LENROOT. I will say to the Senator that could not amount to very much, because with the pre-war price he speaks of it was only $1.75 a ton at the mine, including the value of the ore as well as the labor cost.

Now, Mr. President, if I may be recognized in my own right——

The PRESIDING OFFICER. The Senator from Wisconsin is recognized.

Mr. LENROOT. I want to ask the Senator from Missouri another question: Where did he get his figures of the cost of mining in Missouri? He referred to the Tariff Commission and said something about $10 a ton.

Mr. SPENCER. If the Senator will look at the publication of the Government called "Barytes and Barium Products in 1920," on page 192, he will find the figures which I gave. It is published by the Department of the Interior through the Geological Survey.

Mr. SMOOT. May I not suggest to the Senator that those are the selling prices and not the cost figures? I think he will find that the report shows the cost in Missouri was $7.39.

Mr. LENROOT. It was $7.74 in 1919.

Mr. SMOOT. Seven dollars and thirty-nine cents is what it was in 1919. That is the highest that it could possibly be.

Mr. SPENCER. It was $10.17 in 1920.

Mr. LENROOT. No; the Senator is mistaken.

Mr. SMOOT. Yes; the Senator from Missouri is mistaken. It was $7.87.

Mr. SIMMONS. I think where the Senator makes his mistake is that he is talking about the pre-war German price. The pre-war German price, landed in New York, was $5.20 per ton.

Mr. SPENCER. There is no doubt of that.

Mr. SIMMONS. Since the war the price has increased, and, including the freight and duty, it is somewhere about $9 a ton. I have not the odd cents.

Mr. LENROOT. It is nearly $10.

Mr. SPENCER. I admit, if the Senator puts the sale as of the 1st of May of this year, that it is less than the Senator indicated, but I have not the figures at hand. The fact still re-

mains, and it seems to me it is the basic fact, that if before the war Germany could lay down that ore in New York at $5.20 a ton, freight paid, certainly the cost of production in Germany is not as great now as it was then. So the potential power of Germany is now greater than it was to lay it down at that price.

Mr. SIMMONS. That is where the Senator is making his error. The cost of production in Germany to-day is greater than it was before the war. It was for a short time after the war closed as great. I see I have not the attention of the Senator from Missouri, and therefore I will not proceed.

Mr. SPENCER. I beg the Senator's pardon. I am listening.

Mr. SIMMONS. I say the Senator was mistaken. The cost of production is greater now than it was before the war. The cost of production everywhere is greater now than it was before the war. I think it is absolutely true that for a little while after the war under propaganda there urging labor to work at low wages and capital to be content with small prices in order that Germany might get into the market of the world and capture it, prices were lower there than anywhere else. But I think to-day it will be found that that condition is altogether changed and that German labor is demanding to-day as nearly as possible the international standard of wages, and the German manufacturers are demanding nearer the international standard of profit. So prices have gone up in Germany and have rapidly advanced, as the imports of German merchandise to this country will show. Within the last year there has been an increase in the price of German merchandise imported into this country running from 25 to 50 per cent, and right now to-day there is practically no difference between the prices of most German articles imported into this country—I will not say all, but of most German articles imported into this country—and similar articles from the other industrial nations of Europe.

I have no doubt that the Senator from Wisconsin [Mr. LENROOT] is absolutely correct at this time—I am not speaking about some past time since the armistice or the close of the war, but at this time—and that the figures which he gave, namely, between $9 and $10 a ton, are correct. It was somewhere near $10 a ton, including the duty. Now, the Senator from Missouri, it seems to me, could not contend that under those circumstances he needs a duty of $5 a ton in order to bring this crude material up to the proper selling price in America. The truth is, Mr. President, that this is a crude material, which is simply dug out of the earth. The Senator from Tennessee [Mr. SHIELDS], who is not now in the Chamber, told me just a little while ago that it is produced in his State and that they take it out of the earth. The process is a very simple one. The cost can not be great. I think when the Senator from Missouri contends that it costs $5 to mine a ton of that natural material, which lies right on the surface of the earth, he is mistaken. I think the truth is that it can be produced very cheaply in this country.

The trouble does not grow out of any difference in the cost of production here and abroad. The difference can not be much. It may be some, but it can not be much. The trouble does not grow out of that. The trouble about which the Senator has spoken with reference to the closing of those mines in Missouri grows out of another condition altogether. Before the war there was not any great consumption of this material in this country or anywhere else in the world. Before the war we were making a very limited quantity of it. I think our production here ran from 40,000 to 60,000 tons a year, and that, together with a small importation from abroad of three or four thousand tons, was sufficient to supply the domestic demands for that material. During the war there grew up a great demand for the material. Barytes was one of the war brides. I know something about it, because I have a friend in the city of Raleigh who lost about $100,000 speculating in barytes on account of the sudden great demand for barytes during the war. When the war closed that demand disappeared. We returned to the normal demand which had existed before the war, but there had been a great accumulation of this material during the war which was not needed, and it was on hand when the war closed. Because of the reduced demand for it, and because of the supply which we had on hand, of course the mines had to shut down. There was no market here for it, because there was no need for it. There was no market in the world for it, because not much need for it existed in the world.

Mr. LENROOT. Mr. President——

Mr. SPENCER. Does not the Senator——

Mr. LENROOT. I have the floor.

Mr. SPENCER. I think I have the floor.

Mr. LENROOT. I wish to be courteous, but I do not wish to be charged with unduly occupying the time of the Senate while I have the floor.

Mr. SIMMONS. I beg pardon of the Senator from Wisconsin. I thought the Senator from Missouri [Mr. SPENCER] had the floor.

Mr. LENROOT. I was recognized in my own right and the Senator from Missouri took his seat. However, I yield to the Senator from Missouri.

Mr. SPENCER. Will the Senator yield to me for a moment?

Mr. LENROOT. Yes.

Mr. SPENCER. Do I understand the Senator from North Carolina to state that the cost of labor in Germany, as measured by the American standard of money, is less to-day than it was before the war, or the equal to what it was before the war?

Mr. SIMMONS. I did not say that.

Mr. SPENCER. Then I misunderstood the Senator from North Carolina.

Mr. SIMMONS. What I said was that at the present time the scale of wages in Germany was very nearly the same as the scale of wages in the other industrial countries of Europe——

Mr. SPENCER. Oh!

Mr. SIMMONS. But that it was higher to-day than it was before the World War. I did not mean as measured in American dollars.

Mr. SPENCER. The Senator from North Carolina will not dispute the fact that wages in the United States are approximately 100 per cent greater than they were before the war, and that wages in Germany are approximately one-fourth less to-day, each measured in American money, than they were before the war?

Mr. SIMMONS. I make the general statement, Mr. President, that, relatively speaking, the cost of labor in Germany and the cost of labor in all the other industrial countries of Europe is more nearly equal to the American standard than before the World War.

Mr. SMOOT. Mr. President, I wish to call attention to one statement particularly which the Senator from North Carolina has made, which is quite misleading, and ought to be explained. As to all of the barytes ore which is mined in the South it takes from three to five tons of ore to make a ton of barytes because of the fact that the barytes has to be washed out of the ore. So the cost is not merely the taking of a ton of ore out of the ground, but when three tons of ore are taken out of the ground they produce only one ton of barytes after the washing process and the separation of the barytes from the ore. The Tariff Board says the barytes content runs from 20 to 35 per cent; so the latter figure would indicate a ratio of 3 to 1.

Mr. SIMMONS. I was not discussing that situation.

Mr. SMOOT. Oh, yes; I think the Senator was; and that is certainly a factor to be considered.

Another question is as to wages, Mr. President. I have received from the Tariff Commission a statement, which is nearly complete, concerning the scale of wages of all of the industries in Germany; and I say now to the Senator from Missouri [Mr. SPENCER] that he was very moderate in stating that the wages in this country are double what they are in Germany. I say the wages are treble in America what they are in Germany. I shall put the figures to which I refer into the RECORD as soon as I get time to do so.

Mr. POMERENE. To what date is the Senator from Utah referring?

Mr. SMOOT. As of December 31, 1921. The scale of wages to which I refer is brought down to that date.

Mr. POMERENE. A statement was made on the floor of the Senate here that during the month of January last wages had increased in German factories 20 per cent.

Mr. SMOOT. Not since the time I have mentioned.

Mr. POMERENE. Yes; since that time.

Mr. SMOOT. This statement was made on the basis of 192 marks for a dollar. Now it requires about 300 marks to purchase a dollar, and I will later show exactly what the percentages are as to the wages quoted and the increases to which the Senator refers.

Mr. SIMMONS. Mr. President——

Mr. LENROOT. Mr. President, I should like to proceed to discuss this matter myself a little.

Mr. SIMMONS. Will not the Senator from Wisconsin permit me to answer the Senator from Utah for just a moment?

Mr. LENROOT. I will yield.

Mr. SIMMONS. Mr. President, how utterly ridiculous it is to undertake to measure labor cost in Germany by the international value of German currency; and that is what the Senator from Utah is trying to do.

Mr. SMOOT. No; the Senator from North Carolina is wrong in that statement.

Mr. SIMMONS. Just let me finish my statement, and then I will yield.

Mr. SMOOT. If the Senator from North Carolina makes any statement on the basis which he suggests, it is wrong.

Mr. SIMMONS. Very well.

Mr. LENROOT. Mr. President——

Mr. SIMMONS. Mr. President, I had just started when the Senator from Utah interrupted me.

Mr. LENROOT. Very well; I yield further to the Senator from North Carolina.

Mr. SIMMONS. Mr. President, everybody who knows anything about the matter knows that the exchange value of the mark—and that is the value upon which our purchases from Germany are based—is entirely different from the purchasing power of the mark in Germany; that is to say, a mark has one value in international trade and has an entirely different value in the German market. It has a purchasing power in the German market which it has not in the world at large by reason of the reduction of the paper currency in Germany to the gold standard that obtains in international trade.

The wages paid the German laborer in marks to-day will buy for him as much, or nearly as much, of the necessaries of life as the wages paid in American factories will buy. I heard that testimony given before the Finance Committee in the general hearings. The mark has one purchasing power in Germany but it has a different purchasing power in the markets of the world. The Germans have some confidence in their mark, while we have none and the world has none.

Mr. SMOOT. Mr. President——

Mr. LENROOT. I hope the Senator will now allow me to proceed.

Mr. SMOOT. Just one moment. I hope the Senate will now remember the statement which has just been made by the Senator from North Carolina, because I am going to call his attention to it a good many times in the future if this question shall then come up. The position of the Senator now is in exact accord with what I have stated on the floor of the Senate several times. Because of the exchange situation to which the Senator has referred, the German laborer, with the purchasing power of the mark in Germany greater than it is outside, has that much advantage over the American laborer, while the American dollar does not have any greater purchasing power in purchasing labor or any other commodities in the United States than it has abroad. The Senator from North Carolina simply makes his case that much worse by the statement which he has just made.

Mr. LENROOT. Mr. President, this is the first time I have participated in the discussion of any rates proposed in this bill, and I shall confine what I have to say to this particular rate.

I have realized, Mr. President, the difficulties under which the committee has labored in the framing of this bill. I do not believe it possible under present conditions at home and abroad to frame on a scientific basis a permanent tariff law; but I also believe that a revision of the tariff is absolutely necessary for the protection of American industry, and I have been disposed, and shall be disposed in the future, to follow the judgment of the committee, so far as possible, and resolve doubts in favor of the committee's action, because they have made a very thorough study of every question involved. However, it ought not to be assumed upon this floor that the committee is infallible and under no circumstances will make a mistake. When a mistake is clearly shown, as a Republican and a protectionist, I believe it is the duty of every Republican to do what he can to rectify that mistake. As to the particular duty now under consideration, Mr. President, it is very clear to me that a mistake has been made upon the part of the committee, and that the increase recommended is absolutely indefensible and can not be defended according to any doctrine of Republican protection.

In the first place, I think the committee was misled with reference to the question of differences in cost of production and what foreign barytes was laid down for in the city of New York.

Under the existing duty of 15 per cent, which at present prices amounts to about $1 per ton, last year there were imported only 9,870 tons, while in 1920 there were imported under the same rate of 15 per cent, equivalent to about $1 a ton, 22,209 tons; in other words, in 1921, under the present rate of duty, the imports were less than one-half of what they were in 1920. But when we come to the question of the domestic production we find what? We find that, notwithstanding the gates were again open to imports of this product from Germany, in 1920 we had the largest domestic production of crude barytes ore in the history of the United States.

Mr. POMERENE. That was in 1920?

Mr. LENROOT. That was in 1920. To give the figures, in 1920 there were produced in the United States of crude barytes 228,113 tons, while the highest previous production was in 1916 of 221,980 tons.

With reference to the cost of production and cost of laying down this ore in New York, the Senator from Missouri is clearly mistaken, and I think I understand how the mistake arose. The price given to him, five dollars and some cents, is the invoice price upon which the duty is paid, but that is not the cost of the product in New York, because to it there must be added $3.60 a ton, the ocean freight rate, which brings it up to between $9 and $10 a ton.

Now, with reference to the cost in this country in the Missouri field, the Senator from Missouri stated that the cost f. o. b. cars at the point on the railroad nearest to the mine was a little over $10; but the Tariff Commission reports that the cost of mining this ore in 1919 was $7.74 a ton, instead of $10 per ton. The Senator from Missouri, no doubt, gets his figures of $10 per ton from the testimony he has read but which he did not have clearly in mind to-day. I hold in my hand the Senate hearings, where the attempt was made to show that the producers could not afford to sell this ore f. o. b. the cars for less than $10 a ton, but they did not say that was the cost of producing the ore. Let us see what they did say. I read from the statement of Mr. RHODES, Representative in Congress from the district in Missouri in which the mines are located:

> According to authentic information received from Thompson, Weinman & Co., of New York, to-day crude barytes ore has been offered for sale by German importers in New York as low as $7.50 per ton within the past few weeks.

I may say in passing that does not tally with the $5 quotation suggested by the Senator from Missouri.

> We must get as much as $10 per ton for the crude ore on board cars at Missouri shipping points to afford fair wages to miners—

Now—

> fair wages for hauling it from the mines to the railroads—

That is proper so far. Then what?—

> fair royalties to the landowner, and a fair profit to the dealer.

So the figure of $10 per ton includes the profit that the miner makes, and no one knows how high that is.

Mr. SMOOT. It is the selling price, as I stated.

Mr. LENROOT. So that the $10 a ton referred to by the Senator from Missouri is not the cost price at all, but it is the selling price. The cost price, Mr. President, both as given by the Tariff Commission and in the testimony of the proponents of this increase before the committee, was a cost based upon the peak cost of production and not the cost of production to-day.

Mr. POMERENE. Mr. President, can the Senator state whether the cost figures which have been given represent the average cost in that district or do they represent the cost to some particular mine?

Mr. LENROOT. The figures given represent the average cost in the district. I said that that was at the high cost of production, the very highest cost of labor; and we have a right to assume—yes; we have a right to insist—that when every other industry is deflated this industry, too, shall take its share of deflation.

What was the cost of mining this product in the Senator's State prior to the war, when Germany was laying it down here for $5.20?

I read from the Tariff Information Survey compiled by the Tariff Commission. After giving the pre-war price of $5.20, for which Germany was laying down this product here, they go on to say:

> The price of domestic crude barytes f. o. b. St. Louis has about doubled during the war. The price from May, 1913, until November, 1915, varied very little from $4.90 per short ton.

Four dollars and ninety cents per short ton was the pre-war cost, and now the proponents of this increase ask that this particular industry shall be permitted to pay the costs of production and receive profits based upon the very peak prices that we had in this country following the war.

Mr. POMERENE. Was that the cost delivered in St. Louis?

Mr. LENROOT. Delivered in St. Louis, which takes a railroad rate from the point of shipment upon the railroad to the city of St. Louis.

Mr. KING. Mr. President, will the Senator yield?

Mr. LENROOT. Yes.

Mr. KING. I beg the Senator's pardon. He will find that that cost was even less in the Washington County district, where it was produced. It was $4.25 per ton.

Mr. LENROOT. I wonder if the Senator from Missouri takes the position that when farmers have been deflated below the 1913 basis, and when every other industry has been de-

flated, he asks for a protective duty to enable this particular industry to avoid any deflation whatever?

Now, Mr. President, let us see what happened with reference to this particular domestic product.

Mr. POMERENE. Mr. President, it would seem that the rate on barytes was fixed according to the cost-plus plan, without paying any attention to the cost.

Mr. LENROOT. Probably.

The price from May, 1913, until November, 1915, varied very little from $4.90 per short ton. The price then increased to $9.80 per ton in October, 1918, and this price was in force until May, 1919, when it decreased to $8.80 per ton. In November, 1919, the price increased sharply to $10.80 per ton.

Laid down in St. Louis—the point where, so far as this crude material is concerned, the product was consumed.

The Senator has stated, and it appears in the testimony, that these mines are closed down, and they would have the Senate believe that it was because of the imports from Germany that these mines were closed; but the fact is conclusively shown that imports from Germany have nothing to do with the closing down of the mines, because when the mines closed down the imports were less than one-half of what they were the previous year, when the mines were running. Of course, the answer is that the general depression closed down not only these mines but every kind of industry to a greater or less extent, and in all probability these mines had a surplus stock on hand which had not yet been exhausted.

Mr. SIMMONS. Mr. President, may I ask the Senator a question?

Mr. LENROOT. I yield.

Mr. SIMMONS. In view of the large surplus stock which is on hand, and the present limited demand, does the Senator think that if they should get this protection the mines would open up? Might not their owners and operators simply say: "Now that we are free from German or any other competition, by reason of this high duty, we can keep these mines closed until we have disposed of the surplus stock we have on hand," and charge very nearly the same prices that they charged during the war?

Mr. LENROOT. Mr. President, I do not happen to know anything about how highly concentrated this mining industry may be, and, of course, that would depend entirely upon how much competition there was in the industry.

Mr. President, I am only going to occupy a moment more.

While I think it is clearly shown that the Senator from Missouri is mistaken as to Germany laying down this product at $5 a ton, let us assume for a moment that that is true. Then I want to ask the Republican side, if that is true, if they can justify a 100 per cent ad valorem duty upon a product that was not planted or sown by man, that was placed in the ground by the Creator, and justify it upon any system or theory of protection?

I am as good a protectionist as the Senator from Missouri; but I say that if there is any raw, crude material found in the ground where in order to mine it in this country the American people have to pay for the raw material double what they could obtain it for abroad, then I am not in favor of trying to build up that particular mining industry until such time as it can be built up with a less amount of duty.

Mr. President, I agree with the Senator from North Dakota that German costs to-day are less than they were prior to the war. I believe they are very much less. I am perfectly willing to make up in any duty in this bill for the difference that I believe does exist, although we may not ascertain it definitely. I am willing to vote for amendments on the theory that German costs to-day are very much less than they were prior to the war, and therefore I am willing to vote in some cases for a duty even higher than that which was imposed under the Payne-Aldrich law. But, Mr. President, how can any Republican defend an increase of 333 per cent, which is proposed by the committee, over the duty imposed in the Payne-Aldrich law, and an increase of 500 per cent over the duty imposed under the present law, where the importations so far have not been so serious as to menace the industry? I can not do it, and I do not see how any other Republican can do it when he is fully acquainted with all the facts.

Mr. President, I want to support this bill. It is necessary to have a revision of the tariff; but I want rates in this bill that at least, if I do not fully agree with them, I can concede that there may be honest differences of opinion about. So far as I am concerned, I could not defend anywhere, before any audience in America, this proposed rate upon barytes ore—not that the item itself is so very important, perhaps, to the American people as a whole, but it is the principle that is involved—and I do not want to see the Republican side of this aisle vote for any duty that can not be defended, that is based upon mistaken figures, and give to our friends on the other side of the aisle an opportunity to attack us justly. Of course, they will do it unjustly, and we can meet them upon that ground; but I do hope that the rates that are voted in this bill will not be such as to make the Republican Party a just subject of attack because of such rates.

Mr. McCUMBER. Mr. President, I want to see if the committee has made any error in its report and what it is claiming to be a proper duty, and I want the attention of the Senator from Wisconsin.

The committee took the cost of producing crude barytes in 1919 at $6.31 per ton. The Tariff Commission give the cost as reported at $7.39 a ton, but on a uniform amortization and royalty basis they give it at $6.31 per ton. I am getting the cost of the American product. That does not include profits. That is the bare cost of production; and taking $6.31 per ton as the cost, removing that ton to the eastern markets costs $5.50 per ton.

Mr. LENROOT. May I ask the Senator a question right there? I should like to ask the Senator if the committee have framed this bill upon the theory that they are going to add as a protective rate the cost of moving all products to the Atlantic coast?

Mr. McCUMBER. No, Mr. President. Sometimes, as I stated yesterday, it is impossible to give protection on an article that is produced so far away that the cost of transportation will be so excessive that the consuming public can not afford to pay the price, and the committee must decide as to when such an occasion arises that it can not afford to give the protection.

Mr. LENROOT. Another question: The Senator is older than I; he has fought longer in the Republican Party than I; but has there ever been a time in the history of the Republican Party when the cost of transportation has been added to secure a protective rate?

Mr. McCUMBER. Mr. President, in determining what a rate should be the cost of transportation has always been considered, together with all other matters that enter into the question of competition in the American market.

Mr. LENROOT. Will not the Senator admit that upon articles that are used generally throughout the country the cost of transportation equalizes itself; that if you are to include in a protective rate the cost of transportation to New York, you are giving an exorbitant protection where the product never reaches New York, where the freight rate itself affords a protection to the manufacturer if he is situated in Chicago, the Mississippi Valley, or elsewhere in the interior of the country?

Mr. McCUMBER. Mr. President, that is just why I have stated that it is impossible to give a protection that will allow any article to be shipped from any section of the country to any other section of the country.

Mr. LENROOT. And is not that why the Republican Party—and I have been through two tariff revisions—has never in all its history made as one of the bases or factors of protection the transportation rate?

Mr. McCUMBER. Mr. President, it has always taken into consideration the transportation rate. We have to take into consideration what it costs to produce an article in Great Britain and in France and in Germany. Then we have to take into consideration what it costs to produce that article landed in New York. Of course, we take the freight into consideration. We take into consideration the usual profits in that business. All of those enter into consideration in determining what rates we must fix as a competitive basis. We do not take that as our standard; we do not add to it in all cases; but we do consider is as a factor in fixing a competitive rate. If an article is produced in Europe at a cost which, with freight added, would be more than the cost in the United States, there would be no necessity of any protective duty whatever. Therefore we must take those into consideration.

Mr. LENROOT. Mr. President——

Mr. McCUMBER. If the Senator will let me finish my statement, I think it will be found that we are not far apart.

Mr. LENROOT. I do not think the Senator understood me. What I said was in reference to the transportation rate. The Senator proposes to add the fixed transportation rate from Missouri to New York to arrive at what should be fixed on as the protective rate. That, I say, has never been done by the Republican Party.

Mr. McCUMBER. The Senator will find that it was not done in this instance, if he will allow me to complete the statement.

I stated that, making the average allowance for amortization, the cost of production in 1919 was $6.31. I did not give the cost of transporting from Missouri to New York, but gave the freight rate from Georgia. I do not think Missouri has been able, unless it was very lately or during war times, to compete in the eastern markets at all; but allowing a freight rate of

$5.50 from Georgia to New York would bring the price up to $11.81. In other words, the Georgia producer, without the profit, would have to pay $11.81 to lay his product down on the Atlantic coast.

Mr. SPENCER. Where it is used.

Mr. McCUMBER. Where practically all of it is used. It was stated to us, and herein I find the conflict, that it can be placed on the New York market from Germany at $5.20 per ton, and that was my understanding; but I think the statements made this morning show that that was an error, that the person who goes to Germany and purchases it to-day and lands it in New York can not land it at $5.20 a ton. The Senator from Missouri has assumed that it can be landed in New York, under present wages in Germany, which are only about one-fourth of what they were prior to the war, at $5.20 a ton.

Mr. SPENCER. The one thing about which there is no dispute is that before the war Germany actually landed and sold this product in New York at $5.20 per ton. That included the cost of transportation to New York. About that fact there has as yet been no dispute.

Mr. McCUMBER. It not only included that, I will say to the Senator, but it included the tariff duty.

Mr. SPENCER. So that when Germany offered this ore in New York before the war $5.20 included the cost of production in Germany, the transportation cost in Germany to the seaboard, the transportation across the sea, and the duty. It was the total price of the German ore before the war.

Everybody knows that the price of labor in Germany, so far as that enters into the cost of the production of the German ore, is only one-fourth as great to-day as it was before the war. It is undoubtedly true that the cost of transportation across the sea is greater now than it was before the war. But my point is that we had the actual demonstration of German ore being sold in New York before the war, transportation and tariff included, at $5.20 a ton, and now, with wages one-fourth as great, Germany can do the same or worse for American production, and if that is true the foundation for this tariff is laid.

Mr. LENROOT. Is the Senator aware of the fact that the entire pre-war wage paid, the entire cost of transportation, and the value of the ore itself were less than the increased freight rate to-day?

Mr. SPENCER. The Senator said that before.

Mr. LENROOT. I say it now.

Mr. SPENCER. It is equally true that $5.20 before the war was the German price, including their profit, and if that was the price then, with the wage rate of that time, now Germany could place it in New York at less than $5.20, and nobody has contended that American mines can begin to lay it down in New York at that price.

Mr. LENROOT. If they gave it away, it could not be laid down here at the pre-war price.

Mr. SIMMONS. Mr. President, if I understand the Senator from Missouri, he contends that before the war—that is, when the present rate of duty was in force—this German article could be laid down in New York and sold in the American market for a little over $5 a ton; that it was so sold, and that that was the price with which the American producer had to compete. That is to say, before the war the American producer of barytes competed with the German producer of barytes on the basis of the New York price of $5 a ton. It does not make any difference what it cost the Germans to produce it before the war; the competition on the part of the American producer was with the $5 a ton price, at which the German product was sold in the New York market.

It makes no difference what it costs in Germany; that same German product is sold in New York, not for $5, the price before the war, but for $10 a ton, and it is the German price of that product which the American producer has to meet, and he meets a price that is twice as high as the price with which he successfully competed before the war.

Mr. McCUMBER. Mr. President, the Senator has just made a suggestion to which I was just coming, that our rates are based, not on what it may cost to produce in Germany, or what Germany sold it for prior to the war; but our rates are necessarily based on the foreign selling price, and the foreign selling price at the present time seems to be considerably in excess of what I understood it to be. I am free to say that as I understood the matter when it was presented to the committee, this product was being laid down in the United States for $5.20 a ton, freight and tariff paid. There is quite a little difference between the six or seven dollars in Germany, with over $3 freight added to it, and $5.20. For that reason I am going to ask that this item be passed over, in order that the committee may give it further consideration, because my only desire is that we shall give a rate of duty which will enable the American producer to compete in the American market. To arrive at that we must always determine what the importer can put the same article down in the American market for, and that, of course, includes freight, and it includes every other element which makes up the cost of the importation.

Therefore I ask unanimous consent that this paragraph may be passed over.

The PRESIDING OFFICER. Without objection it will be passed over.

Mr. SIMMONS. Mr. President, I want to say before that is done that I think the chairman of the committee has acted very wisely. I am glad he has met the situation in a liberal and fair manner.

I want to say also, before we leave this item, that there seems to me to be a strange inconsistency here. The contention is made upon this floor that Germany is producing at the very lowest level, that the cost of production there is only a fraction of what it was before the war, when we are confronted with the fact that the German selling price in this country is twice as much as it was before the war with the duty added.

I have contended that whatever may be the German production cost, the German selling prices in this country are about as high to-day as the selling prices of any of the industrial nations of Europe. This illustrates it.

The selling price of this German product is twice what it was before the war. We are now competing with a price twice as high as the price we competed with before the war. That situation is found all through these schedules.

Last year we were considering the question of adopting an antidumping provision in the revenue bill. The House had been stampeded upon that question by the suggestion that Germany, especially, was flooding this market with its low-priced products, dumping them, selling them at a sacrifice, at salvage prices, and that it was necessary to meet that situation by the establishment of a drastic antidumping law.

When that bill came over to the Finance Committee the suggestion was made, I think by myself, that before we followed the House in that matter, before we enacted that very drastic piece of legislation, we would better make inquiry of the expert appraisers and customs officials located at the great ports, and ascertain whether there was any justification for such unusual and exceptional legislation against the foreign exporter.

The suggestion was adopted by the committee, and, as a result, we did subpœna a large number of experts, not only from New York but I think some came from Boston, possibly some from Philadelphia, and some from other ports. At the head of these experts were two gentlemen of exceptional experience and ability as appraisers, gentlemen who were the heads of the port in New York. Their experience was very great, their ability unquestioned, and their veracity beyond dispute. They came before the committee, together with others, early in 1921, and they stated, as a result of their actual experience as appraisers of foreign merchandise in the port of New York, that as a matter of fact all foreign products, including those of Germany, were invoiced much higher than they were before the war, and in many instances they said these German products were invoiced at prices higher than the American selling price.

Upon that testimony the Finance Committee decided that there was really no justification for the House action in adopting this antidumping provision. It was modified by the Senate committee and reported in the tariff bill. Upon the floor of the Senate the direct question was asked by myself of the chairman of the committee as to whether, in the light of the testimony which had been presented to the committee, he contended there was at that time any dumping going on in this country. He answered in the negative, that there was no dumping going on at that time, but that some might occur afterwards, and as a matter of precauttion the House provision, slightly modified, was retained on the theory that if it did not do any good it would not do any harm.

So it was then established, and no conditions which have transpired since then have changed the fact—and the Senator from North Dakota very frankly admits that is not the basis on which he levied the taxes—that whatever may be the difference in the cost of production here and abroad, including Germany, when we come to the American ports of entry the prices of the products from Germany are very much higher than they were before the war, that they are substantially the same as those from other industrial countries of Europe, and it is those prices, with the duty added and the freight added, with which we have to compete.

The chairman of the committee has just stated that the bill is framed not upon the basis of the cost of production but framed upon the basis of the selling price in the American mar-

ket of the foreign product and in the American market of the domestic product, its object being to bring about conditions of equality in competition in this market. Therefore, whatever may be the cost of production in Germany or other countries, in the consideration of the tariff bill framed upon that theory the question is whether the increased rate is necessary in order to bring about not equality in the cost of production here and abroad but equality in the price at which that foreign product is sold in the domestic market with duty added, with freight added, with overhead added, and the wholesale price of the American article in this market.

Now, in this particular case, Mr. President, whatever may happen to the production of the article in the foreign markets, the facts disclosed make it clear that the article sold here before the war at $5.20, after duty was paid and after freight was paid, to-day, after the duty is paid, after the freight is paid, the article is offered for sale in the port of New York, alongside the American product, for twice what it sold for before the war. Hence the American has to compete not with the pre-war price of $5 but with the present price of $10 a ton for the article. I do not know how much profit the foreigner may have in that $10, if it includes the profit, but I have no doubt the American has a pretty good profit in whatever price he charges for his product in the present market.

Mr. McCUMBER. Mr. President, will the Senator yield for a question?

Mr. SIMMONS. Certainly.

Mr. McCUMBER. My attention was called, of course, to other matters during a part of the time the Senator was just speaking, but I have been informed that he made the statement that I claimed that our rates were based upon the selling price of the foreign article in the American market.

Mr. SIMMONS. I understood the Senator a little while ago to say that the basis was the difference in the selling price in the American market.

Mr. McCUMBER. Oh, no. Our rates, as the Senator understands from a reading of the bill, are based upon the foreign selling price of the foreign article in the country of origin.

Mr. SIMMONS. Or the export price—whichever is highest.

Mr. McCUMBER. Yes; but it can be assumed that they are very close ordinarily. At least that is a far different statement from saying that our rates are based upon the selling price of the foreign article in the United States.

Mr. SIMMONS. The selling price in the United States is based upon the export selling price at which it is brought in. That is probably the higher price, higher than the domestic selling price; yet the bill provides that whichever is highest shall be taken, and I assume the export selling price would be higher than the domestic selling price, and that the export selling price will be the basis of comparison.

Mr. McCUMBER. I think probably there must have been some misunderstanding on the part of my informant as to what the Senator stated. I understood that the Senator said I had made a statement upon the floor of the Senate that our duties were based upon the selling price of the foreign article in the United States market. We repudiated that in our refusal to accept the American selling price theory.

Mr. SIMMONS. That would include overhead and all that sort of thing. I take it the theory of the bill is, or should be, that the rates are based upon the export selling price of the article in the American market.

Mr. McCUMBER. Oh, no; the selling price in the foreign market; either the domestic selling price in that market or the sale for export in that market.

Mr. SIMMONS. Let me see if I now understand the Senator. The Senator imposed the rates in the bill upon the domestic selling price of the foreign article or the export selling price of the foreign article, whichever is highest.

Mr. McCUMBER. In the foreign country.

Mr. SIMMONS. Yes; in the foreign country, and the invoice price of that article is supposed to be the export selling price.

Mr. McCUMBER. The invoice price is supposed to be the price which the importer paid for the article——

Mr. SIMMONS. That is what I mean.

Mr. McCUMBER. Whether it represents the export price or whether it represents the price at which the manufacturer sold it.

Mr. SIMMONS. That is the price at which it is invoiced to the importer.

Mr. McCUMBER. There is probably very little difference, but the law is the same as it has been, I think, in all the previous cases, that the basis of the duty shall be either the wholesale selling price of the article in the foreign market or the export selling price of the article in that country, whichever is the highest. Of course, the export price would not then be any higher than the article would be sold for in the home markets unless there was some export duty or something equivalent thereto levied upon it.

Mr. SIMMONS. Mr. President, the duties are based upon the foreign selling price or the export selling price, whichever is the highest. The purpose of the bill is to equalize conditions of competition in the United States. The American wholesale selling price is selected as one of the elements in the measurement of the protection to be given. The American wholesale selling price includes the profits of the jobber, the commission merchant, or the wholesaler. We can not with any degree of justice, in order to ascertain the difference in competition, compare that selling price with the foreign selling price unless we likewise include, in making up the foreign selling price, all the expenses up to the time it reaches the hands of the jobber, or the importer in that case, plus a reasonable profit to the importer on the transaction.

In other words, if we are going to have a standard of comparing the prices of foreign products in this market with the prices of domestic products in this market which will equalize conditions in competition, if we include in the American price with which to compare the foreign price the freight, the insurance, the overhead, and profit, we must of necessity, in order to be just and fair, include that same thing in the foreign selling price. What I am afraid of is that in levying these duties the committee have been led into accepting the American wholesale selling price with the high profits which we know are exacted upon some of these protected articles, ranging from 25 to 200 and 300 per cent, and when, in making the duties, they have compared that with the foreign article, they have not taken into consideration the fact that the importer, who is the wholesaler in this market of that product, is entitled to have his profits included in ascertaining what is the difference in competitive conditions as between the foreign article which he handles and the domestic article which the American jobber handles.

I do not know whether that is so or not. I am afraid it has been so in some cases. It looks like it has been so in this particular case and it looks like they were comparing the export price of the foreign product without adding to it freight, insurance, and importers' profits, and that the selling price of the domestic article includes not only the profits of the American dealer but includes freight and other items of expense. I do not know whether I correctly interpret it or not.

Mr. SMOOT. No, Mr. President; the Senator is wrong in his interpretation as to this particular item. If it were not that the Senator from New Jersey [Mr. FRELINGHUYSEN] desires to address the Senate at this particular time, I could tell the Senator from North Carolina the reason why as to this article. The basis of rates was not upon that standard, I will say to the Senator.

Mr. SIMMONS. It looks very much that way.

Mr. President, if the Senator from New Jersey [Mr. FRELINGHUYSEN] desires to proceed, while I had not finished what I wish to say, I shall take very great pleasure in yielding to him.

Mr. FRELINGHUYSEN. I should like to have the Senator from North Carolina allow me to interrupt him to speak on a question of personal privilege.

Mr. SIMMONS. I take very great pleasure in yielding to the Senator. I yield the floor to the Senator. I will continue my remarks upon some other subject hereafter.

Mr. FRELINGHUYSEN. I thank the Senator for his great courtesy, because it is a matter of extreme importance to me.

Mr. WALSH of Massachusetts. Mr. President, does the Senator from New Jersey desire to have a quorum call?

Mr. FRELINGHUYSEN. No; I thank the Senator from Massachusetts. I simply ask that my statement may appear in the RECORD, so that Senators may there have an opportunity to read it.

Mr. WALSH of Massachusetts. Very well.

PERSONAL EXPLANATION.

Mr. FRELINGHUYSEN. Mr. President, the New York Times of this morning, Wednesday, May 17, printed a scandalous and, I believe, libelous article in which my name is mentioned. It is headed "*Bribery here laid to Cuban bankers seized for fraud. * * * Havana News asks if property was woolen mills in which Frelinghuysen was interested.*"

There are two parts of the article to which I shall directly speak, but before doing so I ask unanimous consent that the entire article may be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The article referred to is as follows:

BRIBERY HERE LAID TO CUBAN BANKERS SEIZED FOR FRAUD—INQUIRY DEMANDED IN UPMANN'S EXPENSE ITEM OF $1,028,151 TO REGAIN ALIEN PROPERTY—ARRESTS CAUSE SENSATION—HABANA NEWS ASKS IF PROPERTY WAS WOOLEN MILLS IN WHICH FRELINGHUYSEN WAS INTERESTED—AFTERMATH OF A FAILURE—ATTORNEY GENERAL ACTS AGAINST OFFICIALS OF CUBAN-GERMAN FIRM ON REPORT OF BANK EXAMINERS.

[Copyright, 1922, by the New York Times Co. Special cable to the New York Times.]

HABANA, May 19.—Herman and Albert Upmann, brothers, heads of the Cuban-German banking house of H. Upmann & Co., which recently failed, involving approximately $10,000,000, were taken into custody late to-day by the secret police. The arrests followed rumors of an attempt to be made to escape by airplane.

The brothers are charged with fraud, the charge being preferred by the attorney general, with the complete knowledge of the commission for the liquidation of banks, on which the United States has a representative.

Although the arrests caused a sensation in clubs and upon the boulevards, Americans seemed even more interested in an item of $1,028,517.48 which the auditors for the Habana Clearing House found upon the books of Upmann & Co. According to the only copy of that report which has reached the public, this item was charged off as "expenses of Herman Upmann in Washington to secure the return of the properties from the Alien Enemy Property Custodian, $1,028,517.48."

It is charged that this item, discovered in "profit and loss," represents money of the bank's depositors. No statements have come to light showing to whom this money was paid.

NEWSPAPER DEMANDS INQUIRY.

The Evening News, a stanch supporter of Major General Crowder, asks to-night, "How was that million spent?" As the heading for an editorial, which mentions Senator FRELINGHUYSEN, of New Jersey, and refers to a "former Habana banker up there at the time." The questions being asked here to-night are summed up in that editorial as follows:

"It is the statement that more than a million dollars of the depositors' money has been used to regain the private property of Mr. Upmann, and that this money was used to gain an end where no money is supposed to be used. How was a million dollars expended in Washington? Who got it? Was it used for graft, for a bribe, for securing influence to secure the return of the property? Who got the money? Why was it necessary to spend a million dollars for it? Has an official of the American Government yielded to the voice of the tempter and taken this money? Of what did the property consist? If Mr. Upmann spent the money for bribery, the United States Government should compel him to tell where he spent that money."

The reference to the New Jersey Senator is as follows:

"Was this property, held by the Alien Enemy Property Custodian, those shares in the woolen mills in which Senator FRELINGHUYSEN is connected? And what connection did Senator FRELINGHUYSEN, of New Jersey, have with assisting Mr. Upmann in spending the million dollars in Washington in order to get that property out of the hands of the Alien Enemy Property Custodian?"

The News calls for a senatorial investigation, declaring the charges are "an official document now," inasmuch as they were turned in with the bank's statement.

REPORT OF BANK EXAMINERS.

HABANA, May 16.—The detention of Herman Upmann, president, and his brother, Albert Upmann, of the firm of H. Upmann & Co., was connected with the affairs of the bank, which failed to open for business on May 1 and was taken over on May 12 by the bank liquidation commission after the members of the Habana Clearing House declined to come to its assistance.

The order of the attorney general to detain the Upmanns followed closely upon the submission of a report to the bank liquidation commission by Angel G. Del Valle and Carlos M. Satolongo, who made an examination of the bank's books, especially in connection with certain information alleged to have been given to the Habana Clearing House by accountants delegated to report on securities offered by the bank to secure a loan of $3,000,000 which the clearing house members were asked to make.

Included in the report to the clearing house was a statement alleging that the bank's books showed an entry of $1,028,517 as "expenses of Herman Upmann in Washington to secure the return of property sequestrated as a result of the war." Another statement set forth that $1,891,650 of securities deposited by clients have been hypothecated by the bank without the written but with the verbal permission of the owners, and that $87,000 had been pledged without the bank admitting that even verbal permission had been secured.

Mr. FRELINGHUYSEN. I quote from the article the following extract:

The Evening News, a stanch supporter of Major General Crowder, asks to-night, "How was that million spent?" as the heading for an editorial which mentions Senator FRELINGHUYSEN, of New Jersey, and refers to a "former Habana banker up there at the time." The questions being asked here to-night are summed up in that editorial as follows:

* * * * * * *

The reference to the New Jersey Senator is as follows:

"Was this property, held by the Alien Enemy Property Custodian, those shares in the woolen mills in which Senator FRELINGHUYSEN is connected, and what connection did Senator FRELINGHUYSEN, of New Jersey, have with assisting Mr. Upmann in spending the million dollars in Washington in order to get that property out of the hands of the Alien Enemy Property Custodian?"

The News calls for a senatorial investigation, declaring the charges are "an official document now," inasmuch as they were turned in with the bank's statement.

In reference to this article, which, as I have said, appeared in the New York Times this morning, and in which my name is said to have been mentioned by a Cuban newspaper in connection with the effort to regain the private property of Upmann & Co., I beg to state that I know absolutely nothing about the matter, have never heard of Upmann & Co., and have no interest whatsoever in their affairs.

Mr. Larkin, member of a firm of lawyers at 20 Broadway, New York, Larkin, Rathbone & Perry, counsel for Upmann & Co., called me on the telephone this morning and expressed great regret that my name was mentioned, and stated that in no manner had I any connection with the case, and that he would do everything in his power to have a correction made.

I have no interest in any woolen mills in New Jersey. The reference to my name in connection with this matter is an entire surprise to me and I fail to understand it. It is a perfect outrage, is entirely unwarranted, and I make absolute denial of any knowledge of or any connection whatsoever with the affair.

INTERIOR DEPARTMENT APPROPRIATIONS—CONFERENCE REPORT (S. DOC. NO. 201).

Mr. CURTIS. I ask unanimous consent to submit a conference report on the Interior Department appropriation bill. It is a unanimous agreement. If it leads to any debate, I will withdraw it.

The PRESIDING OFFICER. The report will be read.

The reading clerk read the report, as follows:

The committee of conference on the disagreeing votes of the two Houses on certain amendments of the Senate to the bill (H. R. 10329) making appropriations for the Department of the Interior for the fiscal year ending June 30, 1923, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 70, 71, 74, 76, 77, 78, and 79.

Amendment numbered 43: That the House recede from its disagreement to the amendment of the Senate numbered 43, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$650,000"; and the Senate agree to the same.

Amendment numbered 75: That the House recede from its disagreement to the amendment of the Senate numbered 75, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$340,000, plus so much of $350,000 additional as the Secretary of the Interior finds to be available in the reclamation fund on March 1, 1923, in excess of all other appropriations from that fund"; and the Senate agree to the same.

Amendment numbered 80: That the House recede from its disagreement to the amendment of the Senate numbered 80, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$675,000, plus so much of $250,000 additional as the Secretary of the Interior finds to be available in the reclamation fund on March 1, 1923, in excess of all other appropriations from that fund"; and the Senate agree to the same.

Amendment numbered 82: That the House recede from its disagreement to the amendment of the Senate numbered 82, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$14,800,000"; and the Senate agree to the same.

Amendment numbered 91: That the House recede from its disagreement to the amendment of the Senate numbered 91, and agree to the same with an amendment as follows: Restore the matter stricken out by said amendment, amended to read as follows:

"Grand Canyon National Park, Ariz.: For administration, protection, maintenance, improvement, and the acquisition of lands for road and trail rights of way within the park, including not exceeding $2,000 for the purchase, maintenance, operation, and repair of motor-driven passenger-carrying vehicles for the use of the superintendent and employees in connection with general park work, $75,000: *Provided*, That no expenditure shall be made in the maintenance or improvement of any toll road or toll trail, or for maintenance or construction of physical improvements on the North Rim."

And the Senate agree to the same.

That the Senate agree to the amendments of the House to the amendments of the Senate numbered 53, 54, 56, 58, 59, and 113.

F. E WARREN,
CHARLES CURTIS,
LEE S. OVERMAN,
Managers on the part of the Senate
LOUIS C. CRAMTON,
BURTON L. FRENCH,
C. D. CARTER,
Managers on the part of the House.

Mr. McNARY. There is an item in disagreement between the two Houses to which the Senator from Arizona [Mr. CAMERON], now absent, objected, and which he intrusted to my care. I proposed a compromise. It was not quite followed. The Senator from Arizona is out of the city, and will be away for some time. The report was filed yesterday, late in the evening, in the House. I did not expect it to come here to-day. I telegraphed the Senator from Arizona the action of the conferees, and asked his judgment as to whether he wanted me, acting for him, to accept the conference report or oppose it.

Mr. CURTIS. In view of the statement of the Senator from Oregon I shall not ask for the adoption of the conference report at this time. I ask that it may lie upon the table until I call it up.

Mr. McNARY. I thank the Senator for his courtesy.

The PRESIDING OFFICER. The conference report will be printed and lie on the table.

ADDRESS BY SENATOR SUTHERLAND—COAL INDUSTRY.

Mr. STERLING. Mr. President, I ask unanimous consent to have printed in the RECORD in the regular RECORD type an address delivered yesterday by the Senator from West Virginia [Mr. SUTHERLAND] before the natural resources section of the Chamber of Commerce of the United States here in Washington on the subject "Government control of the coal industry."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GOVERNMENT CONTROL OF THE COAL INDUSTRY.

[Speech delivered May 16, 1922, at Washington, D. C., before the natural resources section of the Chamber of Commerce of the United States.]

Senator HOWARD SUTHERLAND spoke as follows:

"Gentlemen of the Chamber of Commerce of the United States of America: It is a hopeful sign when so many of the country's leading business men participate in these conferences under the auspices of your national organization for the consideration of the many problems which are vexing the minds of the business people of our country and incidentally giving the benefit of your views to the members of the national legislative body here in Washington. Divided into groups, holding simultaneous meetings for the discussion of various essential topics, an opportunity for a more thorough study and exchange of views is given. It is an honor as well as a pleasure to have the opportunity of appearing before the natural resources section of the Chamber of Commerce of the United States to present informally and briefly my views regarding one of the decided tendencies of the day, that of Government regulation of private business, particularly as applied to the coal industry. This is a very vital subject indeed at this time, because various suggestions have been made and put into concrete form in the shape of bills introduced in the Congress providing for various degrees of governmental regulation and control of this great basic industry.

"It will be conceded, perhaps, that next to the transportation business of the country that of the Nation's fuel supply is the most important. You may, perhaps, have noted the statement which was read before the American Chemical Society at a recent meeting held in New York that coal, not oil, is the world's basic fuel, and will continue to be its basic fuel until some method has been devised through the transmutation of the energy in sunlight or by utilizing the atomic energy in ordinary matter. From the more general use of oil as fuel many may be led to believe that eventually oil will supplant coal as our chief fuel. Dr. Arthur D. Little, in the address above referred to, giving the results of a careful study of the subject, shows that there has been produced in the United States since the first oil well was drilled in 1859 nearly 5,000,000,000 barrels of petroleum. We are now thought to have nearly 7,000,000,000 barrels remaining, from which we are drawing nearly 400,000,000 barrels a year on a rapidly rising curve of production. That most of the oil elsewhere is now under British control, though we are consuming 80 per cent of the world's output. Guesses at the remaining world's supply of this natural and essential energy resource range from 43,000,000,000 to 60,000,000,000 barrels. While these are large figures and indicate that during our lifetime we need have no apprehension as to the exhaustion of the world's oil supplies, yet the coal resources of the world, in units of 1,000,000 tons, from figures prepared by the estimate of the Twelfth Geographical Congress, are about 7,400,000 units, of which 5,000,000 are in the United States, 1,280,000 in Asia, and 784,000 in Europe.

"There is every probability therefore, that for many generations to come the production and distribution of coal will be of vital concern to our people and to the peoples of the world; and our superiority in coal resources is equally apparent. The very fact that the coal industry is of such a basic character leads some persons to suggest that its production should be controlled by the Government.

"During the past 25 years there has been a constantly growing tendency toward paternalism in government. This tendency was greatly accentuated by the conditions brought on by the great World War when the Government, extending its authority pursuant to the war powers, found it necessary to exercise a controlling supervision over much of the industrial life of the country in order that we might function most efficiently for the one purpose of bringing that terrible catastrophe to a successful conclusion at the earliest possible moment. The business of railroad transportation had already in increasing degree been brought more and more under the direct control of the agencies of Government, but while there were strong reasons for the regulation by the Government, under the interstate-commerce clause of the Constitution, of the great arteries of our country's commerce upon the theory that in many communities the business was a monopoly, I am firmly of the opinion that no justification can be alleged for similar control of the bituminous coal industry.

"I do not attempt to speak of the anthracite coal industry because anthracite coal is a luxury pure and simple, is confined in its production to a small area, produced by a very few companies, and is used by a comparatively small number of our people and almost entirely for domestic heating purposes. In discussing this subject, therefore, I refer only to the bituminous coal industry.

"The principal cause for the introduction of the bills providing for the regulation and control of the bituminous coal industry is the fact that during the year 1920 following the war there was a threatened shortage of the supply of bituminous coal with a period of serious apprehension and of panicky prices, the recurrence of which it was desired to prevent. Let us examine for a moment the causes which led to the coal panic of 1920. The two great factors in the cost of coal to the consumer at this time, or at any time, are wages and freight rates. With the exception of certain coal-producing districts in my own State of West Virginia, in Alabama and a few districts in Pennsylvania, the entire output of both bituminous and anthracite coal is produced by union labor. Following the great bituminous miners' strike called on November 1, 1919, because the operators would not concede to the demands made for a 60 per cent increase in wages, a 5-day week and a 6-hour day, a strike that lasted some six or seven weeks and caused a loss in production of coal just as the country was entering the rigors of winter, which is estimated at from 26,000,000 to 40,000,000 tons, the President of the United States appointed the Bituminous Wage Commission with authority to determine the questions at issue. This official commission of the Government allowed an increase in wages averaging approximately 27 per cent over the rate that had been fixed by the Fuel Administration in November, 1917, familiarly known as the Washington wage agreement, which in turn had come after two prior increases, one in April, 1916, and one in April, 1917, had already been agreed upon between the miners and the operators.

"The miners' wages constitute approximately 75 per cent of the total actual cost of coal, so that the total increases in wages, the last two being made pursuant to Government regulation, increased the actual cost of coal approximately $1.70 per ton over the cost of mining it in 1914. The terms of the Bituminous Wage Commission's award, which the Government directed should be written into a contract between the operators and the United Mine Workers, did not expire until April 1, 1922. The result has been that approximately half of the mines in the great coal-producing State of West Virginia and in all great bituminous coal-producing districts have been idle or have been running one, two, or three days per week because they could not find a market for their product at a price sufficient to cover the actual cost of producing the coal. Prior to April 1 of this year, when the present strike was called, many thousands of miners were idle, and many hundreds of mining companies were becoming seriously embarrassed by reason of their inactivity. The other principal factor in the coal cost to the consumer is freight rates. We have to-day the spectacle of the great transportation systems of the country, the arteries through which must flow the life blood of the Nation, its commerce, still more or less demoralized as a result of Government control and operation. Under the Government régime operating cost mounted and soared, freight rates were increased in order to offset the increased operating costs, but the income could not keep pace with the outgo. What is the result? It appears from a statement made

about a year ago to the chairman of the Committee on Appropriations of the House of Representatives by Director General Davis that the operating loss to the Government during the period of Federal control will be $1,200,000,000, and that if the Supreme Court of the United States approves the carriers' contentions in regard to maintenance claims, there will be seven or eight million dollars additional.

"The railroads themselves are still staggering under the burden and freight rates have been advanced until in numerous instances the traffic will not bear the burden of the rate. What has been the effect of this upon the consumer of coal? It has in fact substantially doubled his freight charges. To give specific instances, I will call your attention to the fact that from the Fairmont district of my State to New York City the freight rate in 1914 was $2.10 per ton, while in 1921 it was $3.60 per ton, and is now $3.85 per ton; from the Kanawha district to Cleveland, Ohio, the rate in 1914 was $1.25 per ton, and now it is $2.66 per ton, or an increase of 112 per cent. From the Greensburg district of Pennsylvania to Boston, Mass., the rate in 1914 was $2.77 per ton, while in 1921 it was $4.82 per ton, and I believe this rate still prevails. From the Franklin field of southern Illinois to Chicago the rate in 1914 was $1.05 per ton, while in 1921 it was $2.06½ and is now $2.17 per ton; and from the same field to St. Paul the rate increased from $2.10 per ton in 1914 to $3.85 in 1921. While it is thus apparent that freight rates have substantially doubled, it also appears that water transportation from Lake Erie ports to the upper end of Lake Superior and from tidewater ports of Baltimore, Norfolk, and Philadelphia to New England ports have increased substantially fourfold, while it is a fundamental principle of law that highways and carriers from the early days have been subject to regulation of their tariffs and their service, it is also true that these tremendous increases in costs of transportation have taken place during the period when the transportation companies were under the most complete domination of Federal authority in their entire history. It does not argue well, therefore, for the scheme of Federal control of another great fundamental industry.

"Reverting to the conditions that existed in the summer and fall of 1920 with reference to the coal industry, it is true that there was a shortage of bituminous coal at that time, and that high prices were paid for bituminous coal during that period. It is likewise true that there were numerous instances of profiteering such as happened in every other line of industry of which we have any knowledge or record. It is admitted further by all those who are at all familiar with the facts that such high prices as did exist and such instances of profiteering as did take place were due to a coal shortage, and that very shortly after production of bituminous coal reached substantially 12,000,000 tons per week, which it did in December, 1920, the demand was completely met and the prices at the mines became normal. The State which I have the honor in part to represent in the United States Senate is a great coal-producing State. I have been closely associated with the coal business for many years and know something of the trials and tribulations of the bituminous coal industry and I know that for many years prior to the war many of the largest and strongest and most ably managed coal companies struggled through the years with little or no profits. I know of no other great basic industry which has suffered so greatly through the lean years, losing money, and yet each year living in hopes of something better, as has the bituminous coal industry.

"Much testimony has been taken before the congressional committees and much expert opinion has been given in the public press and elsewhere as to the underlying causes of the coal shortage in 1920. It is practically the unanimous opinion that the most serious problem of this great industry has been the transportation problem. The shortage of coal in the summer and fall of 1920, which resulted in high prices for perhaps 15 or 20 per cent of it, was due solely and absolutely to conditions over which the bituminous coal operators had no control whatsoever. There are in the United States something like 7,000 coal-producing companies, operating approximately 10,000 developed mines capable of producing so much coal that if they had the transportation facilities the output could not possibly be marketed. Official figures show that the actual production from existing mines has been for short periods of time at a rate of 700,000,000 tons per annum, whereas the normal consumption requirements of the country under normally prosperous conditions, including the export demand, has never exceeded 550,000,000. In 1918 the mines produced 579,386,000 tons, but it was estimated that about 60,000,000 tons of this amount was in storage when the armistice was signed, and this stock pile was carried over into the succeeding year. When the bituminous coal strike began on November 1, 1919, the coal stocks of the country approximated 41,000,000 tons. Due to the winter demands for coal and to the loss in production caused by the strike those reserves had been reduced approximately to 23,000,000 tons on April 1, 1920.

"The usual stocks on hand on that date are 30,000,000 to 35,000,000 tons. This, strictly speaking, is not a reserve stock but a working capital upon which our railroads, public utilities, and industries operate. These stocks are usually at the minimum at this season of the year, and consumers begin at the early summer to build them up again for the ensuing winter. Navigation on the Great Lakes usually opens early in April and coal from eastern and southern Ohio, western Pennsylvania, northern and western Virginia, eastern Kentucky and Tennessee begins moving to the Lake Erie ports for transshipment to lake coal docks on Lake Superior and Lake Michigan. Similarly coal begins moving into Canada and into New England for the accumulation of winter reserves. The shortage in 1920 was confined to the eastern part of the United States. This section is served by the mines of the Appalachian Plateau from the Tennessee field north. The bituminous mines in these States, in order to satisfy the normal demands upon them, must ship month by month throughout the year an average of approximately 28,000,000 tons of bituminous coal. In winter this is all consumed currently by the territories which receive regular shipments from the mines during that season. In summer these consuming areas require between 22,000,000 and 23,000,000 tons per month, but production at the mines must be maintained at approximately the 28,000,000-ton average in order to provide the summer movement via the Great Lakes to the Northwest, and by rail and water into Canada and New England for the accumulation of stocks for the following winter.

"The bituminous coal producers therefore began the spring season of 1920 with the twofold task of taking care of the current consumption requirements and of building up the reserves that had been depleted by the 1919 strike. The industry was well started toward an accomplishment of this task when the railroads became increasingly disorganized by the outlaw switchmen's strike, which began in April, 1920, and disastrously affected transportation conditions until July of that year.

"On June 1, 1920, the reserves of coal, instead of being built up, had declined still further, until they totaled only 20,000,000 tons. On the corresponding date in 1919 there had been 40,000,000 tons. Coal dumped at Lake Erie ports for shipment to the Northwest was up to June 1, 1920, only 1,600,000 tons, whereas on the same date in 1919 it had been 5,043,000 tons and in 1918 it was 4,423,500 tons.

"Shipments to New England were in just about as bad shape, the tonnage being 7,780,000 tons, whereas it is normally about 10,000,000 tons by the 1st day of June. This was not a condition for which the mine operators or the coal industry can be held responsible. They had the capacity to produce; they had the labor available; they had a market, but they had no cars in which to ship. Mines were shut down and were able to operate only two or three days out of each week, because they could not get the open-top cars into which to dump coal at the tipple.

"Operators were clamoring for cars, but were unable to get them, and current production even in summer was under the normal amount of coal that should be produced. By the middle of May, 1920, the railroads themselves had realized the seriousness of the situation as a transportation problem, and on the 15th of that month they filed with the Interstate Commerce Commission their petition setting up the urgent need for additional equipment, and that relief in the transportation of basic commodities such as foodstuffs, perishables, live stock, etc., could only be procured through emergency action by the commission. These railroads requested the commission to take action under its emergency powers directing relocation of existing equipment and such other emergency powers as the commission should find necessary to put into effect.

"It may here be said that Government control and operation of the railroads had not only brought about a complete dislocation of the existing transportation facilities—tens of thousands of box cars standing on eastern sidetracks were 1,500 miles from the grain centers of the country, where they should have been when the crop movement started, and an even greater number of coal cars were scattered over the western plains a thousand miles from the principal coal fields of the country—but also resulted in turning the railroads back to private control and operation with the greatest number of disabled cars out of service in the history of transportation in this country. As a result of this demoralized condition the Interstate Commerce Commission found it necessary to issue during the sum-

mer and fall of 1920 eighteen different emergency or so-called service orders, all issued in recognition of the fact that the problem was a transportation problem.

"Among these service orders were Nos. 7, 10, and 11, which finally compelled the railroads to deliver back coal cars to their coal-loading connections, and imposed restrictions on the use of empty coal cars for the shipment of other commodities, and gave a transportation preference to coal for the Northwest and for New England, and remedied the situation materially so that monthly production in the northern and middle Appalachian territory, which had run from 22,000,000 to 26,000,000 tons from April to June, had increased to 30,000,000 tons by August and remained at that rate, with a slight recession in November, until the end of the year. By January 1, 1920, stocks of coal in the United States had been replenished to a normal basis.

"The price of coal, like that of any other commodity, responded to market conditions and the inexorable law of supply and demand, and an inevitable disturbance in price levels was the natural result. There was much bidding by consumers for their uses in a limited market. There was also speculation in coal by many irresponsible persons never before connected with the coal business. Uncertainty of delivery caused consumers having contracts to enter the competition for spot coal. As a result, during the summer unprecedentedly high levels were reached in the spot-coal market. Advantage of market conditions was taken by some retailers, some wholesalers and jobbers, and some operators, but it was a competitive-market condition brought about solely because the railroads could not furnish the cars to move the coal that the operators and miners of this country stood ready, able, and anxious to furnish.

"There is not a particle of evidence anywhere of a monopolistic limitation of supply or control of prices. It is, however, the fact that approximately 80 per cent of the output was sold under long-time contracts at a price which would represent the cost of production plus merely a reasonable profit, and many of the larger operators of the country refused to increase their prices even on coal not under contract.

"A number of the West Virginia coal operators refused to accept the higher prices offered them for coal and accepted only such prices as yielded a very moderate profit. Many operators from other States did likewise. The fact is that bituminous coal operators probably took less advantage of market conditions to reap excessive profits than did people engaged in any other line of business.

"I have attempted to show that while the disturbance of coal prices that took place in 1920 is perhaps primarily responsible for the clamor on the part of a few theorists for governmental control of the coal industry, yet that condition was due entirely to causes beyond the control of the coal operators, and the legislation now suggested would not in any way correct the evil or prevent a recurrence of the difficulty.

"Competition in the industry is so keen and the chance of monopoly or control is so impossible and the potential overproduction is so great that an adequate car supply at once sends coal prices down to substantially the cost of production.

"While it is true that the production and distribution of coal is a great basic industry, we discovered during the recent war that there were many, many fundamental basic industries. If we yield to the suggestion for governmental control of the coal industry upon the theory that it is a basic industry, this will soon be followed by the demand for governmental control and regulation of other great basic industries. We can no more do without iron and steel, or lumber, or foodstuffs, or clothing than we can do without coal. To turn all these great businesses over to the control of a bureaucracy will bring about a socialistic condition in this country which is repugnant to American ideals and not contemplated in the great scheme of government formulated by our forefathers.

"Let us therefore move cautiously and slowly, remembering that it is through individual initiative and thrift and the genius of American business men that American industry has achieved its present high position and its primacy among the industries of the world. Let us be slow to change those methods and processes of business, by the use of which our country has so greatly prospered, in order to adopt the nostrums of the impractical theorist and dreamer who advocates a change through his very ignorance of the businesses involved.

"Let us adhere firmly to the doctrine enunciated by the great President now occupying the White House, 'More business in government and less government in business.'"

EIGHT-HOUR DAY FOR GOVERNMENT EMPLOYEES.

Mr. HARRISON. Mr. President, in this morning's Washington Post, under the heading "Daylight saving through summer," there is an article written by Harry N. Price, a very reputable newspaper correspondent of the Washington Post, who is stationed at the White House. Mr. Price's views and writings should be of peculiar interest, because he generally knows what is going on on the inside at the White House, and his expressions generally reflect what is in the mind of the President and the policies of the administration. In this article I note that Mr. Price says:

> An 8-hour day for Government employees, it is said, has been under consideration by Cabinet heads and Members of Congress, and it is understood that the question was considered at the Cabinet meeting yesterday.

He goes further and says that—

> The Committee on Reorganization of the Executive Departments has discussed this matter in connection with its work of reallocating the work of the Government, and while no recommendation is likely to be made by the committee in its report to Congress, it is probable that in a later report it will be submitted.

Mr. President, I do not know whether or not the President contemplates the inauguration of the policy of an 8-hour day for Government employees; I do not know that the matter has been discussed by the members of his Cabinet; I am not on the inside; but I accept the statement of Mr. Price because of the weight that any of his utterances necessarily carries. I therefore take it that it is true that, so far as the President and the Cabinet are concerned, they are discussing the question of initiating the policy of compelling Government clerks, without respect to overtime, to work eight hours a day; but the latter part of the statement, that the Committee on Reorganizaion considered the proposition, is without foundation. The Committee on Reorganization did meet, Mr. President, some two weeks ago for the first time since the 6th day of last April. Mr. Brown, the chairman of the committee, so designated by the President, has been working out a preliminary survey so that he might obtain the indorsement of the President and the Cabinet of the reorganization plan that he will submit to the joint committee appointed by the Vice President of the United States and the Speaker of the House of Representatives. Up to this good hour, however, that preliminary survey, plan, and policy have not been submitted and the Committee on Reorganization has not considered the proposition at all.

If the question of the 8-hour day for Government employees has come up for consideration in the committee, it was in some meeting at which, as a member, I was not present or knew nothing about; but I am sure that there has been no meeting of which I was not apprised, and that I have been present at all meetings of the committee. So, Mr. President, that part of this article which has been written for the Washington Post by Mr. Price, with apparent authority, is without foundation.

Mr. SMOOT. Mr. President——

Mr. HARRISON. I yield to the Senator from Utah.

Mr. SMOOT. I simply rose to say that the Senator from Mississippi is absolutely correct in his statement. There has been no meeting of the Reorganization Committee at which the Senator from Mississippi has not been present; and at no time has there ever been any discussion of the question referred to in the article which the Senator from Mississippi has read.

DRIFT OF RECENT ELECTIONS.

Mr. HARRISON. Mr. President, referring to another matter, I desire to say that some weeks ago there was held an election in one of the congressional districts in New York State. It was a district which for years had elected a Republican Representative; and in the election preceding the recent one, although I am not quite sure as to the figures, the Republican nominee had been elected by a majority of between twenty and thirty thousand votes. In the special election held some weeks ago to fill the vacancy caused by the resignation of the Representative who had been appointed as ambassador to Germany the Democratic nominee ran within approximately 5,000 votes of the Republican nominee, reducing the normal Republican vote in that rock-ribbed Republican district from twenty or thirty thousand down to about 5,000. That shows how the political wind is blowing in New York State. We have read returns also from cities in Connecticut, Rhode Island, Massachusetts, New York, and other States, showing in practically every instance that Republicans have been defeated and Democrats placed in office.

In the recent primaries in the State of Illinois two very splendid and distinguished Republican Representatives, men whom I have had the honor of knowing for years and with whom I had the pleasure of being associated in the other House, the very highest type of Republican Representatives and American citizens, were defeated for renomination. One of them is a member of the Ways and Means Committee, which drafted the tariff bill now being considered by the Senate, and voted upon the schedules that were incorporated in what was known as the

Fordney "folly." He went before his people for an indorsement of the part which he had played as a member of the Ways and Means Committee in drafting this bill and in writing the tax provisions; but, to the surprise of everyone and to the sorrow of his friends, he was defeated by one who found fault with that record and who had criticized the administration by 5,500 majority. In another district in Illinois, represented by Mr. IRELAND, a splendid gentleman, the electorate turned him down because, I presume, he had stood for the administration and its policies in writing upon the statute books legislation in the other House.

Following that a few days later there was an election—I might say a political storm—in Indiana. Our good friend, the Senator from Indiana [Mr. NEW], was up for renomination at the primary. No man had stood by the administration more faithfully than he; none had championed its policies with more vehemence and eloquence than he; in every instance he had stood by the President, the administration, and its policies. In the preelection campaign two years ago he gave his time and genius to the party, and well did he perform his services. Mr. Beveridge ran against him and was nominated by over 20,000 majority, thus showing how the political winds are blowing in the great Middle West.

Yesterday there was a primary held in the great State of Pennsylvania. Two candidates ran for the gubernatorial nomination upon the Republican ticket—one, Mr. Alter, who has been attorney general, and the other, Mr. Pinchot, a progressive leader and friend and ally of Theodore Roosevelt in his day. This man was thought by the reactionary leaders, not only in Pennsylvania but in the city of Washington and throughout the country, to have no chance of nomination. He advocated his progressive policies; he was in disfavor with the national administration and the old guard that had held a strangle hold upon the politics of Pennsylvania since the days of the War between the States.

The PRESIDING OFFICER. The Senator from Mississippi will suspend while the Senate receives a message from the House of Representatives.

Mr. HARRISON. That is the only thing that could stop me at this time.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. Overhue, its enrolling clerk, announced that the House agreed to the amendment of the Senate to the bill (H. R. 2193) to amend an act entitled "An act to prohibit the importation and use of opium for other than medicinal purposes," approved February 9, 1909, as amended.

The message also announced that the House agreed to the report of the committee of conference on the disagreeing votes of the two Houses on certain amendments of the Senate to the bill (H. R. 10329) making appropriations for the Department of the Interior for the fiscal year ending June 30, 1923, and for other purposes.

DRIFT OF RECENT ELECTIONS.

Mr. HARRISON. Mr. President, I am not revealing any secrets when I say that the old guard, the reactionary element of the Republican Party, composed of Senators of high standing and leadership in this body, as well as Members of the other Chamber and men throughout the country, were opposed to the nomination of Mr. Pinchot, because they knew that his nomination would give a black eye to the policies which the old guard had championed and stood by for years. Few dreamed in this country that in this rock-ribbed, boss-controlled Republican State of Pennsylvania, calloused to the spirit of progressivism, Pinchot could defy the bosses and obtain a majority of the Republican votes for the nomination for governor of that State.

I am not revealing any secret; of course I do not know it; but if those who are in the inner councils at the White House would tell it, we would know that sorrow hovers over that part of the city to-day. We would know that President Harding did not want Pinchot nominated for governor by the Republicans in Pennsylvania. But just to-day from that State the news comes that Pinchot, the former Bull Mooser and ally of Roosevelt, the antagonist to reaction in the Republican Party, has been nominated for governor in that State. Why, there ought to be weeping and wailing and gnashing of teeth on the other side of the aisle over the returns. No wonder so many seats over there are empty and you have deserted your posts. No wonder you are heavy at heart. It is bad news; it is sad, as well as unwelcome, news; but, Mr. President, it indicates that even in Republican primaries the Republicans can not stomach the policies of this administration and the things that you are trying to do and the reactionary legislation you are attempting to put over in this Congress. To the lovers of equality and justice there is a bright light ahead; we welcome it; and it is a warning to the Senator from Utah, who is about the only one of the old guard sitting here now, that you had better look at the signs that the American people have placed at every road crossing throughout this country, "Stop, look, and listen," before you go further in putting over this tariff bill, every line of which presses down upon the brow of the consumers and will extort from the people everywhere higher costs for all the necessities of life. So beware, Senators, and take notice; retract your steps, and reform your lines.

Have another meeting behind closed doors of the Finance Committee and bring in some amendments that instead of increasing the taxes on the American people, as is proposed in this bill, will reduce the taxes and help them in their present distressed condition.

Mr. MOSES. Mr. President, may I congratulate the Senator from Mississippi upon his invitation to Mr. Bryan to make a Chautauqua speech?

Mr. HARRISON. I accept the congratulations of the Senator.

Mr. MOSES. May I also call the Senator's attention to that which the Senator from Utah will be too modest to mention, namely, that the Senator from Utah need not take much warning. He has five years to run, and in the meantime much water will run down the Potomac. Since the Senator has now diverted his attention from Missouri politics to Pennsylvania politics, may I chide him for his recreance and bring him back to Missouri once more, and ask if he will not give his comment upon what is taking place in that imperial Commonwealth, especially in the recrudescence of the bossism of the former President of the United States?

Mr. HARRISON. Mr. President, I never take part in a fight between Democrats, like the present President of the United States. He has wiggled and wobbled on that as he has done in other instances. When his friend, his very close friend, a friend who had stood by him in the dark days of the last campaign, was fighting the fight of his political life in Indiana, and his friends were calling upon the administration for help, the President said he was not taking part in contests among Republicans or between Republicans in primaries.

But under the beneficent sun of a New Jersey shore, where the galeties of Atlantic City could almost be heard, or on the green of a New Jersey golf links just a few days ago, in company with a very distinguished and splendid and admirable gentleman from New Jersey, who has the fight of his political life on his hands, brought about because of his advocacy of these outrageous provisions in this bill that he and the committee voted for, that he is championing here on the floor of the Senate, that is laying the iron hand of unjust taxation upon the people of New Jersey and the people all over this country, the President was appealed to to get into that primary fight; and so, under the influences of the occasion and the circumstances which surrounded him at that time, he said to the people of New Jersey, "I have gone back on what I said touching the Indiana primary. I am for Senator FRELINGHUYSEN for reelection, and I appeal to you to stand by him."

I am different in that respect from your President. I do not take part in contests between Democrats, and I would not now say anything about the Missouri situation. I refuse to follow the example of your President.

Mr. MOSES. Mr. President, it is news to most Republicans, and I assume still more astounding news to the senior Senator from New Jersey [Mr. FRELINGHUYSEN], that he has any kind of a fight at all over there in the primary. The Senator from Mississippi seems to have a monopoly of that sort of information. But I can not permit the Senator from Mississippi to abandon Missouri, even for the benefit of Pennsylvania and New Jersey, and I implore him to give the Senate and the country his opinion of the situation in Missouri, and especially his opinion of the letters written by the former President of the United States, in which the issue is made the first personal pronoun in the largest type that may be set in any newspaper.

Mr. HARRISON. I may say to the Senator that no matter which of the two distinguished candidates for the Democratic nomination in Missouri may be nominated by the Democrats of that State he will surely be elected; and when the returns come in in November I shall discuss Missouri, but not at this particular time.

Mr. MOSES. There seems to be some difference of opinion about that; and it is because of that, Mr. President, that I implore the Senator to follow his usual custom in specializing on Missouri politics and cause to be inserted in the RECORD an article appearing in the Washington Post of this morning—a paper which he has frequently sought to make use of in embellishing the columns of the RECORD—in which the facts of the Missouri situation are clearly set forth by a political writer

whose acumen and style and accuracy have frequently been commented upon favorably by the Senator from Mississippi.

Mr. HARRISON. I have not read that article.

Mr. MOSES. Then I will say to the Senator that he has missed something.

Mr. SMOOT. Mr. President, may we proceed now with the tariff bill?

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDING OFFICER. The next amendment of the Committee on Finance will be stated.

The READING CLERK. The next amendment is found on page 26, line 14, where it is proposed to strike out "12" and insert "8," so as to read:

Blue pigments and all blues containing iron ferrocyanide or iron ferricyanide, in pulp, dry, or ground in or mixed with oil or water, 8 cents per pound.

Mr. SMOOT. Mr. President, I ask that paragraph 65 may go over until the junior Senator from Utah [Mr. KING] returns to the Chamber. He will be here in just a few moments, and in the meantime we can take up paragraph 66.

The PRESIDING OFFICER. Without objection, it is so ordered. The next amendment of the Committee on Finance will be stated.

The READING CLERK. On page 26, in paragraph 66, in line 19, it is proposed to strike out "20 per cent ad valorem" and to insert "1 cent per pound," so as to read:

Bone black or bone char, blood char, and decolorizing and deodorizing chars or carbons, 1 cent per pound.

Mr. McCUMBER. Mr. President, I ask that the Senate disagree to the committee amendment. After further consideration by the committee we felt that it was inadvisable to make a specific duty in this case because of the very considerable differences in the values of these several articles.

At the time this was adopted perhaps the specific duty would have been more applicable, but at the present time, with the present information we have, we think it is better to fall back to a 20 per cent ad valorem rather than a 1 cent specific duty on each of those articles.

Mr. WALSH of Massachusetts. Mr. President, the articles named in paragraph 66 are made of entirely distinct raw materials and are entirely different in uses and prices. Bone black, or bone char, is the most important product among those named. That is a product made from charred animal bones and is used by the refiners of sugar for the purpose of bleaching their product. Blood char is an entirely different product, and at times has been very much more expensive than bone black. There are a number of other products included in the term "decolorizing and deodorizing chars or carbons."

The principal item in this paragraph is bone char, and there can be no good reason advanced for a tariff duty upon this product. It ought to be on the free list. First of all, it is not imported into this country to any extent; secondly, the import prices to-day are more than the domestic prices. Upon what theory can Congress impose a tariff duty upon this product? When we were discussing olive oil yesterday it was claimed, when the figures indicating that we produced only 5 per cent of our consumption in this country were presented, that we must have a tariff on olive oil for revenue purposes. As there are no imports of bone black there can be no revenue realized. In view of the fact that the foreign prices to-day are more than the American prices there is no question of foreign competition, and the only reason for the imposition of a tariff is to permit the few producers of this product to charge the increased price this tariff rate would permit the domestic producers to demand.

Mr. NORRIS. May I ask the Senator who the producers are? Has the Senator the names of them?

Mr. WALSH of Massachusetts. Yes. The two chief producers are Armour & Co. and the American Agricultural Chemical Co. There are some others but not so well known.

Mr. NORRIS. What do the other great packers do with their bones?

Mr. WALSH of Massachusetts. I think they either sell them to Armour & Co. or the American Agricultural Chemical Co., or they make other use of animal bones.

Mr. NORRIS. What is the amount of the production?

Mr. WALSH of Massachusetts. The total production is now about 30,000 tons. Previous to the war it was about 20,000 tons. The price before the war was $70 per ton. It increased during the war to the excessive price of $280 a ton. It now has returned to pre-war prices, and the domestic price is $80 per ton. Practically only one concern has attempted to import bone black into this country, and I am informed that in desperation the sugar refiners came to this importer in 1920 to try to find some bone black somewhere in Europe which could be imported into this country for the purpose of driving down the exorbitant price of $280 a ton. This one importer made a trip to Europe and there he made a contract for bone black, and bone black has been shipped in very, very small quantities since then under contracts made in 1920. It was the shipping in of the small amount of bone black contracted for in Europe that was the chief factor in reducing the peak price of $280 per ton. A similar condition, I will say to the Senator, appears again and again in the study of these chemical items.

The producers of chemicals increased their prices until they reached a tremendous peak in the year 1920, and the breaking of the market and the destruction of business prosperity in America was somewhat due to the excessive prices charged for raw materials. In desperation the manufacturers were compelled to go into foreign markets and show the American producers of chemicals that they could, under certain conditions, get the product that was made in America, and thereby they were able to break the high prices which arose because of shortage of these products and the absence of foreign competition.

Mr. NORRIS. Is the product on the free list now?

Mr. WALSH of Massachusetts. The product has been on the free list since 1913.

Mr. NORRIS. Has there ever been a tariff on it?

Mr. WALSH of Massachusetts. Yes; there was a tariff upon this article under the Payne-Aldrich law of 20 per cent ad valorem, and there was a tariff previous to that.

Mr. NORRIS. What is the tariff carried in this bill?

Mr. WALSH of Massachusetts. The Senate committee amendment fixes a rate of 1 cent a pound.

Mr. NORRIS. What rate did the House adopt?

Mr. WALSH of Massachusetts. Twenty per cent ad valorem. Of course, the majority members of the Finance Committee realize now that it is absurd to put a cent per pound duty on a group of articles one of which costs about 4 cents a pound, and another has cost as high as a dollar a pound, and they have just now proposed that the committee amendment be rejected, and that the House provision stand, namely, 20 per cent ad valorem. I am arguing that bone black be placed upon the free list, but for the sake of testing the sentiment of the Senate I will move to modify the 20 per cent ad valorem rate to 10 per cent.

Mr. NORRIS. That would not be in order now.

Mr. WALSH of Massachusetts. I understand I can offer an amendment to the House provision, which the Senate now proposes as a substitute for its amendment, to strike out "20" and to fix the rate at 10 per cent ad valorem, and later I intend to make an attempt to put it on the free list.

Mr. NORRIS. Who asks for this duty? Did some one appear before the committee in favor of it? Is there something in the hearings about it?

Mr. WALSH of Massachusetts. No one, as I recall, appeared at the hearings asking for this duty, but the one importer of bone black appeared in opposition to the duty and made a very strong argument in favor of its being placed on the free list.

Mr. NORRIS. After he made his argument to put it on the free list they increased the rate?

Mr. WALSH of Massachusetts. Yes. In almost every instance the rates have been increased in the chemical schedule, and have been increased because an attempt is evidently being made to maintain the excessive prices which were exacted during the war, when there was absolutely no foreign competition. Here is a perfect illustration of this condition. This is a commodity which sold for $70 a ton in 1914 in this country, without competition, when it was on the free list, and the price was raised during the war to $280 a ton, which it sold for in 1920, and it is now back to $80 a ton. The price of 1920 indicates the excessive profits which were made and the excessive prices that were charged to the American manufacturers, in this case sugar refiners, who depend upon this product in order to give us white sugar. If it were not for bone black we should all have to eat brown sugar. It is the one substance which the sugar refiners must have in order to decolorize sugar.

I think it might be interesting to present a little review of the importations and some figures enlarging upon what the Senator from Nebraska asked me.

The importations of bone black for decolorizing purposes before the war averaged, for 10 years, about $20,000 per annum, which would represent about 200 tons. During this time the consumption was about 20,000 tons, so the importations were

1 per cent for 10 years previous to the war, and that at a time when there was a protective duty upon the bone black. It should be borne in mind that during these 10 years there was a duty of 20 per cent ad valorem. The pre-war price averaged from $75 to $100 per ton.

The importations under the Underwood bill in 1914, when it was on the free list, were $79,500, representing 5.2 per cent of production. From 1915 to 1919 the value of importations averaged about $62,141, representing 4 per cent of consumption. Importations for 1920, duty free, were valued at $524,000.

That was the only year there was a large value of imports, due to the fact that the sugar refineries in desperation sent to Europe and tried to get some bone black imported into this country so as to stop the price from still soaring after it had reached $280. Even this large sum for 1920 represented only 6 per cent of the consumption. The reason therefore for this large increase in the value of the imports is due to the enhanced value of domestic bone black. This tremendous increase was so excessive that an unusual demand for the foreign article arose.

Assuming the consumption to be 30,000 tons in 1920 and as the prices rose to $280 per ton the value of foreign importations will be found to be a comparatively small percentage of the whole.

The summary of the Tariff Commission shows that the importations for nine months of 1921 were valued at $170,206. All these imports were made on old contracts.

Whatever has been brought into this country has come in under the contracts of 1920, and my information is that not a dollar's worth of bone char or bone black has been contracted for with a foreign concern in the last year and a half.

German bone black is not a factor in this case. We have heard a good deal about competition from Germany, but no German bone black has been imported into this country. German bone black does not suit the American consumer. In fact, no bone black produced abroad is satisfactory to the American sugar refiners. They are practically compelled to use the domestic product.

German bone black, so the importer says, is of a poor quality, and the importations of bone black never have taken a foothold. This importer states that he has not heard of any importations in several years, except an occasional trial order to see if the quality has improved. German importations amount to less than 1 per cent of domestic production.

Another reason why bone black produced in foreign countries is not likely to be imported in large quantities is that producers abroad refuse to make their bone black according to domestic specifications.

Blood char, upon which a duty is also demanded, is an insignificant article of commerce. It is used as a clarification of fine chemicals. The value of imports in 1921 amounted to only $555.

All sugar refiners are in favor of bone char being put upon the free list, not because they intend to buy the foreign article but in order to have a balance in preventing the domestic price becoming excessive.

That is the whole case as to this paragraph. To be sure, bone black is not a very extensive factor in the manufacture of sugar. But it is very important and, indeed, indispensable.

In view of the fact that we have heard argued here that certain rates were fixed in this bill for revenue purposes, such as the rate on olive oil, and that protection was incidental; in view of the fact that we have heard argued here in other cases that because of foreign competition protection is necessary, I ask now, because there can be no question of revenue and no question of protection, upon what ground can a duty be fixed upon bone black except to permit the producer in this country to raise his price 20 per cent?

Mr. KING. Mr. President, I was called from the Chamber for a moment. I would like to inquire whether any defense has been made on the proposition of fixing these rates at the height indicated in the bill?

Mr. WALSH of Massachusetts. No. I took the floor at the outset of the discussion, and I do not know what answer will be made. I do know, however, about some of the communications which have been sent to the chairman of the Committee on Finance, and I am going to read a part of a letter which was sent to the chairman of the committee by Charles B. Grimes, who is an importer, representing the firm of Pomeroy & Fischer, 95 Madison Avenue, New York. His letter, addressed to the chairman of the Finance Committee, a copy of which was sent to other members of the Finance Committee, is as follows:

I very greatly appreciate the interview accorded me on Thursday last in reference to the above item, and I trust that a careful reading of this letter will warrant you in asking your committee to reconsider its action upon this article.

The present market value of domestic bone black being $80 per ton, the Senate rate of $20 per ton is a considerable increase over the House rate of 20 per cent.

* * * * * * *

The attached schedule of foreign and domestic prices at the present time further indicates that importation even with free entry is impossible to-day. The original letters of quotation are attached as confirmation of our data. These letters are sent for your information and we would naturally prefer that the names of the writers be not published unless it might be absolutely necessary.

We are the principal and at times the only importers of foreign blacks, and a careful search of our records shows that the last purchase which the price has permitted was September, 1920. The imports in our name since that date have been deliveries of old contracts made under more favorable circumstances.

It is interesting to note that German blacks have never been a factor in this market owing to their poor quality. The occasional imports made in the past 20 years have been entirely of trial lots. We have never known of a reorder nor have we heard of any imports whatsoever since the war.

The foreign sugar refining practice differs from the American and calls for different sizes of bone black. This prevents the foreign black maker from offering suitable sizes for this market and has been a very great handicap. Only one foreign producer has shown even an inclination to attempt the production of American standard sizes.

I have visited the various foreign factories many times and can assure you they are all small and capable of offering only an exceedingly small tonnage for export.

In conclusion, it seems clear to me from the data submitted that no duty on bone black or bone char is needed to protect the American producers, and I trust you may so decide. This request applies only, however, to the bone black item and not to blood char or decolorizing carbons, which we do not handle and with which we are not familiar by experience. I remain,

Yours very truly,

CHAS. B. GRIMES.

Mr. President, let me sum up this case. A tariff rate of $16 to $20 a ton is to be put upon bone black which now sells for $80 a ton to the American consumer. There are no importations. There can be no revenue. A duty of $16 to $20 per ton means that the American producer will have the privilege of charging $16 to $20 per ton more to the sugar refiners of the country and, of course, they will pass that tax on to the consumers of sugar. I am sure there can not be much dispute about these facts. There has never been a time when the importations have been over 5 per cent and they are really insignificant now.

I shall not take the time to read the other letters, but I have from producers of bone black in South America, in Great Britain, and in France—the chairman of the committee has copies of them—and they all indicate that the price of bone black from Europe delivered in New York is to-day higher than the domestic price charged by the domestic producers.

I hope the Senator from North Dakota will be able to give us some explanation, in view of the fact that we can not collect any revenue from bone black and in view of the fact that there is no question of protecting the domestic producers from foreign competition, as to why there should be a tariff duty fixed upon this article.

I now yield to the Senator from Ohio.

Mr. POMERENE. The Senator has answered the question which I expected to ask him a few moments ago with respect to the amount of revenue which would be derived. I notice, however, that the House provided for a 20 per cent ad valorem duty. At the rate of $80 per ton that would be a $16 per ton duty. That has been changed by the Senate committee to 1 cent per pound specific duty. Why was this change made? Who asked for it?

Mr. WALSH of Massachusetts. I ought to say to the Senator from Ohio that in his absence the chairman of the committee withdrew that amendment and is to ask the Senate to support the House amendment. I understand that is the position of the chairman of the Senate Finance Committee.

Now, Mr. President, in order that we may have a test of the sentiment of the Senate in regard to this product I move, in line 19, paragraph 66, page 26, that the numerals "20" be stricken out and the numerals "10" inserted in lieu thereof.

Mr. McCUMBER. Mr. President, the Senator from Massachusetts desired an explanation as to why the duty which we have placed upon this item should be the duty agreed upon by the Senate committee, and the Senator from Nebraska [Mr. NORRIS], if I understood correctly, wanted some information about it also. I think I can make it very clear, if I may have the attention of the two Senators.

They will notice that paragraph 66 gave 20 per cent ad valorem as the bill came from the House. That ad valorem was based upon the American valuation. It will be remembered that the bill came from the House in July, I think it was, 1921. I have not just what the figures were at that time, but I am informed that the price was about 6 cents a pound. I noticed in the figures which were given by Pomeroy & Fischer, or their agents, that in 1920 the value was $200 per ton. Just exactly what it was when the House passed judgment upon it

I am unprepared to say, but probably not less than 6 cents per pound, or $120 a ton, as compared with $80 a ton at the present time.

The Senate committee proposes 20 per cent ad valorem, and that, of course, upon the foreign valuation. The valuation to-day is about $80 per ton. In 1914, just prior to the war, it was $70 per ton. Undoubtedly it can be produced again in a foreign country for about that price, the same as the pre-war price, and that would be 20 per cent ad valorem upon the foreign valuation.

Now, let us see if the importations are of sufficient quantity in any way to affect the selling price in the United States.

Mr. WALSH of Massachusetts. Does the Senator agree with me that the foreign prices to-day are higher than the domestic prices?

Mr. McCUMBER. I do not know just what they are at this time. I have not ascertained. I take my figures from the same letter which the Senator read, from the agent of Pomeroy & Fischer.

Mr. WALSH of Massachusetts. Annexed to that letter are quotations from the foreign producers of bone black and the prices per ton are from $85 to $125, while the domestic price appears to be about $80 per ton. There are several letters annexed which touch upon the matter.

Mr. McCUMBER. I do not know whether they prevail to-day or not. The letters are dated back in December and October of 1921. Then we have a figure as of March 6, 1922, $85 per ton. Whether to-day the price is $85 or $80 per ton, I do not know, but I assume that if the product is exactly the same it has got to sell down as low as the American product; and if the American product is selling for $80 per ton, undoubtedly the foreign product is selling for the same price. Otherwise it would not be purchased, and it is coming in.

Now, I want to take the figures that are presented by this agent of Pomeroy & Fischer. The value per ton in 1914 was $70; to-day the value in the United States is about $80. Undoubtedly the foreign price would be about $70, if there were added the cost of freight and profits, and so forth, in order to sell in competition with the American product, assuming that it is of the same quality.

I notice that in pre-war times, when we had a duty of 25 per cent ad valorem on this article, we were still importing. The quantity, to be sure, was not very great, only about $20,000 worth being imported; but from 1915 to 1919 the imports had grown to $62,000 when the article was on the free list. In 1920 the importations had grown to $528,000 worth, but in 1921, on account of the slack in business, importations fell off to $178,000 worth. I am giving the first figures only. The fact I have stated is at least sufficient to have an influence in fixing these rates, because one article must be sold in competition with the other, and there could be a sufficient amount of this commodity produced in foreign countries undoubtedly to supply our market if that became necessary.

Let us look at another feature of this case which the Senator was discussing. The first was that no one was asking for this duty. I find that the Armour Fertilizer Works, New Orleans; Baugh & Sons Co., Philadelphia; the Listers Agricultural Chemical Works, of Newark, N. J.; Michigan Carbon Works, Detroit, Mich.; Pacific Bone Coal & Fertilizing Co., San Francisco, Calif.; Pacific Guano & Fertilizer Co., San Francisco, Calif.; and the Texas Chemical Co., Houston, Tex., all joined in a request for still higher rates. Of course, they were asking for more than we have given them in the bill. They were, however, satisfied with 20 per cent ad valorem based upon American valuation.

Mr. NORRIS. May I ask the Senator from North Dakota a question at that point?

Mr. McCUMBER. I yield.

Mr. NORRIS. I notice that nearly all the companies whose names the Senator has just read with which I am familiar are interested in the fertilizing business. How are the fertilizer people interested in this proposition?

Mr. McCUMBER. I notice only one or two of their firm or corporate names would indicate that they are engaged in the manufacture of fertilizer. Some are merely chemical works.

Mr. NORRIS. Fertilizer companies very often have names which indicate that they are merely engaged in the manufacture of chemicals. I may be mistaken, but I happen to be somewhat familiar with the fertilizer situation, because we have been hearing considerable testimony in the Muscle Shoals investigation from fertilizer people, and some of the names the Senator from North Dakota has read sound familiar to me, although I may be wrong, not having looked up the matter, of course. I am wondering, however—I am asking the question simply for information, because I do not understand the uses of the particular article which we are now discussing except as I get my information from members of the committee—are the fertilizer people in any way interested in bone black and how would they be interested in it, if at all?

Mr. McCUMBER. I do not understand that a company producing merely fertilizing products would use bone black at all.

Mr. NORRIS. The Senator from Massachusetts [Mr. WALSH] stated that the only people interested in the use of bone black were sugar refiners.

Mr. McCUMBER. There are some others also.

Mr. WALSH of Massachusetts. I should also have added that bone black is also used for deodorizing and purifying water supplies by municipalities. It is, however, chiefly used in sugar refineries.

Mr. McCUMBER. I will read to the Senator the uses of bone black, as shown by the Summary of Tariff Information:

> Bone black or bone char and blood char are produced by heating dried blood and bones in closed retorts until all volatile matter is driven off. Bone char contains about 10 per cent carbon and 90 per cent mineral matter. Both of these substances are sometimes called animal charcoal. Bone char to be used for decolorizing purposes differs from that used as a pigment only in that it should be in lumps or grains, while the pigment must be very finely ground. The principal use of these substances is as decolorizers in the refining of sugar, and in the purification of vegetable oils and paraffin. Other uses are in the purification of drinking water and in case-hardening steel.

Those are the principal uses of bone black. Now, the question arises whether the sugar-refining companies can stand tariff rates that are placed upon bone char, assuming that it adds to the cost of refining sugar. I have here a table from the Tariff Information Summary which shows that in 1914 the cost of bone char, which is used in refining sugar, for refining a pound of sugar amounts to fifteen one-thousandths of 1 cent, and assuming that we should give the manufacturers of that commodity 20 per cent duty upon it, it would be 20 per cent of fifteen one-thousandths of a cent, or three one-thousandths of 1 cent added to the cost of refining a pound of sugar.

Mr. President, does anyone suppose for a single moment that three one-thousandths of 1 penny extra paid by the refiners of sugar is going to make any particular difference in fixing the price of sugar, which is absolutely and unquestionably in the hands of the refining companies, which will always make a charge equivalent to what the public can stand? I think they can afford to pay, and I do not think they will be injured by paying three one-thousandths of 1 penny on a pound of sugar for the added cost of refining it.

Mr. NORRIS and Mr. WALSH of Massachusetts addressed the Chair.

The PRESIDING OFFICER. Does the Senator from North Dakota yield; and if so, to whom?

Mr. McCUMBER. I will yield first to the Senator from Nebraska, if the Senator from Massachusetts will excuse me, and then I will yield to the Senator from Massachusetts.

Mr. NORRIS. The question, I think, is quite important as to whether the American producer is in danger of foreign competition.

Mr. McCUMBER. I am coming to that.

Mr. NORRIS. If the Senator has not taken that up as yet, I will reserve my question until he comes to it.

Mr. McCUMBER. I have not taken it up, except in the general statement that the importations in 1920 amounted to over a half million dollars' worth, which is quite a quantity, assuming the price to be 4 cents a pound.

Mr. NORRIS. Again I may be mistaken, but I understand from the information I can obtain that this commodity is perhaps a by-product of the packing business to a great extent. America has the largest packing establishments in the world, as compared to those in European countries, and the amount of the product, I should think, coming from our great packing institutions all over the United States, including slaughtering houses, would be in no danger of any European competition, but would be more in danger from the product coming from Argentina and other South American countries.

Mr. McCUMBER. The only company as to which there is indicated any connection whatever with the packing industry is the first one I mentioned. I do not think that the others have anything whatsoever to do with the packing concerns.

Mr. NORRIS. I thought, from the nature of the article, that if the other packing establishments did not make it as a by-product—and I asked the Senator from Massachusetts something about that very matter—perhaps because there was not demand enough for it, or perhaps not profit enough in it, so that under the circumstances it did not pay them to product it, as the Senator from Massachusetts intimated, the fact may be that Armour & Co. might take from the leading packing cities the product of the other big packing companies and utilize it.

Mr. McCUMBER. I have not the percentage of how much each one manufactures, and it may be that Armour & Co. manufacture the greatest portion of it; I have not looked into that to ascertain the fact. All I wanted to show was, first, that there is sufficient amount coming in, and in all probability a sufficient amount will continue to come in to prevent any excessive prices in the United States.

Mr. NORRIS. Has the Senator any information as to the cost of production, for instance, by Armour & Co., who, I suppose, are able to produce it as cheaply as any other company?

Mr. McCUMBER. I neither have the cost of production here, nor have I the cost of production in Germany or France or England, and I think England is one of our chief competitors.

Mr. FLETCHER. May I ask the Senator what the unit value is now? I gather it is about three-tenths of a cent a pound. What percentage would a duty of 1 cent a pound be?

Mr. McCUMBER. The unit of value now is 4 cents, and a duty of 1 cent would be equivalent to 25 per cent ad valorem.

Mr. FLETCHER. The Senator says the value is about 4 cents a pound now?

Mr. McCUMBER. Yes; or $80 a ton. We are asking to reduce the rate from 20 per cent on the American valuation to 20 per cent based upon the foreign valuation, which may be anywhere between 15 and 20 per cent.

Mr. FLETCHER. According to the statistics given in the summary on page 192, it would seem that the unit of value in 1920 was only three-tenths of a cent a pound. It must have gone up considerably. The summary clearly shows that the production in this country was about 44,509 pounds in 1914; for 1919 the figures are not given.

Mr. McCUMBER. The Senator must be mistaken. Is not that 3 cents instead of three-tenths of a cent?

Mr. FLETCHER. Yes; the Senator is right. Perhaps it is 3 cents a pound. But there is a large domestic production, running into many hundreds of thousands of pounds, and importations amount to comparatively little. In the first nine months of 1921 the importations were only 17,094 pounds, valued at $555.

Mr. McCUMBER. There must be some mistake there, because the figures that are given in the document before me show an importation of $178,689 worth in 1921.

Mr. FLETCHER. I am referring to the figures on page 192. In 1919 the figures of importations are given as 10,732 pounds, and in 1920, 84,762 pounds, and in 9 months of 1921, 17,094 pounds.

Mr. McCUMBER. Mr. President, the Senator is reading from the wrong paragraph. The Senator is reading from the paragraph that deals with blood char. We have been considering bone char.

Mr. FLETCHER. Oh!

Mr. McCUMBER. It is in the same paragraph, to be sure.

Mr. FLETCHER. Yes; it is in the same paragraph.

Mr. McCUMBER. But the point we are speaking of now is the rate of duty upon bone black or bone char.

Mr. FLETCHER. Yes; I see now that those figures did refer to blood char. I supposed they referred to the principal item that we were talking about.

The imports since 1918 of bone char in pounds are not given, but in values they are as follows:

1918	$36,594
1919	137,561
1920	524,172
1921 (first 9 months)	170,206

Under the act of 1913 these were all on the free list, as I gather, and the House committee proposed to levy a duty of 20 per cent, and the committee amendment now would make it 25 per cent. It does not seem to me to be a very important matter or one that very much time should be taken up with.

Mr. McCUMBER. I do not think the Senator was here a short time ago when I stated that the committee would ask for a disagreement in the Senate to the committee amendment, which would leave the duty at 20 per cent ad valorem; but that would not mean the same as the House bill, because the House bill meant 20 per cent ad valorem on the American valuation while this would mean 20 per cent ad valorem on the foreign valuation.

Mr. FLETCHER. I did not know that the committee expected to ask the Senate to disagree to the proposed committee amendment.

Mr. McCUMBER. I think the importations of bone black or bone char, as shown by the years here from 1914 to 1921, show in the first instance that we were still importing with a 25 per cent ad valorem duty, and in the second instance that when the products were on the free list we were importing in 1920 $524,000 worth—enough at least to regulate prices.

Mr. WALSH of Massachusetts. Mr. President, it is true that bone char is a very insignificant percentage of the total sugar cost; but nevertheless we are dealing here with a product used for various purposes besides purifying sugar and that cost the American consumers $90,000,000 in the year 1920, and we are dealing with a product here, however insignificant a factor it is in the final cost of sugar, that is going to cost the American refiners $600,000 more a year if this amendment fixing a rate of 20 per cent ad valorem is adopted, providing, of course, that this tax is reflected in an increased price for the domestic product. But it matters not how important or unimportant this item is. We ought to have some fundamental principles to guide us in determining what duties to levy. There is no question of protection here, because the foreign price to-day is more than the American price. The fact remains undisputed that the importation is much less than 5 per cent. Even in the best year, the year 1920, when prices were exceedingly high, the imports were less than 6 per cent of the total domestic production. I repeat, it does not seem to me that it has been made apparent that the imposition of this tax is going to produce any revenue to the country or is going to be a protection to any home industry from foreign competition. This tariff duty will ultimately lead to permitting the American producers of bone black to increase their price from $16 to $20 per ton; and if the price is $80 per ton, the day this bill is enacted into law it will be a license to every one of these few domestic producers to raise their price about $20 to the refiners of sugar, and ultimately passed on to the American consumers of sugar.

Mr. McCUMBER. Mr. President, will the Senator yield?

Mr. WALSH of Massachusetts. I yield.

Mr. McCUMBER. The Senator says that it is undenied that the foreign price to-day is greater than the American price.

Mr. WALSH of Massachusetts. Yes.

Mr. McCUMBER. I am inclined to dispute it. I am inclined to dispute it upon this basis: That the foreign product would not sell in competition with the American product unless it could be brought in here and sold as low as the American product, and we have no figures that are right up to date. About all we have is that all during the year 1921 it was coming in. I do not know whether it is coming in to-day or not, but I assume that it is.

Mr. WALSH of Massachusetts. Then, if the Senator is not willing to concede that fact, I shall take the trouble to read the letters that I have here.

Mr. McCUMBER. The Senator did read it, and I read it.

Mr. WALSH of Massachusetts. I have not simply one letter; I have several letters here giving the recent quotations.

Mr. McCUMBER. At what date?

Mr. WALSH of Massachusetts. I have one of May 15. That is two days ago.

Mr. NORRIS. Mr. President, before the Senator reads that——

Mr. WALSH of Massachusetts. I yield.

Mr. NORRIS. It has been demonstrated here a good many times that we can not reliably base any action upon any figures that are received as to costs and prices anywhere in the world and have them last any length of time.

Mr. WALSH of Massachusetts. That is true.

Mr. NORRIS. That is one of the serious things that the committee had to contend with, and one of the reasons, too, that it seems to me is going to make it an impossibility to pass a tariff bill that is scientific, or anywhere near scientific. Now, if the Senator has figures of May 2——

Mr. WALSH of Massachusetts. May 15.

Mr. NORRIS. This is May 17, is it not? What assurance can he give the Senate that since May 2 they are not entirely changed, and that they will apply at all?

Mr. WALSH of Massachusetts. This is a letter of May 15, quoting a cable quotation of the 13th of May. I do not know how we can get any later quotations than that.

Mr. NORRIS. Oh, well, the Senator must recognize that that is four days ago.

Mr. WALSH of Massachusetts. Then the Senator must repudiate all the information which the Senate Finance Committee have, because they have based all their information as to price upon figures gathered by the Reynolds committee as of August 1 last.

Mr. NORRIS. Oh, well, they have repudiated that themselves, as I understand.

Mr. WALSH of Massachusetts. I quite agree with the Senator that there has been a very great change in prices. In fact, I called attention to the fact that in one article alone, made in Germany, in the last six months there has been an increase of 600 per cent in the price, and I expect to demonstrate it here when that article is reached for discussion.

There has been a tremendous change and a tremendous increase in the prices of foreign products in every part of Europe, including Germany, and it is a well-known fact that the prices of articles manufactured in Germany and in Europe to-day have reached a higher level than the foreign pre-war prices; and I do not think that is disputed even by the Finance Committee.

Mr. FLETCHER. Mr. President——

Mr. WALSH of Massachusetts. I want to read this letter, and then I shall be glad to yield to the Senator. It is very short. It is dated May 15, 1922.

DEAR SIR: Supplementing my letter of the 13th, we have cable quotation this morning upon sugar black from Jared Terrett Hunt & Son (Ltd.), of London, quoting £26 per ton of 2,240 pounds f. o. b. London. With the exchange of $4.50 per pound sterling this is roughly equivalent to $105 per ton of 2,000 pounds at London and compares with the domestic price of $80 to the sugar refiner. This seems proof conclusive that importation is impossible and that no duty is required.

I remain,

Yours very truly, CHARLES B. GRIMES.

I have similar letters, but not so recent, stating South American and French prices for this product, and they all show that the domestic price to-day is lower than the price of foreign bone black. And, of course, these foreign prices quoted do not include the importers' profits or commissions, insurance, and other overhead charges after the foreign product reaches the importer.

Mr. NORRIS. I wish the Senator, if he can, would give us information as to the production of bone black in Argentina. Is any of it produced there?

Mr. WALSH of Massachusetts. Yes; there is some produced there, but the importation is insignificant. The total importations from everywhere were less than 1 per cent before the war.

Mr. NORRIS. Yes; I understand that.

Mr. WALSH of Massachusetts. Most of what has come into this country has come from England, because they make a bone black more suitable for American use. Our sugar refiners require a different bone black from that used by foreign consumers.

Mr. NORRIS. What I am trying to do, I want to say to the Senator, is to get information as to the source of production. The article itself by name would indicate that it is something made out of bones.

Mr. WALSH of Massachusetts. Yes; it is.

Mr. NORRIS. The bones of cattle, I judge; perhaps hogs as well.

Mr. WALSH of Massachusetts. Charred cattle bones.

Mr. NORRIS. Therefore it is perhaps a by-product of the packing industry; and I have desired to find out whether the packers, both big and small, in all parts of the United States are producing this article; and if not, why not? It seemed to me that since America leads the world in the packing industry, away beyond all other countries—there is not any other country anywhere that is in the same class—if this is a by-product of the packing industry it would be well to know it, and we ought to know it so as to determine whether or not there should be a tariff levied on it.

Mr. WALSH of Massachusetts. It is a very insignificant by-product of the packing business—very insignificant.

Mr. NORRIS. It is probably true, then, that its possibilities of production here are not shown by what actually is produced, and that the other packers are throwing it away as not being of sufficient value to save the by-product. I should like to know what the facts are.

Mr. WALSH of Massachusetts. It is not a valuable by-product; neither is it an expensive factor in the production of sugar, but it is an essential product. We would not have white sugar if it were not for this product. We would all be eating brown sugar. It is absolutely essential in the decolorizing of the sugar that we consume in America. Our sugar refiners must have it, no matter what the price is.

I now yield to the Senator from Florida.

Mr. FLETCHER. Mr. President, I simply wanted to make this inquiry: The actual question before us is whether the Senate will agree to the committee amendment?

Mr. WALSH of Massachusetts. No, sir; I intend to move to put it on the free list when the proper time comes; but, to test the sentiment of the Senate on an article that ought to be on the free list, I am moving to reduce the ad valorem rate of the committee amendment from 20 per cent to 10 per cent.

Mr. FLETCHER. That is the real question.

Mr. WALSH of Massachusetts. That is the real question. Here the item of revenue is insignificant, and therefore a duty can not be put on this article for revenue purposes. It was on the Underwood free list, and yet, notwithstanding that fact, there has been no importation into this country of any consequence.

So far as we can learn, there has not been a contract made for bone black by an American importer since 1920. There has been some bone black brought in under old contracts, but the producers of bone black abroad are engaged in the business in a very small way. They can not supply the demand even if there was a demand, and their prices are in excess of the American prices.

Mr. McCUMBER. Mr. President, I have questioned right along the ability to import foreign bone black and sell it here at a price higher than the American price. The figures which I gave before were $80 per ton for the American product; that is what I based my opinion on a short time ago. But the very latest I have are of May 15, from the Oil, Paint and Drug Reporter, which give bone black, powdered, at 5½ to 7½ cents a pound in New York. If it was just 5½ on the 15th, it was very much higher than the London quotation, because at 5½, with 2,000 pounds needed here to make a ton, it would be $110 a ton. The British have always based their calculations on the long ton; that is, 2,240 pounds. If I am in error about that the Senator can correct me. So you would have a British price of $105 for 2,240 pounds, as against the American price of $110 for 2,000 pounds.

Mr. WALSH of Massachusetts. I beg the Senator's pardon. I will read the letter again for his benefit.

Mr. McCUMBER. Very well.

Mr. WALSH of Massachusetts. The letter reads:

With the exchange of $4.50 per pound sterling this is roughly equivalent to $105 per ton of 2,000 pounds—

not 2,240 pounds. And the Senator makes no allowance for the importer's commission or profit.

Mr. McCUMBER. Then the Senator has $105 a ton for 2,000 pounds as against $110 a ton in the United States at the very lowest figure, and the Senator has stated that their quality was better than the American quality. I do not know whether it was or not, but assuming that it was no better at the lowest you still would have a higher price.

Mr. WALSH of Massachusetts. I made no such statement. I said the foreign quality was inferior to the American; that they did not meet the specifications of the sugar refiners of America, and that there were practically no importations. The only time in the last three years there have been any importation was when the attempt was made to cut down the excessive price of $2.80 per ton which was being charged in 1920.

The quotations I read, which the Senator has before him also, show that the price of the American producers is $80 per ton.

Mr. McCUMBER. He evidently is mistaken, because here are the very latest quotations. I took the price of $80 per ton, but here are the American quotations on May 15 showing that at the very lowest it amounts to $110 a ton.

Mr. WALSH of Massachusetts. The importer who sent me this letter said he inclosed a copy of it to the Senator from North Dakota, and in that letter he quoted the domestic price as being $80 per ton. I do not know whether the Senator has that or not.

Mr. McCUMBER. I know he says that, and I took his figures for it, but I find upon investigation, taking the reports of to-day, that he is in error; that it is not $80 per ton; that the very lowest figures are $110 per ton, and from that up to $130 per ton.

Mr. NORRIS. Mr. President, I want to suggest to the Senator from Massachusetts, and also to the Senator from North Dakota, that there seems to be a dispute. However, as a peacemaker, I want to call attention to what is probably the fact, that perhaps there is no dispute. The letter and the cablegram which the Senator from Massachusetts has read show that on May 13 the price in London was $105 a ton and in America $80 a ton. Am I right?

Mr. WALSH of Massachusetts. That is the information which comes to me from one who claims to be the only importer of bone black into this country; and he says further that because the prices have been so high—and he is willing to make an affidavit to that effect—he has not made a single contract since September, 1920, for one dollar's worth of bone black to be imported into America.

Mr. NORRIS. The information given us by the Senator from North Dakota from the Drug Reporter, which is still later information, and I suppose therefore entitled to greater consideration, shows that the American price, instead of being $80 per ton, is about $110 per ton. That was two days after the other man said it was $80 a ton. Again we come back to the same proposition in building this tariff bill.

It depends on whether you are considering an article to-day, or whether you are considering it to-morrow; whether you pass the bill to-day and have a good bill, or pass it to-morrow and

have a good bill. It will be some time before we get through with the discussion here, evidently. We had some information on the 15th as to the price of the foreign product; that is still open.

Mr. SMOOT. I want to say to the Senator from Massachusetts that I am quite sure the writer of the letter was wrong in his statement of the price of bone black, particularly of bone black that is used in the refining of sugar. The difference in the prices quoted is due to the fact that one of these is a pigment black, and before that pigment bone black can be used for the refining of sugar it must be purified to a certain extent.

Mr. WALSH of Massachusetts. Is the pigment powdered?

Mr. SMOOT. The bone black is not.

Mr. WALSH of Massachusetts. The quotation made by the Senator from North Dakota was as to powdered bone black, which is the pigment.

Mr. SMOOT. That is 5½ cents.

Mr. WALSH of Massachusetts. Under the Underwood law there was a tariff rate on that.

Mr. SMOOT. I think this price is lower than any price which has been quoted for some years. So I think the letter quoting the 4 cents a pound in America for bone black is a mistake.

Mr. WALSH of Massachusetts. Does the Senator know whether the powdered bone black was pigment bone black, or the bone black used in decolorizing sugar?

Mr. SMOOT. I have no doubt but what it was pigment bone black.

Mr. WATSON of Georgia. Mr. President, if it can be demonstrated that in this bill an effort is made to unite those three powers which make sovereignty, and which our forefathers took such pains to completely separate, then I am sure that the American people will wake up to the fact that this bill should not become a law, because it would work a revolution in our system of government.

It may not be at all significant that in the very first line of the supreme law of this Republic, which we have all taken a solemn oath to support, the wording is:

> All legislative power herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

When we come to the Executive, it says "the Executive power." When it comes to the judicial it says, "the judicial power."

I do not know whether the fathers had any intention of conveying any special emphasis in the word "all," as distinguished from the word "the," but it is the fact that in the very first line of the Constitution they say, "All legislative power herein granted shall be vested in a Congress."

The reasons for the separation of sovereignty into these three branches are well known to all students of the origins of government. The most profound work I know of on the subject of the Constitution of the United States is that by John Adams, published in 1794. It is in three volumes, and so far as I can judge, it exhausts the literature on the subject. He surveys all the different governments which had theretofore existed, and he shows how the union of these three powers in one person always led to despotism, which in the course of time led to the downfall of the country thus oppressed. I will read only two extracts from it, one from the preface:

> The systems of legislators are experiments made on human life and manners, society, and government. Zoroaster, Confucius, Mithras, Odin, Thor, Mahomet, Lycurgus, Solon, Romulus, and a thousand others may be compared to philosophers making experiments on the elements. Unhappily a political experiment can not be made in a laboratory, nor determined in a few hours. The operation once begun, runs over whole quarters of the globe, and is not finished in many thousands of years. The experiment of Lycurgus lasted 700 years.
>
> * * * * * * * *
>
> The process of Solon blew out in one century; that of Romulus lasted but two centuries and a half; but the Teutonic institutions described by Caesar and Tacitus are the most memorable experiments, merely political, ever yet made in human affairs. They have spread all over Europe, and have lasted 1,800 years. They afford the strongest argument that can be imagined in support of the point aimed at in these letters.

What was the point aimed at in these letters? It was that the complete separation of the three powers—executive, legislative, and judicial—must be preserved if the liberties of the people were to be maintained.

> Nothing ought to have more weight with America to determine her judgment against mixing the authority of the one, the few, and the many confusedly in one assembly than the widespread miseries and final slavery of almost all mankind in consequence of such an ignorant policy in the ancient Germans.

What was that ignorant policy? It was that they would either concentrate all the power in a few, thus to establish an aristocracy, or allow one man to grasp all three of the thunderbolts of Jove and establish a monarchy, thus spreading misery over Europe during the Dark and Middle Ages.

> What is the ingredient which in England has preserved the democratical authority? The balance, and that only.

What balance? The balance of the executive, the legislative, and the judicial, each being separate, each maintaining its powers in its own sphere of action and not allowing the others to encroach.

So far as modern thinkers, lawgivers, and statesmen are concerned, it is Montesquien, the author of The Spirit of the Laws, who is the father of this plan of a complete separation of the legislative, judicial, and executive. He is quoted in Story on the Constitution, page 390, as follows:

> When the legislative and executive powers are united in the same person, or in the same body of magistrates, there can be no liberty, because apprehensions may arise lest the same monarch or senate should enact tyrannical laws or execute them in a tyrannical manner. Again, there is no liberty if the judiciary power be not separated from the legislative and executive. Were it joined with the legislative, the life and liberty of the subject would be exposed to arbitrary control, for the judge would be the legislator. Were it joined to the executive power, the judge might behave with violence and oppression. There would be an end of everything were the same man or the same body, whether of the nobles or of the people, to exercise these three powers, that of enacting laws, that of executing the public resolutions, and of trying the causes of individuals.

Now, Mr. President, Judge Story quotes Blackstone, who in his Commentaries said:

> In all tyrannical governments the supreme magistracy, or the right both of making and of enforcing laws, is invested in the same man, or one and the same body of men; and wherever these two powers are united together there can be no public liberty. The magistrate may enact tyrannical laws and execute them in a tyrannical manner, since he is possessed, in quality of dispenser of justice, with all the power which he as legislator thinks proper to give himself. But where the legislative and executive authority are in distinct hands the former will take care not to intrust the latter with so large a power as may tend to the subversion of its own independence, and therewith of the liberty of the subjects.

Judge Story, on his own high authority, states the same doctrine on page 388 of his great standard work on the Constitution.

Now, Mr. President, Mr. Hamilton, in the Federalist, discusses that question, and in doing so quotes the constitution of Massachusetts as a model. He declares—

> that the legislative department shall never exercise executive and judicial powers or either of them. The executive shall never exercise the legislative and judicial powers, or either of them. The judiciary shall never exercise the legislative and executive powers, or either of them.

Could language be stronger or clearer? That language is quoted from No. 47 of the Federalist. I quote from page 266 a brief sentence as to the constitution of Maryland:

> Maryland has adopted the maxim in the most unqualified terms, declaring that the legislative, executive, and judicial powers of government ought to be forever separate and distinct from each other.
>
> * * * * * * *

The language of Virginia is still more pointed on this subject. Her constitution declares—

> that the legislative, executive, and judiciary departments shall be separate and distinct, so that neither exercise the powers properly belonging to the other; nor shall any person exercise the powers of more than one of them at the same time.

What could more clearly show what our forefathers meant when they founded our Government? They had been taught by the lessons of thousands of years, and they founded this Government on this rock in the hope that it would last longer than any other government had ever lasted. But if we pass this bill we take the first great step toward a consolidated empire, in which the people will have a voice that really amounts to nothing in the governing of the country.

Now, Mr. President, I quote from the highest authority on constitutional limitations, Judge Cooley. I said that if the lawyers of the Senate and the House do not hear what I read from these great authorities, they will give themselves the benefit of reading them in the RECORD to-morrow, because I have run them down with some little labor, and I place them where everybody will have access to them.

On page 137 Judge Cooley said:

> One of the settled maxims in constitutional law is that the power conferred upon the legislature to make laws can not be delegated by that department to any other body or authority. Where the sovereign power of the State has located the authority, there it must remain; and by the constitutional agency alone the laws must be made until the Constitution itself is changed. The power to whose judgment, wisdom, and patriotism this high prerogative has been intrusted can not relieve itself of the responsibility by choosing other agencies upon which the power shall be devolved, nor can it substitute the judgment, wisdom, and patriotism of any other body for those to which alone the people have seen fit to confide this sovereign trust.

If we delegate to the President and to "the separate independent establishment" the power contemplated and authorized in this bill, we are recreant to the trusts which the people reposed in us.

Mr. President, let me show how far this doctrine goes. First of all, it commends itself to the common sense of every individual. If you choose an agent, general or special, that agent can not shirk his responsibility by putting another in his place. If you delegate a power under a power of attorney, for instance, that attorney in fact can not delegate his authority. If you employ a lawyer, that attorney can not, without your consent, put some other into your case to try it in the place of himself, whom you employed. If you call a physician, no honorable doctor will send somebody else without your consent. It is common sense, otherwise there would be endless confusion, boundless opportunities for betrayal of trust, and all kinds of injuries to him who appointed the agent, signed the power of attorney, employed the lawyer, or sent for the doctor.

Let us see how very jealous is the law on this subject. I refer to "Delegation of municipal powers," page 248. I take the time to read it, because I do not think since I have been a Member of this body there has been a more profoundly important question in the Senate than is here now:

Another very important limitation which rests upon municipal powers is that they shall be executed by the municipality itself, or by such agencies or officers as the statute has pointed out.

As the statute has pointed out—

So far as its functions are legislative, they rest in the discretion and judgment of the municipal body intrusted with them, and that body can not refer the exercise of the power to the discretion and judgment of its subordinates or of any other authority. So strictly is this rule applied that when a city charter authorized the common council of the city to make by-laws and ordinances ordering and directing any of the streets to be pitched, leveled, paved, flagged, etc., or for the altering or repairing the same, "within such time and in such manner as they may prescribe, under the superintendence and direction of the city superintendent," and the common council passed an ordinance directing a certain street to be pitched, leveled, and flagged, "in such manner as the city superintendent, under the direction of the committee on roads of the common council, shall direct and require," the ordinance was held void, because it left to the city superintendent and the committee of the common council the decision, which under the law must be made by the council itself. The trust was an important and delicate one, as the expenses of the improvement were, by the statute, to be paid by the owners of the property in front of which it was made. It was in effect a power of taxation, and taxation is the exercise of sovereign authority; and nothing short of the most positive and explicit language could justify the court in holding that the legislature intended to confer such a power, or permit it to be conferred, on a city officer or committee. The statute in question not only contained no such language but on the contrary clearly expressed the intention of confining the exercise of this power to the common council, the members of which were elected by and responsible to those whose property they were thus allowed to tax.

In the law referring to that municipal power did they use words stronger than the very first three words in our supreme law? Those words are:

All legislative powers herein granted shall be vested in a Congress of the United States.

When we seek to shirk the responsibility, abdicate our authority, and delegate it to someone else, we violate the very spirit that breathes throughout the body of our Government.

Mr. President, soon after the Supreme Court was organized there came before it a case under the charter of the city of Washington. Congress had authorized a lottery company for the purpose of supplementing the revenues of the town government, providing the amount raised did not exceed $10,000 a year. The council undertook to expend the money in such way as the President of the United States should approve; but Chief Justice Marshall, when the case had been argued by Daniel Webster, decided that it could not be done; that the council of the city of Washington could not relieve itself of the responsibility by delegating the President to do something which the town council should have done. I will not read that decision, but will refer the lawyers to it. It is in Twelfth Wheaton's Reports, beginning at page 40.

Mr. KING. Mr. President, will the Senator yield to me?

The PRESIDING OFFICER (Mr. EDGE in the chair). Does the Senator from Georgia yield to the Senator from Utah?

Mr. WATSON of Georgia. Certainly.

Mr. KING. I ask the Senator if this thought has suggested itself to him—and undoubtedly it has, and he can discuss it with greater clarity than I myself can—namely, that where legislative power exists and a legislative body is authorized to create a subordinate legislative body, as a legislature may create a city council to perform certain legislative duties, there would be a far greater reason to support an ordinance which attempted to delegate authority to some other organization or body than an attempt by the legislature in the beginning to delegate its legislative powers to an executive branch of the Government.

Mr. WATSON of Georgia. There is one portion of this authority that, perhaps, I should have read, and that is where the author draws a distinction between a statute in which discretion may be used in a certain manner on the happening of a certain contingency. It is said that that may be done, the source of authority having pointed out how and when, but that no legislative discretion, no power to hear evidence, to deliberate, and to decide, and to make the law may be delegated by any lawmaking body.

Mr. KING. The point I was trying to make was that if there should be a delegation of legislative power it could more easily be justified if the delegation were to a legislative body than if the attempt were to delegate it to an executive body, or to a judicial body, for that matter.

Mr. WATSON of Georgia. Mr. President, I should want to reflect on that question; I would not want to make any admission on that at all. I would rather stand by the authority just as it is.

Mr. CARAWAY. Mr. President, will the Senator yield to me?

Mr. WATSON of Georgia. Certainly.

Mr. CARAWAY. In reference to the power to delegate authority, I desire to say that it has been held in several cases that a court may delegate a commissioner to perform a certain function, but if that function requires the deciding of a question upon the testimony offered it can not be done, for that becomes the function of the court.

Mr. WATSON of Georgia. Certainly; that is the law.

Mr. President, I desire now to make a brief analysis of sections 315, 316, and 317.

(a) Whenever the President wants to investigate conditions and change the tariff rates, by his proclamation he may do so. Was there ever a more preposterous clause written into a tariff law? The Republican majority say they want to settle and stabilize business; they want to remove doubt and anxiety. Could anything perpetuate uncertainty, doubt, and anxiety to a greater extent than to put into the hands of the President of the United States a big pistol which he may hold at the head of every great trust and business in America and keep them in fear and trembling? It would be a sword of Damocles hung over their heads perpetually. They would never know to-day what to-morrow might bring forth.

All the statesmen of the past never thought of what a wonderfully good thing for the people a tariff was. Ancient monarchies rose without the aid of a tariff, as they fell without its prop as they were going down. Not until the seventeenth century did anybody dream of a tariff, and when it was first imposed in France by the great minister, Colbert, he did not pretend for one minute that he was levying it for the benefit of the laborer, and no other country ever did until our country made that claim.

Mr. President, the Executive can make his investigation. How? In public, as we do? Not at all. He will make it in secret, as the Finance Committee did. It will be a star-chamber affair, transferred to the other end of the Avenue. Nobody will know who the witnesses are; nobody will know what their testimony has been; nobody will know what the arguments have been; nobody will know what decision the President is going to come to until he comes to it, and then what can he do? After having investigated, deliberated, and decided, he may raise the tariff rates 50 per cent or lower them 50 per cent, there being a sliding scale of 100 per cent. Give to a despotic man that power over the internal and external commerce of this country and you have given such power as Tiberius never wielded, such power as Louis XIV never wielded, such a power as even George III and William Pitt never wielded. It is the power of life and death over every business, domestic and foreign.

(b) He may at any time—not at any fixed time, not at any definite, certain, anticipated time, a time for which you can prepare yourself, a contingency which you can prepare to meet; no—he may at any time investigate, deliberate, and decide in favor of American valuation as against foreign valuation. Is it not monstrous? The bill itself is founded upon foreign valuation. The Senator from North Dakota [Mr. MCCUMBER] said some weeks ago, in effect, that he would never give up the foreign-valuation plan. The Republican leader in the other House, Mr. FORDNEY, said he would never give up the American-valuation plan, and now what do they do? Their minds come together, not here on Capitol Hill, where laws ought to be made, where legislative minds ought to come together, but they come together at the White House, in secret; and there they can surrender the Senate plan of a foreign valuation if the President sees fit to adopt the other plan; in other words, shift from one extreme to the other, swing from one extreme arc that the pendulum moves in to the other. When before in the history of governments was any one man vested with such power?

(c) He may investigate, hear testimony—that sounds like a court, does it not? It sounds like a judge, does it not? It sounds like a judicial power—hear testimony as to wages, cost of materials, and other expenses of production here and abroad, and he may then, by his proclamation, without consulting Congress, change any schedule in this bill, not one, not a thousand, but 4,000, and not only change them but terminate them. Heavens above! if the President is made to do all this work, he will certainly be a very busy man. No more trips to St. Augustine; no more week ends on the *Mayflower;* no more delightful trips up to New Jersey to enjoy the hospitality of Senator FRELINGHUYSEN; no more luxurious dalliance with Senator DU PONT. If the President is given all of this power he will be the horse on the treadmill.

Mr. NORRIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Nebraska?

Mr. WATSON of Georgia. Certainly.

Mr. NORRIS. Does the Senator intend also to include golf amongst the things which the President must give up?

Mr. WATSON of Georgia. I think he would have to give up golf, and horseback riding, too.

Mr. CARAWAY. The Senator now is trying to keep the President from acting favorably on this bill. That is what he is trying to do.

Mr. WATSON of Georgia. (d) He may investigate and collect evidence, and upon this base a decision to put into effect the dye and chemical act of 1921. This will be done by proclamation. Think of going from a government of debate, of deliberation, of collective voting in the House and in the Senate and going slapdash at one jump to a government by imperial decree, issued from the White House. The mightiest Cæsar that ever ruled a Roman Empire had no greater power than that.

(e) After having made public a finding upon any imported article, the President may learn that there is no similar competitive article manufactured or produced in the United States. He may then proclaim such fact, whereupon the article shall be valued under paragraphs 1, 2, and 3 of subdivision (a) of section 402 of this bill, which is the American valuation. You leave the Senate bill, you leave the former parts of the bill, you leave our bill, and change cars to the House bill, or vice versa. You can do either.

(f) The Secretary of the Treasury will make rules and regulations to carry into effect the new laws made by the President's proclamation. (Section 316a.) The President may investigate and learn that unfair competition and unfair acts are in operation by importers, owners, and agents, whereupon such acts are declared unlawful. In other words, the President is given the power to outlaw certain importers, certain exporters, and their agents, without trial, without a hearing, in a star-chamber proceeding, condemn their action, and penalize it. Is that Americanism? Is that democracy? Is that the Republicanism of the pristine days when it was represented by those who founded the party and fought its first fights?

(b) That to assist the President in making any findings under this section jurisdiction is hereby conferred upon the executive department or independent establishment of the Government, or both acting in cooperation, which he shall designate—

That is not my verbiage, but that of the bill—

to investigate any alleged violation hereof on complaint under oath or upon the initiative of such department or independent establishment.

Anybody can make an oath against his rival in trade, export or import—mostly export, of course. He can make an ex parte affidavit, for which he is not to be held responsible anywhere, nor even put to the exposure of a public investigation, not be questioned or cross-questioned. By his simple oath he can put this tremendous machinery in operation, or this independent department which is to be created under this bill may take the initiative and make an assault upon anybody's business at any time, which assault would necessarily lead to its destruction, it seems to me, because I can not conceive how any man's business can long survive the persistent attacks of the all-powerful Government.

Subdivision (c) provides that such department or establishment shall make its own rules for conducting investigations; may hear witnesses—in public? Not at all. With due notice to the other man? Not at all. It may receive evidence in writing—of what sort? It is not specified. All lawyers know what is legal testimony in writing. This does not say that. If it necessarily implies it, if by necessary implication we accept that, I should like to know by what machinery you will take interrogatories or depositions. It may ascertain whether or not there has been a violation of this section, and its decision shall be final.

Think of that tremendous power. This ex parte investigation, based upon one affidavit, with no hearing to the other party, to the interest, to the business, to the corporation menaced, no notice, no hearing—this decision, for or against, shall be final, unless a rehearing shall be granted on appeal taken to the United States Court of Customs Appeals.

Subdivision (d) provides that the final decision shall be transmitted to the President.

Subdivision (e) provides that if satisfied with the decision the President shall increase the tariff not more than 50 per cent nor less than 10 per cent.

Here you have a star-chamber proceeding against a legitimate business, employing American labor, consuming American raw materials, supplying American demands, adding to the wealth of America. You may destroy it overnight, upon the oath of one man, and the decision of the destroying angel admits of no appeal if the President approves it. If that is not a mixture of executive, legislative, and judicial powers I should like for you to tell me how you could unite them.

The President may, in cases of what he deems extremely unfair methods, exclude these articles from entry into the United States. His action shall be conclusive, unless he himself sets it aside within 10 days. Unless the President changes his mind within 10 days the ports—not one, but all; Atlantic, Pacific, Gulf, and Lakes—are closed forever to that importer. Is such a power as that consistent with a democracy, with a republic, with a government of limited powers?

Subdivision (f) provides that whenever the President may be uncertain as to whether any merchandise offered for entry into the United States should enter, the Secretary of the Treasury, upon the request of the President, may forbid the entrance of such merchandise until the President shall have made up his mind to let it come in. The President is given authority to investigate, gather facts, deliberate upon those facts, and then decide.

What greater power did the Finance Committee have? What greater power does Congress have? The Finance Committee went into its committee room, closed the door, locked it, and kept it locked in the face of the world month after month. The President will do the same thing. There is no provision for publicity.

Here in this Senate Chamber and in the House of Representatives all the world sees, all the world hears, and, through our CONGRESSIONAL RECORD, there goes to every State in the Union and to the whole world that wants to know just what it is that takes place here. Why should we give this tremendous autocratic power to the other end of the Avenue when the Constitution intrusts it to us? If we say that we can not make these laws, and the President can, we advertise our own imbecility. Why should we do it? Is the wisdom of the President greater than the combined wisdom of both Houses of Congress?

Mr. President, there is no constituency for a legislative President. There are none to whom he has to account for his stewardship when acting as a legislator. We have to account for our stewardship. We have a constituency, but as a legislator he has none. He does not even have to report to us. Even we, who delegate this power to him, do not require him to give an account of his stewardship. We clothe him with the purple of royalty, put upon his head the crown of a king, and in his hand the scepter. Why should such a thing be done? Having done it once, you will be asked to do it again. Having set this precedent, you will soon find it become as strong as law and we will stand convicted before posterity as guilty of having taken the first great step in the surrender of legislative independence and the liberties of our people.

Mr. President, so much could be said upon this subject that it really is a case where one is embarrassed by its riches. I have simply touched some of the more prominent points in this part of the case. I was anxious that the country should know what tremendous power we are asked to surrender to the Executive. What I say now is not personal to the present occupant of the White House. It applies to the office; and I contend that if all history teaches anything at all, it teaches that it is dangerous to give this much power to any one man or to any one office.

It is already charged in this country that presidential elections and other elections are bought. We have heard of campaign contributions of the Sugar and the Steel Trust, and all the other trusts. With this power in his hands, the President could say to any one of these 500 trusts that have taken their stand at the headwaters of American life, and who are dictating the terms upon which 100,000,000 people shall live, "I would like to have a million dollars for the campaign fund, else somebody will file an affidavit against you here; we will begin to operate the machinery, and the first thing you know you will

be sorry you did not give us five million"; and the million will come. In other words, human nature being the same yesterday, to-day, and forever, with this power, Mark Hanna could have fried four times the fat out of the corporations he did fry out some years ago. With this power, it will be another case where the Prætorian Guards could run out upon the walls of Rome and sell the Empire to the highest bidder.

Mr. McCUMBER. Mr. President, I first read Cooley on Constitutional Limitations when I was in law school, in 1880, and while I was deeply impressed with the great truths enunciated in that great work, so eloquently restated to-day on the floor by the Senator from Georgia, it never occurred to me that it would be used in an argument as to what the duty upon bone black should be. That is the subject before the Senate to-day. I should like to stick to that subject until it is completed, and I would not take any of the time of the Senate now more than again to deny an assertion which has been accredited to me by the Senator from Georgia—I know inadvertently, of course.

The Senator from Georgia stated that the Senator from North Dakota had declared that he would never yield the foreign valuation plan in this bill, and that the chairman of the Committee on Ways and Means of the House had declared that he would never yield the American valuation plan. I can not speak for the Representative from Michigan, who has been long the chairman of the House Ways and Means Committee.

I will accept with some doubt any statement made by the press or otherwise which would indicate that that great legislator had made any declaration of that character. But whatever may have been the truth, I can assure the Senator from Georgia that the Senator from North Dakota never has made a statement of that kind, and that he would consider it very improper for him to make a statement of that kind when he will undoubtedly be called upon to act as a conferee in the settlement of that question. The only way the two Houses can conie together upon any subject is by the conferees on both sides entering the conference with free minds, the duty of the conferees on the part of the House being, of course, to sustain the views of the House, if possible, and the duty of the conferees on the part of the Senate being to sustain the views of the Senate. My utmost declaration has been that I would regard it as my duty to sustain whatever view was taken by the Senate upon that question, and I reiterate that it would be very improper for me to make any other statement.

Mr. WATSON of Georgia. Mr. President, I was in the Chamber when I thought the Senator said something substantially to the effect I have mentioned. I remember that he seemed to intimate that the chairman of the Ways and Means Committee of the House [Mr. FORDNEY] had said he would never yield the American valuation plan, and I understood the Senator from North Dakota to say that he would never yield the foreign valuation plan.

Mr. McCUMBER. The Senator is mistaken in that, as the record will show.

Mr. WATSON of Georgia. Of course, the Senator knows best what he said.

Mr. McCUMBER. I should not make a statement of that kind. Returning now to bone black——

Mr. WALSH of Montana. Mr. President, before the Senator passes to that, I rather think his associate on the committee, the Senator from Utah [Mr. SMOOT], made substantially that statement. I was here in an early part of the debate when he was interrogated by the Senator from New Mexico [Mr. JONES] as to the discussion of that feature of the bill in the House, and the Senator from Utah responded that it would be useless to discuss it, because the Senate would not recede. The Senator from New Mexico insisted that it ought to be debated anyway, so that the House would have the benefit of the reasons which impelled the Senate to take the course it did; that the Senate conferees might otherwise yield. I recall very distinctly that the Senator from Utah said there was not the slightest fear about the Senate conferees yielding. So we on this side understood that the attitude of the Senate was at least as obdurate as that of the House.

Mr. McCUMBER. Mr. President, I can hardly imagine that the Senator from Utah made a statement which would mean that he would go into a conference with a determination never to yield a point. I reiterate, I think that kind of a statement would be improper for anyone to make who must necessarily become a member of the conference, as much so as it would be for a judge to decide a case beforehand, and say that he never would yield to any persuasive evidence upon the other side.

I know that we have been accused on this side of the Chamber of listening only to the complaints made by the manufacturers, and yielding to their views. I have tried to make it clear that in the hearings we gave everyone an opportunity to properly present his case, and I think we gave the importer equal opportunity with the manufacturer. It is true that there are more manufacturers than there are importers, and therefore the greater portion of the testimony must necessarily be taken up by those who are interested in the manufacturing industries.

I do not think the statements on either side may be taken as the law or the gospel upon any subject, and I think that was pretty well illustrated by the letter which the Senator from Massachusetts read this morning, and as I believe that it is the duty of the importer, as well as of the manufacturer, to give us the facts within his knowledge and give them to us truly, I think we have a right to rely to a considerable extent upon what they say, examining whatever they may have to sav in the light of their interest and what other information we may secure upon the subject.

I submit to the Senator from Massachusetts that the witness whom he called this morning, and who gave his testimony, for the moment, at least, misled me by his statement that bone black was selling at 4 cents per pound, and I took his figures for it in saying that that would make the price $80 per ton. I find that he has been hardly fair in other portions of his statement, and I want to call the Senator's attention to it. His letter is dated May 13, 1922, and in that letter he says:

> The present market price of domestic bone black being only $80 per ton, the Senate rate of $20 a ton is a considerable increase over the House rate of 20 per cent.

He is speaking of the present. His letter is dated May 13. In examining the record of May 15 I find that bone black ranged from 5½ to 7½ cents per pound, and that would be from $110 a ton to $150 a ton.

Mr. WALSH of Massachusetts. I do not think the Senator means to be unfair to the writer of the letter. He states that the Senate committee amendment of 1 cent per pound is higher than the House provision of 20 per cent ad valorem. If, as he says, the domestic price is $80 a ton, 1 cent per pound would make the duty $20, while 20 per cent ad valorem would make the duty $16. So, on his claim that the domestic price is $80, he is sound and correct in stating that the Senate committee amendment increases the tariff duty. I do not think there will be any dispute about that.

Mr. McCUMBER. The Senator does not seem to catch the point I am making.

Mr. WALSH of Massachusetts. May I call the Senator's attention to the fact that the letter I read was dated May 15, and that the paper from which he is reading, the Oil, Paint, and Drug Reporter, is dated May 8. It is fair to assume that those figures were collected before May 8, so that the information which I have given may be even more correct than the Senator's.

Mr. McCUMBER. If the Senator will read the figures of May 8 right now, if he has the quotations of the American price of bone black——

Mr. WALSH of Massachusetts. I have them. Bone black, powdered, 5½ to 7½ cents.

Mr. McCUMBER. That is just the same as I read it, and that is not $80 a ton, but it is $110 a ton, taking the lowest figure.

Mr. WALSH of Massachusetts. I am not disputing that fact, but I am informed that this rate is per pound, and when bone black is sold by the pound the rate is very much higher than when it is sold by the ton; and, further, that these figures are practically always in excess of the market price.

Mr. McCUMBER. Well, let us follow this down a little further and see the present market value.

Mr. WALSH of Massachusetts. Let me suggest to the Senator that after all the issue is very trivial and we are spending a good deal of time on it. There can be no dispute that the imports have been less than 5 per cent average in the last 25 years, that we produce in this country sufficient to take care of American consumption, and the further fact can not be disputed that at least the foreign price is as much as the domestic price.

Mr. McCUMBER. The Senator stated that once before and stated it very clearly. I want to get down to his statement. He said, "The present market value of domestic bone black is $80 per ton." I find nothing that will confirm that. He said, "This paragraph covers three different items, bone black from cattle bone, selling at 4 cents per pound; blood char from blood, selling at over $1 per pound." When I look at the record for 1921 I find that instead of selling at $1 per pound the average price was 3 cents per pound. I am trying to find out from what source he gets his information, and find that he is quoting from a report which I think was made by the Tariff Commission a year or two ago, or upon prices during the war.

The average price for blood char for the nine months of 1921 was 3 cents per pound, and in 1919 it was 4 cents per pound, whereas the witness says it is selling now at over $1 per pound; at least when he says it is selling at over $1 per pound I have a right to assume that he means it is selling now for that sum, when, as a matter of fact, it is selling at about 3 cents per pound.

Mr. President, I think we have taken up sufficient time upon this matter. The question now is upon my request that the committee amendment be not agreed to, which leaves the rate at 20 per cent ad valorem.

Mr. WALSH of Massachusetts. May I ask the Senator a question? Is it a fact that the change of the committee amendment to 20 per cent ad valorem, which, of course, implies the foreign valuation, makes no difference in this case, at least in the case of bone black, because whether it is 20 per cent ad valorem foreign valuation or 20 per cent ad valorem American valuation, if the American price and the foreign price are about the same the duty will be the same?

Mr. McCUMBER. It would make but very little difference. It would be 25 per cent if the price is 4 cents at the present time.

Mr. WALSH of Massachusetts. I want it to appear that the Senate committee is not reducing the rate fixed by the House. That is clear, of course.

Mr. McCUMBER. That depends upon what price the Senator is taking. When the bill was passed by the House the price was very much higher, if I understand correctly, than it is now. Taking the American price with 20 per cent ad valorem, of course, it would be greater than the foreign price with 20 per cent ad valorem.

Mr. WALSH of Massachusetts. Ordinarily the change from the American valuation to the foreign valuation would reduce the duty. Ordinarily that is what would happen; but in this instance, if the foreign price and the American price are practically the same, there is no change in the duty.

Mr. McCUMBER. Of course, if the foreign price is higher than the American price, the foreign article will hardly be sold at all, and so it would have no effect.

Mr. UNDERWOOD. Mr. President, at the conclusion of the very clear, forceful, and timely speech of the junior Senator from Georgia [Mr. WATSON] in reference to the powers which are given to the President in the pending bill to fix the tariff rates, the distinguished Senator from North Dakota [Mr. McCUMBER] said that he wished, now that the speech was over, to return to bone black.

It occurred to me, Mr. President, that the address of the Senator from Georgia, although it may not have mentioned the subject of bone black, was most pertinent to the item of bone black and every other item contained in the bill, and I think we should understand that as we go along. We are contending here over tariff rates—tariff taxation—disputing as to whether the rate is prohibitory, whether it is satisfactory to the importer or satisfactory to the manufacturer; and yet within the belly of this bill we have an organized machinery which carries the power to overthrow all these questions that we are discussing, with only the limitation that the power of the President in levying taxes or reducing taxes shall not exceed 50 per cent ad valorem in making the change.

If a range of from 1 per cent to 50 per cent ad valorem can cover the subject matter of the item under discussion, then it seems to me, if this clause in the bill granting this power to the President, as just discussed by the junior Senator from Georgia, remains in the bill—and I hope it will not—it is hardly necessary for us to consider what rates of duty shall be levied, because, no matter what we do, no matter what the legislative mind may determine as to where the burden of taxation shall fall, the extent of that burden, as to how much prohibition there may be on the importation of foreign goods into this country, all matter not, because all of our own conclusions and all of our efforts may be wiped out overnight by an Executive order. It is perfectly clear.

At this point I wish to read into the RECORD again the opening sentence of section 315 (a) of the bill as reported by the committee:

> That in order to regulate the foreign commerce of the United States and to put into force and effect the policy of the Congress by this act intended, whenever the President, upon investigation of the differences in conditions of competition in trade in the markets of the United States of articles wholly or in part the growth or product of the United States and of like or similar articles wholly or in part the growth or product of competing foreign countries, shall find it thereby shown that the duties fixed in this act do not equalize the said differences in conditions of competition in trade he shall, by such investigation, ascertain said differences and determine and proclaim the changes in classifications or forms of duty or increases or decreases in any rate of duty provided in this act shown by said ascertained differences in conditions of competition in trade necessary to equalize the same in the markets of the United States.

Therefore, Mr. President, coming back to bone black, if the President should find, after he makes investigation, that 1 cent a pound does not equal the difference in market competition in this country and in foreign countries—and I think that can only be determined in questions of wholesale prices—the President must ascertain what is the difference and raise the rate, which we are going to put upon bone black, to such an extent as that it will equalize that difference in market competition. On the other hand, if the President finds that the rate which we fix on bone black in the bill when it passes is in excess of the difference in market competition in the wholesale price in this country and abroad, then he must lower the rate which the legislative branch of the Government puts on bone black.

Therefore the real question involved in the bill in determining what the rate shall be on bone black seems to me to be governed by section 315 (a) granting this legislative power to the President. We are going through an idle form of building up a skeleton which the President can enlarge or decrease as he determines is within this grant of power.

Mr. WALSH of Montana. Mr. President, probably that is the reason why the junior Senator from Missouri [Mr. SPENCER] proposed yesterday to vote immediately without any further consideration at all, because he knew the whole thing was useless.

Mr. UNDERWOOD. It probably was. Probably the Senator from Missouri, with his acute intellect, reached this conclusion before some of the balance of us saw the cul de sac into which we were being led.

Mr. WALSH of Montana. Appreciating that it was useless to discuss any of the items.

Mr. UNDERWOOD. And realizing that our work here is futile as long as this clause remains in the bill, that we are determining nothing, that in the end, no matter what we may hand to the President, we give some bureaucracy which he creates, composed of men not responsible to the people of the United States at all, the question of determining whether the competitive values in the markets of America are equalized by the competitive value of imported goods into the markets of America, and if they are not he is to work out a schedule and adjust it. So long as we have this clause in the bill it is pertinent; it is germane to every single item that is put upon the tax list.

Mr. McCUMBER. Mr. President, will the Senator allow me?

Mr. UNDERWOOD. Certainly.

Mr. McCUMBER. I am not for one moment suggesting that the argument which the Senator from Georgia made was not germane to the particular section. The only point I desired to make was that when we come to that particular section, every one of those arguments will be made over again. We can not prevent them being made over again, because that will be the subject then under discussion. I admit now that there may be some portions of the paragraph which at least reach into the twilight zone of uncertainty, but we shall thresh that out when we come to it. We shall have to have a tariff law whether that paragraph goes in or whether it goes out. I am hopeful that we may go on with the various items and determine them and may postpone the discussion of paragraph 315 of the administrative features of the bill until we reach that paragraph, for it is certain that when we do reach it, it will be again discussed; so we shall waste a great deal of time in discussing it now upon another feature of the bill.

Mr. UNDERWOOD. Of course, I do not desire to delay the Senator from North Dakota in securing action on the bill, except in so far as legitimate discussion may delay it. I can not, however, agree with the Senator as to the discussion of this provision. There are vast numbers of people in the United States who are greatly interested in the items on which we are passing from day to day, and many of those people overlook the effect of section 315. They may think that the decision of the Senate and of the House of Representatives is going to establish the tariff rates or tax under which the working conditions of business will be established for a period of years to come. I think it is our duty continually to call to the attention of the people of the United States in connection with these various items what effect section 315, giving the President power to regulate and establish competitive conditions in the United States, may have on the work which we have in hand.

Mr. SIMMONS. Mr. President——

Mr. UNDERWOOD. I yield to the Senator from North Carolina.

Mr. SIMMONS. I wish to suggest to the Senator from Alabama that what he has been stating with reference to dutiable items in the bill applies also to those on the free list. We may here, after discussion, decide that a particular product is entitled to no protection at all, or that it is not a good revenue

item, and that it ought therefore to be placed on the free list; but under the language which the Senator from Alabama has read, and which has been previously read to the Senate, the President may not only increase the duty upon a dutiable article to the extent of 50 per cent but he may take an article which Congress has placed upon the free list, put it on the dutiable list, and if he shall find that it is necessary he may impose a duty of 50 per cent upon it.

Mr. UNDERWOOD. I think the Senator from North Carolina is quite right.

Mr. SIMMONS. And that is what I meant when I referred to "forms of duty," which is the language used in section 315.

Mr. McCUMBER. If the Senator from Alabama will allow me, I wish to say most emphatically that both Senators are mistaken. I ask them to point out to me what provision there is in the bill which will allow the President to take an item from the free list and put it upon the dutiable list.

Mr. SIMMONS. The provision authorizing the President to change the "forms of duty" will permit him to do that. I discussed that matter with the Senator from Utah [Mr. SMOOT], who certainly is as familiar with the bill as is any member of the committee, and who surely understands its meaning. I asked him how he interpreted that language, and he said, "Of course the President might take an article off the free list and put it on the dutiable list, or he might take an article off the dutiable list and put it on the free list; the language can not mean anything else."

Mr. UNDERWOOD. The reason I agree with the statement of the Senator from North Carolina that section 315 applies to articles on the free list as well as those on the dutiable list is because I see nothing in that section that excludes articles on the free list from being transferred to the dutiable list. If there is any provision making such exclusion I should be glad to have it pointed out.

Mr. McCUMBER. Take paragraph 315, which reads:

Ascertain said differences and determine and proclaim the changes in classifications or forms of duty or increases or decreases in any rate of duty provided in this act.

Not to increase a rate of duty where there is no rate of duty, but the paragraph provides only for an increase or a decrease of rates of duty and to change the "classifications or forms of duty." The free list provides no duties whatever; therefore there can be no change made in it.

Mr. UNDERWOOD. I think the Senator from North Dakota omitted to read a little word in the paragraph when he read it, though I am sure he did not do so intentionally.

Mr. McCUMBER. I certainly did not.

Mr. UNDERWOOD. The language is "classification or forms"; not "classification of forms," but "classification or forms."

Mr. McCUMBER. I think the Senator misunderstood me.

Mr. UNDERWOOD. Classification, as I interpret tariff bills, refers to the class in which an article falls, and all in the world the President has got to do is to cancel the classification where an article falls in the free list, and then of itself it will fall in the dutiable class.

Mr. McCUMBER. I do not think that that is a fair construction.

Mr. UNDERWOOD. If the Senator from North Dakota does not agree with me, I hope he will make it certain that none of the articles on the free list may be subject to the will of the President. It will be very easy for the Senator, when we reach that clause in the bill, to move to insert a proviso to the effect that the provisions of paragraph 315 shall not apply to articles on the free list, and I hope he will do so.

Mr. McCUMBER. If any Senator thinks that is necessary and that the language is not clear, I shall certainly have no objection to any change that will make it clear.

Mr. UNDERWOOD. I am glad the Senator from North Dakota concedes that.

Mr. McCUMBER. I simply say that the provision does not apply to those articles which are not dutiable.

Mr. UNDERWOOD. When the proper time comes, when we reach that section, I shall certainly ask the Senator from North Dakota to make good his promise and to move the insertion of an amendment to the effect that this clause shall not apply to articles on the free list.

Mr. SMOOT. That is already provided in the amendment as it is now contained in the bill. If the Senator from Alabama will turn to page 274 he will find that the bill reads:

but no such rate shall be decreased or increased more than 50 per cent of the rate specified in title 1 of this act upon such merchandise.

The free list, Mr. President, is title 2, and the provision quoted applies only to title 1 of the bill.

Mr. SIMMONS. Where is that provision?

Mr. SMOOT. On page 274, beginning in line 11 and going down to the end of line 14:

but no such rate shall be decreased or increased more than 50 per cent of the rate specified in title 1 of this act upon such merchandise.

Mr. UNDERWOOD. A proviso in section 315(a) fixes the status. It reads in this way:

Provided, That until further provided by law the total increase or decrease of such rates of duty shall not exceed 50 per cent of the rate specified in this act or in any amendatory act.

That does not say anything about title 1.

Mr. SMOOT. There are no rates of duty, of course, in the free list.

Mr. UNDERWOOD. But it does not say anything about title 1 of this act; it says "in this act."

Mr. SMOOT. The provision the Senator has read is a part of the same amendment embodied in paragraph 315(a).

Mr. UNDERWOOD. A rate of duty provided by this act, taking the whole act, is a classification, and the different classifications determine whether an article shall bear a duty or shall not bear a duty.

Mr. SMOOT. The free list has no rates of duty at all.

Mr. UNDERWOOD. I think the Senator is making a lawyer's argument.

Mr. SMOOT. Not at all. If the Senator wants any specific words put in the provision, that may be done.

Mr. UNDERWOOD. Oh, I am not going to fall out with the Senator as to that. We have the promise of the chairman of the committee that there will be no doubt left about this provision and that he will exclude the free list by special amendment. So I do not care to discuss that question further; I will take his word for it.

Mr. SMOOT. I am perfectly willing that there should be incorporated such an amendment, because that is exactly what the provision means, and if it is desired to add to it in any way so as to make it clear, I shall have no objection.

Mr. UNDERWOOD. There is a difference of opinion between us, but we will eliminate that difference by putting in a few specific words which will settle the doubt.

Mr. McCUMBER. May I ask the Senator a question?

Mr. UNDERWOOD. I yield.

Mr. McCUMBER. How will the President proceed to raise a duty 50 per cent when there is no standard, no duty being fixed at all, and the bill providing that there shall be no duty. How can the President say "I will raise 'no' duty 50 per cent?"

Mr. UNDERWOOD. I suppose it would be easy for the President to say that he could apply a duty of 50 per cent on the value of the goods.

Mr. McCUMBER. That is not what the paragraph provides. The paragraph provides merely that he may raise an existing duty 50 per cent.

Mr. CARAWAY. Mr. President, will the Senator from Alabama yield to me for a moment?

Mr. UNDERWOOD. I yield.

Mr. CARAWAY. I wish to read the provision which was read by the Senator from Utah, as follows:

But no such rate shall be decreased or increased more than 50 per cent of the rate specified in title 1 of this act upon such merchandise.

Therefore that limitation does not affect goods in title 2 at all. The President is only restricted from raising duties 50 per cent on those articles that are mentioned in title 1.

Mr. UNDERWOOD. And he can raise indefinitely on other items.

Mr. CARAWAY. Yes.

Mr. UNDERWOOD. I think it is subject to that construction.

Mr. CARAWAY. Certainly; no other construction can be placed upon it.

Mr. SMOOT. Mr. President, the Senator from Arkansas would not say that if he had read the whole amendment.

Mr. CARAWAY. Oh, yes, I would; and I have read it.

Mr. SMOOT. The Senator's construction of the provision is not right.

Mr. CARAWAY. The Senator from Utah is always right when he is not wrong, and he is usually wrong.

Mr. SIMMONS. Mr. President, I want to suggest to the Senator from Alabama that the right to change a classification might give a right to change from the free list to the dutiable list. We all understand what change of classification means with reference to railroad rates.

There is a commodity class and then a general class. If an article in the commodity class is transferred to the general class an altogether different rate applies, and if a rate in the general class is transferred to the commodity class, an altogether different rate applies. The President is authorized to

change classifications, and under that he could put an article on the dutiable list and thereby apply to it the duty of a particular class.

Mr. UNDERWOOD. Undoubtedly; I think that this clause is subject to the interpretation, which might be made by a court or a commission in the future, that this power would apply to the free list. I think the Senator from North Carolina is right when he makes that point, but I will not continue that line of argument because the chairman of the committee has settled the question by saying that he will see that the language is made so clear when we reach the section that the man who runs may read. So I will not take up the time of the Senate in discussing the application of this provision to the free list, if that is the purpose, and I presume the Senator from Utah will agree with me that it is.

Mr. SMOOT. Certainly. If the Senator wants this question settled now, why not settle it now by inserting at the end of line 1, on page 273, after the words "not exceed 50 per cent of the rate specified in," the words "Title I of." Then there would be no question about it.

Mr. UNDERWOOD. I shall be glad to propose an amendment when we reach the section. In the meantime, I am perfectly willing to accept the interpretation that the Senator from North Dakota says he will put on the provision, and I will confine my argument in the future to the taxable list on the assumption that no matter how the provision may be interpreted we are going to provide an interpretation that will exclude the free list from the power granted to the President. Of course, if the Senator from North Dakota will give us a dozen votes we can put that interpretation in the bill vi et armis, because we can give him the remainder of the necessary votes if he will give us a dozen.

Mr. SMOOT. There will be no votes on this side of the Chamber against any proposition such as that.

Mr. McCUMBER. We will have no difficulty about that.

Mr. UNDERWOOD. I will accept the word of the Senator.

Mr. SMOOT. Why not put the amendment in now?

Mr. UNDERWOOD. Because I want to make a careful study of this section and see to my own satisfaction that the amendment covers the situation. I will be very glad if the Senator will propose an amendment to cover it and give me overnight to study it.

Mr. SMOOT. I now offer for the consideration of the Senator from Alabama an amendment on page 273, at the end of line 1, to insert the words "title 1 of," so as to read:

Fifty per cent of the rates specified in title 1 of this act.

The PRESIDING OFFICER (Mr. NORRIS in the chair). The Senator from Utah asks unanimous consent to present an amendment, which the Secretary will state.

Mr. SMOOT. No; I merely offer the amendment.

Mr. McCUMBER. I hope the Senator will not ask unanimous consent for the consideration of the amendment now, because I want to satisfy Senators on the other side of the Chamber that there will be no question in the world that the provision will not apply to the free list, and I think by the time we reach the paragraph we can agree upon a satisfactory amendment.

Mr. UNDERWOOD. I am perfectly willing to accept the Senator's word.

Mr. SMOOT. All I asked was to present the amendment at this time for the consideration of the Senator from Alabama. That was my request.

Mr. UNDERWOOD. I presume an amendment may be offered for future consideration.

The ASSISTANT SECRETARY. The Senator from Utah proposes to amend the committee amendment on page 273, at the end of line 1, after the words "specified in," by inserting "title 1 of," so as to read:

Provided, That until further provided by law the total increase or decrease of such rates of duty shall not exceed 50 per cent of the rates specified in title 1 of this act or in any amendatory act.

Mr. UNDERWOOD. Mr. President, I will assume that that will go into the law and that this proposition applies only to the taxable list in the bill; but before I take my seat—I do not want to take up much of the time of the Senate—there is one proposition about section 315 and how it applies to the rates of duty to which I wish to call the attention of the Senator from North Dakota. He may have already investigated and given consideration to the matter, and may be able to enlighten me, but I have not reached any conclusion as to how this section is going to be put into effect.

It provides that the President shall equalize competitive conditions by levying a tax. What competitive conditions is he going to equalize? We may assume that a certain class of cotton goods coming from Germany, say socks, may be selling 10 cents a dozen pairs cheaper than cotton goods imported from England. The President is to equalize the competitive conditions. What competitive conditions? Is he going to take as the competitive rate the import value of the English socks, the higher-cost goods, or is he going to take as the competitive rate the import value of the German socks, the lower-cost goods? There must be some rate that he is going to make the comparison with if you are going to have an automatic establishment of this proposition; and how are you going to work that out? How are you going to arrange it?

Mr. McCUMBER. Mr. President, does the Senator desire me to answer him?

Mr. UNDERWOOD. I should be glad to have the Senator do so. I should like to know, because you will have it too high in one case or too low in the other case if you are going to make absolutely equal competitive conditions.

Mr. McCUMBER. That is true under the present system. There are a great many things that Germany can produce and sell in this country that Great Britain can not produce and sell in this country.

What must the President have in view when he determines upon an investigation—which, of course, will be made by the Tariff Commission? What has he in view as to what is necessary? He must have in view the question that is submitted to him to protect the American industry from destruction. There might be a certain quantity of a commodity produced in Germany that would be so much cheaper than that which was produced in Great Britain that whatever duty would be placed upon that commodity would be an embargo against Great Britain. Then the question would necessarily arise whether the quantity coming in from the cheapest country was sufficient to destroy the American industry. If it was sufficient to destroy the American industry, and it appeared clearly to the satisfaction of the President that it was impossible for the American industry to be sustained in the United States as against the cheapest producing country, of course it would be necessary to consider the price of the commodity produced in the country of cheapest production, and that must necessarily be the basis.

The Senator knows as well as I do, however, that our trade which has been going on for years rather adjusts itself. Germany, prior to the war, drove the British product out of the American market in a great many lines, and therefore the only thing that was coming in was coming in from Germany. Therefore the only country which we would have to consider would be Germany in that case, because while if the duty was high enough to allow England to compete she might compete, nevertheless at the particular time when the President would act she would not be a competitor at all, and he would have to take into consideration what duty was necessary to protect the American market against a country which was destroying the American market. If he finds no destruction, if he finds they have equal opportunity in the American market, he will not act either way.

Mr. UNDERWOOD. Your bill does not say "destruction." I am trying this case on the terms of your bill. It says "to equalize the differences in conditions of competition in trade." The Senator has made the answer that I suspected he would make. It is entirely in line with this bill, and entirely in keeping with the idea of protecting the American manufacturer against competition abroad, protecting his profits.

I asked the Senator if the socks manufactured in competition with the American industry turned out to be 10 cents a pair cheaper coming from Germany than from England, with which rate would the President equalize the competitive trade conditions? The Senator answered what I expected him to answer, that the equalization would be with Germany; but when he makes that answer and says, "We are going to equalize competitive conditions with the country that can make the commodity the cheapest," of course we put an embargo against the other countries.

Mr. SMOOT. That is the same thing that happens with the rate to-day, with any rate at all.

Mr. UNDERWOOD. Oh, no; no. If the Senator will simply take the imports and exports of the United States on 100 or 1,000 commodities coming in, he will find that there are various commodities where the cost of the foreign article varies very much. The Australian wools and the South American wools are not of the same competitive trade conditions or the same cost, and yet they come into the American market. Both of them come in here competitively.

Mr. SMOOT. But competitively with the same grade of wool—not fine wool with coarse wool.

Mr. UNDERWOOD. But I am talking about the same grade of wool. Of course, I recognize that there is a great deal of difference between the Australian wools and the South American wools.

Mr. SMOOT. Certainly.

Mr. UNDERWOOD. But they compete in the same line—coarse wools and good wools. The English wools may not be in absolute competition with the Australian wools; there may be a little difference in grade; but they compete for making the same class of cloth in many respects.

Mr. SMOOT. Not many.

Mr. UNDERWOOD. Well, they do.

Mr. SMOOT. Of course fine wool does not enter into coarse-wool goods.

Mr. UNDERWOOD. Certainly not.

Mr. SMOOT. Because they could not afford it.

Mr. UNDERWOOD. But there are coarse wools that come from Australia, there are coarse wools that come from South America, and there are some very fine wools from Australia, and fine wools from England. I am only illustrating, but if the Senator does not like the illustration of wools I can take steel.

I do not know that any pig iron is coming in, but if any does come in it comes from Germany and it comes from England. It is competitive. If the German producer of pig can make pig iron a dollar cheaper, and, coming into the American market, can enter into the competitive conditions a dollar cheaper than the English producer of pig can, then, according to the interpretation of the chairman of the committee, the President, in equalizing trade conditions, would take the rate of the German competition and fix his barrier on that, and that would exclude absolutely the English pig, and it would do the same thing in wool.

Mr. SMOOT. The only difference is that the rates themselves provide that, and the President never will be called upon to exercise this power in regard to pig iron.

Mr. UNDERWOOD. I first talked about wool, and the Senator tried to avoid the question by saying, "They are not equal grades." Of course, I know that it was folly to put a tax on pig iron in this bill just as well as the Senator does, but I am only using that as an illustration, and assuming that it will come in. The Senator says that none will come in, and I think he is right about it; but I am assuming, for the sake of the argument, that the products could come in, and that they were equally competitive, but that from one country they were cheaper than from the other. When your President fixes the point of competition in the competitive market in the cheaper country you exclude all other countries, and you will do that in wool; you will do that in sugars; you will do that in silks; you will do it all along the line of this bill.

Mr. SMOOT. Mr. President, as I said before, I do not think there will be four classes of goods as to which the President will ever exercise his power of increasing the rates of duty. I look for more decreases than I do for increases, because of the conditions existing in the world to-day; but on the question of increases take toys, for instance: There is no need of putting a rate of duty on toys that would equalize the difference between England and the United States, because England can not make toys against Germany at all, and yet she makes toys. The only thing you would have to do would be to take the cost of toys in Germany, and that is one of a few items as to which, in my opinion, the power will be exercised by the President.

Now, Mr. President——

Mr. UNDERWOOD. The Senator, of course, is speaking in my time.

Mr. SMOOT. Pardon me.

Mr. UNDERWOOD. I do not want the Senator to make an argument in my time. I am glad to hear what he says. I am perfectly willing to have the interruption; but the Senator picks out toys to sustain himself about this bill. Of course, we all know, anybody who knows anything about international trade knows, that the real competition in toys came alone from the German market, and practically none from England; but I did not take an illustration of that kind. I am taking as an illustration what we know. We know that wools come from a number of countries. We know that iron and steel, if they can come into this country at all, come from Belgium, Germany, and England. They are made in different countries. They are made at different costs of production. Their point of competition in this market rests on a different basis of cost, a different basis of profit, and one is cheaper than the other; and you admit that the President is going to take the cheapest ground, the cheapest product, and base his rates to equalize competition in the home market upon the cheapest product. In other words, he is going to take the cheapest product and raise the rate above that to equalize costs; and I say of necessity that in those cases you are going to build an embargo against the importation of similar articles from everywhere else.

Mr. SMOOT rose.

Mr. UNDERWOOD. I am glad to have the Senator's opinion. He has stated repeatedly what he thinks is going to happen. He has told us that he did not think the President would change four rates. He has told us that he thinks the President will lower more rates than he will raise; but we are not here to try this bill on what the Senator "thinks." We are trying this case on what this bill says, and we know that this difference in competitive costs exists as to many articles, and you not only give the President the power, but you use the word "shall." The bill says he shall do this when he finds a difference in competitive costs in the home market, and the man who wants to build up a tariff wall by raising his rates at home will make a difference in competitive costs, and this provision is mandatory. It will not rest with the commission to which the President shall delegate his power to use their discretion as to whether they will carry out the terms of this bill. The bill provides they shall do it; it is mandatory, and they must do it.

That is the case I am trying. The Senator from Utah is entitled to his opinion. He is entitled to "think" about it all he wants to, but he has never yet met the proposition that the power rests in the President, that it is mandatory power, and that it must be carried out.

Mr. SMOOT. Mr. President, the Senator knows there never was a tariff bill written in which these very things were not taken into consideration. No protective bill could be written without taking those things into consideration, and in framing this bill they have been taken into consideration. The members of the committee know and the Senator himself, I think, knows that under conditions existing to-day nobody could tell what rates are to be applied, except as to a few articles. There are a few of the coal-tar products and a few of the chemicals which are vital to the very existence of the country; and the only time the President would ever exercise this power would be when he knew that a condition existed which it was impossible to meet in this country by a reasonable rate. I say to the Senator from Alabama I know that is the thought of the committee, I know it is the thought of the President, and I know it is the only way to meet the situation.

If we want those few industries—and they are very few—to cease to exist in the United States, then well and good; do not put this provision in the law, although I think it ought to be there, because of the unsettled conditions of the world, authorizing the President of the United States to decrease some of the rates which we know are necessary to-day, but which, when things get back to normal, perhaps may not be necessary.

Mr. UNDERWOOD. As I said the other day, you may probably have put the rates so high in this bill that you have already met all competitive trade conditions in the United States; you may have already done it under the terms of this bill and have established your embargo, but if you have not, then the President is ordered to exercise this power.

Mr. WALSH of Montana. Mr. President, before this particular discussion ends, I desire to advert to a statement made by the Senator from Utah [Mr. SMOOT] to the effect that only a very few items in the bill will ever become subject to the provisions just canvassed by the Senator from Georgia [Mr. WATSON] and the Senator from Alabama [Mr. UNDERWOOD].

I have no doubt the Senator from Utah has information concerning the action of the present occupant of the White House and his attitude toward these schedules, which the rest of us do not possess, and he may be right in saying that there are only a few items in reference to which the power will ever be invoked; but what assurance has anybody that every item in the bill will not become subject to this power? Whether you consider it from the standpoint of policy, or whether you consider it from the standpoint of power, you must recognize the fact that the power extends to every single item in the bill.

Of course, so far as the power extends, so far as the validity of the provision is concerned, so far as the validity of the act of which this provision constitutes a part is concerned, it is of no consequence whatever whether the power will ever be exercised with reference to any article or not. That would never enter into consideration.

So, likewise, when you come to consider the question of policy, how does anyone know that the power will be limited in its exercise to a few articles? We do not point out in the bill the particular commodities with reference to which the power may be exercised. It may be exercised with reference to any item in the bill. It is as broad as the bill itself.

Mr. POMERENE. Mr. President, may I suggest to the Senator that when they urge in defense of this power that it will

be used in only a few instances, they demonstrate conclusively that in their own judgment they regard it as a very dangerous power.

Mr. WALSH of Montana. That is quite right, as, of course, it must be recognized by all to be a dangerous power to repose in any man, no matter how wise, how patriotic, or how honest he may be. No one questions the high motives and purposes of the present Executive; but that is not the question.

The other day I discussed the mere matter of the power of Congress to make such a delegation to the Chief Executive. In that connection, the Senator from Utah suggested what he has repeated here to-day, that it will be exercised with reference to only a few items; but that does not affect the question in the slightest degree. So far as power is concerned, if it is not valid under the Constitution, it is not valid whether it is ever exercised at all or not, and if it affects the entire bill, as I think it does, the whole bill will fail, whether it is ever exercised or not.

The fact is that if that view is correct, even though the President does not exercise it at all, or before he exercises it at all, if the duties required under it are paid under protest and suit is brought to recover the duties on any articles in that litigation, as in the case of Field against Clark, the validity of the entire bill will be for consideration.

Mr. McCUMBER. Mr. President, following the record of the Senate for the last few days, in which we have been enabled to vote upon one or two items a day, having now been in session for almost six hours and not having had a vote upon bone black, I ask Senators if they will not now allow us to vote on the amendment offered by the Senator from Massachusetts [Mr. WALSH] to the bone-black proposition.

Mr. WALSH of Massachusetts. On my amendment to the amendment of the committee I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. WALSH of Massachusetts. I ask that the amendment offered by me be reported.

The PRESIDING OFFICER. The Secretary will state the amendment to the amendment.

The READING CLERK. On page 26, line 19, the Senator from Massachusetts proposes to strike out "20" and insert "10" in the part stricken out by the committee, so that it will read:

Deodorizing chars or carbons, 10 per cent ad valorem.

The reading clerk proceeded to call the roll.

Mr. DIAL (when his name was called). I have a pair with the Senator from Colorado [Mr. PHIPPS]. Not being able to obtain a transfer, I withhold my vote.

Mr. SIMMONS (when his name was called). I have a general pair with the Senator from Minnesota [Mr. KELLOGG], which I transfer to the Senator from Rhode Island [Mr. GERRY], and vote "yea."

Mr. WATSON of Georgia (when his name was called). I transfer my pair with the junior Senator from Arizona [Mr. CAMERON] to the senior Senator from Nevada [Mr. PITTMAN] and vote "yea."

Mr. WATSON of Indiana (when his name was called). I have a pair with the Senator from Mississippi [Mr. WILLIAMS], which I transfer to the Senator from Washington [Mr. POINDEXTER], and vote "nay."

The roll call was concluded.

Mr. NEW. Transferring my pair with the junior Senator from Tennessee [Mr. McKELLAR] to the senior Senator from Pennsylvania [Mr. CROW] I vote "nay."

Mr. OVERMAN (after having voted in the affirmative). I am paired with the senior Senator from Wyoming [Mr. WARREN] who is absent. I transfer that pair to the senior Senator from Tennessee [Mr. SHIELDS] and let my vote stand.

Mr. HARRIS. I transfer my pair with the junior Senator from New York [Mr. CALDER] to the senior Senator from Texas [Mr. CULBERSON] and vote "yea."

Mr. WATSON of Georgia (after having voted in the affirmative). The Senator from Nevada [Mr. PITTMAN], to whom I have transferred my pair, has entered the Chamber; so I must withdraw that announcement. Being unable to obtain a transfer, I withdraw my vote.

Mr. JONES of New Mexico. I transfer my pair with the Senator from Maine [Mr. FERNALD] to the senior Senator from Missouri [Mr. REED] and vote "yea."

Mr. STERLING. I transfer my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Maryland [Mr. FRANCE] and vote "nay."

Mr. DILLINGHAM. I have a general pair with the junior Senator from Virginia [Mr. GLASS], which I transfer to the junior Senator from Delaware [Mr. DU PONT] and vote "nay."

Mr. JONES of Washington. Has the senior Senator from Virginia [Mr. SWANSON] voted?

The PRESIDING OFFICER. That Senator has not voted.

Mr. JONES of Washington. I have agreed to take care of him with a pair for the day. I find, however, that I can transfer that pair to the senior Senator from Iowa [Mr. CUMMINS] which I do, and vote "nay."

Mr. COLT. I have a general pair with the junior Senator from Florida [Mr. TRAMMELL]. I transfer that pair to the junior Senator from Oregon [Mr. STANFIELD] and vote "nay."

Mr. CURTIS. I was requested to announce that the senior Senator from Wyoming [Mr. WARREN] is absent on account of a death in his family. I will let this announcement stand for the day.

Mr. EDGE. I transfer my general pair with the Senator from Oklahoma [Mr. OWEN] to the Senator from Maryland [Mr. WELLER] and vote "nay."

The result was announced—yeas 23, nays 46, as follows:

YEAS—23.

Ashurst	Heflin	Overman	Simmons
Caraway	Hitchcock	Pittman	Stanley
Dial	Jones, N. Mex.	Pomerene	Underwood
Fletcher	King	Ransdell	Walsh, Mass.
Harris	Myers	Robinson	Walsh, Mont.
Harrison	Norris	Sheppard	

NAYS—46.

Ball	Frelinghuysen	McCumber	Rawson
Borah	Gooding	McKinley	Shortridge
Brandegee	Hale	McLean	Smoot
Broussard	Harreld	McNary	Spencer
Bursum	Johnson	Moses	Sterling
Capper	Jones, Wash.	Nelson	Sutherland
Colt	Kendrick	New	Townsend
Curtis	Keyes	Newberry	Wadsworth
Dillingham	Ladd	Nicholson	Watson, Ind.
Edge	Lenroot	Norbeck	Willis
Elkins	Lodge	Oddie	
Ernst	McCormick	Phipps	

NOT VOTING—27.

Calder	France	Page	Swanson
Cameron	Gerry	Pepper	Trammell
Crow	Glass	Poindexter	Warren
Culberson	Kellogg	Reed	Watson, Ga.
Cummins	La Follette	Shields	Weller
du Pont	McKellar	Smith	Williams
Fernald	Owen	Stanfield	

So the amendment of Mr. WALSH of Massachusetts to the committee amendment was rejected.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. McCUMBER. I ask that the Senate reject the committee amendment.

Mr. KING. As I understand, the Senator moves now to restore the rate of 20 per cent ad valorem?

Mr. McCUMBER. Yes; 20 per cent ad valorem.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was rejected.

Mr. McCUMBER. I ask that the Senate return to paragraph 65, which was passed over this morning.

The PRESIDING OFFICER. The first amendment of the committee in that paragraph will be stated.

The READING CLERK. On page 26, line 13, the committee proposes to strike out "12" and insert "8," so as to read:

PAR. 65. Blue pigments and all blues containing iron ferrocyanide or iron ferricyanide, in pulp, dry, or ground in or mixed with oil or water, 8 cents per pound.

Mr. KING. Mr. President, I move, as an amendment to the committee amendment, to strike out "8 cents per pound" and in lieu thereof insert "20 per cent ad valorem."

I wish to say just a few words and as briefly as possible relative to this very important paragraph. Senators may not know that blue pigments and all blues containing iron ferrocyanide or iron ferricyanide deal with products which are very important to the farmers and the agriculturists, and indeed to all classes of Americans. Briefly let me call attention to what has been stated by the Tariff Survey and to the character and uses of the product embraced within the amendment which I have offered:

The terms Berlin blue, Prussian blue, and Chinese blue, used in the act of 1913, are commercial names given to blue pigments——

Mr. McCUMBER. Mr. President, will the Senator yield to me for just a suggestion upon these rates, because I think it will be better understood from his own standpoint?

Mr. KING. I am glad to yield to the Senator.

Mr. McCUMBER. The Senator asks for 20 per cent ad valorem. Taking the last quotation we have of importations in 1921, the value is 38 cents per pound. With an 8 cents per pound duty the ad valorem is 21 per cent. So really the only difference is a difference at the present time of 1 per cent between what the Senator proposes and the present law, and what the committee by its amendment has suggested.

Mr. KING. I concede what the Senator says, and that is one of the vices found in the bill. When a specific rate is laid upon war prices and the peak prices which exist to-day, to project that specific rate into peace times is giving an undue protection even to those who believe in a protective policy. It is giving war protection in peace times, or protection upon war prices.

The Senator says that the foreign price of this product is 38 cents per pound, and that is true, but in 1914 Berlin blue was 8½ cents per pound, Chinese blue 10 cents per pound, and Prussian blue 22 cents per pound. Of course it is clear that those pre-war prices, measured by the 20 per cent ad valorem which I have suggested, would not carry as high a duty as an 8-cent specific rate. If the Senator's belief is that these prices should be reduced, then it is clear that an 8-cent specific would be greater than a 20 per cent ad valorem. Therefore, I have moved the amendment because the American people will not submit to the extortionate rate of 8 cents per pound projected into peace times or projected indefinitely upon a product which before the war was 8½ cents per pound, or 10 cents per pound, or 22 cents per pound, depending upon the grade.

My information is that the greatest amount of this product came within the classification of 8½ cents a pound. As I understand the Senate committee bill, there is no distinction between the highest grade and the lowest grade. It all bears 8½ cents a pound notwithstanding, as I have stated, the grade bore a different value and a different market price prior to the war and, of course, will carry a different market price now, if there is no trust and no combination and if there is legitimate competition. However, I submit that there are strong evidences of a combination and a trust now, because notwithstanding the fact that before the war Berlin blue was 8½ cents per pound, the domestic price on April 24 was practically 50 cents per pound. The same is true of Chinese blue, bronze blue, and Antwerp blue, which are 50 cents per pound. In other words, those different grades which bore different prices before the war are now uniform in price at 50 cents per pound. That is the reason why an 8 per cent specific would be unfair because it would be too high a rate measured upon pre-war prices or upon any fair prices that may follow.

Now, let me refer briefly to the uses to which these pigments are put:

Ferrocyanide blues are used as pigments in prepared paints and dry colors; printing, lithographing, and writing inks; japans, enamel paints, soluble laundry blues; and mixed with other pigments, in the manufacture of other dry colors.

So it is obvious from the statement of the tariff summary that these pigments are in common use by the people of the United States.

As to production this statement is made:

Ferrocyanide blues—

And those are the ones we are considering—

in general are made by mixing ferrocyanide of potash or soda with a soluble iron salt, such as copperas, and oxidizing the insoluble white product formed with a suitable chemical under carefully controlled conditions.

Then the statement proceeds:

Ferrocyanide blues are made on a large scale in the United States, and prior to 1914 the domestic production supplied over 75 per cent of the total needs, but about half of the sodium or potassium ferrocyanide used as a raw material was imported.

I might say in passing that we have sodium and potassium in the United States, their production is being developed, and there is no reason why that production should not be more largely developed in the future than it has been in the past. Over 1,000,000 pounds of Prussian blue, valued at $387,077, were manufactured in the United States in 1914, and 1919—preliminary figures—showed more than 944,650 pounds. I might say that this commodity is also manufactured in Germany, France, and England.

Now, under the head of imports, it is stated:

Imports for the period 1910–1917 have averaged 263,549 pounds, valued at $76,840, yielding a revenue of $19,623. Later statistics follow:

In 1918 the imports were 2,923 pounds. In that year our production was more than 1,000,000 pounds. The imports for that year would be less, of course, than 1 per cent of the domestic production. In 1919, when our production was nearly 1,000,000 pounds, our imports were only 16,055 pounds. In 1920 our imports were 465,119 pounds and for the nine months of 1921 they were 108,093 pounds.

May I say that the foreign value is 38 cents a pound, just as the Senator from North Dakota [Mr. MCCUMBER] has stated. The domestic price on April 24 was 50 cents per pound. The pre-war prices were, as I have indicated, ranging from 8½ cents a pound to 22 cents a pound.

Mr. McCUMBER. Mr. President——

Mr. KING. I yield to the Senator from North Dakota.

Mr. McCUMBER. Right there I desire to correct the Senator. There is some error in his statement. The price of 8½ cents a pound, I think, refers to ultramarine-blue dryer and pulp, and it is not derived from the blue pigments such as ferrocyanide or the iron ferrocyanide or the iron ferrocyanide pulp. I have here the statistical reports of imports from 1908 to 1919. Prior to 1914 the price was never less than 17 cents and in 1914, the last year before the war, it was 18 cents a pound. I am speaking now of the ferrocyanide. I find in no instance was the price below that prior to the war; so that the article to which the Senator is referring as being 8 cents a pound must be included in the second clause of the paragraph, and in that we are not asking for 8 cents a pound but ask simply for a duty of 3 cents a pound.

Mr. KING. Mr. President, I still think that the figures I gave were correct. The Berlin blue is a ferrocyanide, and the import price was 8½ cents per pound.

Mr. SMOOT. Will my colleague tell me where he gets the price of 8½ cents a pound for this article? Does he get it from Pickhardt's list?

Mr. KING. No. I got it in part from Commerce Reports and in part from Department of Commerce Miscellaneous Series No. 82.

Mr. SMOOT. I can not find it anywhere.

Mr. KING. As to the ultramarine blues, of which the Senator from North Dakota has spoken, I think he will find that for the dry ultramarine the domestic price was only 3½ cents up to 1913, dependent upon the quality. Mixed with oil, the price was from 13 to 16 cents per pound; but in the war time it went as high as from 50 to 65 cents in the oil. Even, however, if the figures which I gave with respect to Berlin blue were as indicated by the Senator, I should still insist upon the rightfulness of the amendment which I have submitted.

There is no question that prior to the war the import price of Chinese blue was 3 cents a pound and that Prussian blue was 22 cents a pound prior to the war, whereas, as I said, the Senator will find on page 123 of the Miscellaneous Series No. 82 that the imports were only 3,220 pounds for the year ending June 30, 1914, valued at $308, and that would show a price of 10 cents per pound. That is the Chinese blue. The Senator will find on page 122 that the quantity of imports of Berlin blue for the year just named was 781,299 pounds, of the value of $66,464, which, as I have stated—of course, I may be wrong in my figures—would amount to 8½ cents per pound.

Mr. SMOOT. That is Berlin blue.

Mr. KING. That is what I stated. Now, will the Senator from North Dakota confess that I was right and he was wrong?

Mr. McCUMBER. No. It may be possible that some one particular kind from China of a very low grade came in at that price; but if the Senator will turn to page 736 of the report of statistics of imports and duties he will find the average price for 1914, after a duty was imposed of 20 per cent ad valorem, was 18 cents; 1913 it was 19 cents; and 1912, 17.8 cents. Those were the very lowest prices. They ran all the way from 21 cents plus in 1908 down to as low as 18 cents in 1914. That is the average of all the importations.

Mr. KING. I was absolutely right in my statement that Berlin blue for the year which I stated, a pre-war year, was 8½ cents per pound, and it did not come from China. Ninety-eight per cent of the entire imports under this particular paragraph which we are now discussing came from Germany. Chinese blue does not come from China; it comes from Germany. The learned Senator evidently thought that because it bore the name "Chinese blue" it must have been made in China. I repeat, we are now attempting to impose a specific rate of 8 cents a pound upon pigments which are used by the great bulk of the American people, upon a product the import price of which before the war was 8½ cents a pound, of another classification 10 cents a pound, and of the highest classification 22 cents a pound. I submit that in view of the fact that we produce such a large quantity, the imports for the years 1910 to 1917 averaging only 263,000 pounds plus, as against approximately a million pounds of domestic production, the proposition of the committee is wrong and that it imposes too great a burden upon the people. I may say in passing that the domestic production exceeded 75 per cent of the domestic consumption, and the commodity is produced in the United States by a large number of companies, among them being the Standard Ultramarine Co., the Imperial Color Works Co., the Harmon Color Works Co., the Seimon Elting Co., Middlesex Aniline Co., the Kentucky Color & Chemical Co., and the Fred L. Lavenburg Co. With respect to this item, as to which I have suggested the amendment, that is all I care to say for the present.

Mr. McCUMBER. Mr. President, I do not want to have this question voted upon without having a correct record of the average import values, and of course that is what we must go by. There may have been one shipment of a certain quality which for some reason or other sold for an exceedingly low price. I do not know where the Senator gets the figures he has quoted. I could not understand all that was said by the Senator on account of some confusion.

Mr. KING. If the Senator will pardon me, I am sure he does not want to be unfair. I gave the figures from the report of the Department of Commerce, showing that the largest importation was 700,000 pounds, valued at 8½ cents per pound.

Mr. McCUMBER. For what year?

Mr. KING. For 1914. If the Senator will turn to page 122 of Miscellaneous Series No. 82, Department of Commerce, he will find near the bottom of the page the importations for that year stated to be 781,299 pounds, of a value of $66,464. My figures show 8½ cents a pound, as I have stated.

Mr. McCUMBER. I think there must be some mistake. I have the figures here and they give Berlin blue, or whatever it is.

Mr. KING. Berlin blue?

Mr. McCUMBER. It does not say Berlin, but I assume it means that; perhaps it is stated somewhere. At any rate, the importations are given as 781,299 pounds. That was for the year ended June 30, 1914. I take the statistics of imports for the year 1914 and find that in that year there were 225,017 pounds imported, and not 781,000 pounds—there is quite a little difference—and that the value was $40,550, and the price of those importations for that year averaged 18 cents a pound.

Mr. KING. Mr. President, may I interrupt the Senator?

Mr. McCUMBER. Certainly?

Mr. KING. The record from which I read was made up by consulting the invoices, and the record from which the Senator now reads has been demonstrated, I believe, to be inaccurate in many instances, because it was not made from the invoices, and, consequently, does not include all of the imports. It is accurate so far as it goes, but it does not include all of the invoices, and therefore does not include all of the imports.

Mr. McCUMBER. Evidently there is some error in it, and I am rather inclined to stick by the statistics of imports and the duties, and they agree substantially with previous years and preceding years; and I can not believe that there was that importation that came in in that year. In 1915 we imported 547,299 pounds, and that came in at 20.6 cents per pound. Then came the war. In 1916 it rose to 59.9 cents, and in 1917 it was 56.2 cents. In 1918 it was 62.9 cents; but the pre-war price averaged from 18 to 21 cents.

It may be that these products will come back to the pre-war price. I simply do not believe that they will, and therefore I think that a duty which is but 21 per cent ad valorem, according to our estimates, and which is only 1 per cent ad valorem above the amendment offered by the Senator from Utah on present quotations, is at least not excessive.

Mr. KING. Mr. President, will the Senator yield?

Mr. McCUMBER. Certainly.

Mr. KING. I would agree with the Senator, at least for the purpose of passing this bill as soon as we can in reason, providing we were to maintain these prices.

Mr. McCUMBER. I have just said that. I have said that of course if it goes back to the old prices there will be twice as much percentage or duty.

Mr. KING. Then it is obvious that this bill is drawn upon the theory that we are to protect the present abnormally high prices, and we are to transfer from ad valorem rates to the specific column in order to give these high duties, when there must be, or ought to be in all conscience, a reduction in prices.

Mr. McCUMBER. I do not think there will be that much of a reduction, and if it was reduced back to the old price it would only be 40 per cent.

Mr. KING. This emphasizes again, if I may be permitted to say so, the vice of this bill. It shows that the scheme is to protect these high prices and to perpetuate them into the future, instead of permitting an ad valorem rate, so that when the prices go down—as they must if we are to have returning prosperity—the people may get the advantage. The proposition is to transfer from the ad valorem to the specific class, so that the manufacturer may keep the high prices and make the high profits, notwithstanding there may be a reduction. It is vicious. It is an odious system of taxation.

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from Utah to the amendment of the committee.

Mr. KING. I call for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. EDGE (when his name was called). Making the same announcement as before as to the transfer of my pair, I vote "nay."

Mr. HARRIS (when his name was called). Making the same announcement as to my pair, I vote "yea."

Mr. OVERMAN (when his name was called). Making the same transfer of my pair, I vote "yea."

Mr. STERLING (when his name was called). Making the same transfer as on the previous roll call, I vote "nay."

The roll call was concluded.

Mr. NEW. Making the same announcement as on the previous roll call, I vote "nay."

Mr. LODGE. I believe that the Senator from Alabama [Mr. UNDERWOOD], with whom I have a general pair, has not voted. I transfer my pair with him to the Senator from Delaware [Mr. DU PONT] and will vote. I vote "nay."

Mr. JONES of Washington. Making the same announcement of my pair and its transfer as on the previous roll call, I vote "nay."

Mr. DIAL (after having voted in the affirmative). I have a pair with the Senator from Colorado [Mr. PHIPPS]. I transfer that pair to the Senator from Ohio [Mr. POMERENE] and will let my vote stand.

Mr. HARRISON. I transfer my general pair with the junior Senator from West Virginia [Mr. ELKINS] to the senior Senator from Nevada [Mr. PITTMAN] and will vote. I vote "yea."

Mr. ERNST. I have a general pair with the senior Senator from Kentucky [Mr. STANLEY]. I transfer that pair to the junior Senator from Oregon [Mr. STANFIELD] and will vote. I vote "nay."

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from Rhode Island [Mr. COLT] with the Senator from Florida [Mr. TRAMMELL];

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The Senator from Indiana [Mr. WATSON] with the Senator from Mississippi [Mr. WILLIAMS];

The Senator from Maine [Mr. FERNALD] with the Senator from New Mexico [Mr. JONES]; and

The Senator from Minnesota [Mr. KELLOGG] with the Senator from North Carolina [Mr. SIMMONS].

The result was announced—yeas 14, nays 35, as follows:

YEAS—14.

Ashurst	Harris	King	Sheppard
Caraway	Harrison	Myers	Walsh, Mass.
Dial	Heflin	Overman	
Fletcher	Hitchcock	Robinson	

NAYS—35.

Ball	Frelinghuysen	McCumber	Rawson
Borah	Gooding	McKinley	Shortridge
Brandegee	Hale	McLean	Smoot
Broussard	Johnson	McNary	Sterling
Bursum	Jones, Wash.	Moses	Sutherland
Capper	Keyes	Nelson	Townsend
Curtis	Ladd	New	Wadsworth
Edge	Lenroot	Newberry	Willis
Ernst	Lodge	Oddie	

NOT VOTING—47.

Calder	Glass	Page	Stanfield
Cameron	Harreld	Pepper	Stanley
Colt	Jones, N. Mex.	Phipps	Swanson
Crow	Kellogg	Pittman	Trammell
Culberson	Kendrick	Poindexter	Underwood
Cummins	La Follette	Pomerene	Walsh, Mont.
Dillingham	McCormick	Ransdell	Warren
du Pont	McKellar	Reed	Watson, Ga.
Elkins	Nicholson	Shields.	Watson, Ind.
Fernald	Norbeck	Simmons	Weller
France	Norris	Smith	Williams
Gerry	Owen	Spencer	

So Mr. KING's amendment to the amendment of the committee was rejected.

The VICE PRESIDENT. The question now is on the amendment of the committee.

The amendment was agreed to.

The VICE PRESIDENT. The Secretary will state the next amendment of the committee.

The READING CLERK. On the same page, line 16, after "ultramarine," it is proposed to strike out "3" and insert "4," so as to read:

ultramarine blue, dry, in pulp, or ground in or mixed with oil or water, wash and all other blues containing ultramarine, 4 cents per pound.

Mr. McCUMBER. I ask that the committee amendment on line 16 be rejected.

Mr. KING. Mr. President, that is to say, as I understand the Senator, he wants to permit the House provision to stand?

Mr. McCUMBER. Yes; 3 cents per pound.

Mr. KING. I move to strike out "3 cents per pound" and to insert in lieu thereof "15 per cent ad valorem."

Just a few words respecting that item.

The Payne-Aldrich law contains this provision:

Ultramarine blue, whether dry, in pulp, or mixed with water, and wash blue containing ultramarine, 3 cents per pound.

As I understand, the Senate has now accepted the Payne-Aldrich provision, 3 cents per pound, as a specific duty upon this important item—important because of the universality of its use among the people, yet an item which does not in its original production cost a very large sum.

Mr. President, I want to call attention very briefly to some facts concerning this item.

The pre-war domestic price of ultramarine blues was 3½ cents per pound, and went higher according to the grade. In war times it rose to 50 and 65 cents per pound.

Mr. FRELINGHUYSEN. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from New Jersey?

Mr. KING. I yield.

Mr. FRELINGHUYSEN. I should like to have the Senator's authority for the statement that the pre-war price was 3½ cents a pound. The records we have show that practically for 20 years the price has been uniform, practically 10 cents per pound.

Mr. KING. I shall try to give the Senator the authority before I leave the floor. I state now that my information is that the pre-war domestic price on dry ultramarine—I am not speaking of the mixed—was 3½ as a minimum and upward, and I think the figures will demonstrate the accuracy of that statement. Mixed it was from 13 to 16 cents per pound. The pre-war import price on certain grades was 8½ cents per pound.

The Senator asked me for the source of my information. If he will look at page 33 of the Tariff Survey A–15, at the bottom of the page, he will find this:

Ultramarine—Prices (wholesale) per pound, in barrels, spot, New York.
[Data from Oil, Paint and Drug Reporter.]

DRY.	Cents.
August, 1914	3½–13
January, 1915	3½–13
January, 1916	5 –22
January, 1917	20 –40
January, 1918	17 –50
January, 1919	14 –40
April, 1919	12 –50

In the column opposite, the Senator will see the price, in cents, of the product in oil.

Mr. FRELINGHUYSEN. If the Senator will turn to the statistics of imports and duties from 1908 to 1918, inclusive, of the United States Tariff Commission, page 736, he will find tabulation 3448, ultramarine, dry, in pulp, or mixed with water, the average figures from 1908 to 1918 are practically 9.6 to 10 cents a pound.

Mr. KING. The Senator is quoting the foreign price; I am quoting the domestic.

Mr. FRELINGHUYSEN. That is practically true. The 3 cents is based upon foreign prices.

Mr. KING. I stated to the Senator a few moments ago what the foreign price was. The pre-war import price was 8½ cents per pound.

Mr. FRELINGHUYSEN. It is on the mixed. The rate on dry is 4 to 5 cents. The average price of ultramarine is 10 cents a pound. That is what it is now in the domestic market.

Mr. KING. I stated to the Senator that the figures which I gave were 3½ cents and upward on the dry; then when I called his attention to the mixed I said 13 to 16 cents. I stated that during war times it went to 50 to 60.

Mr. SMOOT. My colleague knows that 3½ cents was for the lowest grade, mixed with other substances. Nobody really wants to use that. The higher grade of ultramarine blue is always used wherever it can be obtained.

Mr. KING. I have no doubt the figures which I have read are correct, and I have no doubt that they state the minimum.

Mr. SMOOT. There is no doubt the Senator's figures are correct, but we could not base a specific rate of duty on an article that is not in reality an ultramarine blue. There is ultramarine blue in it, but it is adulterated with cheap products, and sells for 3½ cents a pound. But the average price to-day is 10 cents a pound, and it runs up to 22 cents. I am speaking of the dry. Of course, in oil it is higher.

Mr. KING. The figures which I gave are absolutely correct. The dry was 3½ cents per pound in 1914, as I stated. It is obvious that at least some of that grade will be used. The proposition of the committee now is to give a specific rate of 3 cents a pound upon that product, the pre-war price of which was 3½ cents a pound. They fix the same specific rate upon the low grade as they do upon the high grades.

Mr. FRELINGHUYSEN. For 43 years, I am informed, after 1870, there was invariably a specific duty upon ultramarine. In the Dingley law it was 3¾ cents per pound. Afterwards the duty was changed to a specific rate of 6 cents a pound, and it has been reduced during the period since, but I am informed that continuously for 43 years, and until the enactment of the law of 1913, there was a specific duty upon this product.

Mr. KING. Did the Senator state that in the Underwood Act it bore a specific duty?

Mr. FRELINGHUYSEN. I did not. I said that for 43 years, down to 1913, there was a specific duty, as high as 6 cents a pound and as low at 3¾.

Mr. KING. I am aware of that. The Senator did not tell me anything I did not know about this matter.

Mr. FRELINGHUYSEN. That would be an impossibility.

Mr. KING. It would not. The Senator knows very much more than I about many things, but upon this matter he did not say anything that we all do not know. The Senator is going back 43 years for a precedent to guide us now. The framers of the Underwood bill sought to correct an injustice. The Senator wants to perpetuate an injustice. He wants to impose the same rate upon a product which costs 3½ cents a pound as upon a product which costs more, and that I denounce and say that it is unjust. The framers of the Underwood bill, I repeat, sought to correct an injustice, and prescribed an ad valorem rate, the same I am asking for now. I do not know why the Senator is so insistent upon calling attention to conditions 43 years ago.

Mr. FRELINGHUYSEN. The Senator challenged the policy of placing a specific duty upon this product.

Mr. KING. I challenge it now.

Mr. FRELINGHUYSEN. I pointed out that for 43 years it had been the policy of this Government to have a specific duty on this article.

Mr. KING. Mr. President, the Republican Party, in framing its tariff laws, for many years adopted a policy which I regard as vicious and unjust to the American people, and the confession of the Senator is a confirmation of the views which I expressed. He is willing to indorse a policy of his party which imposed the same duty upon a 3-cent-a-pound product as it did upon a 10-cent-a-pound product. I submit that is unfair. The Senator may justify it, and I leave it to him to make such justification as he desires.

As suggested by the Senator from Nebraska, when is this infant to grow up? It had that specific rate years ago. Is it never to be an adult?

Mr. FRELINGHUYSEN. Mr. President, I understand that practically 2,400,000 pounds of this article are manufactured in the United States in various industries. One of them is in my State, a reputable industry, which has been built up under this protection. Since 1868, I think, this one industry has been making ultramarine blue. They have asked for 6 cents a pound duty. They felt that with the competition they have to meet and the high rates of wages they have to pay they should have it. At one time they did have it, and under that duty this industry was built up, employing American labor, furnishing the products at a reasonable, uniform price. The House has seen fit to make it 3 cents, which is not outrageous, which is not excessive, which follows practically the uniform average of a long period of time. I claim that to charge that this is an excessive duty or is unjust is not warranted by the facts.

Mr. KING. Mr. President, the Tariff Survey shows that this pigment, which occurs in nature as the mineral lapis lazuli, and is an artificial product obtained by chemical process, is produced very extensively in the United States, and, as the Senator says, has been produced here for many years. It is sold as a dry powder, in pulp, or ground or mixed with water or oil. It is used in large quantities in paints, inks, soaps, and paper, and for many other purposes, including the manufacture of laundry blues.

The Senator from New Jersey is interested as a public-spirited man in the development of his State. I have no doubt he is likewise interested in the building of homes for the people. The Senator knows, as all Senators do, that for a number of years there has been almost a cessation of home building because of the enormous prices.

Mr. FRELINGHUYSEN. Mr. President, I am also interested in the employment of labor and the payment of wages to American laborers. If they do not have their wages, they can not buy the homes.

Mr. KING. Yes, Mr. President, I understand the Senator's position. I was about to compliment the Senator upon a de-

sire to have buildings erected for the people of the United States. He knows, as everybody knows, that for a number of years, owing to the combinations and the high prices, the erection of homes has practically ceased. Prices of brick and of all of the products and commodities which go into houses have been raised to a level of 100, 200, 300, 400, 500, or 600 per cent above pre-war prices.

This bill is calculated to perpetuate these high prices and to offer obstacles to the building of homes by the people of New Jersey, as well as by other people. Of course, it will offer no impediment to the building of palaces by the rich, by those who will profit by these enormous gratuities which this bill gives, but it will offer impediments to the erection of homes by the great mass of the American people.

Paints are important in the building of homes, and this product is not only a constituent of paints but it forms a part of inks, of soaps, of paper, and of many other products, including laundry blues, and a mere enumeration of the uses to which this product is put shows how important it is and how universally it is used in the United States.

The production of it is simple, and I might state that what might be the fundamental products out of which it is manufactured are in very rich abundance in our country. Artificial ultramarine is made by heating a mixture of clays and soda ash, of Glauber's salt, charcoal, and sulphur, in specially constructed furnaces, followed by grinding and levigating the products in water. We have more coal than any country in the world. We have soda ash and clays and sulphur surpassing the products of any country in the world. No country can compete with the United States in the production of this product because of the great plentitude of the fundamental constituents of the product in our country.

Over 2,500,000 pounds were manufactured in 1914, and that was under the provisions of the Underwood law. The industry did not die, it did not languish. It was profitable in 1914. In 1919, with the Underwood law in force, the product was 2,800,000 pounds. The imports from 1911 to 1917 averaged only 636,907 pounds. In 1918 there were 287,000 pounds imported, just giving the round numbers; in 1919, 310,000 pounds; in 1920, 735,000 pounds; in 1921, 605,000 pounds. The unit value for the last year was 10 cents per pound.

Now, the proposition is upon this product so universally employed by the people, so easily constructed, an old and well established industry, to give a specific rate of 3 cents per pound, the same rate affecting the cheap product, the intermediate product, and the costliest product. I submit that under the facts of the case this rate can not be justified. There is no evidence here measuring the difference in wage abroad and here, nothing to indicate the necessity for this high protection, nothing to justify it, an industry that lived prior to 1914, and under the Underwood law, and which has prospered, as I understood the Senator to indicate.

Mr. President, we are ready for a vote.

Mr. McCUMBER. Mr. President, before voting upon this item, I think there are a few facts which ought to be put into the RECORD. The Payne-Aldrich law gave 3 cents per pound on this article. The Underwood law gave 15 per cent ad valorem duty. The present House bill now before us gives 3 cents per pound duty. The committee asks that the House rate be retained.

In 1914 the production of ultramarine blue amounted to 2,500,000 pounds in the United States, valued at 9 cents per pound. In 1919 the production of ultramarine blue amounted to 2,800,000 pounds, valued at 22 cents per pound. The Senator from New Jersey says that the present production is about 2,400,000 pounds.

The imports during the first nine months of 1921 amounted to 605,000 pounds, valued at 10 cents per pound. Six hundred and five thousand pounds is about one-fourth of 25 per cent of the production in the United States. Of course, anyone acquainted with the course of trade will know that an importation of 25 per cent of the consumption will necessarily fix and control the price.

The price was 9 cents a pound prior to the war. It is valued at 10 cents per pound, foreign production. We have given 3 cents per pound duty, which is equivalent to 30 per cent ad valorem upon the foreign price. Thirty per cent ad valorem I do not regard as an excessively high rate.

Mr. FRELINGHUYSEN. Mr. President, I wish to make a further correction, and that is that the duty protects not only an industry in New Jersey, but there are four in the United States furnishing the American market—the Harmon Color Works Co., of Newark, N. J.; the International Ultramarine Works, of Staten Island, N. Y.; the Rust Co., of South Bend, Ind.; and the Standard Ultramarine Co., of Huntington, W. Va.

I wish also to point out that although a comparatively small amount of capital is invested in the production, amounting to $2,500,000, there are others directly concerned in its manufacture, industries absolutely dependent upon it as raw material, having an invested capital of considerably more than that invested in this one industry.

Mr. KING. Mr. President, if the Senator will pardon me, I put into the RECORD at the outset of my remarks on the other item, and stated that it applied to this, the names which have just been read by the Senator, and one or two others engaged in the industry.

Mr. FRELINGHUYSEN. I overlooked that.

Mr. KING. The Seimon-Elting Co. is also one and the Imperial Color Works is another.

Mr. HITCHCOCK Mr. President, I would like to ask the Senator from New Jersey what other industries there are of which he speaks which are dependent upon ultramarine blue for manufacturing?

Mr. FRELINGHUYSEN. Textile industries, paper, paints, linoleum. The capital invested in those industries dependent upon this raw product runs into the millions of dollars.

Mr. HITCHCOCK. I would like to ask the Senator, then, what is the effect of putting on a tariff to raise the price of this material to the industries which use it?

Mr. FRELINGHUYSEN. It has not raised the price.

Mr. HITCHCOCK. Is it not the purpose of putting on a tariff to maintain the price or to raise it?

Mr. FRELINGHUYSEN. Certainly, against the foreign markets.

Mr. HITCHCOCK. Suppose foreign competition comes in so as to reduce the price. Does not that benefit the industries which use it?

Mr. FRELINGHUYSEN. It does; but it does not benefit American labor. It probably benefits German labor and French labor. We are trying to protect American labor, while those on the Senator's side of the Chamber seem to be trying to destroy it.

Mr. HITCHCOCK. This is another instance in which the policy of the Finance Committee of increasing the tariff on a raw material or upon a material used in industry will probably necessitate a compensatory duty for the benefit of those industries, and so it is proposed by these compensatory duties and these tariffs upon the raw material to pyramid the price of the finished article to the ultimate consumer so as to aggravate and increase the cost of living.

Mr. FRELINGHUYSEN. Does the Senator claim that ultramarine is a raw material?

Mr. HITCHCOCK. Perhaps the term "raw material" is not correct. It is a primary article used for the manufacture of another article, and according to the Republican theory, according to the theory upon which the bill is built, having increased by a tariff the cost of this material which must be used by these other industries, we have to give a compensatory duty to the other industries. We have had that several times exploited upon the floor of the Senate. We were told that the duty upon Paris green, for instance, was made necessary because we had raised the duty upon arsenic. So I suppose we will be met with the argument that we must concede a higher tariff to those other products because we are raising the tariff rate on ultramarine blue.

I would like to ask the Senator if it has not been the theory of the Republican protective tariff that by building up these industries they would be made strong enough to maintain themselves?

Mr. FRELINGHUYSEN. Of course, ultramarine is one of the products closely connected with the chemical and dye industry. For 40 years in this country the textile industry and other industries, friends of the Germans, and the Germans themselves fought consistently against a protective tariff on chemicals and dyes, and practically there was no protection whatsoever.

Mr. HITCHCOCK. I understood the Senator to say that there had been protection on this article for 40 years.

Mr. FRELINGHUYSEN. Will the Senator please wait until I get through? It is a part of the policy of the committee to protect the chemical industry. It is true that ultramarine has had a 3-cent duty, but I mean other chemicals. Never did we realize, never did the world realize, the necessity for having an independent chemical and dye industry until the gas attack at Ypres. It was realized then that the German scientists and the German chemists had accomplished something which we had failed to accomplish because we had not the industry or the necessary chemists in this country.

Mr. HITCHCOCK. Will the Senator please answer my question?

Mr. FRELINGHUYSEN. I am answering it.

Mr. HITCHCOCK. Has not this particular article we are now discussing been under protection for 30 or 40 years?

Mr. FRELINGHUYSEN. I have stated that it has been.

Mr. HITCHCOCK. How old does an infant have to be before it ceases to be an infant?

Mr. FRELINGHUYSEN. It is always recognized that we should protect an industry. This is not an infant industry.

Mr. HITCHCOCK. Is the Republican Party abandoning the protection of infant industries?

Mr. FRELINGHUYSEN. No; it is not.

Mr. HITCHCOCK. Does that mean that adult industries have to be protected indefinitely?

Mr. FRELINGHUYSEN. Certainly we have to protect the difference between the conversion cost of our product and the conversion cost abroad. We have to protect American labor. There is where the difference is. It is the difference in the cost of production. It has been the policy of the Republican Party to protect American labor and it has been the policy of the Senator's party to try to destroy it by low tariff duties.

Mr. HITCHCOCK. The Senator need not get excited about it. If the German industry is destroying the American industry, the Senator from New Jersey ought to be able to show it by statistics, but the statistics he has given us show that the American market only receives about 600,000 pounds of this material from abroad, whereas 2,400,000 pounds are produced in the United States. That is a case where competition is going on under the present tariff of 15 per cent ad valorem.

Mr. FRELINGHUYSEN. If the Senator takes this duty off he will destroy the American industry. It has been due to keeping it on that the American industry has been preserved.

Mr. HITCHCOCK. The present duty is 15 per cent ad valorem.

Mr. FRELINGHUYSEN. I know that; and I also know that for seven months prior to the war, when the Underwood law was in effect, practically all the industries in my State were closed down, and the only thing which saved the country from the greatest industrial panic that ever punished a country was the war. It has been due to the war that we have had an embargo, and we have had that protection, and the Democrats are shielding themselves behind the war as one of the virtues of the Underwood law.

Mr. HITCHCOCK. Will the Senator please put in the RECORD the date when the war stopped? When did the war stop?

Mr. FRELINGHUYSEN. The Senator knows as well as I do when it stopped.

Mr. HITCHCOCK. It stopped nearly four years ago.

Mr. FRELINGHUYSEN. Yes; it is nearly four years since a technical peace was made, but actual trade conditions with Germany were delayed two years by reason of the fact that peace was not brought about.

Mr. HITCHCOCK. That did not prevent importations. It is now four years since the war stopped, but the supply from Germany only equals one-fourth of the amount consumed.

Mr. FRELINGHUYSEN. It did prevent importations, because Germany was compelled to furnish reparation dyes to the Allies. She could not get the raw materials. She was not organized. But now she is organized and in the market and competing. The Senator knows that as well as I do.

Mr. HITCHCOCK. The figures given by the Senator show that Germany has only sent in one-fourth of the amount manufactured in the United States. Under those figures he can not possibly claim that any damage has been done up to this time. He can make a prophecy about business, and apparently the theory of the bill, so far as the Finance Committee is concerned, as to base the tariff upon prophecies of dire results that may happen some time in the future; but they have not happened yet, and the very statistics which the Senator offers here demonstrates that there is only a very small competition from Germany at this time.

Mr. FRELINGHUYSEN. The reason why there is no more competition is due to the fact that we have a tariff, and have had a tariff in the past, and that we have built up this industry. The reason why we have not more imports now is because Germany is not organized and is not importing; but if we take this tariff off Germany and France and, I think, England will very soon capture the American market, or, even if we keep only a 15 per cent ad valorem duty, the low duty which has prevailed under the Underwood law, that will be the result.

Mr. HITCHCOCK. That exactly verifies what I said. This tariff is imposed because the Senators on the other side think that some time or other German competition is coming in here to interfere with American production.

Mr. FRELINGHUYSEN. Oh, yes.

Mr. HITCHCOCK. But it can not be shown. Tariffs ought to be based upon facts; tariffs ought to be based upon figures; tariffs ought to be based upon statistics; but here upon this side of the Chamber we have shown as to almost every one of the schedules in the pending bill that invariably on the items upon which the tariff is proposed to be raised by the Committee on Finance there exists at the present time comparatively little competition from abroad, and there is no reason to think that that competition is likely to increase. One man may think one way just as well as another man may think another. I may think that competition is not going to increase; but I want to call the Senator's attention to the fact that every month for, perhaps, the last 30 months our foreign commerce has been growing less and less.

Our exports from the United States for April just closed were thirty-odd million less than they were in April of last year; our imports during April just closed were $19,000,000 less than they were the April before; those of March were less than those of March of last year; those of February were less than those of February last year; and those of January were less than January of the year before.

The fact is that at the present time, if we look the facts in the face, we shall find that our import trade from abroad has been declining steadily for the last 30 months; and yet this tariff bill is brought in here upon the pretense that we are having a disastrous competition from abroad. That, however, can not be shown. Senators on the other side may predict, but if they wish to go before the country basing their excuses to the American public for increasing the taxes upon a prophecy of what may happen some day, they will have a very flimsy basis for their defense.

Mr. FRELINGHUYSEN. The Senator from Nebraska has a very short memory.

Mr. HITCHCOCK. We can point to the figures. We can point to the fact that American commerce is declining. We can show that the Republican tariff is going to produce a still further decline in our exports and imports, and simply add grief to the misery which is already being suffered by the business world, because the policy of the majority is going to take a commerce which is on the decline and force it down still further.

Mr. FRELINGHUYSEN. Mr. President, the Senator from Nebraska has a very short memory. He probably has forgotten that for many years statesmen of this body religiously fought a duty on dyestuffs, and that consequently Germany dominated the market.

When the Senator talks about "grief," he has also forgotten the tariff which was enacted during the Cleveland administration; nor has he made a careful survey of the situation which existed after six months' operation of the Underwood tariff law before war conditions ensued.

Mr. KING. Mr. President, the Senator from Idaho [Mr. GOODING], who now occupies the chair, may congratulate himself upon having one follower, at least, in this body, and that is the distinguished Senator from New Jersey [Mr. FRELINGHUYSEN]. The latter Senator has demonstrated in the observations just submitted, as well as his statements upon former occasions, that he shares the views of the Senator from Idaho, and would practically place an embargo upon foreign commodities. Many of the rates found in this bill will effectually prohibit imports of the commodities to which they relate; and there are those who would raise the already unprecedentedly high rates fixed in this bill to still higher levels.

The Senator from New Jersey stated to the Senator from Nebraska [Mr. HITCHCOCK] that the Republican Party was very solicitous for the welfare of the laborer. When I was addressing the Senate a few days since upon this bill I was interrupted by the able Senator from Connecticut [Mr. MCLEAN], who propounded some questions to which I attempted a reply. In the course of my remarks I referred to the fact that in his State a protective policy had enriched the few; that the manufacturers and others who had secured high tariff rates at the hands of the Republican Party had made inordinate profits, but that in so doing they had exploited the people. I also called attention to the fact that his party had been "so anxious to protect the American laboring man" that it had encouraged and promoted the importation of what some have called "pauper labor."

The Republican Party following the Civil War inaugurated a policy which sought to force down American standards of living and American wages, and, in order to accomplish that end, millions of persons from southern Europe were brought into the United States and put into the mills and factories and mines at wages so low as to drive therefrom thousands of Americans. And wages were so low as to make it impossible for the heads

of families to earn sufficient to provide for the necessities of their families. The sad and pitiful spectacle was presented of mothers being compelled to enter the factories and mills in many of the protected industries in order to supplement by their labors the meager wage paid to their husbands; and we know that thousands of little children were employed in the same factories and mills, because the combined earnings of fathers and mothers were in many cases insufficient for the maintenance of the family.

Even now many mothers work in the mills and factories which are producing "protected" commodities, not because they desire to be so employed, but because their earnings are necessary for the support of their children. Protectionism has enriched some, but it has impoverished many. Too often in preparing tariff measures the masses—the wage earners—have been forgotten, and the demands of the immediate beneficiaries have been heeded. Undoubtedly a tariff which gives to an industry or enterprise the domestic market and destroys competition will enrich those who control the enterprise or industry; but their wealth will be wrung from those who are compelled to thus pay tribute to them.

So the Republican Party, in laying protective duties, has been more interested in the protection of a few than in protecting the people. I received a letter last evening from the president of the American Federation of Labor of the State of Connecticut in which he referred to the colloquy between the Senator from Connecticut [Mr. McLEAN] and myself, and he stated that my reply to the able Senator from Connecticut was true. He further stated that many of the workingmen of Connecticut were in distress and that conditions were so bad that recently through collections and by various devices means had been raised to send some poor, unfortunate persons back to Portugal and to other countries in Europe from which they came. These conditions exist in the State of Connecticut, of which the Senator boasted.

Mr. MOSES. Mr. President——

The PRESIDING OFFICER (Mr. GOODING in the chair). Does the Senator from Utah yield to the Senator from New Hampshire?

Mr. KING. I yield.

Mr. MOSES. It is no part of my business to defend the State of Connecticut, yet, in the temporary absence of the two able Senators from that State, I desire to call to the attention of the Senator from Utah a few figures taken from the Statesman's Yearbook for 1921, which show the population of the State of Connecticut to be 1,380,000; that there are 226,264 wage earners in its manufacturing establishments; that the total amount of deposits in the savings banks of the State is $391,000,000; that the depositors number 717,000, or about 65 per cent of the total population of the State, with an average of $545.76 to each depositor. I offer that, Mr. President, as a picture of the woeful conditions obtaining in the State of Connecticut.

Mr. KING. Mr. President, undoubtedly there are large amounts of money in the banks of Connecticut. I said when I was replying to the Senator from Connecticut that under the protective policy a few in his State had grown immensely rich, and they had been enabled out of their great profits to build railroads and to loan millions to agricultural parts of the country. I do not know what the average amount of deposits would be of those to whom the Senator from New Hampshire refers, but I venture the assertion that most of the depositors have but very small sums to their credit. We know that many persons who have been working in mills and factories are not American citizens and are returning to their homes across the sea. Thousands of persons have withdrawn their small savings from the banks during the last two years, either because they were compelled to do so to buy bread or to meet pressing demands. And, as I have indicated, millions of dollars have been sent to European countries by those who through trial and privation have been able to save a few dollars.

Mr. MOSES. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from New Hampshire?

Mr. KING. I yield.

Mr. MOSES. If the Senator from Utah will permit me, I fear he is not familiar with the savings-bank institution as it exists in New England. The savings banks are not frequented or made use of by those of large earnings or who have large sums of money for investment, but they are a sure and safe depository for the wage earner, which accounts for the fact that 717,000 out of the 1,300,000 people in the State of Connecticut make use of the savings banks to the tune of $545 per capita.

Mr. KING. I have no doubt, Mr. President, that during the war, when high wages were paid——

Mr. HITCHCOCK. Mr. President——

Mr. KING. Let me finish the sentence——

Mr. HITCHCOCK. The Senator from Utah can go further and can say all through Woodrow Wilson's administration.

Mr. KING. Yes; during the Democratic administration better wages were paid not only in agriculture and in the livestock industry, but in the shipyards, in the steel mills, and in the factories. The fact is that during the years of Mr. Wilson's administration the wealth of the United States—and the Underwood tariff law was in force—increased from approximately $180,000,000,000 or $187,000,000,000 to more than $300,000,000,000; but, as I said the other day, the wealth of the country has shrunk until now after a year and a few months of Republican administration the wealth of the United States is not more than $200,000,000,000 or $225,000,000,000.

Mr. President, I shall later ask to insert in the RECORD the letter which I have referred to. The record will show that in the State of Connecticut labor has been, except during the war and under Mr. Wilson's administration, poorly paid, and even under the administration of Mr. Wilson the manufacturers in Connecticut and many of the employers of labor attempted to reduce wages below a fair and just standard, with the result strikes occurred and much suffering ensued among thousands of employees. It was shown in some of the investigations that women and children were forced to work in factories and in mills, in order that they might supplement the wages of their husbands and fathers in order that they might eke out a more or less wretched and miserable existence.

Mr. President, the Democratic Party believes in a policy that will furnish work to the American people and give to them a living wage. It believes in the individual, in his advancement and happiness. It seeks to build and establish happy homes, in which peace and happiness and prosperity abound. It believes in men more than dollars; in the happiness of the many, not the welfare of only the few. It seeks justice and equality and the development of a broader spirit of brotherhood among all the people. It speaks for the oppressed and the sorrowing. It is the living voice that calls humanity to amity and love to push onward and upward toward the heights of freedom, industrial and political, where peace and righteousness are enthroned. The Democratic Party seeks to promote legitimate industrial development, to increase the number of factories and mills and plants, in order that greater prosperity may come to all. It is opposed to a policy which prostitutes the powers of the Government and by hothouse methods grows pallid and sickly plants or creates trusts which devour the people. Democrats do not believe in perverting the taxing power of the Government to put money into the pockets of a few individuals and to give them colossal fortunes. They are unwilling to increase the burdens of the many to add to the fortunes of the few.

Mr. President, there has been no showing with respect to the item under consideration which justifies the action of the committee. The Senator from New Jersey has labored eloquently, forcefully, as he always does in support of any proposition which he favors, and has made the very best case possible. He has shown that there is an industry which has been in existence for many years; that two or three years ago it was producing annually more than 2,400,000 pounds of this product; that the importations were less than 600,000 pounds. He has shown that a number of manufacturing plants are engaged in producing this commodity; that they continued their operations under the provisions of the Underwood law and increased their output, notwithstanding the foreign competition. Now he proposes to impose a specific duty of 3 cents per pound upon a product the great portion of which before the war sold for 3½ cents a pound. In other words, we are to enact a rate of nearly 100 per cent upon a product in order to advance the price, or keep up war prices, that the domestic producers may increase their profits. The rate of increase is not so great upon some of the commodities within this category, but all commodities coming under it are given a high and indefensible rate, the effect of which is to burden the people and enrich the domestic producer.

This paragraph is in line with the bill; it fixes rates of duty for the purpose of maintaining war prices and war profits. It prevents competition and turns over the domestic consumer to the profiteering interests of the United States. This is not an infant industry; labor or wage questions are not involved. The difference in cost of production is not suggested. We are asked to give the power to the producers to impose their will upon the helpless consumer.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Utah [Mr. KING] to the amendment of the committee.

Mr. HEFLIN and Mr. KING called for the yeas and nays, and they were ordered.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. EDGE (when his name was called). Making the same announcement as to my pair and its transfer, I vote "nay."

Mr. ERNST (when his name was called). I have a general pair with the senior Senator from Kentucky [Mr. STANLEY], I transfer that pair to the junior Senator from Oregon [Mr. STANFIELD], and will vote. I vote "nay."

Mr. HARRISON (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. ELKINS] to the Senator from Ohio [Mr. POMERENE], and will vote. I vote "yea."

Mr. JONES of New Mexico (when his name was called). Making the same announcement as to my pair as on the preceding roll call, I vote "yea."

Mr. LODGE (when his name was called). Making the same transfer as before of my pair with the Senator from Alabama [Mr. UNDERWOOD], I vote "nay."

Mr. OVERMAN (when his name was called). I have a general pair with the senior Senator from Wyoming [Mr. WARREN]. I transfer that pair to the junior Senator from Rhode Island [Mr. GERRY], and will vote. I vote "yea."

Mr. STERLING (when his name was called). Making the same transfer as on the previous roll call, I vote "nay."

The roll call was concluded.

Mr. BALL. Has the Senator from Florida [Mr. FLETCHER] voted?

The PRESIDING OFFICER. He has not.

Mr. BALL. I transfer my general pair with that Senator to the junior Senator from Washington [Mr. POINDEXTER], and vote "nay."

Mr. HARRIS. Making the same announcement as before as to my pair, I vote "yea."

The roll call resulted—yeas 14, nays 34, as follows:

YEAS—14.

Ashurst	Harrison	King	Shields
Caraway	Heflin	Overman	Walsh, Mass.
Dial	Hitchcock	Robinson	
Harris	Jones, N. Mex.	Sheppard	

NAYS—34.

Ball	Gooding	McLean	Smoot
Brandegee	Hale	Moses	Spencer
Broussard	Johnson	Newberry	Sterling
Bursum	Ladd	Norbeck	Sutherland
Capper	Lenroot	Oddie	Townsend
Curtis	Lodge	Page	Wadsworth
Edge	McCormick	Phipps	Willis
Ernst	McCumber	Rawson	
Frelinghuysen	McKinley	Shortridge	

NOT VOTING—48.

Borah	France	Nelson	Smith
Calder	Gerry	New	Stanfield
Cameron	Glass	Nicholson	Stanley
Colt	Harreld	Norris	Swanson
Crow	Jones, Wash.	Owen	Trammell
Culberson	Kellogg	Pepper	Underwood
Cummins	Kendrick	Pittman	Walsh, Mont.
Dillingham	Keyes	Poindexter	Warren
du Pont	La Follette	Pomerene	Watson, Ga.
Elkins	McKellar	Ransdell	Watson, Ind.
Fernald	McNary	Reed	Weller
Fletcher	Myers	Simmons	Williams

Mr. EDGE. Making the same announcement as before, I vote "nay."

The PRESIDING OFFICER. On the amendment of the Senator from Utah to the committee amendment the yeas are 14, the nays are 34. Less than a quorum has voted. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Hale	McKinley	Shields
Brandegee	Harris	McLean	Shortridge
Broussard	Harrison	Moses	Smoot
Bursum	Johnson	Newberry	Sterling
Capper	Jones, N. Mex.	Norbeck	Sutherland
Curtis	King	Oddie	Townsend
Dial	Ladd	Overman	Wadsworth
Edge	Lenroot	Page	Walsh, Mass.
Ernst	Lodge	Phipps	Watson, Ind.
Frelinghuysen	McCormick	Rawson	Willis
Gooding	McCumber	Sheppard	

Mr. RAWSON. I wish to announce that my colleague [Mr. CUMMINS] is necessarily absent on account of illness.

The PRESIDING OFFICER. Forty-three Senators having answered to their names, a quorum is not present. The Secretary will call the names of the absent Senators.

The reading clerk called the names of the absent Senators.

Mr. JONES of Washington entered the Chamber and answered to his name.

The PRESIDING OFFICER. Forty-four Senators have answered to their names. There is not a quorum present.

Mr. McCUMBER. I move that the Sergeant at Arms be directed to procure the attendance of absent Senators.

The motion was agreed to.

The PRESIDING OFFICER. The Sergeant at Arms will execute the order of the Senate.

Mr. CARAWAY, Mr. SPENCER, Mr. MCNARY, Mr. KEYES, and Mr. BALL entered the Chamber and answered to their names.

The VICE PRESIDENT. Forty-nine Senators have answered to their names. A quorum is present. The Secretary will call the roll on agreeing to the amendment of the Senator from Utah [Mr. KING], which the Secretary will state.

The READING CLERK. On page 26, line 16, strike out "4 cents per pound" and insert in lieu thereof "15 per cent ad valorem," so as to read:

Ultramarine blue, dry in bulk, or ground in or mixed with oil or water, wash and all other blues containing ultramarine, 15 per cent ad valorem.

The reading clerk proceeded to call the roll.

Mr. FRELINGHUYSEN (when his name was called). I transfer my general pair with the Senator from Montana [Mr. WALSH] to the junior Senator from Pennsylvania [Mr. PEPPER] and vote "nay."

Mr. HARRIS (when his name was called). Making the same announcement as before with reference to my pair and transfer, I vote "yea."

Mr. JONES of New Mexico (when his name was called). I transfer my pair with the Senator from Maine [Mr. FERNALD] to the senior Senator from Missouri [Mr. REED] and vote "yea."

Mr. LODGE (when has name was called). Making the same announcement as before as to my pair and its transfer, I vote "nay."

Mr. McKINLEY (when his name was called). Making the same announcement as before with reference to my pair and its transfer, I vote "nay."

Mr. OVERMAN (when his name was called). I have a general pair with the senior Senator from Wyoming [Mr. WARREN]. I transfer that pair to the junior Senator from Rhode Island [Mr. GERRY] and vote "yea."

Mr. STERLING (when his name was called). Making the same announcement as on the last vote with reference to my pair and its transfer, I vote "nay."

Mr. WATSON of Indiana (when his name was called). I have a general pair with the senior Senator from Mississippi [Mr. WILLIAMS], which I transfer to the senior Senator from Pennsylvania [Mr. CROW], and vote "nay."

The roll call was concluded.

Mr. BALL (after having voted in the negative). Has the Senator from Florida [Mr. FLETCHER] voted?

The VICE PRESIDENT. That Senator has not voted.

Mr. BALL. I have a general pair with that Senator, which I transfer to the junior Senator from Washington [Mr. POINDEXTER], and allow my vote to stand.

Mr. EDGE. Making the same announcement as before with reference to my pair and its transfer, I vote "nay."

Mr. ERNST (after having voted in the negative). I have a general pair with the senior Senator from Kentucky [Mr. STANLEY]. I transfer that pair to the junior Senator from Oregon [Mr. STANFIELD] and allow my vote to stand.

Mr. SUTHERLAND. Transferring my general pair with the Senator from Arkansas [Mr. ROBINSON] to the junior Senator from Oklahoma [Mr. HARRELD], I vote "nay."

Mr. HARRISON. Transferring my pair with the Senator from West Virginia [Mr. ELKINS] to the Senator from Alabama [Mr. HEFLIN], I vote "yea."

The roll call resulted—yeas 9, nays 38, as follows:

YEAS—9.

Dial	Jones, N. Mex.	Overman	Shields
Harris	King	Sheppard	Walsh, Mass.
Harrison			

NAYS—38.

Ball	Hale	McNary	Smoot
Brandegee	Johnson	Moses	Spencer
Broussard	Keyes	Newberry	Sterling
Bursum	Ladd	Nicholson	Sutherland
Capper	Lenroot	Norbeck	Townsend
Curtis	Lodge	Oddie	Wadsworth
Edge	McCormick	Page	Watson, Ind.
Ernst	McCumber	Phipps	Willis
Frelinghuysen	McKinley	Rawson	
Gooding	McLean	Shortridge	

NOT VOTING—49.

Ashurst	Cummins	Glass	McKellar
Borah	Dillingham	Harreld	Myers
Calder	du Pont	Heflin	Nelson
Cameron	Elkins	Hitchcock	New
Caraway	Fernald	Jones, Wash.	Norris
Colt	Fletcher	Kellogg	Owen
Crow	France	Kendrick	Pepper
Culberson	Gerry	La Follette	Pittman

Poindexter	Simmons	Trammell	Weller
Pomerene	Smith	Underwood	Williams
Ransdell	Stanfield	Walsh, Mont.	
Reed	Stanley	Warren	
Robinson	Swanson	Watson, Ga.	

The VICE PRESIDENT. On this vote the yeas are 9 and the nays 38. A quorum has not voted. The Secretary will call the roll.

The principal legislative clerk called the roll, and the following Senators answered to their names:

Ball	Hale	McLean	Sheppard
Brandegee	Harrison	McNary	Shields
Broussard	Johnson	Moses	Shortridge
Bursum	Jones, N. Mex.	New	Smoot
Capper	Keyes	Newberry	Spencer
Caraway	King	Nicholson	Sterling
Curtis	Ladd	Norbeck	Sutherland
Dial	Lenroot	Oddie	Townsend
Edge	Lodge	Overman	Wadsworth
Ernst	McCormick	Page	Watson, Ind.
Frelinghuysen	McCumber	Phipps	Willis
Gooding	McKinley	Rawson	

The VICE PRESIDENT. Forty-seven Senators have answered to their names. A quorum is not present. The Secretary will call the names of the absent Senators.

The principal legislative clerk called the names of the absent Senators.

Mr. HARRIS and Mr. WALSH of Montana entered the Chamber and answered to their names.

The VICE PRESIDENT. Forty-nine Senators have answered to their names. A quorum is present. The Secretary will call the roll on agreeing to the amendment of the Senator from Utah [Mr. KING] to the amendment of the committee.

The Assistant Secretary proceeded to call the roll.

Mr. FRELINGHUYSEN (when his name was called). Making the same announcement as before, I vote "nay."

Mr. HARRISON (when his name was called). Making the same announcement as before, I vote "yea."

Mr. OVERMAN (when his name was called). Making the same announcement as to the transfer of my pair, I vote "yea."

Mr. STERLING (when his name was called). Making the same announcement as on the last roll call, I vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement with reference to my pair and its transfer, I vote "nay."

The roll call was concluded.

Mr. BALL. Making the same announcement as before as to my pair and its transfer, I vote "nay."

Mr. LODGE. Making the same announcement as before as to the transfer of my pair, I vote "nay."

Mr. PHIPPS (after having voted in the negative). I have a pair with the Senator from South Carolina [Mr. DIAL], which I transfer to the senior Senator from Iowa [Mr. CUMMINS] and will allow my vote to stand.

Mr. ERNST. I have a pair with the senior Senator from Kentucky [Mr. STANLEY]. I transfer that pair to the junior Senator from Oregon [Mr. STANFIELD] and will vote. I vote "nay."

Mr. HARRIS. Making the same announcement as before as to my pair, I vote "yea."

Mr. NEW. Transferring my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the senior Senator from Idaho [Mr. BORAH], I vote "nay."

The roll call resulted, yeas 7, nays 39, as follows:

YEAS—7.

Caraway	Harrison	Overman	Walsh, Mont.
Harris	King	Sheppard	

NAYS—39.

Ball	Hale	McNary	Shortridge
Brandegee	Johnson	Moses	Smoot
Broussard	Keyes	New	Spencer
Bursum	Ladd	Newberry	Sterling
Capper	Lenroot	Nicholson	Sutherland
Curtis	Lodge	Norbeck	Townsend
Edge	McCormick	Oddie	Wadsworth
Ernst	McCumber	Page	Watson, Ind.
Frelinghuysen	McKinley	Phipps	Willis
Gooding	McLean	Rawson	

NOT VOTING—50.

Ashurst	Fletcher	Myers	Smith
Borah	France	Nelson	Stanfield
Calder	Gerry	Norris	Stanley
Cameron	Glass	Owen	Swanson
Colt	Harreld	Pepper	Trammell
Crow	Heflin	Pittman	Underwood
Culberson	Hitchcock	Poindexter	Walsh, Mass.
Cummins	Jones, N. Mex.	Pomerene	Warren
Dial	Jones, Wash.	Ransdell	Watson, Ga.
Dillingham	Kellogg	Reed	Weller
du Pont	Kendrick	Robinson	Williams
Elkins	La Follette	Shields	
Fernald	McKellar	Simmons	

The VICE PRESIDENT. On this question the yeas are 7, the nays are 39. A quorum has not voted.

Mr. LODGE. I ask for a report from the Sergeant at Arms.

The VICE PRESIDENT. The Sergeant at Arms will make a report.

The SERGEANT AT ARMS. The Senators who are absent because of illness are Senators COLT, DILLINGHAM, NELSON, POINDEXTER, CULBERSON, and CROW. Senator BORAH is absent on account of the illness of his wife, and Senator WARREN because of a death in his family.

Those who are out of town are Senators CALDER, CAMERON, FERNALD, FRANCE, KELLOGG, LA FOLLETTE, MCKELLAR, REED, SMITH, STANFIELD, TRAMMELL, GERRY, OWEN, and CUMMINS.

The Senators who are in town, but absent from the roll call, are Senators ASHURST, DU PONT, ELKINS, FLETCHER, GLASS, HEFLIN, HITCHCOCK, KENDRICK, NORRIS, PEPPER, PITTMAN, POMERENE, RANSDELL, ROBINSON, SIMMONS, STANLEY, SWANSON, UNDERWOOD, WALSH of Massachusetts, WATSON of Georgia, WELLER, and WILLIAMS.

Mr. WADSWORTH. Mr. President, I ask unanimous consent to make a very brief statement with respect to my colleague [Mr. CALDER]. He has been reported by the Sergeant at Arms as absent from the Senate. That is true; but his absence is due to his illness.

The VICE PRESIDENT. Without objection, the statement will stand.

Mr. JONES of New Mexico. Mr. President——

The VICE PRESIDENT. For what purpose does the Senator rise?

Mr. JONES of New Mexico. I rise for the purpose of making an announcement regarding the absence of the Senator from North Carolina [Mr. SIMMONS].

The VICE PRESIDENT. Without objection, it will be received.

Mr. JONES of New Mexico. I desire to state that the Senator from North Carolina is necessarily at his home to-night, several miles from the city of Washington; that there are very urgent reasons why he is not here at this time.

Mr. SHEPPARD. I call for the regular order.

The VICE PRESIDENT. The Secretary will call the roll.

The Assistant Secretary called the roll, and the following Senators answered to their names:

Ashurst	Gooding	McKinley	Rawson
Ball	Hale	McLean	Robinson
Brandegee	Harris	McNary	Sheppard
Broussard	Harrison	Moses	Shortridge
Bursum	Johnson	New	Smoot
Capper	Jones, N. Mex.	Newberry	Spencer
Caraway	Keyes	Nicholson	Sterling
Curtis	King	Norbeck	Sutherland
Dial	Ladd	Oddie	Townsend
Edge	Lenroot	Overman	Underwood
Ernst	Lodge	Page	Wadsworth
Fletcher	McCormick	Phipps	Watson, Ind.
Frelinghuysen	McCumber	Pomerene	Willis

The VICE PRESIDENT. Fifty-two Senators having answered to their names, a quorum is present. The yeas and nays have been ordered on the amendment offered by the Senator from Utah [Mr. KING] to the committee amendment, and the Secretary will call the roll.

Mr. JONES of New Mexico. Mr. President, may we have the question stated?

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from Utah [Mr. KING] to the committee amendment, which the Secretary will state.

The ASSISTANT SECRETARY. On page 26, line 16, the committee proposes to strike out "3 cents per pound" and insert "4 cents per pound." The Senator from Utah proposed to strike out "4 cents per pound" and insert in lieu thereof "15 per cent ad valorem."

The Assistant Secretary proceeded to call the roll.

Mr. FRELINGHUYSEN (when his name was called). Making the same announcement as before, I vote "nay."

Mr. HARRIS (when his name was called). Making the same announcement as to my pair and its transfer, I vote "yea."

Mr. HARRISON (when his name was called). Making the same announcement as before, I vote "yea."

Mr. JONES of New Mexico (when his name was called). I transfer my pair with the Senator from Maine [Mr. FERNALD] to the Senator from Missouri [Mr. REED], and vote "yea."

Mr. NEW (when his name was called). I transfer my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Washington [Mr. POINDEXTER], and vote "nay."

Mr. OVERMAN (when his name was called). Making the same announcement as to my pair and its transfer as on the previous vote, I vote "yea."

Mr. STERLING (when his name was called). Making the same announcement as on the last vote, I vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as heretofore as to my pair and its transfer, I vote "nay."

The roll call was concluded.

Mr. UNDERWOOD. I desire to announce for the junior Senator from Massachusetts [Mr. WALSH] that he was unavoidably called from the Chamber, and left word that he would be back shortly. If he were present now, he would vote "yea."

Mr. EDGE. Making the same announcement as before as to my pair and its transfer, I vote "nay."

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from Minnesota [Mr. KELLOGG] with the Senator from North Carolina [Mr. SIMMONS];

The Senator from Rhode Island [Mr. COLT] with the Senator from Florida [Mr. TRAMMELL]; and

The Senator from Washington [Mr. JONES] with the Senator from Virginia [Mr. SWANSON].

Mr. McCUMBER. I have a general pair with the junior Senator from Utah [Mr. KING]. He being absent from the Chamber, I transfer that pair to the senior Senator from Minnesota [Mr. NELSON] and vote "nay."

Mr. ERNST. Making the same announcement as heretofore as to my pair and its transfer, I vote "nay."

The result was announced—yeas 12, nays 39, as follows:

YEAS—12.

Ashurst	Fletcher	Jones, N. Mex.	Robinson
Caraway	Harris	Overman	Sheppard
Dial	Harrison	Pomerene	Underwood

NAYS—39.

Ball	Hale	McNary	Shortridge
Brandegee	Johnson	Moses	Smoot
Broussard	Keyes	New	Spencer
Bursum	Ladd	Newberry	Sterling
Capper	Lenroot	Nicholson	Sutherland
Curtis	Lodge	Norbeck	Townsend
Edge	McCormick	Oddie	Wadsworth
Ernst	McCumber	Page	Watson, Ind.
Frelinghuysen	McKinley	Phipps	Willis
Gooding	McLean	Rawson	

NOT VOTING—45.

Borah	Gerry	Nelson	Stanley
Calder	Glass	Norris	Swanson
Cameron	Harreld	Owen	Trammell
Colt	Heflin	Pepper	Walsh, Mass.
Crow	Hitchcock	Pittman	Walsh, Mont.
Culberson	Jones, Wash.	Poindexter	Warren
Cummins	Kellogg	Ransdell	Watson, Ga.
Dillingham	Kendrick	Reed	Weller
du Pont	King	Shields	Williams
Elkins	La Follette	Simmons	
Fernald	McKellar	Smith	
France	Myers	Stanfield	

So Mr. KING's amendment to the amendment of the committee was rejected.

Mr. HALE. Mr. President, I ask unanimous consent to be allowed to make a statement in regard to my colleague.

The VICE PRESIDENT. Without objection, the statement will be received.

Mr. HALE. In the list of names read by the Sergeant at Arms of those who were absent from the city appears the name of my colleague [Mr. FERNALD], who is away from Washington on account of illness.

Mr. McCUMBER. Mr. President, I ask unanimous consent at this time that when the Senate concludes its business on this calendar day it shall recess until to-morrow at 11 o'clock.

The VICE PRESIDENT. Is there objection?

Mr. UNDERWOOD. What is the request?

The VICE PRESIDENT. That the Senate shall recess until to-morrow at 11 o'clock when it finishes its business to-day.

Mr. UNDERWOOD. Of course, I do not intend to object to what the Senator desires, but I want to have a little conversation with him before it is agreed to. I would like to be informed as to the Senator's program with reference to the procedure of the Senate.

I notice that every now and then a bill is reported or called up and unanimous consent is asked for its immediate consideration. When such a request is made as to unimportant bills, bills which we would pass under ordinary circumstances by unanimous consent, I have no objection, and will raise none; but I think if the Senator intends to keep this bill before the Senate—and it is proper that he should, in his own way—I do not think unanimous consent should be asked for the consideration of debatable bills. If the Senator wants to have them considered and will lay aside the tariff bill and bring them up, so that we may have opportunity to give those on this side of the Chamber notice that they will be considered, I shall raise no objection; but I hope we can reach some understanding that bills of importance will not be brought up except in that way and that we may have some notice of the bills which are coming up before the Senate for consideration.

I am not going to object without being forced to do so; but, of course, if this procedure is continued, then it would require me to object all along the line and to force a vote on these questions. So I ask the Senator if we can not have an understanding that on important bills of that kind they will not come up for unanimous-consent consideration before some notice is given when they are coming up.

Mr. McCUMBER. I think the request is a very reasonable one. I do not want to lay aside the tariff bill at all for any bill that is going to require any considerable discussion. Thus far I have only yielded for bills to be introduced, or for the passage of some resolution or a bridge bill or something of minor importance that would take no time.

Mr. UNDERWOOD. I have no objection to that, but I have heard rumors that other bills which are debatable, where there would be issues involved, might be called up. The Senator from New York [Mr. WADSWORTH] has one or two that he desires to bring up for consideration, but I want them considered in a way that will have them laid before the Senate, and so that the Senate will have an opportunity to consider them with reasonable debate in the usual course. We have been allowing the Senator to pursue his own course in this matter, and I hope to continue to do so, but I want some understanding that important bills will not be brought up before notice is given.

Mr. LODGE. Mr. President, it is the intention of the majority, as the Senator in charge of the tariff bill has stated, to keep that bill constantly before the Senate. I do not include appropriation bills or conference reports, which are always excepted, and which require laying aside the bill, of course, but certainly it is our intention to keep the bill before the Senate until it is passed, no matter how long we are held, and to sit as long hours as possible. There is no intention of sending this bill over, no matter how many weeks it takes. Therefore, I think the Senator's request entirely reasonable. If there is to be a debatable bill brought up, notice should be given and time set aside for it.

Mr. UNDERWOOD. That is all we ask. If we have that understanding, I have no objection to the Senator proceeding. Of course, an objection on our part would require a motion to take up a bill and the displacing of the pending bill. I have no desire to force a situation of that kind.

Mr. LODGE. Certainly I know the Senator has not, but if we should decide to take up a debatable bill, I think due notice ought to be given and assent asked. If it is so important that we have to lay aside the tariff bill, that can be done. Certainly the other side of the Chamber ought to receive due notice and time ought to be allotted to any serious bill that requires debate. In fact, I shall be glad to see the small bills cut off during the consideration of the tariff bill.

Mr. UNDERWOOD. There is no objection to that procedure, and I am glad to receive that assurance from the leader of the majority party. So far as the consideration of the pending bill is concerned, we know that no tariff bill has ever passed the Senate without weeks and months of debate. Of course, we intend to debate the bill until we present what we think are the salient features in it. That is undoubtedly going to take considerable time, but as to the orderly procedure of the Senate in prosecuting its business, there is no desire on this side of the Chamber, that I know of, to interfere with it. All we want is to have notice when it comes to taking up any other bill.

Mr. LODGE. I only said what I did because I wish to support the Senator in charge of the pending bill. It is the intention on this side of the Chamber to keep the tariff bill before the Senate, no matter how long it takes. We hope there will be nothing but legitimate debate, but we shall keep it here until it is passed.

The VICE PRESIDENT. Is there objection to the unanimous-consent request?

Mr. HARRISON. Mr. President, may I suggest to the Senator from Massachusetts that he said the only exception that will be made in setting aside the tariff bill to take up other matters would be conference reports and appropriation bills. The Senator knows there is a controversy over the District appropriation bill. There will be quite a good deal of discussion on that report. Does not the Senator think we ought to have notice when that is going to be brought up also, so that we may know when it is going to come before the Senate? Does not the Senator think when the District bill is to be brought before the Senate, where there is a controversy and which will involve a great deal of discussion, we ought to have notice?

Mr. LODGE. That is not strictly a conference report, but it will be so regarded. I only mentioned the things for which the tariff bill might be set aside. I hope it will not be set aside for any of them. The pay bill which the Senator from New York [Mr. WADSWORTH] has in charge is a bill that ought to be passed with the least possible delay, and I think the other side ought to be notified when we intend to take it up, as the Senator from Alabama suggested.

The VICE PRESIDENT. Is there objection to the unanimous-consent request of the Senator from North Dakota? The Chair hears none, and it is so ordered. The question is on agreeing to the amendment of the committee.

Mr. McCUMBER. I ask that the amendment of the committee be disagreed to, leaving the rate 3 cents per pound as fixed by the House.

The amendment was rejected.

The VICE PRESIDENT. The next amendment will be stated.

The ASSISTANT SECRETARY. The next amendment of the committee will be found in paragraph 67, page 26, line 23, where the committee proposes to strike out "25" and insert "30" before the words "per centum ad valorem."

Mr. JONES of New Mexico. Mr. President, the junior Senator from Utah [Mr. KING] is engaged at present in eating his dinner, and I request that we pass over this paragraph and take up paragraph numbered 69.

Mr. SMOOT. I will say to the chairman of the committee that the junior Senator from Utah did ask me to do that. The Senator from New Mexico wants to go to paragraph 69, and if the chairman has no objection I would like to have that done.

Mr. McCUMBER. That is entirely agreeable to me.

The amendments of the committee to paragraph 69 were, on page 27, line 3, after the word "Litharge," to insert "2½ cents per pound;"; in line 4, after the word "mineral," to insert "3 cents per pound;"; in the same line, after the words "red lead," to strike out "and" and to insert "2¾ cents per pound;"; and in line 5, before the word "cents," to strike out "2⅞" and to insert "2½," so as to make the paragraph read:

PAR. 69. Lead pigments: Litharge, 2½ cents per pound; orange mineral, 3 cents per pound; red lead, 2¾ cents per pound; white lead, 2½ cents per pound; all pigments containing lead, dry or in pulp, or ground in or mixed with oil or water, not specially provided for, 30 per cent ad valorem.

Mr. WALSH of Montana. Mr. President, with reference to paragraph 69, I assume a duty of 2½ cents on litharge is merely compensatory.

Mr. SMOOT. I will say that the compensatory duty is 1.9 cents and the duty imposed is 2.5 cents; that is, six-tenths of 1 cent is a protective duty and 1.9 cents is a compensatory duty upon lead. In other words, in paragraph 388 the duty upon lead ores is to be found, and that is 1.5 cents per pound. Paragraph 389 is a paragraph on bullion and carries a duty of 2⅛ cents per pound. The duty on lead sheet found in the same paragraph is 2⅞ cents per pound, and then in paragraph 69 is the duty on lead pigment. The first item is litharge, and that carries 2.5 cents per pound. In every compound of litharges there is an amount of lead which carries a tariff of 1.9 cents; in other words, the amount of the duty placed on the lead bullion is 2.5 cents.

Mr. WALSH of Montana. So that really the propriety of imposing a duty of 2½ cents on litharges depends, as I take it, upon the propriety of imposing 2⅛ cents per pound on lead bullion.

Mr. SMOOT. That is true.

Mr. WALSH of Montana. So that is not really essential. I ask the Senator from New Mexico to postpone the consideration of paragraph 69 until paragraph 389 is disposed of.

Mr. JONES of New Mexico. I think there is no doubt that we must consider the duty upon lead itself in connection with this paragraph. I supposed that we would take paragraphs 388 and 389 into consideration.

Mr. SMOOT. Let me ask the Senator from Montana if he would object to a rate of duty of 1½ cents on the lead contained in lead ore?

Mr. WALSH of Montana. I think it is entirely immaterial what position I take upon the matter. I do not suppose that the imposition of a duty of 2⅛ cents per pound on lead is going to go unchallenged on the floor of the Senate. It is entirely agreeable to me to take up the item now, but I suggest that, as mentioned by the Senator, this precipitates, of course, a discussion of paragraph 389.

Mr. SMOOT. Does the Senator from New Mexico object to a rate of duty of 1½ cents per pound on the lead contained in lead ore?

Mr. WALSH of Montana. That is not the question.

Mr. SMOOT. I want to know whether the Senator from New Mexico objects to it.

Mr. WALSH of Montana. It seems to me the duty on lead here is not of consequence. It is the duty on bullion.

Mr. SMOOT. The duty on bullion is the same as the duty on lead ore. What would be the difference whether we take in lead ores here or not?

Mr. WALSH of Montana. It would be the difference between 1½ cents and 2⅛ cents per pound.

Mr. SMOOT. That differential can be justified.

Mr. WALSH of Montana. However well that differential can be justified, it is the duty of 2⅛ cents on lead bullion that is of consequence in determining the rate of duty which litharges should bear.

Mr. SMOOT. It is also just as important that we should decide the rate upon lead in the ore.

Mr. WALSH of Montana. The Senator is quite right about that.

Mr. SMOOT. The whole rate has been balanced up, commencing with 1½ cents a pound on the lead contained in the ore.

Mr. WALSH of Montana. Exactly. That is where we have to commence, and of course it is a matter of no consequence to me whether it is taken up now or after the lead schedule is taken up for discussion.

Mr. SMOOT. I ask unanimous consent that we take up paragraph 388 and settle that at this time, and then follow it with paragraph 389.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

Mr. SMOOT. I will say to the Senator from Montana that, of course, there is no change in the House provision in the first part of paragraph 388, which fixes a duty of 1½ cents per pound on lead-bearing ores and mattes of all kinds, so we can not consider it at this time.

Mr. WALSH of Montana. The Senator is quite right about that.

Mr. SMOOT. I would like very much to have the Senate proceed on the basis that lead contained in lead ores will bear 1½ cents a pound and that bullion will be 2⅛ cents, and then, if there is any objection to the rate found in paragraph 69, let it be understood that it is on that basis.

The ASSISTANT SECRETARY. The first amendment in paragraph 388 is, on page 88, at the beginning of line 18, before the word "assay," to strike out "an" and to insert "a proper," and in the same line, after the word "sample," to strike out "by wet assay without deduction," so as to make the additional proviso read:

Provided further, That on all importations of lead-bearing ores and mattes of all kinds the duties shall be estimated at the port of entry and a bond given in double the amount of such estimated duties for the transportation of the ores or mattes by common carriers bonded for the transportation of appraised or unappraised merchandise to properly equipped sampling or smelting establishments, whether designated as bonded warehouses or otherwise. On the arrival of the ores or mattes at such establishments they shall be sampled according to commercial methods under the supervision of Government officers, who shall be stationed at such establishments, and who shall submit the samples thus obtained to a Government assayer, designated by the Secretary of the Treasury, who shall make a proper assay of the sample and report the result to the proper customs officers, and the import entries shall be liquidated thereon. And the Secretary of the Treasury is authorized to make all necessary regulations to enforce the provisions of this paragraph.

The amendment was agreed to.

The ASSISTANT SECRETARY. The next amendment will be found in paragraph 389, on page 89, line 3, after the word "wire," to strike out "lead in any article or material not specially provided for," so as to make the paragraph read:

PAR. 389. Lead bullion or base bullion, lead in pigs and bars, lead dross, reclaimed lead, scrap lead, antimonial lead, antimonial scrap lead, type metal, Babbitt metal, solder, all alloys or combinations of lead not specially provided for, 2⅛ cents per pound on the lead contained therein; lead in sheets, pipe, shot, glazier's lead, and lead wire, 2⅞ cents per pound.

The amendment was agreed to.

Mr. UNDERWOOD. Mr. President, I heard something a moment ago about which I desire to obtain some information. I have been in the Senate all day, but I went home for supper, as it became necessary that I should have something to eat. I understand that while I was absent the lack of a quorum was developed; so the Sergeant at Arms was directed to request the attendance of absentees; and when he made his report in reference to the absentees he reported the number of Democrats who were in town and absent as being all well——

Mr. SMOOT. Not all, but most of them.

Mr. UNDERWOOD. And the Republicans who are in town and absent as all being sick except three. What I wish to know is whether the performance on the pending bill has made all those Republicans sick already? I want to know whether that

is the cause of so much sickness in the Republican family? [Laughter.]

Mr. CARAWAY. It may have been the result of the primary election in Pennsylvania.

Mr. UNDERWOOD. That is true.

Mr. SMOOT. That would not make anybody sick, I will say to the Senator from Arkansas. That was expected.

Mr. HARRISON. Mr. President, the Senator from Alabama [Mr. UNDERWOOD] has just asked a very pertinent question and made a still more pertinent observation to the effect that probably the reason why the Republicans are sick and absent is not only because of the revelations of the many iniquitous provisions of this tariff bill but also because of the late returns from the primary election in Pennsylvania. They probably saw the green sheet of the afternoon Washington Times which has just come to our attention in which Governor Sproul has just made a statement analyzing the result of the election and offering an excuse why Mr. Pinchot was yesterday nominated by the Republicans governor of Pennsylvania. The Times quotes Governor Sproul as saying:

> He got a good start and was able to capitalize the enthusiasm of the newly enfranchised woman voters and to corral all of the disaffected elements of the State who are out of sorts with the administration at Washington and Harrisburg and with conditions generally. * * * The Republican Party is all right—a good fight in the ranks once in a while keeps up party spirit.

The PRESIDING OFFICER (Mr. WILLIS in the chair). The Secretary will state the next amendment reported by the Committee on Finance.

Mr. SMOOT. We recur now to paragraph 69.

The next amendment of the Committee on Finance was, on page 27, paragraph 69, line 3, after the word "Litharge" to insert "2½ cents per pound"; so as to read:

> Par. 69. Lead pigments: Litharge, 2½ cents per pound.

The PRESIDING OFFICER. The Chair desires to inquire whether paragraph 68 was passed over as well as paragraph 67?

Mr. SMOOT. It was.

The PRESIDING OFFICER. Very well. The question is upon the committee amendment on page 27, paragraph 69, line 3.

Mr. JONES of Mexico. Mr. President, as has been stated, this paragraph is based upon paragraphs 388 and 389. Paragraph 388 imposes a duty of 1½ cents per pound upon the lead content of imported ores. It also has a proviso to which reference will be made later. Paragraph 389 imposes a duty of 2⅛ cents per pound upon imported bullion. In order to get into the RECORD at this point the problems with which we are to deal, I will state that these lead pigments are made from the lead metal, and, as stated awhile ago by the Senator from Utah [Mr. KING], these duties have all been built up.

Upon the litharge there is a duty of 2½ cents a pound; upon orange mineral of 3 cents a pound; upon red lead of 2¾ cents per pound; upon white lead of 2½ cents per pound; and upon "all pigments containing lead, dry or in pulp, or ground in or mixed with oil or water not specially provided for, 30 per cent ad valorem."

Under the present law all of these pigments are on the dutiable list at the rate of 25 per cent ad valorem, and the present duty upon the lead is three-fourths of 1 cent per pound. So it is apparent that there is quite a change; in fact, there is an increase in the duty upon lead of 315 per cent. I do not know of any one commodity which is of more universal use than lead and its products. It is the basis of very many essentials in the affairs of the civilized world. The primary use of white lead, of course, is in paint, and the universal nature of that use is understood by all.

In the first place, I think that it is important for us to justify if we can this differential upon the lead bullion. The present duty upon the lead content of imported ore is three-fourths of 1 cent per pound. That has been increased to 1½ cents per pound, or 100 per cent. So far as I am personally concerned, I do not care to discuss that phase of the question.

I think much could be said upon that subject; but I assume that that is taken as the basis of this entire program; that it is done for the benefit of the producers of lead ores; that, owing to the present depressed condition of the mining industries of the country, it was thought by the committee that there should be an increased duty upon lead ores; and so the committee has imposed an increase of 100 per cent, from three-fourths cent per pound to 1½ cents per pound.

As I have said, I do not care to discuss that phase, especially in this connection. I do want, however, to bring out just one thought. The duty is imposed for the benefit of the producers of lead ores. Under ordinary circumstances the only importations of lead ores will be from Mexico, but even those importations are controlled largely by the same concerns who do the smelting in the United States. The Tariff Commission has reported that the deposits in Mexico are controlled by the smelting concerns of the United States; and if that be the case, there is no assurance that the domestic producer of lead ores is going to get the benefit which, it will be stated, it is intended that he should get. That is a problem about which nothing has been said in the testimony upon this subject or anywhere else, so far as I know. However, I am willing, for the purpose of the discussion to-night, to consider that it is advisable to put a tariff of 1½ cents per pound upon the lead content of imported ores.

That being done, the next step in the structure which is proposed here by the majority of the Finance Committee is to put a tax of 2⅛ cents a pound upon lead bullion, an addition of five-eighths of a cent per pound. It seems to me that that should be justified; that some reason should be given for that, and if the Senator from Utah is willing to give us the reason which moved the majority of the Finance Committee in making the proposal I should be delighted to hear from him.

Mr. SMOOT. Of course, Mr. President, the Senator is well aware that there is a considerable loss in the smelting of ores from the assay content of the ore to the bullion. No smelter can get all of the metal out, as the Senator knows, and that generally runs about 0.5 of a cent a pound, and 1½ cents, of course, is the equivalent of 1.5 cents, and 0.5 cents added is 2 cents, and that leaves one-eighth of a cent in the way of smelter charges and to cover extra cost of material in the smelting business as compared to the smelters operated in other countries.

Mr. JONES of New Mexico. Mr. President, I think we should understand each other at this point. Here is a difference of five-eighths of a cent per pound. I should like to know how much the Senator from Utah thinks should be attributed to the loss in the smelting of the ore?

Mr. SMOOT. Four-eighths of a cent.

Mr. JONES of New Mexico. I should like to know where the Senator from Utah gets any data to make that statement.

Mr. SMOOT. If the Senator has ever read a contract for smelting ores he will know that there is always a differential allowed between what the assay shows and the actual bullion paid for. Generally it is 1.3 cents; that is what the smelter charge is; and yet there is not that amount of loss. As nearly as I can ascertain—and I believe it to be a fact—four-eighths of a cent is all the loss there is, and not 1½ cents which the miner pays.

Mr. JONES of New Mexico. It not only does not amount to four-eighths, or one-half of a cent, but it does not begin to approach that figure, if the information furnished us by the Tariff Commission is correct. That matter was tried out under a law which allowed an amount for that loss, and it was not anything like the figure the Senator from Utah has stated. In Tariff Information Surveys, which I hold in my hand, dealing with the lead and giving a tariff history of that commodity, the following statement occurs:

> In addition to increasing the duties on lead in ore and other forms the act of 1897 made a great change in the phraseology of the section relating to lead ore, by imposing duty on lead content and by providing in detail for the determination of the assay value without extra inconvenience to the consignee, allowing the sampling to be done at the latter's works under the supervision of Government officers.
>
> In this same act an allowance was made in the paragraph dealing with bonded works, for the losses incurred in treatment. Hitherto no allowance had been made for these inevitable losses and an amount of lead equal to the total lead contents of the ore imported had to be set aside each day for cancellation of the bond. But under the act of 1897 only 90 per cent of the imported metal had to be thus reserved.
>
> In the act of 1909 no change was made in the tariff relating to lead ore except as regards the allowance made for smelting losses. Claims had been made that the 10 per cent loss allowance was excessive and that it allowed the free importation of lead, which, although presumably lost in the slag, actually was recovered in many works. With a view to prevent such free importation the 1909 act provided that the bond was to be canceled only upon the exportation (or withdrawal for consumption with payment of duties) of the actual quantity of lead produced from the ore (this provision also applied to base bullion).

So there, under a provision of law which only provided safeguards for a loss of 10 per cent in the smelting, it was contended that that was too much; but here the Senator will realize that the difference between this cent and a half and 2⅛ cents is more than a third, and so the Senator can not account for it because of the loss in the smelting of the ore. It was considered, and evidently accepted by the Congress, that an allowance of 10 per cent was too much.

Mr. SMOOT. Then all I have to say to the Senator is that if he wants the ore to come in instead of the bullion, just follow his suggestions here, and what is the difference to the lead producer in this country whether the ore comes in or whether it comes in in the shape of bullion? None whatever; and if you are going to protect the ore producer you have got to protect the bullion; and if you allow the bullion to come in

here, of course, then the producer will never produce the ore in this country, and the laborer will never smelt it in this country.

Mr. JONES of New Mexico. Mr. President, the Senator will not be able to justify the statement he has made.

Mr. SMOOT. Of course not to the satisfaction of the Senator. I could not make any statement that would satisfy him.

Mr. JONES of New Mexico. Oh, I think the Senator can. I am a good-natured individual, and there are a great many things that the Senator from Utah says which I accept at par; but when he is undertaking to justify a provision in this tariff bill which in my judgment can not be justified, I rather doubt if he could convince me on this.

The broad statement as to my frame of mind, however, I do not believe is justified. I accept a good many things, the Senator says; and I will say that if the Senator can present anything here to-night to show that I am wrong about what I expect to contend for in the discussion of this paragraph, I shall be only too glad to change my mind about it.

Mr. FLETCHER. Mr. President, may I interrupt the Senator?

The PRESIDING OFFICER. Does the Senator from New Mexico yield to the Senator from Florida?

Mr. JONES of New Mexico. I yield.

Mr. FLETCHER. What puzzles me about the matter—and I know very little about it except what I find in this Summary of Tariff Information—is that here is a proposition to increase duties over those provided for in the act of 1913. Under that act there was a duty of 25 per cent ad valorem. The statistics show that the production in the United States has been steadily increasing—37,739 short tons, valued at $5,853,543, in 1916; 46,739 tons, valued at $6,431,801, in 1919; and 62,329 tons, valued at $12,386,185, in 1920.

Now, what are the importations?

The average annual import for 1910–1916 was 35,500 pounds, valued at $1,787, yielding a revenue of $782; and then follow the later statistics. In 1918 the quantity imported was 100 pounds, yielding a revenue of $3 to the Government. In 1919 there is no quotation. In 1920 the revenue yielded was $662, and there were 21,002 pounds imported. In nine months of 1921 only 100 pounds were imported, of the value of $7, about 7 cents a pound. One-quarter of $7 would be the revenue, I take it, that came to the Government.

Mr. SMOOT. The Senator, of course, does not go back to the lead.

Mr. FLETCHER. I am dealing with litharge.

Mr. SMOOT. But you can not deal with that unless you deal with the lead. Under the existing law lead has a duty of three-quarters of a cent a pound, and under the existing law litharge has a duty of 25 per cent ad valorem. Now lead has a duty of 1½ cents and it takes 1.9 cents compensatory duty on the bullion of 2⅛ cents.

Mr. FLETCHER. No; you propose to put a duty of 2½ cents a pound on litharge.

Mr. SMOOT. Why, certainly.

Mr. FLETCHER. And even under a 25 per cent ad valorem duty only 100 pounds have come in during the last nine months.

Mr. SMOOT. I see that the Senator does not understand the situation, or else he would not quote that at all. I tried to explain to him why on litharge to-day, with a duty of 25 per cent on 8 cents, the delivered price, the duty is 2 cents, and there they have 2 cents with only three-quarters of a cent on lead, whereas under this bill the duty was 1½ cents on the lead content and 2½ cents on the bullion, and 2⅛ cents on the bullion takes 1.9 cents a pound on litharge in the beginning, without any other kind of a duty.

Mr. FLETCHER. Then you are considering this item in connection with a lot of other items.

Mr. SMOOT. Certainly; you have to.

Mr. FLETCHER. But you have specified here, under this particular item, 2½ cents a pound, and under red lead 3 cents a pound.

Mr. SMOOT. Yes; and the compensatory duty on the bullion is 1.9 cents a pound, or all the duty upon this is six-tenths of a cent a pound—I mean, outside of the compensatory duty.

Mr. FLETCHER. Under the act of 1913 lead pigment was given a duty of 25 per cent ad valorem.

Mr. SMOOT. Yes; and 25 per cent ad valorem on to-day's prices is 2 cents, and the duty on this, outside of the compensatory duty on lead, is only six-tenths of a cent.

Mr. FLETCHER. No; that still is puzzling to me. I do not yet see why you want to increase that duty if you are going to get any revenue at all, because under the present duty you can not get any.

Mr. JONES of New Mexico. Mr. President, I think I can assure the Senator from Florida that no revenue will be collected under this provision of the bill. The industry is very unique, and it is important that we have the facts well in mind in order to determine what should be done about these rates. The truth is that the production of lead in the United States is just about the amount which is consumed in the United States. Under the present law and under previous tariff laws, provisions were made for the importation of foreign ores in bond——

Mr. SMOOT. And there is provision for that in this bill, too.

Mr. JONES of New Mexico. And for smelting them in bond, and upon exporting the bullion or any manufactured product of the lead content of the ore there was a drawback of the amount of the duty, less 1 per cent. That same provision is carried into this bill. The result of years of experience has been that substantially all of the lead derived from foreign ores imported into the United States has either been exported as bullion or as some manufactured product of that bullion; so that the Treasury of the United States from this great lead industry has derived but very little revenue, and this bill is going to take away the little revenue which has been derived under previous bills.

I think it advisable at this time to call attention to the proviso of section 388, and the facts pertaining to it.

This is furnished us by the Tariff Commission, giving the figures as to the imported ores, the duty paid, and the drawback, and after allowing for that drawback we find that the amount of foreign ore which has been retained in the American consumption has been very small.

Mr. SMOOT. Do I understand that the Senator would like to stop the smelting of foreign ores in bond? Does he want to drive that business away from the United States?

Mr. JONES of New Mexico. Not at all.

Mr. SMOOT. Then, what is the Senator complaining about?

Mr. JONES of New Mexico. If the Senator will be patient just a moment, I expect to develop the thought which I have in mind.

Mr. SMOOT. As far as I am concerned, I want to see all of that kind of business developed; I want to see the refining of sugar in bond for exportation developed; I want to see developed the smelting of lead and the smelting of all other ores in this country in bond, the making of perfumery of all kinds, the making up of leather goods in bond, and everything else which can be manufactured here, in order to give the American workmen something to do.

Mr. JONES of New Mexico. I, too, am perfectly willing to have the same thing done, and I shall try to show the pertinency of my observations before I proceed much further.

In 1910 the amount of the foreign ores imported and retained in American consumption amounted to one and a very small fraction per cent of the domestic production. In 1911 it amounted to a little over a quarter of 1 per cent. In 1912 it amounted to one-tenth of 1 per cent. In 1913 it amounted to less than a fourth of 1 per cent. In 1914 it amounted to about a half of 1 per cent. In 1916 and during the war it increased a little, from nearly 2 per cent up to a little less than 2¼ per cent in 1920.

In another table which the Tariff Commission furnishes us we are told that the amount of this ore which is retained varies in tons very little from 2,000 tons per year on the average, never but a little over 2,000 tons, sometimes a little under and sometimes a little over. The table is found on page 41 of the Tariff Commission Survey, and the net imports of ores are given by tons for the years 1910 to 1918, and except during the war there were only two years in which the net importations reached as much as 2,000 tons.

It is a rather strange coincidence that in paragraph 388 of this bill there should be a proviso which is now in the tariff legislation upon this subject. During a series of years there were net importations of ores with a lead content of about 2,000 tons. For this period of years it just about averaged the 2,000 tons. Evidently somebody was interested in that 2,000 tons, because a very singular thing occurred, for to this provision for a duty of 1½ cents per pound upon the lead content of imported ores there is added a proviso, as follows:

> *Provided*, That such duty shall not be applied to the lead contained in copper mattes until after 2,000 tons of such lead shall have been imported in any one year, to be allocated under rules and regulations to be prescribed by the Secretary of the Treasury.

In order that there may be no doubt as to the specific purpose of that proviso, I want to insert in the RECORD at this point the table to which I have just referred, showing these net

annual importations of the lead content of ore, found on page 41 of this survey. I believe I will read just that column. The net imports were as follows:

	Tons.
1910	9,379
1911	1,632
1912	2,703
1913	1,442
1914	1,445
1915	1,832

Then came the war, and in 1916 there were 4,892; in 1917 there were 2,625, and in 1918 there were 2,676. I ask to have the whole table inserted.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Combined importations of lead bullion and lead in pigs, bars, etc., duties collected, drawback paid, and net revenue received, 1910–1918.[1]

Fiscal years.	General imports (tons).[2]	Imports for consumption.[3]		Exports under drawback.		Net imports.	
		Tons.[4]	Duties.	Tons.[4]	Drawback.	Tons.[4]	Revenue.
1910	67,096	13,139	$573,047.44	3,760	$158,209.71	9,379	$414,837.73
1911	67,939	11,427	513,919.42	9,795	412,057.18	1,632	101,862.24
1912	80,782	12,636	548,592.42	9,933	415,720.00	2,703	132,872.42
1913	62,154	13,345	575,736.12	11,903	480,732.32	1,442	95,003.80
1914	18,648	7,389	207,518.00	8,843	372,091.41	[5] 1,445	[5] 164,573.41
1915	34,193	3,525	57,187.65	5,357	134,053.35	[5] 1,832	[5] 76,865.70
1916	29,899	9,564	174,329.40	4,672	83,507.60	4,892	90,821.80
1917	26,643	5,081	132,921.30	2,456	51,441.99	2,625	81,479.31
1918	84,329	2,191	80,555.50	4,867	113,721.68	[5] 2,676	33,166.18

[1] Data compiled from Commerce and Navigation.
[2] "Discrepancy" between amount of "General imports" and sum of "Imports for consumption" and "Exports" is made up of bonded imports and errors of estimation at ports of entry.
[3] Includes only imports on which duty was paid and not those for bonded smelting, sec. 4, N 1.
[4] Short tons, lead content.
[5] Deficit.

Mr. JONES of New Mexico. I have not figured the exact average, but it is apparent that the average is around 3,000 tons per annum, if you leave out of consideration the extra amount which came in during the war and for war purposes; but the information is that there is no great influx of these ores now.

So, Mr. President, the American supply of lead for the United States was almost balanced; the production just about made up the balance of the domestic consumption. It lacked about 2,000 tons a year; and the Tariff Information states that the same concern which controlled the smelting industry in the United States likewise controlled the lead deposits in Mexico, and that the lead that is brought in here in copper mattes likewise is controlled by concerns in the United States which are interested in the lead industry.

It appears that they wanted to get out of this American market every penny which could be gotten by an absolute control of the lead consumption of the United States. So it is provided that as much as 2,000 tons of lead may come into the United States in copper mattes without paying any duty.

Mr. SMOOT. The Senator may draw that conclusion; but I am quite sure that the Members of the House never had any such thought in their minds, nor did the Senate committee. The Senator knows that copper ores and copper mattes come into the United States free. The Senator knows that if there is a small amount of lead in copper mattes it would never pay to extract the copper out of the mattes for the lead that is in them. Why should the duty on that amount be paid if it is going to cost more to take it out than it is actually worth? I ask the Senator that question.

Mr. JONES of New Mexico. If you are going to protect the producer of lead in this country at all, why not protect him all along the line, and why permit the producer of copper mattes to bring in just enough to supply the American market?

Mr. SMOOT. Simply because of the fact that in the country where the copper matte is made, and from which it comes into this country, they have no separation of lead and copper, and therefore they have to send it here as it is. Does the Senator want to keep that copper out; does he want to have a duty on it because there is a little lead in it? It is always low-grade copper.

Mr. JONES of New Mexico. Let me ask the Senator, then, why it was limited to 2,000 tons lead content per annum?

Mr. SMOOT. Because they find that is about all there is, but if they were allowed more than 2,000 pounds, then, of course, the smelters in the foreign countries would put in the lead, ship it to this country, and have it entered free. The Senator does not want that to happen. I know he is interested enough in lead not to want that to happen, but where there is lead to the amount of 2 or 3 per cent the smelters can not afford to take it out and pay a duty on it besides.

It is known through this provision that there is to be a limitation on the lead which may come in in copper ores from foreign countries, and if there were not a limitation, there would be 7 per cent, 10 per cent, 20 per cent, in the copper mattes, and the chief value would be copper, and it would come into this country free. I am not so suspicious as the Senator is. The Senator wanted to make it appear that this was inserted for the benefit of the two smelting companies which smelt lead ores from Canada, but I assure the Senator that is not the fact. It is for the protection of the lead producers of this country, that not more than that amount shall come in free in copper mattes at any time.

Mr. JONES of New Mexico. Mr. President, if we are going to prevent any of it from coming in in copper mattes, why not prevent it all from coming in in copper mattes? We import ores containing varying quantities of lead. We import silver-bearing ores and copper-bearing ores.

Mr. SMOOT. I thought I told the Senator the reason.

Mr. JONES of New Mexico. The Senator told me what his notion about it was.

Mr. SMOOT. Does the Senator think it would pay any smelter to take a copper matte with just a little lead in it, and separate it, when they could ship the ore in here at $1.50 a pound?

Mr. JONES of New Mexico. Of course, we do not expect to have it separated.

Mr. SMOOT. It has to be separated before it can be used, I will say to the Senator.

Mr. JONES of New Mexico. Of course it does, but in the shipment here it is not separated. As the Senator said, before it is used it is separated. The lead is taken out of it. Why should not that copper matte be treated precisely the same as lead-bearing ores which are imported and which must pay a duty upon the lead content of the ore? It has been done all the time in the past. Why should it not be done now? Why should there be permitted these 2,000 tons to come in without the payment of any duty, when it is apparent that just about that amount is necessary to supply the American market?

Mr. WALSH of Montana. Mr. President, I should like to ask a question of the Senator from Utah, if the Senator from New Mexico will permit.

Mr. JONES of New Mexico. I yield.

Mr. WALSH of Montana. It appears that 2,000 tons is about the average annual amount of lead content that comes into the country with the foreign ores. If that is the case——

Mr. SMOOT. This has nothing to do with the ores at all.

Mr. WALSH of Montana. I understand that.

Mr. SMOOT. This is in the bullion.

Mr. WALSH of Montana. The amount of the importations of lead is about 2,000 tons annually; that is to say, in one form or another we get from foreign countries about 2,000 tons of lead annually. What I want to know from the Senator is: Why it is not possible, therefore, to take the lead to the smelter in a foreign country and put any percentage of it into the copper matte and introduce into this country the copper matte containing 20 or 25 or 30 per cent of lead, ample to justify the separation in the process of refinement, and thus supply the entire domestic market to the extent of 2,000 tons from the lead brought in in the copper matte?

Mr. SMOOT. That is limited in the provision here.

Mr. WALSH of Montana. I understand it is limited to 2,000 tons, but why, then, in Canada or British Columbia or Mexico, can they not take the lead and put it with the copper in the smelting process in the copper mattes carrying 20 per cent of lead and bring that into this country to the extent of 2,000 tons, the entire domestic demand being thereby supplied from the copper matte? In other words, under that provision why should a man bring in lead ore on which he is obliged to pay 1½ cents per pound duty when he can put that lead into mattes on the other side of the line and bring it in free?

Mr. SMOOT. Oh, no; he can not do that at all. Under the rules and regulations of the department it is impossible for him to do that.

Mr. WALSH of Montana. But the rules and regulations prescribe how he can bring it in.

Mr. SMOOT. No man can bring in here free copper matte with 20 per cent of lead.

Mr. WALSH of Montana. Why can he not do it?

Mr. SMOOT. Because he can not.

Mr. WALSH of Montana. That, perhaps, is a good reason.

Mr. SMOOT. He can not, because the lead in it is taxable.

Mr. WALSH of Montana. As long as it is copper matte it will come in free to the extent of 2,000 tons.

Mr. SMOOT. As long as there is ore in the copper matte of course the rule and the practice is that he can not do it. Under the bullion section which the Senator has read there is only a small percentage of lead in the copper.

Mr. WALSH of Montana. I should like to hear from the Senator from Idaho [Mr. GOODING] on this matter. The Coeur d'Alene ores carry no copper at all, and there is no copper smelter available. It occurs to me that the British Columbia smelters may introduce lead into this country to the extent of 2,000 tons in the form of copper matte, to the detriment of those mines in this country owned by parties who do not own property on the other side of the line. Of course the American Smelting & Refining Co. to a large extent own properties in the Coeur d'Alene, but they own properties in Mexico and are not particularly interested in the proposition, because they can bring in the total supply from the outside without the payment of duty. But the Hercules Co. and other companies owning properties in the Coeur d'Alene, it seems to me, are permitted by this provision to bring 2,000 tons of foreign-produced lead into this country in the form of copper matte without paying a cent of duty.

Mr. SMOOT. The whole information from which the Senator has read falls under the combined imports of lead bullion and lead in pigs, bars, and so forth, duties collected, drawback paid, and net revenue received. This is all there is of ores that are exported in bond. That is all there is to it. You can not smelt ores in Canada and bring them in under this provision. This is in bond in the United States.

Mr. WALSH of Montana. Will the Senator note that the paragraph deals with lead-bearing ores and mattes?

Mr. SMOOT. That is, lead-bearing mattes. It is not copper mattes.

Mr. WALSH of Montana. Oh, no; the "lead-bearing" does not modify the mattes at all.

Mr. SMOOT. But it does in this section, because it is mattes.

Mr. WALSH of Montana. Oh, no; because on the other page it is expressly provided as follows:

Provided, That such duty shall not be applied to the lead contained in copper mattes until after 2,000 tons of such lead shall have been imported in any one year.

That is, mattes of any kind—copper mattes or any other kind of mattes.

Mr. SMOOT. Oh, no; it is the lead in the copper mattes. The figures in the provision to which the Senator from New Mexico refers are applicable to lead bullion.

Mr. WALSH of Montana. It seems to me it is perfectly plain that lead coming in in copper mattes to the amount of 2,000 tons comes in free.

Mr. JONES of New Mexico. Not at all.

Mr. SMOOT. The Senator says not at all. What is the heading? Let the Senator read the heading and see what it is.

Mr. JONES of New Mexico. What I said is this——

Mr. SMOOT. I am not speaking of what the Senator said. I am saying what the figures which he read had reference to.

Mr. JONES of New Mexico. The figures I read from and what they mean is just this, that the net imports of lead content of ores and bullion for those years retained for consumption in the United States were the amounts I read a while ago.

Mr. SMOOT. Lead ores and lead bullion, and it is here stated that it was refined in bond, not for use in this country, but to ship to a foreign country.

Mr. WALSH of Montana. That is in a different part of the bill.

Mr. SMOOT. It is exactly the figures the Senator quoted from on page 41.

Mr. WALSH of Montana. This is the language:

Lead-bearing ores and mattes of all kinds, 1½ cents per pound on the lead contained therein: *Provided*, That such duty shall not be applied to the lead contained in copper mattes until after 2,000 tons of such lead shall have been imported in any one year.

That is the language of the bill. It does not deal with property in bond at all.

Mr. SMOOT. Of course, I can not say anything more than I have said. I ask the Senator to look on page 41 of the Tariff Survey at the heading there which says, "Combined importations of lead bullion and lead in pigs, bars, etc., duties collected, drawback paid, and net revenue received, 1910–1918." That is what it is.

Mr. JONES of New Mexico. What it means is simply that of the imported lead, whether in bullion or in ore, the net amounts of the imported metal retained in this country are those numbers of tons which I read a while ago. That is the quantity retained here. That is the addition to the domestic production which is necessary to be made to supply the domestic consumption, and with this addition of about 2,000 tons a year we have equalized the demand and the supply in the American market. In other words, you control the American market, the entire consumptive demand of the people of the United States, by the importation of that small quantity of ore.

As the Senator from Montana pointed out, this paragraph specifically mentions lead bearing ores and mattes. The use of the word "mattes" in this paragraph is a new thing. It has not occurred in tariff laws before specifically, but now they mention lead bearing mattes specifically, and provide that as to those lead bearing mattes the importer shall not pay any duty upon 2,000 tons of the lead content of those mattes.

It appears that that is just the amount necessary to supply the American market and give to those concerned the absolute control of the market. The excuse offered by the Senator from Utah may be satisfactory to him, but I can not understand why they should permit the lead-bearing mattes to come in here to the extent only of 2,000 tons of lead. It can only be explained, it seems to me, by the fact that there is somewhere some great controlling influence that has complete control of the American market for lead and also has control of the importation of lead.

Mr. WALSH of Montana. Mr. President, I should like to ask the Senator another question. Again I think perhaps the Senator from Idaho would be interested in it. Is not the substantial effect of this provision to leave lead without any protection at all?

Mr. JONES of New Mexico. I do not see why it does not give to the smelting interests of the country complete control of the market.

Mr. WALSH of Montana. Exactly. The producers controlling the foreign supply, the Mexican and Canadian supply, simply mix their lead in copper mattes or in any mattes, and bring it into this country free, as the Senator has indicated, to the extent of 2,000 tons, thus supplying the entire domestic market. In other words, no revenue whatever will be secured under this provision from lead ores. In quantities the ore will not be introduced at all, but the smelting would be done on the other side of the line and the lead brought here in the form of mattes, and consequently the domestic producer will have no protection at all.

Mr. SMOOT. Of course, the Senator can make that statement, but there is no question in the world that the domestic producer is protected to the extent of 1½ cents per pound on the content of his ore.

Mr. WALSH of Montana. But there will be no ore come in. It will not come in the form of ore. It will come in the form of mattes.

Mr. SMOOT. It can not come in the form of mattes unless it pays this duty.

Mr. WALSH of Montana. But 2,000 tons come in free, and that is all that the domestic market will absorb.

Mr. SMOOT. It is not only lead mattes, but we have reference to mattes of all kinds.

Mr. JONES of New Mexico. I do not believe that the Senator from Utah wants to claim that these are not lead-bearing mattes referred to in the paragraph. Is that what the Senator claims?

Mr. SMOOT. I did not hear what the Senator said.

Mr. JONES of New Mexico. Does the Senator from Utah contend that the word "mattes" as used in this paragraph does not refer to lead-bearing mattes?

Mr. SMOOT. Why, certainly; I know it does.

Mr. JONES of New Mexico. Then why is not just what the Senator from Montana said a necessary consequence of such a provision?

Mr. SMOOT. Because of the fact that there is no amount of lead mattes exempt from the tax; that is why—not an ounce of it.

Mr. JONES of New Mexico. Does the Senator mean to say there is no lead in copper mattes?

Mr. SMOOT. I did not say that at all. I said that where it comes in in small quantities, as it does, and only as it comes in in that way. That is why this provision, as I have said, was put in here; and there is not an ounce of lead matte that can come in here unless it pays a duty.

Mr. JONES of New Mexico. If the word "matte," as used here, did not include copper matte bearing lead, why was the proviso tacked onto that provision?

Mr. SMOOT. If the Senator will read it he will realize that it refers to any kind of matte that includes lead, with the exception of copper. That is all there is in the whole thing. I do not care what kind of matte comes in, with the exception of copper matte, it pays the duty, if there is lead in it.

Mr. JONES of New Mexico. With the exception of 2,000 tons of lead.

Mr. SMOOT. In copper.

Mr. JONES of New Mexico. In copper matte, undoubtedly; and I imagine that the copper matte bearing lead comes from just across the line in old Mexico, where the concerns are owned by the people in the United States who control the smelting interests of the United States; or it may come, as the Senator from Montana has said, from Canada.

Mr. SMOOT. Mr. President, if the Senator is interested in the lead question, and really wants to know how much lead ore comes into this country, let him turn to page 13 of Tariff Information Survey and tell the Senate what amount of lead ore comes into this country. The same principle applies to ore that applies to bullion to which the Senator is referring, for he is not referring to anything else but lead bullion, as I said before.

Mr. CARAWAY. Mr. President, may I ask the Senator from Utah a question?

The PRESIDING OFFICER. Does the Senator from New Mexico yield to the Senator from Arkansas?

Mr. JONES of New Mexico. I yield.

Mr. CARAWAY. What was the object of limiting the copper matte as is provided at the bottom of page 87, as follows:

Provided, That such duty shall not be applied to the lead contained in copper mattes until after 2,000 tons of such lead shall have been imported in any one year, to be allocated under rules and regulations to be prescribed by the Secretary of the Treasury.

Why was the importation limited to 2,000 tons?

Mr. SMOOT. If there had not been a limit copper matte could come in any quantity.

Mr. CARAWAY. Why would not 4,000 tons be as proper a limit as 2,000? I am trying to get an idea as to what caused the limit to be fixed at 2,000 tons.

Mr. SMOOT. It was fixed at 2,000 tons because of the fact that the amount of copper matte that comes in with lead content so low that it does not pay to take the lead out of it amounts to about that quantity.

Mr. CARAWAY. Then, if it only amounts to about that quantity, why was it necessary to place a limit of 2,000 tons? There would be no occasion to limit it if it did not amount to more than that.

Mr. SMOOT. We did not know but that they would put more in, as I have said before.

Mr. CARAWAY. They would put more in? Why should they put any in?

Mr. SMOOT. They do not put it in. It comes in the ore, and can not be separated. The smelter does not separate the lead and copper; it is not separated by the smelter at all.

Mr. CARAWAY. I think I understand that, although I do not understand much about the smelting of ores; but the Senator said "they would put more in." I do not know whether he intended to say that or not.

Mr. SMOOT. If there were no limit, they would.

Mr. CARAWAY. If it is wrong to bring it in, why does the bill provide that 2,000 tons may be brought in?

Mr. SMOOT. I do not think the Sentaor from Arkansas understands the situation. These copper ores come in containing very little lead, and the lead and copper can not be smelted separately, but they are smelted together. There is a plant in New Jersey and I think there is also one other plant in the United States where the process is carried on. No one would ever bring it in in small quantities, because it would not pay.

Mr. CARAWAY. But it is desirable to bring in the copper.

Mr. SMOOT. Yes; free of duty.

Mr. CARAWAY. But what was it that fixed it in the minds of the committee that 2,000 tons were desirable but more would be undesirable?

Mr. SMOOT. Because that is the percentage of low-grade copper matte that comes in here that it does not pay to separate here and on which the duty would be equivalent to the amount of lead saved.

Mr. CARAWAY. Is there not more of that ore that could come in?

Mr. SMOOT. I can not say as to that.

Mr. ROBINSON. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Mexico yield to the Senator from Arkansas?

Mr. JONES of New Mexico. I yield to the Senator from Arkansas.

Mr. ROBINSON. Mr. President, at 6.45 o'clock this evening, after the Senate had been in session to-day for eight hours lacking 15 minutes, the absence of a quorum developed, and on proper motion the Sergeant at Arms was directed to request the attendance of absent Senators. A short time later a quorum was developed, and under the usual procedure of the Senate further action under the order to the Sergeant at Arms would have abated. Some time later, however, the Senator from Massachusetts [Mr. LODGE] asked the Sergeant at Arms to submit a report, the lack of a quorum having developed upon a subsequent vote. No Senator, either on this side of the Chamber or on the other side of the Chamber, according to my information, was notified of the order of the Senate. A large number of Senators, some of whom are in the Chamber now, were in the restaurant dining room, just a few feet removed from the Chamber.

Upon the request made by the Senator from Massachusetts that the Sergeant at Arms report, that officer made to the Senate a statement which in part is not warranted by the rules of procedure governing the Senate. After undertaking to say what Senators were ill and what others were out of town, the Sergeant at Arms reported to the Senate the names of a number of Senators who, he said, were in town but absent from the roll call. His statement did not disclose that any of those Senators had been notified of the order of the Senate directing him to request the attendance of absent Senators, and, as a matter of fact, no Senator was notified, although a large number of Senators were absent in the usual course, taking their dinners in the restaurant.

Throughout this debate it has been the purpose and the policy of this side of the Chamber to keep in attendance at all times while the Senate is in session as many Members as practicable. We realize that a large number of Republican Senators are necessarily absent for various reasons. Some of them are appearing in judgment before their respective constituencies, others are responding to legal process.

I do not know what the purpose of the very extraordinary procedure being taken by the Senator from Massachusetts may be. If any disposition had been manifested by Senators on this side of the Chamber—or on the other side of the Chamber for that matter—to break a quorum, the extraordinary course of insisting upon a report by the Sergeant at Arms after a quorum had developed in the Senate might be justified; but certainly decency and fair play require that when an order of that character is made Senators be notified. If it is your purpose to place upon this side of the Chamber the burden of maintaining a quorum while Members on the other side of the Chamber remain absent, you will have the opportunity hereafter of doing so in compliance with the rules of the Senate and not in defiance and disregard of them.

Not a Senator received notice that his attendance had been requested, and yet the RECORD shows that four Senators on the other side of the Chamber who had been in attendance all day, and whose names I will give if any Senator doubts the accuracy of my statement, are reported as ill. Two-thirds of the Senators reported absent on the roll call were within easy reach.

Mr. STANLEY. Mr. President——

The VICE PRESIDENT. Does the Senator from Arkansas yield to the Senator from Kentucky?

Mr. ROBINSON. I yield to the Senator from Kentucky.

Mr. STANLEY. I am told that I am among the Senators who were absent. I doubt very much whether even the buzzer is in order. I have been in my office or in this Chamber continuously since half past 8 o'clock this morning, with the exception of 5 or 10 minutes to get a little lunch. They did not even telephone my office.

Mr. ROBINSON. The RECORD shows that without making any effort whatever to give Senators an opportunity to attend, at an hour when normal human beings are in the habit of refreshing themselves with food, while more than a sufficient number of Senators to make a quorum were in the restaurant, with a parade that is totally unwarranted and unjustified Senators are impliedly censured for their absence. It is not fair, and you know it.

If that is the way you are going to proceed, summon back from their political Waterloos every follower of the standard, ask the courts to adjourn and postpone the trial of their proceedings, and understand that from now on you will keep a quorum here, and if you fail to do so the Sergeant at Arms will be directed to request, and he will request, the attendance of absent Senators.

In view of the facts which I have stated, I ask unanimous consent that that portion of the alleged report of the Sergeant at Arms which undertakes to state what Senators are in town and absent from the roll call, without showing notice given them to attend, be stricken from the RECORD.

The VICE PRESIDENT. Is there objection?

Mr. LODGE. Mr. President, before the consent is given, I should like to be heard.

Mr. President, I requested that the Sergeant at Arms should make his report. A quorum had been obtained, and then a quorum was lost; and after the quorum was lost the second time I asked for a report.

The Senator is mistaken about no notice being given. Not only were the bells rung in every office and in the dining-room—bells notifying a quorum call, and notifying a call for a vote, because they alternated—but every room was telephoned to, and every Senator who was within reach of the telephone or of the bells, which are always rung, of course, had an opportunity to hear them and knew what they were. That notification was given.

After the Senator from North Dakota [Mr. McCUMBER] made the usual motion that the Sergeant at Arms be directed to procure the attendance of absent Senators, the Sergeant at Arms and his assistants proceeded to try to reach all the Senators who were not within reach of telephone or messengers—for messengers were sent also into the dining-room—in this building or in the office building. Every usual effort was made to notify them. The Sergeant at Arms then proceeded to reach the Senators who had not been reached in those ways, and who apparently were not in the office building or in the Capitol, by calling up their houses and notifying them that their attendance was requested. When the quorum disappeared again, I asked for the report of the Sergeant at Arms.

The constitutional power of the Senate, of course, is to compel the attendance of Members; and in the House, as we all know, that is very drastically enforced. Here it is customary to make a request. That had been done. I asked for the report. The Sergeant at Arms is the officer of the Senate. He is responsible to the Senate; and the Senate, or any Senator, in my judgment, has a right to ask for such a report. It is a very old and frequent custom.

I find in the Precedents, on page 202, February 23, 1883:

The number of Senators voting not constituting a quorum, the Presiding Officer (Mr. Morgan in the chair) directed the roll to be called, when 36 Senators answered as their names were called.

The number of Senators responding not constituting a quorum, on motion by Mr. Edmunds that the Sergeant at Arms be directed to request the attendance of absent Senators (a motion to adjourn failed, 6.33 p. m.), and the question recurring on Mr. Edmunds's motion, it was determined in the affirmative—yeas 19, nays 11.

So the motion was agreed to.

The Sergeant at Arms proceeded to execute the order of the Senate.

At 8 o'clock p. m. the Sergeant at Arms, in obedience to the order of the Senate directing him to request the attendance of absent Senators, submitted the following report:

To the PRESIDENT OF THE SENATE:

In execution of the order of the Senate to request the attendance of absent Senators the Secretary reported the following absent (36 Senators named): Of these (6 named) are absent from the city; sick and unable to attend (5 named); a number of Senators are reported to be at a dinner at Senator Chandler's, where the host refused admission to the officers sent to notify them; Senators Groome, Kellogg, and Saulsbury could not be found; officers are in search of the remainder.

Respectfully,

R. J. BRIGHT.

Colonel Bright, whom many of us well remember.

On January 16, 1891, the Sergeant at Arms was directed to use all necessary means to compel the attendance of absent Senators, excepting those detained on account of sickness.

At 4 o'clock and 30 minutes a. m. the Sergeant at Arms, in obedience to the order of the Senate directing him to compel the attendance of the absent Senators, submitted the following report:

UNITED STATES SENATE,
January 17, 1891—4.30 a. m.

SIR: In obedience to the following order received by me at 2.30 a. m.:

"*Ordered*, That the Sergeant at Arms be directed to use all necessary means to compel the attendance of absent Senators, excepting those detained on account of sickness"—

I executed the same by notifying Senators Evarts, Call, Dawes, Daniel, Jones of Arkansas, Gray, Coke, Kenna, and Bate, who responded to the same by appearing in the Senate Chamber. Senators Hampton, Ingalls, Ransom, Butler, Sherman, Wilson of Maryland, and Wolcott reported themselves sick, and Senator Berry answered that he was not ready to come. Could not gain entrance to the residence of Senator Barbour. Party responded at door of Senator Stanford; answered, "Is not in." At Senator Turpie's there was no response. The order is being executed by Deputy Sergeants at Arms at this time.

Very respectfully,

E. K. VALENTINE,
Sergeant at Arms.

He subsequently submitted another report, and a little later a third report, naming the Senators absent, naming the cause as given to him, and so forth.

To come down to more recent times, on September 18, 1914, the following occurred:

Mr. CHAMBERLAIN of Oregon, Mr. President, I am wondering why we do not get a report from the Sergeant at Arms.

The PRESIDING OFFICER. The Sergeant at Arms has been directed to report, and the Chair is informed that he is preparing his report.

Mr. CHAMBERLAIN. There seems to be some delicacy about the feelings of Senators who are absent and who ought to be brought before the bar of the Senate, but there does not seem to be so much consideration about Senators who have been here all night and show a disposition to be here all the time.

The PRESIDING OFFICER. Debate is not in order. The Chair has directed the Sergeant at Arms to report, and he is informed that he is preparing to report proceedings under the order of the Senate.

After a little delay Mr. Kern entered the Chamber and answered to his name.

The SPECIAL DEPUTY SERGEANT AT ARMS (John J. McGrain). I have the honor to make the following report.

The PRESIDING OFFICER. The Secretary will read the report.

The Secretary read as follows:

SENATE OF THE UNITED STATES,
SERGEANT AT ARMS,
September 19, 1914—6.30 a. m.

SIR: In obedience to the following order received by me at 12.45 a. m.—

"*Ordered*, That the Sergeant at Arms be directed to compel the attendance of all absent Senators now in the city of Washington, except those detained on account of sickness, and is instructed to procure without delay such conveyances and employ all necessary means to compel such attendance"—

I have the honor to report that I executed the same by serving, by deputies, the above order upon Senators Lewis, STERLING, Hughes, Thompson, West, and Weeks, who responded to the same by appearing in the Senate Chamber. Senators NELSON, McCUMBER, and POMERENE reported sick. Could not gain entrance at residences of Senators BRANDEGEE and DU PONT.

At residence of Senator William Alden Smith deputy read the order to the Senator, who refused to come, as he ascertained that a quorum was present. Senator Bankhead could not be located.

Since appearing in the Senate Chamber in response to this order Senator Weeks has left.

That was on September 18, 1914. Later on the same day the Deputy Sergeant at Arms was called on for a further report, and he reported. Meantime, business had been transacted; a quorum had been obtained; business had been transacted. This was while business was going on, and a quorum was present.

The PRESIDING OFFICER. The question is on agreeing to the amendment to the amendment.

The amendment to the amendment was agreed to.

Mr. RANSDELL. I now move the adoption of the substitute as amended.

The PRESIDING OFFICER. Pending that motion, the Sergeant at Arms is directed to report the proceedings and action under the order of the Senate heretofore issued to compel the attendance of absent Senators.

He had made one report. There had been a quorum. There was a quorum at the time. Business had been transacted, and he made a further report. Mr. McGrain, as deputy, said:

I have the honor to further report that Senators Culberson and Perkins, who were excused last evening on account of illness, have appeared in the Senate Chamber. Senators Bankhead, Brandegee, Gore, McCumber, Nelson, Norris, Pomerene, Smith of Georgia, and Smith of Michigan have responded to the order of the Senate by appearing in the Senate Chamber.

Every Senator now in the city of Washington, except Senators Bristow and La Follette, who are reported sick, has appeared in the Senate Chamber.

Also, in obedience to the following order received by me—

"*Ordered*, That the Sergeant at Arms be instructed to request the attendance of all Senators now absent from the city of Washington except those who are sick or excused"—

I beg leave to report that I have complied with these instructions by telegraphing to all Senators now absent from the city of Washington, with the exception of Senators Burleigh, Shively, and Thomas, excused, and one Senator, who is abroad.

Now we come to a day which shows at least that I was not doing anything very novel. It was the 8th of February, 1915. A report was made in compliance with the Senate's order that the Sergeant at Arms be directed to request the attendance of absent Members.

SIR: In obedience to the order of the Senate ordering the Sergeant at Arms to request the attendance of absent Senators, I have the following report to make:

Senator Bankhead, no response.
Sneator Borah, no response.
Senator Brady, not at home.
Senator Burleigh, will come.
Senator Bristow, notified and talked with Senator Weeks.
Senator Camden, not in.
Senator Clarke of Arkansas, not in.
Senator Colt, no response.
Senator Cummins, will come if sent for.
Senator Dillingham, not in.
Senator Hollis, here.
Senator Kenyon, not in.
Senator Lewis, no response.
Senator Lodge, no reply.
Senator McCumber, will come if sent for.
Senator Smith of Michigan, coming.
Senator Smoot, coming.
Senator Sterling, will come if sent for.
Senator Swanson, sick.
This is as far as we have gotten with the call.

Respectfully yours,

CHARLES P. HIGGINS,
Sergeant at Arms, United States Senate.

Then there was a further order to compel the attendance of absent Senators, and a further report, where it was provided that—

Whereas the following-named Senators are absent without leave of the Senate, to wit, Messrs. Bankhead, Borah, Brady, Bristow, Camden, Crawford, Colt, Dillingham, du Pont, Fall, Gallinger, Hardwick, Hitchcock, McCumber, McLean, O'Gorman, Root, Sterling, and Works; and

Whereas it is necessary to compel the attendance of said absent Senators: Therefore—

And so forth.

Then again, later in the day, he made a further report as to inability to get responses. Telephone calls were made to certain residences and deputies went out in automobiles. He made an-

other report again on the following day, February 9, of a similar character, giving an account, with an exact return of what was said to him. He made another report on the same day, February 9. He made another report on the same day, February 9, and he made apparently a final report on February 9.

The question of a quorum arose; a quorum was developed on a vote, and Mr. Smith of Georgia said:

I think the Secretary ought to start with the earlier report and come on down. That is the last report.
Mr. SMOOT. They have been read.
The PRESIDING OFFICER. They have been read in due order.
Mr. SMOOT. I will say to the Senator that they now appear in the RECORD.
Mr. SMITH of Georgia. They do not appear in the RECORD. There was one at 3 o'clock and another at half past 4 and another at 5 o'clock.
The PRESIDING OFFICER. They were read and marked at the time of their reading. The Secretary will read the report.

Then Sergeant at Arms Higgins gave some more facts about Senators on the same day at 8.30 a. m. Those two days seemed to have been very busy days, and there were constant reports from the Sergeant at Arms. In fact, you can go back and find any number of such cases.

I do not conceive how there can be the slightest doubt of the right of the Senate to ask for a report from the Sergeant at Arms when he has been directed either to request or to compel the attendance of Senators. This occurred under both forms of motion. There is no doubt of the right of the Senate to do it, and Senators must have seen, from what I have read, that it was required that those reports should be printed in the RECORD.

All usual forms of notification were used this evening, and they were used for some time before the Senator from North Dakota [Mr. MCCUMBER] asked for the order to the Sergeant at Arms, and some further time elapsed before the report was made on my request.

The whole proceeding was entirely usual, is very common in both House and Senate, and I see no reason why it should not remain in the RECORD as all other proceedings taken in the Senate remain in the RECORD. There was no intention on my part to make any party reflection whatever. It reflected, if anything, more on my own side, because we are the majority party.

If Senators are absent, I think there can be no possible objection to that fact being known. It is known to anyone who will take the trouble to examine the calls, but I see no reason why the uniform practice of the Senate should not have been followed to-night, as it always has been followed in past years by both parties. It is mere accident that I happen to have read two cases which were Democratic and one Republican, but they present precisely the same question, and I see no reason why the report submitted by the Sergeant at Arms to-night should be stricken from the RECORD, because every possible effort usually made to notify Senators was made by the officers of the Senate on both sides.

If Senators were in their offices and did not hear the bells, or did not reply to them; if they paid no attention to the messages which were sent to the dining room; if they paid no attention to the bells, which ring in the dining room, I think they had due notice. Then further notice was given by telephone to those who were absent and could not have heard the bells either in the Capitol or in the office building. I think it is a proper parliamentary proceeding, and I hope it will have some good effect in preserving a quorum of the Senate to transact the public business. So I object to its being stricken from the RECORD.

Mr. UNDERWOOD obtained the floor.

Mr. ROBINSON. Mr. President——

The VICE PRESIDENT. Does the Senator from Alabama yield to the Senator from Arkansas?

Mr. UNDERWOOD. I yield.

Mr. HEFLIN. Mr. President——

Mr. UNDERWOOD. I will yield to my colleague in just a moment.

Mr. HEFLIN. I am in no hurry; we have all night before us.

Mr. ROBINSON. With the indulgence of the Senator, I wish to state that there is no question about the right of the Senate to compel the attendance of absent Senators, and certainly no suggestion that I made could be construed by any flight of fancy to imply such a contention.

Mr. LODGE. If the Senator will allow me, I did not mean for a moment to imply that the Senator questioned the right of the Senate.

Mr. ROBINSON. The Senate, under its usual procedure, directs the Sergeant at Arms to request the attendance of absent Senators when a quorum fails to appear upon any vote, and the Sergeant at Arms, carrying out that order, communicates with Senators and notifies them of the special necessity for their presence. If they then fail to attend after that request is communicated to them, under the practice of the Senate they may be compelled to attend.

The point I make is that at this unusual hour, after the order has been made and a quorum has been developed, it is out of the ordinary practice of the Senate to call upon the Sergeant at Arms for a report, and when the Sergeant at Arms reports, never before in the history of the Senate has that officer undertaken to do more than to say what Senators he had communicated with and requested to attend and what Senators are absent or unable to attend.

In this instance the Sergeant at Arms does not state that he requested the attendance of any Senator or notified any Senator who was absent that his attendance was specially necessary, as directed or requested by the order of the Senate; and, as I said before, there are in this presence now a number of Senators who are on the list as being absent on the roll call and failing to attend the Senate who had no notice of the order of the Senate and who were down in the restaurant dining room, where they could easily have been notified.

Under that extraordinary condition the Senator from Massachusetts [Mr. LODGE] insists that the report of the Sergeant at Arms shall be perpetuated in the RECORD, and that notwithstanding the fact that Senators who were not notified, and therefore had no opportunity of responding to the request of the Senate, are to be stigmatized, if you want to term it such, as having violated or disregarded the order of the Senate.

During almost a month, while this bill has been under consideration, and while the Senate has sat in continuous session, the greater part of the time for a period of 11 hours a day, a quorum has developed in every instance, and this side of the Chamber has done more than its part in furnishing those quorums. If it were anywhere else this procedure would and could be justly stigmatized as petty politics.

I thank the Senator from Alabama for yielding to me.

Mr. UNDERWOOD. Mr. President, I think this procedure is more humorous than otherwise. This bill, of course, is very obnoxious to a man who believes in the principles of democracy from a party standpoint. His constituency is not going to blame him for the failure of the passage of this bill. We who are entirely opposed from every standpoint to the passage of the bill can see no reflection on any Senator on this side of the Chamber because he has not aided in furnishing a quorum to pass the bill. But, as I stated to Senators on the other side of the Chamber in the beginning, there is no desire on this side to filibuster on this bill. We intend to see that it is debated, and thoroughly debated; and it will be debated for weeks to come, because the country is entitled to know what is in it.

The bill has been before the Senate for about a month. There has not been a day in that time when, if this side of the Chamber had wanted to break a quorum, they could not have walked out into the corridor and broken the quorum. Quorum after quorum has appeared here with just a sufficient number, when a half dozen men from this side of the Chamber could have gone into the cloakroom and broken the quorum. But it happens—and it is very unusual in a case of this kind—that this bill has been for about a month before the Senate, while we have sat unusual hours, and the consideration of the bill has not been delayed to any unusual extent by lack of a quorum until to-night.

Of course, if the Senator in charge of the bill intends to have night sessions—and that rests with him—he must recognize the fact that men who come here at 11 o'clock in the morning are going to take some time, either in the restaurant or at their homes, to get their dinners, and if he will not permit an adjournment for dinner he is going to find it difficult to keep a quorum at that hour. But if a quorum is necessary, and the Senator intends to pursue that course, then it is the duty of Senators on the other side of the Chamber to furnish the quorum, and it is certainly no reflection on this side of the Chamber if Senators on this side are not here.

I asked for some of the roll calls on the motion of the Senator from Utah [Mr. KING] on the item now before the Senate on which a quorum failed to appear. I have been given two of them. I think there were more. But in running down the two roll calls which came to me from the desk I find in each that there were just 29 Republicans responded. That is where the quorum failed. Of course if you had had enough Democrats, if you had added 20 Democrats to the 29 Republicans, you would have had your quorum. But you have 60 Members of the Senate and we have 36. Three Democrats are supporting your bill. That gives you 63 Members on the floor against 33 who are opposed to the bill. You only need 49 Members to constitute a quorum. You have 14 to the good, 14 more than the necessary majority, and yet here are two

roll calls demonstrating at this critical time when you made this order that you had only 29 Republicans here, and we are criticized because we did not furnish 20 out of our 33 to make your quorum.

Now, Mr. President, I have no desire to delay the bill, as I said before. It is not my purpose or the purpose of others on this side of the Chamber to filibuster. I intend to sit here through the usual hours, as I always have, in attendance upon the business of the Senate, but when we reach the usual hour of going to dinner, just to be plain about it, if you are not going to adjourn for dinner I am going somewhere to get my dinner at that time in the evening, and the Republican majority must furnish its quorum in the Senate.

Mr. LODGE. Mr. President, if the Senator will permit me, I did not intend to criticize, and I do not think that I did criticize, the minority. I perfectly agree with one thing, and that is that when there are 60 Republican Senators in the Senate we ought to have a quorum of our own men here all the time.

Mr. UNDERWOOD. The Senator and I are in thorough accord.

Mr. LODGE. I do not disagree to that at all. Of course, when we have a call of the Senate all the Senators are called. We can not do anything else.

Mr. UNDERWOOD. The Senator recognizes that, and we are in accord. Many matters that we pass through the Senate are not political. We help each other in carrying them through. But you know that this is a political bill. The political lines are drawn here. The opposition to the bill is not only economic but it is political, and you must have more than 29 Senators respond to a quorum call at a critical hour if you are going to try to convince the country that you are in earnest in endeavoring to pass the bill.

Mr. HEFLIN. Mr. President, my name was read out in the list of those who were recorded as absent when the call for a quorum was made about 8 o'clock this evening. I believe that every Senator present will testify that there are not half a dozen Senators in this body who have a better record for attendance than I have. I came here this morning at 11 o'clock and remained until 7. For eight hours I was right here attending to my duties. I went to my hotel at 7 o'clock, the Congress Hall Hotel, for dinner. I did not know anything about this call until after my name had been read out. The Sergeant at Arms telephoned to my room and told me that a quorum had failed to develop and that they were still seeking those who did not answer the call. I said, "All right; I will be right over," and I came. When I arrived several of my colleagues told me that my name as one of the absentees had been read out. This happened in the face of the fact that I had not been notified of the call for a quorum.

I submit, Mr. President, to the Senate and to the country that when those of us who come here at 11 o'clock in the morning stay here until 7 o'clock in the evening, working right along all day, that it is unfair and unbecoming in Senators on the other side with their 24 majority who fail and refuse to keep a quorum, to read out the names of Senators who are away for only a few moments trying to get something to eat and a little rest after a hard day's work. You did not read out any names last night. You were not here. You adjourned at 6 o'clock in the evening so you could go to the circus. And you did not enjoy the circus as much as you thought you would. The G. O. P. elephant was not so lively and portly as when on dress parade in the aftermath of the campaign of 1920. Last night he was lame and disfigured and seemed to be conscious of the approach of a hard winter following the November election.

I see faces over there now that I have not seen here before to-day. Senators, where were you this afternoon when the able and eloquent Senator from Georgia [Mr. WATSON] made such a powerful and appealing argument against the provision in this bill which takes away from Congress the taxing power and places it in the hands of one man—the head of the executive department, the President of the United States? You are attempting to take away from the representatives of the people in the House and Senate the right and power to say what shall or shall not be the tax rate levied against 100,000,000 American consumers. You propose to lodge that power in the hands of the President and permit one man to raise or lower the tariff tax at will. You thereby clothe him with the taxing power. Those who framed the Constitution never dreamed that any party would ever go that far in the usurpation of power in this great Government, but you are undertaking to do it.

This afternoon the Senator from Georgia [Mr. WATSON] made a great speech against this attempted usurpation of power, and I commend it to the careful consideration of every Senator on the other side who intends to vote to place this legislative power in the hands of the President. No President, I care not what party he represents, should have such power conferred upon him. It is a dangerous thing to do, Senators. The tariff barons demand that it be done, but the American people, if they knew you were trying to do it, would storm you with protests from one end of the country to the other. Have we reached the time when special interests have become so influential and powerful in the councils of the Republican Party that they can put through Congress measures injurious to the whole people and dangerous to constitutional government? Have we fallen upon the time when these same special interests can buy and control certain newspapers for the purpose of suppressing the truth, misrepresenting the issues, and deceiving the people?

Suppose the American people knew that you had passed through a Republican House a bill containing a provision which confers upon the President the power to levy taxes against them—and that is what it is—why, they would rise in true American indignation and denounce and repudiate it. And what would these same people think if they knew that the Republican leaders of the Senate had indorsed the action of the House and had reported a bill containing the same provision to transfer the taxing power from Congress to the President? Why, they would give you a double dose of their bitter scorn and righteous resentment. I wonder if we have reached the time when the subsidized newspaper can keep the truth from the voter and fool the people while the work of disintegration and destruction goes on in free government here at the Capitol? If Lincoln could come back to life and visit the Capitol now and hear you demanding these things in the name of the party of Lincoln, he would drive you from the Halls of Congress, as did the Master the dove sellers and money changers from the temple at Jerusalem.

Mr. McCUMBER. Mr. President, being in charge of the pending bill, I think it very proper for me to state that I have no complaint to make against the Democratic side for their failure to be present at all times. They have helped us to make a quorum many a time when we could not have obtained it without the presence of Democratic Senators. I may complain of the repetition of the same kind of speeches over and over and over again, day after day, without adding anything new; but I am not complaining because the Democrats of this body have not been in their seats day after day, and I do not want the Democratic side of the Chamber to think for a single moment that when I call for a quorum and move to direct the Sergeant at Arms to bring in absent Senators that I am particular at all about his bringing in Democrats.

I made the motion this evening with the expectation that he would bring in Republicans, who are the ones who must pass the bill; it is up to them to make the quorum. I can not expect the Democratic Members who do not believe in the bill to exert themselves to any extent to make a quorum in the Senate; but I do expect that Republicans, who do believe in it and upon whom we are dependent to put this bill through, will come to the Senate Chamber in sufficient number to constitute the necessary quorum to put it through. They have not been doing that. We have had vote after vote, Mr. President, when we only had a bare 49 Senators present to make the quorum necessary to pass upon the amendments.

I have every excuse in the world for a man who is sick, for if he is sick he can not be here. Then, there are some on both sides of the Chamber whose age is such that we can not expect them to attend the night sessions; there are those who are engaged in severe contests in their home States in primary elections whom we may well excuse, if they find it necessary from time to time to absent themselves; but there is no excuse on earth for those Republicans who are perfectly well, for those Republicans who have no contests on hand and who can come here day in and day out, to absent themselves until we call for quorum after quorum in order to secure the presence of 29 or 30 of them.

If they can not stay here and help pass a bill of this kind, for God's sake let them resign and get their States to appoint Senators who will stay.

That is my message, Mr. President, to those Republicans who can stay here to help us pass this bill and who fail to do so. I think it is their duty to do it, and I am not asking the Democrats to help us make a quorum.

SEVERAL SENATORS. Vote!

The VICE PRESIDENT. The question is on agreeing to the amendment reported by the committee.

Mr. JONES of New Mexico. Mr. President, it is now 10.30 o'clock, and I had just begun to develop the facts regarding the pending paragraph when the colloquy took place regarding the absence of a quorum. If the Senator from North Dakota insists upon my doing so I shall proceed, but I rather thought he did not intend to go further to-night.

Mr. McCUMBER. Let me ask the Senator a question in all good faith. We have passed on three little insignificant amendments in a whole day's work in the Senate. Does not the Senator think that we ought to vote on more than two or three amendments in a day?

Mr. JONES of New Mexico. Mr. President, of course I regret that we are not making any greater progress, and I do not intend to do anything to delay this bill; but I think before I get through with what I intend to say that I can convince any Republican, including the chairman of the Finance Committee, that the provisions of this bill, so far as they relate to lead and lead pigment, amount practically to the robbery of the people of the United States of $100,000,000 a year. I believe I can convince the Senator from North Dakota of it if he will listen to me.

RECESS.

Mr. McCUMBER. Mr. President, I will listen to the Senator to-morrow; and if he fails to convince the Senators on this side of the Chamber, or a single one of them, of the soundness of his position, then I hope he will accept that verdict and let us vote.

Mr. President, I move that the Senate take a recess, the recess being under the order previously made, until to-morrow at 11 o'clock.

The motion was agreed to; and (at 10 o'clock and 30 minutes p. m.) the Senate took a recess until to-morrow, Thursday, May 18, 1922, at 11 o'clock a. m.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, *May 17, 1922.*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

O God, the Father of all, help us to begin anew our labors and the tasks left incomplete. Give us zeal for the present and the courage of the future. Chasten and refine our influences and impress us that there is no good fortune in all the world equal to doing right. In every way make us faithful to our duty and loyal to our gift. O may nothing break down our faith or disrupt our hope in the mission and destiny of our country. Direct our citizenship with the resources of Thy wisdom and spread over our land the blessings of righteous peace and of a just prosperity. Through Jesus Christ our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

LINCOLN MEMORIAL DEDICATION.

The SPEAKER laid before the House the following communication:

LINCOLN MEMORIAL COMMISSION,
Washington, D. C., May 9, 1922.

Hon. FREDERICK H. GILLETT,
Speaker House of Representatives, Washington, D. C.

MY DEAR MR. SPEAKER: It has been suggested that it would be a most impressive feature of the Lincoln Memorial dedication if the Senate and House of Representatives would arrange to approach the memorial in a body and sit together in a group during the ceremonies.

Will you kindly inform me if it would be agreeable to the Members of the House of Representatives if seats are reserved for them on this supposition? If this plan meets with the approval of the Representatives such additional seats as they may desire for their families will be reserved in a different section. I am writing a similar letter to the President of the Senate.

Yours very sincerely,

WILLIAM H. TAFT, *Chairman.*

Mr. MONDELL. Mr. Speaker, my understanding is that the Senate has adopted a resolution formally accepting the invitation to the Lincoln Memorial dedication ceremonies, and expressing its willingness and desire to attend the ceremonies in a body. It occurs to me that it is scarcely necessary for the House to act upon the matter formally, but in talking the matter over with several Members the opinion seems to be that the Senate having approved of the suggestion that they attend the ceremonies in a body, it might be well for the House to follow the same procedure. My understanding is that the Speaker has had some talk with Colonel Sherrill in regard to the matter, and that in due time Colonel Sherrill will inform the Members of the House, and a statement will be made on the floor as to the point at which, and the time at which, it will be convenient for the Members to meet somewhere in the vicinity of the Lincoln Memorial with a view to marching to the memorial.

In that connection, Mr. Speaker, having been asked by many Members as to the program for Memorial Day, and for the day preceding and following, I desire to say that it is my opinion that in view of the fact that many Members are necessarily absent from the city at a time like that, that we should not transact any important business, either on the 29th or 31st. It is impossible to say at this time whether we shall be in recess on both of those days, but it is my hope that we may so arrange matters that no business of any considerable importance will be considered, either on the 29th or 31st.

Mr. GARNER. Will the gentleman yield?

Mr. MONDELL. Yes.

Mr. GARNER. Does the gentleman hope to have anything of importance on June 1? [Laughter.]

Mr. MONDELL. Owing to circumstances over which we have no control, I regret to say that it may not be possible to adjourn sine die on the 1st of June, as we at one time hoped. [Laughter.]

Mr. LONGWORTH. Perhaps the gentleman from Texas can give us more accurate information.

Mr. MONDELL. I want to say that, as far as the House is concerned, most of the important essential business of this body will be practically disposed of by June 1.

Mr. GARNER. Do you propose to take a recess at that time?

Mr. MONDELL. I hope, if the appropriation bills reach us and are disposed of—and I see no reason why they should not—it is my hope that we may then be able to make an arrangement whereby we may recess for a short time, three days at a time.

Mr. GARNER. What does the gentleman mean by "a short time"?

Mr. MONDELL. It is difficult to say now.

Mr. CAMPBELL of Kansas. I suggest that if the gentleman from Texas has any knowledge of when a certain filibuster that is going on will end, we can give the House some information as to when the Congress will adjourn sine die.

Mr. GARNER. I have the same knowledge of the filibuster that the gentleman from Kansas had of the Finance Committee that considered the bill eight months in committee without bringing it to the floor.

Mr. WALSH. Will the gentleman yield?

Mr. MONDELL. Yes.

Mr. WALSH. In view of the communication that has been read, does not the gentleman from Wyoming think the House ought to act upon the matter in the same manner in which the Senate has?

Mr. MONDELL. That might be done, but what I had in mind was that after what has been said this morning the Speaker might properly answer personally the letter from the Chief Justice and inform him that the House would be very glad to follow the suggestion made.

INTERIOR DEPARTMENT APPROPRIATION BILL—CONFERENCE REPORT.

Mr. CRAMTON. Mr. Speaker, I call up the conference report on the bill (H. R. 10329) making appropriations for the Department of the Interior for the fiscal year ending June 30, 1923, and for other purposes.

The SPEAKER. The gentleman from Michigan calls up a conference report, which the Clerk will report.

The Clerk read the report, as follows:

The committee of conference on the disagreeing votes of the two Houses on certain amendments of the Senate to the bill (H. R. 10329) making appropriations for the Department of the Interior for the fiscal year ending June 30, 1923, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 70, 71, 74, 76, 77, 78, and 79.

Amendment numbered 43: That the House recede from its disagreement to the amendment of the Senate numbered 43, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$650,000"; and the Senate agree to the same.

Amendment numbered 75: That the House recede from its disagreement to the amendment of the Senate numbered 75, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$340,000, plus so much of $350,000 additional as the Secretary of the Interior finds to be available in the reclamation fund on March 1, 1923, in excess of all other appropriations from that fund"; and the Senate agree to the same.

Amendment numbered 80: That the House recede from its disagreement to the amendment of the Senate numbered 80, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$675,000, plus so much of $250,000 additional as the Secretary of the Interior finds to be available in the reclamation fund on March 1, 1923, in excess of all other

appropriations from that fund"; and the Senate agree to the same.

Amendment numbered 82: That the House recede from its disagreement to the amendment of the Senate numbered 82, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$14,800,000"; and the Senate agree to the same.

Amendment numbered 91: That the House recede from its disagreement to the amendment of the Senate numbered 91, and agree to the same with an amendment as follows: Restore the matter stricken out by said amendment, amended to read as follows:

"Grand Canyon National Park, Ariz.: For administration, protection, maintenance, improvement, and the acquisition of lands for road and trail rights of way within the park, including not exceeding $2,000 for the purchase, maintenance, operation, and repair of motor-driven passenger-carrying vehicles for the use of the superintendent and employees in connection with general park work, $75,000: *Provided*, That no expenditure shall be made in the maintenance or improvement of any toll road or toll trail, or for maintenance or construction of physical improvements on the north rim."

And the Senate agree to the same.

That the Senate agree to the amendments of the House to the amendments of the Senate numbered 53, 54, 56, 58, 59, and 113.

LOUIS C. CRAMTON,
BURTON L. FRENCH,
C. D. CARTER,
Managers on the part of the House.
F. E. WARREN,
CHARLES CURTIS,
LEE S. OVERMAN,
Managers on the part of the Senate.

STATEMENT.

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on certain amendments of the Senate to the bill (H. R. 10329) making appropriations for the Department of the Interior for the fiscal year ending June 30, 1923, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon by the conference committee and submitted in the accompanying conference report:

On No. 43: Appropriates $650,000, instead of $600,000, as proposed by the House, and $700,000, as proposed by the Senate, for surveying public lands.

On Nos. 70, 71, 74, 75, 76, 77, 78, 79, 80, and 82, relating to the Reclamation Service: Appropriates $215,000, as proposed by the House, instead of $235,000, as proposed by the Senate, for the Uncompahgre project; appropriates $1,220,000, as proposed by the House, instead of $1,300,000, as proposed by the Senate, for the Boise project; appropriates $1,200,000, as proposed by the House, instead of $1,250,000, as proposed by the Senate, for the Minidoka project; appropriates $1,440,000, as proposed by the House, instead of $1,690,000, as proposed by the Senate, for the North Platte project; appropriates $1,000,000, as proposed by the House, instead of $1,100,000, as proposed by the Senate, for the Rio Grande project; appropriates $115,000, as proposed by the House, instead of $145,000, as proposed by the Senate, for the North Dakota pumping project; appropriates $350,000, as proposed by the House, instead of $370,000, as proposed by the Senate, for the Belle Fourche project; appropriates $340,000 for the Milk River project and an additional contingent sum not to exceed $350,000, instead of $340,000, as proposed by the House, and $890,000, as proposed by the Senate; appropriates $675,000 for the Riverton project and an additional contingent sum not to exceed $250,000, instead of $675,000, as proposed by the House, and $1,075,000, as proposed by the Senate; the additional sums of $350,000 and $250,000, respectively, for the Milk River and Riverton projects are only available to the extent that the Secretary of the Interior finds money in the reclamation fund on March 1, 1923, in excess of all other appropriations from the fund.

On No. 91: Appropriates $75,000 for the Grand Canyon National Park in one fund for all park purposes limited so as to prohibit any expenditure for maintenance of any toll road or toll trail or for construction or maintenance of physical improvements on the north rim.

On Nos. 53 and 54: Appropriates $42,500, as proposed by the House, for a combination gymnasium and assembly hall building at the Albuquerque Indian School instead of $45,000, as proposed by the Senate, for two separate buildings.

On No. 56: Limits, as proposed by the Senate and modified by the House, the amounts which may be expended from tribal funds of the Five Civilized Tribes without specific authority of Congress.

On Nos. 58 and 59: Appropriates $50,000, as proposed by the House, instead of $60,000, as proposed by the Senate, for a boys' dormitory at the Indian school at Salem, Oreg.

On No. 113: Provides for the use of certain receipts from the Alaska Railroad, as proposed by the Senate, modified as proposed by the House, so as to limit such use to a sum not to exceed $200,000 during the fiscal year 1923.

LOUIS C. CRAMTON,
BURTON L. FRENCH,
C. D. CARTER,
Managers on the part of the House.

Mr. CRAMTON. Mr. Speaker, this report if accepted by the House and Senate disposes of the differences between the House and the Senate upon this bill. The former report left in disagreement only three matters—first, the question of $600,000 for land surveys as voted by the House, or $700,000 as voted by the Senate. On that there is a compromise at $650,000. Second, the difference as to the appropriations for the Reclamation Service has been compromised by increasing two items contingent upon there being sufficient money in the fund for that purpose after all other reclamation appropriations are cared for. The House cut the appropriations for the Reclamation Service $1,500,000 below the Budget Bureau estimates, upon figures given in January by Director Dawes as to the probable amount that would be available next year in the reclamation fund. The Senate restored the items to the Budget figures. The difference of opinion was entirely as to the amount that will be available next year in the reclamation fund, the House conferees feeling it undesirable to continue appropriations in part on paper, without money available to make them real. The projects where the greatest cuts had been made were the Milk River, in Montana, and the Riverton, in Wyoming. The compromises give an additional $350,000 for the former and $250,000 for the latter, conditioned on there being sufficient money in the fund for all the other reclamation appropriations first. Third, the restoration of the appropriation for the Grand Canyon National Park, which had been stricken out by the Senate. The House appropriation was $88,000, and the conference report recommends $75,000.

Mr. Speaker, due to the fact that we were permitted to bring this report in at this time, greatly for my convenience, through the courtesy of the gentleman from New York [Mr. HICKS], the gentleman from New York [Mr. HUSTED], and the gentleman from Indiana [Mr. WOOD], my remarks are limited.

Mr. HICKS. Mr. Speaker, will the gentleman yield?

Mr. CRAMTON. Yes.

Mr. HICKS. Do I understand the gentleman to state that the conference report carries an appropriation of $75,000 for the Grand Canyon Park?

Mr. CRAMTON. Yes.

Mr. HICKS. I congratulate the gentleman as one of the conferees for bringing in that provision. I believe that park is one of the greatest parks in the country, and I think Mr. Mather, who is at the head of the park service, deserves the thanks of the whole country for his work in this connection.

Mr. CRAMTON. The conferees share the gentleman's view with respect to Mr. Mather's conduct of the National Park Service. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the conference report.

The conference report was agreed to.

TO SCRAP CERTAIN NAVAL VESSELS.

Mr. HICKS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 11214) authorizing the President to scrap certain vessels in conformity with the provisions of the treaty to limit naval armaments, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the "scrapping bill," with Mr. HUSTED in the chair.

The Clerk reported the title of the bill.

The CHAIRMAN. The gentleman from New York [Mr. HICKS] is recognized for 38 minutes.

Mr. HICKS. Mr. Chairman and gentlemen of the committee, in the remaining time allotted to general debate I propose to speak in respect to a part of the bill which has not yet been

discussed. I refer to the conversion of two battle cruisers into airplane carriers, a very important item in the bill. Permit me to introduce the subject by a reference to the provisions of the Washington conference. In the naval compact an airplane carrier is defined as a vessel of war, with displacement in excess of 10,000 tons, designed for the specific and exclusive purpose of carrying aircraft and so constructed that aircraft can be launched therefrom and landed thereon. The treaty also provides that these airplane carriers shall not exceed 27,000 tons in displacement; and on that point I especially want the members of the committee to bear in mind the figures 27,000 tons, for they may seem contradictory to the tonnage of the carriers we propose to construct by conversion, due to the fact that an exception was made. The size of guns that can be carried is limited to 8 inches.

The treaty also provides that whenever one of these airplane carriers carries any guns in excess of 6 inches in diameter they shall be limited in number to 10. If they carry guns not in excess of 6 inches in caliber, then there is no limit to the number of guns they can carry, and there is no limit at any time upon the number of antiaircraft guns or upon the amount of armor which these carriers may have upon them.

There is also a provision in the treaty which is most important, and which makes possible the bringing in of this bill with respect to the conversion. Because of the fact that our country has upon the ways six of these great battle cruisers, of which you see a model before you, and which would have been scrapped in case no provision was made for their conversion, it was specifically provided that any nation, party to the covenant, can build or can utilize any two of its ships, either built or building for the purpose of conversion into airplane carriers with a tonnage in excess of 27,000. There are two limits set for these ships—one that there can not be more than two, and the other limit is that they can not exceed 33,000 tons each, standard displacement, and a further restriction is that the number of 8-inch guns they may carry is limited to eight.

I shall take time a little further to explain fully these ships in detail, because I think all members of the committee are interested in these great monsters, of which there is no equal upon the Seven Seas at the present moment. Under the treaty the number of airplane carriers is not limited, but the total tonnage of airplane-carrier ships is limited. The United States and Great Britain limit themselves to a total tonnage of 135,000, standard displacement; France and Italy to 60,000 tons; and Japan to 80,000 tons. At the present moment England has seven airplane carriers. Perhaps, to be more accurate, I should say only five, because two of them are very insignificant ships. Of the five carriers, the speediest makes 32 knots an hour, and has a displacement of 19,000 tons. The total tonnage of Great Britain's aircraft-carrier ships at the present time is 84,000 standard tons. France has one airplane carrier with a displacement of 25,000 tons and Japan has one of 7,000 tons. We have one, the *Langley*, a converted collier, with a tonnage of about 14,000 tons, and a speed of about 14 knots. While she is a very good ship, she is not fast enough and is not large enough to really be effective as a fighting unit of our fleet. We have also an aircraft mother ship, the *Wright*, which does not carry airplanes, and therefore does not come within the tonnage limitation.

The battle cruisers which we were building had an estimated tonnage of 43,000, but in the treaty it is provided that if any nation utilized two of its ships for airplane carriers or constructs two, the tonnage shall not exceed 33,000 tons, and at once the question arises in your mind, if the cruisers were of 43,000 tons, how can we convert them into carriers of 33,000 tons? The answer is that the cruisers had great turrets and heavy guns. They all come off, and thereby the tonnage of the cruisers is reduced to 33,000 in the carriers.

There is one provision which was a compromise in regard to these larger carriers. As I said a moment ago, the caliber of the guns of all airplane carriers is limited to 8 inches, and on a 27,000-ton carrier, which is the largest that can be constructed except the two which are specifically mentioned, the number can not exceed 10; but if any nation takes advantage of the exception and builds ships having a tonnage not exceeding 33,000 tons, then the number of 8-inch guns is confined to eight. In other words, any nation, for the sake of getting the 6,000 additional tonnage over the prescribed limit of 27,000, must give up two 8-inch guns in order to build the larger tonnage carrier under the special provision of the treaty.

Six of these great cruisers are being constructed at the present time in American yards. They are in all stages of construction, ranging from a very small percentage of completion up to as high as 35 per cent.

Mr. JONES of Texas. Mr. Chairman, will the gentleman yield?

Mr. HICKS. Yes; and I will welcome any questions, for I desire to inform my colleagues to the limit of my ability.

Mr. JONES of Texas. I notice that the President is authorized to cancel the contracts for the construction and to discontinue construction of these ships. Has construction been continued on these ships since February 6?

Mr. HICKS. No. On February 8, by order of the President, work ceased on all of the ships that were to be scrapped under the treaty.

Mr. JONES of Texas. And they were immediately notified not to carry on the work further?

Mr. HICKS. No work is going on at the present time.

Mr. JONES of Texas. No expense being incurred.

Mr. HICKS. Except overhead and the expense incidental to caretakers. Work has been stopped, but contracts have not been canceled. On April 1 the state of completion of the three cruisers furthest advanced was: *Lexington*, at Fore River, 33.8 per cent completed; *Saratoga*, at Camden, 35.4 per cent completed; and the *Constellation*, Newport News, 22.7 per cent completed. The bill provides for the conversion of any two, at the discretion of the President.

At the present time the battleships in the fleet are being equipped with a catapult device by which airplanes, whether land planes or seaplanes, can be projected into the air without a runway. When we first tried to put aircraft on our fleet we had a little runway built from the back of the turret over the muzzle of the gun, and the airplane ran a short distance and then took the air. We found that impracticable. So the platforms have been removed and the plane is catapulted from the catapult device, which works successfully, and before the next fiscal year ends we hope to have one of these devices upon all the battleships, and we are also planning to have aircraft on practically every vessel of the Navy within the next three or four years. Even the destroyers will probably carry aircraft of some kind. Gentlemen will probably think I am a crank on the subject of aviation, and I feel I should apologize to my colleagues here in the House for so repeatedly speaking upon this topic, but I am earnestly of the belief that aviation is about to revolutionize naval maneuvers if not naval construction, and I believe aircraft has potentialities that to-day we little dream of, and possibilities almost as boundless as the element in which it operates, and I sincerely hope you gentlemen of Congress, as the time comes for you to vote on aircraft appropriations, will stand squarely behind this great arm of the service, both in the Army and in the Navy.

For the benefit of the committee these models were kindly sent here by Admiral Taylor, and I will use them to explain the bill. As I contemplate the great work done by Admiral Taylor, soon to retire, I can not let the moment pass without eulogizing this master naval constructor, who stands at the head of his profession and whose superb attainments are recognized the world over. I wish him happiness after his long and distinguished service.

I am going to take up for a few moments these cruisers, four of which will soon be torn to pieces. Of course, a cruiser or any other ship is composed of several parts or separate units. One is the hull, another the machinery, another is ordnance. Above the hull proper is the superstructure. At the present time the cruisers have largely been contracted for; a large part of the material and much of the machinery and ordnance is on hand.

Now I will illustrate. This is the hull of the cruiser as we find it to-day in the three I have mentioned—the *Lexington*, the *Saratoga*, and the *Constellation*—and here is the superstructure [changing the models], and as soon as this bill becomes a law work will be commenced to build the ships up from here [illustrating]. The machinery is installed, and when I tell you that the engines of these cruisers will develop a horsepower of 180,000 it seems almost unbelievable; but that is the case. With this enormous horsepower the cruisers would have had a speed of about 33 knots an hour. By converting the cruiser into an airplane carrier, reducing the weight, it will raise the speed about a knot and a half, so these great new airplane carriers will have a speed practically of 34½ knots an hour, which is the fastest ship of a heavy-type vessel in the world. This is, of course, a rather rough model, but it will illustrate what it is proposed to do. The hull is about 850 feet in length, with a beam of about 105 feet, which will enable the vessel to go through the Panama Canal locks, which have a width of 110 feet. You will notice the smokestack, the bridge, and the masts are built on the side. That was, of course, necessary in order to have as much free deck as possible. You will note the stream

line design to reduce wind resistance. If you gentlemen have any conception of great steam engines under forced draft you can imagine what the draft will be coming out of that stack, and that is one of the problems of this carrier construction—to get the funnels sufficiently on the side so that an aviator approaching will not have a cyclone to travel through in order to reach the deck. Here are the antiaircraft guns that will be provided. Remember, on this carrier there may be 8-inch guns not exceeding eight in number, but no limit is set for the antiaircraft guns or for the armor which might be placed upon the ship.

Right there is what is called the arresting gear or the trap. Amidships there are hatchways for the lowering and elevation of the planes. Below, in several decks, will be stored airplanes. Shops are also to be provided for the repair of planes and motors. Some planes will be in readiness to fly, and others will be in a knockdown condition. This carrier will be able to carry 75 airplanes in full commission and then, maybe, 50 more by turning back the wings. They can be brought from the hatch here and then brought out in the open in that way [illustrating]; then they will be either shot from the catapult or be projected by a short run. They alight right here on the stern and run into a trap consisting of two ramps 200 feet apart, across which heavy wires, under high tension, will be strung. On the axles of the planes engaging hooks will be fastened which will engage the wires of the ramp.

They will steady the airplane and keep it from falling off the deck of the ship. Those wires are arranged so that they come down lower on the deck on the forward end than on the other end. That will produce friction on these engaging hooks, and then, in addition, ropes will be placed across these wires at right angles, with sandbags on each end, and as the plane runs along the trap it will pick up one rope with sandbags, and then another, until as it nears the end of the journey it will be dragging many hundreds of pounds of sandbags and will stop before it gets to the end of the trap. Roughly, the deck of the ship is divided into three parts. The forward section will be for launching, the midship section for hatchways and for parking the planes, and the aft section for the landing field and trap.

Mr. STAFFORD. Will the gentleman yield?

Mr. HICKS. I will.

Mr. STAFFORD. How many planes can land at one time, or how many planes is it proposed to land at one time on the stern of one of these cruisers?

Mr. HICKS. Only one at a time. As soon as one lands and is taken out of the way another can land in a few moments, and so on. You could probably land them every few minutes.

Mr. KNUTSON. I presume the ship itself is going ahead at full speed also at the time so as to give more surface?

Mr. HICKS. The present landing speed of a plane is not below 45 miles an hour. The speed of the ship is 34 knots. That leaves something like 10 miles that has to be overcome by the arresting gear. If the speed of the plane and the ship could be synchronized, it would be simple. But we have not gotten the speed of the airplane quite as low as that of the ship. I think the day is not far distant when we will have a landing speed of something like 35 miles an hour, perhaps lower. Of course if that comes our proposition is simplified. There is no trouble in launching. The trouble comes with getting the plane down on the small landing field without an accident. But we have at the present time, at Hampton Roads, a turntable, so that we can turn it in the wind, and it is a duplicate of the trap we propose to install. We are constantly experimenting, and planes are coming down and landing on it day by day. It is true that we have had accidents, but only a few, and we hope we will be able to have our pilots land by this scheme with a reasonable degree of certainty.

Mr. TOWNER. Will the gentleman yield?

Mr. HICKS. I will. I will be glad to yield to any of you gentlemen who wish to ask a question.

Mr. TOWNER. The gentleman's speech is a very interesting and instructive one. I believe we will have two of these airplane carriers provided for?

Mr. HICKS. That is correct.

Mr. TOWNER. As I understand you, there would be about 45 airplanes in each carrier?

Mr. HICKS. Between 75 and 120. It depends on whether they are knocked down or not.

Mr. TOWNER. It depends also on the size somewhat?

Mr. HICKS. Yes; of course. It is a great deal like asking how many automobiles will go into a ship. It depends upon whether they are Fords or Pierce-Arrows.

Mr. TOWNER. And then the carrier is provided to take care of the crew?

Mr. HICKS. Yes.

Mr. TOWNER. So that the entire complement of airships would be sent out from the carrier fully manned at one time?

Mr. HICKS. Yes. I will say to the gentleman that the navigation force, entirely separate from the aviation force, will consist approximately of about 52 officers and 1,000 men. For aviation it will consist of about 126 officers and 500 men.

Mr. TOWNER. On each one of these ships?

Mr. HICKS. On each one of the carriers.

Mr. TOWNER. So it will be possible to send out a fleet of airplanes, if both of the carriers were engaged, of possibly 150 or 200 airplanes?

Mr. HICKS. Yes.

Mr. WILLIAMSON. Will the gentleman yield?

Mr. HICKS. I will.

Mr. WILLIAMSON. I was wondering how long it would take a crew to elevate the planes that are carried below deck and to set them up before they could be sent out from the ship into the air?

Mr. HICKS. What we would do would be this: We would have a certain number set up, ready for flying, and then as soon as they flew into the air the mechanicians would set up the others. That can be done in probably 10 or 15 minutes.

Mr. WILLIAMSON. That is the information I desire.

Mr. PARKER of New Jersey. When the gentleman from New York was with me in Glasgow during the war we saw a ship where the smokestack was at the stern. I see by the plan here that it is not convenient to do that.

Mr. HICKS. The gentleman is correct. The *Langley* discharges the smoke astern on a level with the deck. The trouble with a great ship on this question is this, that when you have 180,000 horsepower the draft is so terrific that if the smoke and gases were brought aft and then rose from the surface of the water it would be impossible for the aviator to get through. By using this plan the engineers figure that from their experience the cloud of smoke and gases will pass upward and a man can get through by coming in underneath. Also to get a proper draft we want a straight uptake.

Mr. PARKER of New Jersey. And besides, it is very difficult to change your engines?

Mr. HICKS. It is impracticable, and in order to get speed we must have a good draft.

Mr. PARKER of New Jersey. I noticed on the ships that we saw also that all the wings of the airplanes floated back on a hinge.

Mr. HICKS. We expect to do that with a lot of these.

Mr. PARKER of New Jersey. Do you expect to adopt it universally? It is not a bad plan.

Mr. HICKS. With many we will. We are experimenting with aircraft. We are trying to devise a new camber device, for instance, and a variable propeller blade, both of which will reduce the landing troubles.

Mr. LONGWORTH. Will the gentleman yield?

Mr. HICKS. I will be glad to do so.

Mr. LONGWORTH. How does this ship compare in size and efficiency with the ships of other countries?

Mr. HICKS. It is finer than that of any other country.

Mr. LONGWORTH. How would it compare with the best ship developed in Great Britain?

Mr. HICKS. The fastest aircraft ship Great Britain has has a speed of 32 knots, which, of course, is almost as great as this, but her largest ship is 100 feet shorter. While it is a good ship, it is not equal to the ones we propose, because, while it was built for aviation purposes, it was built five or six years ago, and in that time we have experimented with aviation a great deal. So I have no hesitation in saying that when these ships are built they will be the finest ships in the world and the most efficient.

Mr. WALSH. Mr. Chairman, will the gentleman yield?

Mr. HICKS. I yield to the gentleman.

Mr. WALSH. Is this to be an oil-burning ship?

Mr. HICKS. Yes.

Mr. WALSH. What are they going to do with these men on board of a ship of that kind? They have not any large batteries or any guns except a few aircraft guns, have they?

Mr. HICKS. There will be a good many antiaircraft guns, and there may be eight of the 8-inch guns, and this is a tremendous ship to care for and properly man. This is a warship of the most advanced type and the fire crew alone will be very large, even though she is an oil burner.

Mr. WALSH. How many guns?

Mr. HICKS. I am going to ask gentlemen not to press me closely respecting the ballistic features of this vessel, and besides full details have not been worked out.

Mr. WALSH. Have they got an antiaircraft gun anywhere that is in any degree effective?

Mr. HICKS. We are working on antiaircraft guns that I think will be a great improvement on those we have had heretofore.

Mr. WALSH. I mean do they have any that are more effective than those they had during the war?

Mr. HICKS. Yes; more accurate in sighting, and more certain in operation.

Mr. WHEELER. Mr. Chairman, will the gentleman yield?

Mr. HICKS. Yes.

Mr. WHEELER. How long will it take after the airplane has landed on the ship to clear the deck?

Mr. HICKS. If the plane lands on the stern of the ship and goes forward and drops into the trap it can be taken out and stored amidships, in probably four or five minutes.

Mr. WHEELER. Then they could be safely stored away in a few minutes' time?

Mr. HICKS. I do not think we could get them down into the hold of the ship in that time. Of course, if we have 100 it would take a considerably longer time. We can only take care of 10 or 15 on the deck and then take them down into the hatches.

Mr. SMITH of Michigan. Mr. Chairman, will the gentleman yield?

Mr. HICKS. Yes.

Mr. SMITH of Michigan. Is it not true that all our large cruisers are more or less provided now with aircraft? Is it not true that most of our battleships have either a scouting plane on them or a fighting plane?

Mr. HICKS. They did have runways as I have explained; but those devices have all been discarded. We have now one battleship, the *Maryland*, equipped with a catapult. We are now equipping all our vessels with that device, and soon all capital ships will be provided with a number of planes of various types.

Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman has 12 minutes remaining.

Mr. MILLER. Mr. Chairman, will the gentleman yield?

Mr. HICKS. Yes.

Mr. MILLER. I notice that the title of this bill is to authorize the President to scrap certain vessels in conformity with the provisions of the treaty to limit naval armament. I have a question which I would like the gentleman to answer. I know the gentleman is exceptionally well informed.

Mr. HICKS. The gentleman is making a bold assertion.

Mr. MILLER. We are proceeding to alter our naval program when the treaty negotiated here has not been ratified by any nation except ourselves, and there is no earnest or indication to show that the other nations will ratify it.

Mr. HICKS. This bill does not make it mandatory on the President to do the scrapping, but merely authorizes him to scrap, gives him the power to destroy. I do not think he will do any scrapping until the treaties are ratified by the different nations. We can trust his judgment.

Mr. MILLER. Then it is the gentleman's opinion that the President will do this when the treaties are ratified?

Mr. HICKS. I think, anyway, we will convert two of our vessels into airplane carriers, because the greatest need of the Navy is for these airplane carriers. It is where we are totally deficient at the present time.

Mr. SISSON. Mr. Chairman, will the gentleman yield?

Mr. HICKS. Yes.

Mr. SISSON. I understand that that is part of the program of the Navy in any event. Even though the treaty should not be ratified by the other nations and the treaty should fail, it is the program of the Navy to make two of these airplane carriers. In fact, I think we ought to have more of these airplane carriers, not less than three or four in the Atlantic and at least that many on the Pacific, and on either side of the Canal Zone.

Mr. HICKS. Of the possibilities of other nations for converting ships into carriers I will not speak. Great Britain and Japan both have ships they can convert, and, while they would be valuable, I do not hesitate to say that ours will be superior to any they can utilize.

Now, some gentlemen are anxious to know what all this is going to cost. This is a rather staggering thing—the cost of these ships. To convert these two battle cruisers from the point where they now are into the completed carriers, and not taking into account the ammunition or the aircraft itself, it will cost $36,500,000 for the two. On the other hand, were we to build two new ships of this tonnage, starting from the keel, they would cost, exclusive of ammunition and aircraft, $56,000,000; so by making the conversion we are saving $19,500,000. Here is the point: By using the two battle cruisers and building them up into airplane carriers by the expenditure of $36,500,000 we are utilizing some $19,500,000 already expended and which will be lost if the conversion does not take place. That is the business proposition, and we are also getting two of the largest types in the shortest time; and there is one other thing that we are accomplishing. We are giving an opportunity to the men in the yards to go ahead and work, where they are now out of employment; and these things, in my judgment, make it almost imperative on this Congress to vote for this provision in the bill. These airplane carriers, my friends, are the most urgently needed units in the whole American Navy. I submit there are four main reasons for developing aircraft:

First. As all battleship construction is halted, improvements must largely come in other services.

Second. Limit of size of new battleships prevents great enlargement in that field.

Third. The value of aircraft as a powerful weapon has been proven not only for defense but for offense; not only for observation in connection with gunnery and maneuvers but as a weapon in itself capable of launching bombs and torpedoes.

Many experts, both professional and lay, feel that the era of great battleship construction, with their staggering initial cost and their high maintenance cost, is about over.

Fourth. It is a great defensive weapon, carrying the attack 200 miles at sea, and in a few years much farther.

Gentlemen who saw those tests last summer off the Virginia capes, when these great German ships went down under the bombing of aircraft, must have been convinced that aviation is no longer merely an idea, no longer an experiment, but a reality and a weapon of the greatest value.

Aircraft is now a great weapon to prevent an enemy from approaching our coast. We can attack an enemy fleet 200 miles from our seaboard line. To-morrow or next week it may be 500 miles. So as a weapon of defense as well as a weapon of offense aviation has an assured value to the Navy and to the people of the United States.

In reference to the bombing tests I want to say this: I pay my tribute of respect to Admiral Moffatt, head of the Aviation Bureau of the Navy, for what he has done, and to Captain Craven before him for his work, and to General Menoher and General Patrick, of the Army Aviation Service, for what they have done. They are all officers of eminence, deserving the thanks of their country. Then comes General Mitchell, a man who, as you know, has told this country that aircraft is the great weapon of the future. Sometimes his statements may have been exaggerated, but he is an enthusiast, sincere and earnest, and in my judgment General Mitchell has done more for aviation than any other man in this country.

Mr. WALSH. Will the gentleman yield?

Mr. HICKS. I yield to my colleague from Massachusetts.

Mr. WALSH. I did not understand the gentleman's statement when he said we were going to save $19,000,000 by converting these cruisers.

Mr. HICKS. What I said was this, that if we should start afresh from the keel up and build two of these airplane carriers of 33,000 tons displacement they would cost us $56,000,000 exclusive of ammunition and aircraft. By utilizing the hulls and the machinery and some of the ordnance of the two cruisers now furthest advanced, the conversion will cost about $36,500,000, thereby saving $19,500,000 by making the conversion. Whether we build anew or make the conversion, the ammunition and aircraft will be additional. We have already expended on the two cruisers furthest advanced over $24,000,000, of which it is estimated nearly $20,000,000 can be utilized by conversion. Some of the ordnance, heavy guns and turrets, will be scrapped, anyway.

Mr. WALSH. Does the gentleman think we are going to save that sum by this conversion?

Mr. HICKS. I certainly do.

Mr. STAFFORD. Will the gentleman yield?

Mr. HICKS. I yield to the gentleman from Wisconsin.

Mr. STAFFORD. Has any estimate been made as to when these airplane carriers will be ready for service?

Mr. HICKS. I am very glad the gentleman asked that question, because I had omitted to mention it. If we push construction to its maximum and take advantage of every opportunity in getting material, they can be finished very shortly after November 1, 1924. If work is slowed down, of course it may be three or four months or a year after that.

Mr. SWING. Will the gentleman yield for a question?

Mr. HICKS. I yield to the gentleman from California.

Mr. SWING. As I understand, it will not call for any new appropriation, but the appropriations which have been made already can be applied to this work?

Mr. HICKS. Yes; that is correct. We will spend probably a million up to June 30, 1922. To carry on work on all the vessels being built, if we are to do it efficiently, probably $10,000,000 in addition will be needed next year.

Now, Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman has three minutes remaining.

Mr. HICKS. I will defer speaking any more, but I will answer any question that any gentleman would like to ask.

Mr. SUMMERS of Washington. Will the gentleman tell us where these ships will be constructed?

Mr. HICKS. Yes; I mentioned that a few moments ago, and I am glad to repeat it for the benefit of the gentleman. The *Lexington*, which is 33.8 per cent completed, is being built at a private yard at Fore River, Mass. The *Saratoga*, 35.4 per cent completed, at a private yard at Camden, N. J.; the *Constellation*, 22 per cent completed, at a private yard at Newport News, Va.

Mr. SUMMERS of Washington. I refer to the change that is to be made—the conversion of the two cruisers.

Mr. HICKS. The work of conversion will take place right on the ships where they are on the ways at the present time. We could not very well move the hulls and machinery from the ways and then put them up on some other ways and go on with the work.

Mr. SUMMERS of Washington. The gentleman spoke about three.

Mr. HICKS. I mentioned three, because there will be a choice of any two of the three.

Mr. SUMMERS of Washington. That choice has not yet been made?

Mr. HICKS. No; the bill has not become a law yet, and no definite plan adopted.

Mr. SUMMERS of Washington. That is very true; but I thought perhaps the choice had been indicated.

Mr. HICKS. They have not yet selected the two.

Mr. LAZARO. Will the gentleman yield for a question?

Mr. HICKS. Yes; with pleasure.

Mr. LAZARO. I understood the gentleman to say that we were not limited in tonnage but that we were limited in ships.

Mr. HICKS. No; it is just the other way. We can not have any ships except the two that we convert, of a tonnage in excess of 27,000 tons, but we could have 50 ships of 2,000 or 2,500 tons each. But the total tonnage must not exceed 135,000.

Mr. LAZARO. If we adhere to the big carriers only, how are we to protect both the Atlantic Ocean, the Pacific Ocean, and the Panama Canal?

Mr. HICKS. We will have 135,000 tons. We can build up to that. We can make our ships any size we please, provided we do not exceed the 135,000 tons in total, and provided with the exception of these two they do not exceed 27,000 tons each. We can divide the number between our fleets as we deem best.

Mr. ALMON. What is to become of the *North Carolina* that is being constructed at Portsmouth, Va.?

Mr. HICKS. She is one of the ships that will be scrapped.

Mr. ALMON. What percentage of the entire work has been done on her?

Mr. HICKS. I can not say as to the percentage.

Mr. PARKER of New Jersey. Will the gentleman yield?

Mr. HICKS. I yield to the gentleman from New Jersey.

Mr. PARKER of New Jersey. Are any of the appropriations now made being pushed to give us light cruisers—fast cruisers?

Mr. HICKS. Yes; the balance of the appropriations made last year for construction, increase of the Navy, will be on the 1st of July about $47,000,000, and of that balance an amount will be used for these light cruisers. I will now conclude my remarks. Gentlemen, aviation is in its infancy, let us give it man's standing, as it deserves. The old prejudice that some naval officers had against it has disappeared, and this branch of the service will come into its own. Let us pass this bill; it will place aircraft with the fleet where naval aviation should be; it will make our Navy more effective, for no one denies the value, yea, the necessity, of aircraft with our ships—its presence may mean victory, its absence defeat; it will save money; it will give us larger vessels; it will find employment for our men at the yards.

I thank you gentlemen for your attention and your courtesy.

For information of the committee I insert the following:

Under the naval treaty of the Conference on the Limitation of Armament an aircraft carrier is defined as a vessel of war with a displacement in excess of 10,000 tons (10,160 metric tons) standard displacement designed for the specific and exclusive purpose of carrying aircraft. It must be so constructed that aircraft can be launched therefrom and landed thereon, and not designed and constructed for carrying a more powerful armament than that allowed to it under article 9 or article 10, as the case may be. (Ch. II, pt. 4.)

Article 7, "The total tonnage for aircraft carriers of each of the contracting powers shall not exceed in standard displacement, for the United States, 135,000 tons; for the British Empire, 135,000 tons; for France, 60,000 tons; for Italy, 60,000 tons; for Japan, 80,000." Article 8, "The replacement of aircraft carriers shall be effected only as prescribed in chapter 2, part 3: *Provided, however*, That all aircraft carrier tonnage in existence or building on November 12, 1921, shall be considered experimental, and may be replaced, within the total tonnage limit prescribed in article 7, without regard to its age." Article 9, "No aircraft carrier exceeding 27,000 tons standard displacement shall be acquired by, or constructed by, for or within the jurisdiction of any of the contracting parties. However, any of the contracting parties may, provided that its total tonnage allowance of aircraft carriers is not thereby exceeded, build not more than two aircraft carriers, each of a tonnage of not more than 33,000 tons standard displacement, and in order to effect economy, any of the contracting powers may use for this purpose any two of their ships, whether constructed or in course of construction which would otherwise be scrapped under the provisions of article 2. The armament of any aircraft carriers exceeding 27,000 tons standard displacement shall be in accordance with the requirements of article 10, except that the total number of guns to be carried in case any of such guns be of a caliber exceeding 6 inches (except anti-aircraft guns and guns not exceeding 5 inches) shall not exceed 8."

Article 10, "No aircraft carrier of the contracting powers shall carry a gun with a caliber in excess of 8 inches. Without prejudice to the provisions of article 9, if the armament carried includes guns exceeding 6 inches in caliber the total number of guns carried, except anti-aircraft guns and guns not exceeding 5 inches, shall not exceed 10. If alternatively the armament contains no guns exceeding 6 inches in caliber, the number of guns is not limited. In either case the number of antiaircraft guns and of guns not exceeding 5 inches is not limited."

I also insert the following from the report on the bill:

Admiral W. A. Moffett, Chief of the Bureau of Aeronautics, when before the Committee on Naval Affairs of the House of Representatives on February 21, 1922, made the following statement:

"The need for carriers in our fleet is far greater than it was before the terms of the treaty were announced; our battleship force is cut far below the strength contemplated in the 1916 program, and we can complete no battle cruisers. Without the utilization of our full allowance of carrier tonnage, together with the equipment of all other suitable ships of the fleet with catapults and airplanes, it will be impossible for the Navy to undertake anything but a defensive and consequently a losing naval campaign.

* * * * * * *

"It should be noted that Japan as well as Great Britain is already ahead of us in carrier strength in commission or under construction. * * *

"We may thus acquire two 33,000-ton carriers of 34 knots speed. These will be the fastest ships afloat, as well as superior in aviation facilities to the best of any carriers now afloat or building. If the work on conversion of two battle cruisers is started immediately they can be made ready to join the fleet in the autumn of 1924.

"The CHAIRMAN. Will your service be perfectly satisfied with this style of airplane carrier?

"Admiral MOFFETT. Yes, sir.

* * * * * * *

"Mr. HICKS. You have no hesitation in saying that, from your standpoint as Chief of the Bureau of Aeronautics of the Navy Department, in order to carry aviation forward to the extent you want to, it is absolutely essential at the present time that we have two of these 33,000-ton airplane carriers?

"Admiral MOFFETT. Yes; and just as soon as we can get them.

"Mr. HICKS. These two that we are talking of converting from battle cruisers to airplane carriers are the ones you want, are they?

"Admiral MOFFETT. Yes, sir; and just as soon as we can get them.

Aircraft carriers of the various nations.

Name.	Completed or converted.	Guns.	Speed.	Tons.
GREAT BRITAIN.				
Furious..... Built as a sister to Courageous and Glorious in 1915–1917. Rebuilt as a carrier November, 1917–March, 1918. She was made to carry two 18-inch guns, one of which was mounted and successfully employed during 1917. She is now under alteration at Rosyth Dock Yard.	March, 1918, and is under another refit at present at Rosyth.	Ten 5.5-inch, five 3-inch AA.	32	19,100
Vindictive..... Begun as a light cruiser, but altered for a carrier before the completion of her construction.	October, 1918..	Four 7.5-inch, four 12-pounders, four 3-inch AA.	29	9,750
Hermes..... This is the first vessel in the world to have been planned, begun, and completed as an aircraft carrier. Her completion is forecast for April or May, 1922.	Spring, 1922...	Ten 6-inch, four 4-inch AA.	25	10,950
Eagle..... Begun as the Chilean dreadnought Almirante Cochrane. Work on her stopped in 1914, and in 1918 her modification to serve as a carrier began. She was first put in service in 1920 and is now being altered in Portsmouth Dock Yard as a result of the experience gained on her. The delivery is expected in April of this year.	April, 1922....	Six 6-inch, two 3-inch AA.	25	22,790
Argus..... Begun as a liner. Work was stopped in 1914. She first appeared in September, 1918, as a carrier. She was refitted in the winter of 1920–21 in a royal dockyard and has since been in use with the main fleet in the Mediterranean or in home waters.	Spring, 1921...	Two 4-inch, four 4-inch AA.	20	15,750
Pegasus..... Ex-merchantman.	1918.....	Two 12-pounders, two 12-inch AA.	20	3,070

Aircraft carriers of the various nations—Continued.

Name.	Completed or converted.	Guns.	Speed.	Tons.
GREAT BRITIAN—continued.				
Ark Royal. Ex-merchantman.	1916	Four 12-pounders	11	7,080
UNITED STATES.				
Langley. Ex-collier Jupiter. Converted by the N rfolk Navy Yard.	Spring, 1922	Four 5-inch AA.	14	14,000
JAPAN.				
Wakamiya. Built in 1901 as a transport. Japan has building the Hosho, 10,000 tons, 25 knots, whose completion is forecast for this year. She was designed and built as a carrier. There are two others of the Hosho class appropriated for, but not begun.	1916 (?)	Two 12-pounders.	12	7,600
FRANCE.				
Bearn. Begun as a battleship. The work was abandoned during the war. Only preliminary experimental work has been done on her. The date of her complete readiness is forecast for late in 1922 or early in 1923.	Autumn, 1921		21.5	24,830

By unanimous consent, Mr. HICKS was given leave to revise and extend his remarks in the RECORD.

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted, etc., That for the purpose of giving effect to the provisions in the treaty to limit naval armament, concluded February 6, 1922, by the United States of America and the British Empire, France, Italy, and Japan, respecting the abandonment of shipbuilding programs and the scrapping of capital ships in excess of the number which the United States may retain in conformity with the said provisions, the President of the United States be, and he is hereby, authorized to make such disposition, as in his judgment may be proper, of any capital ship of the Navy built or building and to cause to be taken such action as is necessary for the scrapping of capital ships to be dealt with in that manner in accordance with the said provisions.

Mr. DALLINGER. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Amendment offered by Mr. DALLINGER: Page 2, line 4, after the word "provisions" insert the following: "*Provided*, That the work of breaking up all such capital ships except such as shall be sold, and except such as have been under construction and are still on the ways unfinished at private shipyards, shall be performed by civilian forces at the Government navy yards."

Mr. LONGWORTH. Mr. Chairman, I reserve a point of order to that amendment.

Mr. DALLINGER. Mr. Chairman, I will state that this amendment has been submitted to the gentleman from New York [Mr. HICKS], who is in charge of this bill, and also to the Assistant Secretary of the Navy, and in its present form I understand that it is acceptable to the department and the committee. In the form in which I originally drew the amendment it provided that the "scrapping" should be done at the navy yards, but I understand that the use of that word might prevent the Navy Department from using some of the old vessels as targets in gun practice, and so at the suggestion of the Assistant Secretary of the Navy I substitute the words "breaking up." The object of the amendment is to require the department to utilize existing plants at navy yards for the work that can properly be done there. It does not interfere with vessels which are in process of construction at private shipyards. It would manifestly be impracticable to remove them to Government navy yards.

Mr. TINCHER. Will the gentleman yield?

Mr. DALLINGER. I will.

Mr. TINCHER. Is there anything in the [illegible] would preclude the President from using the emplo[illegible] navy yards at this time, without this amendment?

Mr. DALLINGER. No; the amendment simply expresses the desire and will of Congress to have it done.

Mr. TINCHER. Does the gentleman think it is necessary to instruct the President how to do this thing when he in fact has the right to do it under the bill?

Mr. DALLINGER. I think, Mr. Chairman, that it is perfectly proper for Congress to express its opinion and judgment that, so far as practicable, existing navy yards should be used.

Mr. TINCHER. This amendment is not expressing an opinion, it is a direction to the President. It directs the President to do something that he can do if he wants to under the bill as it exists now.

Mr. DALLINGER. That same objection can be raised to any limiting amendment placed by Congress on any administration bill that comes up for discussion here.

Mr. STAFFORD. Will the gentleman yield?

Mr. DALLINGER. Certainly.

Mr. STAFFORD. The gentleman in reply to the inquiry by the gentleman from Kansas says "so far as practicable," but his amendment is not limited to that extent. There may be a large battleship which is 4 per cent completed—and there are some 10 per cent completed—and you would compel the Government under your amendment to have that vessel taken to a Government navy yard to be scrapped.

Mr. DALLINGER. Absolutely not. My amendment expressly excepts such a case as the gentleman from Wisconsin cites.

Mr. CHINDBLOM. Will the gentleman yield?

Mr. DALLINGER. I will.

Mr. CHINDBLOM. Suppose it is more economical to destroy a ship where it happens to be than to sail it under the use of oil or coal to a navy yard, as the President would be compelled to do under this amendment, incurring additional expense?

Mr. DALLINGER. Such a vessel could be sold where it was, or used as a target.

Mr. CHINDBLOM. Suppose it is not used as a target—suppose it happens to be in some part of the world distant from America. It would have to go under its own steam to a navy yard for the purpose of being broken up, at an additional cost to the Government.

Mr. DALLINGER. Such a vessel would naturally return to the United States; otherwise what would become of the crew?

Mr. CHINDBLOM. You might have several vessels together and one vessel could bring all the crews back.

Mr. DALLINGER. I do not think that such a case as the gentleman cites is likely to happen.

Mr. HICKS. Mr. Chairman, I have no desire to discuss the point of order, but I want to say in regard to this amendment that the gentleman from Massachusetts [Mr. DALLINGER] kindly showed me the amendment some days ago. I took it up with the naval authorities, and there is no objection to it from their standpoint. It only provides for scrapping ships in commission, and as we expect to sell all those ships anyway for about a million dollars if the market holds, the amendment will probably never come into operation.

However, if it does, and some of our ships in commission have to be scrapped by the Government, they will naturally be scrapped in a Government yard. We will not scrap a Government ship in a private yard. Therefore the amendment provides merely for that thing being done. The amendment is innocuous. It will not hurt, one way or the other. As far as I am concerned personally, I am quite agreeable to having it adopted, although I think it valueless.

Mr. STAFFORD. It has some local advantage to persons representing navy yards, of course.

Mr. LONGWORTH. Mr. Chairman, in view of the statement of the gentleman in charge of the bill that this amendment is unobjectionable from a practical standpoint, I shall not insist upon the point of order.

The CHAIRMAN. The gentleman from Ohio withdraws his reservation of the point of order.

Mr. PADGETT. Mr. Chairman, I have very little to say in respect to this amendment. This provision in the bill leaves it absolutely in the discretion and judgment of the President as to how this shall be done. He has all of the authority that this amendment proposes to give him under the provisions of the bill. I do not see any good to be accomplished by limiting the discretion of the President. I think that he ought to be left at full liberty to determine what is right and proper under the circumstances as they may present themselves in individual cases, without putting a provision in the bill directing the President to do something in a particular way or at a particular place. I do not think any good can be accomplished by agreeing to the amendment.

Mr. MILLER. Mr. Chairman, I move to strike out the last word for the purpose of asking the gentleman from New York in charge of the bill some questions in respect to the bill. The paragraph that we are now considering is the scrapping paragraph of the bill. If I understand the situation, the *Massachusetts*, the *Indiana*, the *Iowa*, and the *Alabama* have been designated as target ships and all have been sunk, with the exception of the *Iowa*. Is that right?

Mr. HICKS. Yes.

Mr. MILLER. I understand that the *Kearsarge* has been converted into a crane ship and the *Kentucky* has been offered for sale.

Mr. HICKS. Yes.

Mr. MILLER. That the *Maine*, the *Missouri*, and the *Wisconsin* have been offered for sale and have been delivered to the contractors; that the *Columbia*, the *Minneapolis*, and the *Brooklyn* have been sold and are delivered, and some monitors have likewise been sold. I am now inquiring under what authority, what act of Congress, the Navy Department is authorized to sell these ships?

Mr. HICKS. There is a general law by which Government property, after a proper survey, is condemned as being no longer useful or valuable and can be sold.

Mr. MILLER. Then if the department has authority to condemn ships and sell them, why do we have to have legislation to scrap them?

Mr. HICKS. Because when a ship is on the ways you can hardly condemn it. If it is not built, it is not a ship and can not be considered useless. There is some question about condemning something which you could not say was no longer useful. It is only no longer useful providing the treaty goes into effect; its usefulness is based on the treaty, not on its own fitness.

Mr. MILLER. But the scrapping program as to the above ships has no relation to the treaty at all. If we are talking about scrapping ships that have no relation to the treaty, why do we have to have an act of Congress to do it?

Mr. HICKS. If the gentleman had been here yesterday, he would probably have heard the very learned discussion occurring between the gentleman from Virginia [Mr. TUCKER] and others——

Mr. MILLER. I heard a lot of it.

Mr. HICKS. As to the power of the treaty to put into effect something provided for in the Constitution, but the ships that are no longer of any use in the Navy, like a worn out gun or an automobile, if condemned by a duly authorized board, can be sold under the board's condemnation report.

Mr. MILLER. That is all very true, but the scrapping the Navy Department is carrying out and intends to carry out has no relation to the treaty. They can not be carrying out any treaty scrapping because we have no treaties ratified by the signatory nations as yet.

Mr. HICKS. I do not see the point the gentleman is making in regard to it. He must admit that the Government always has the right to sell condemned property. He must know that, because he serves on a committee that must have to do with the sale of condemned property, useless and obsolete property of the military department.

Mr. MILLER. I am aware of that. I do not know that I make myself clear to the gentleman. Why is it that the Navy Department can sell vessels without being authorized by Congress, whereas if they scrap a vessel they have to have congressional authorization?

Mr. HICKS. Because we felt that these ships on the ways could not be condemned in the same way that you could condemn an obsolete and useless vessel. Who can say that a vessel merely half built is obsolete or useless. She may be of the greatest use imaginable if completed. Other vessels are condemned because they are useless. But some of these vessels to be scrapped are not obsolete. They are good ships and no board could condemn them.

Mr. PADGETT. If the gentleman will permit, a number of the 15 ships that are reserved are useful ships and are valuable, but they are authorized to be scrapped under the pending treaty, and it is to carry out the treaty that they are authorized to be scrapped. They could not be disposed of unless we had this legislation, because they are valuable, useful ships.

Mr. MILLER. But the point is that the scrapping program as now outlined by the Navy Department has no relation in the world to the treaty, and we are scrapping vessels that are claimed to be of no military value on the same plan that we are selling those that have no military value.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. WALSH. Mr. Chairman, I ask unanimous consent that his time be extended for five additional minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MILLER. The point I am getting at is this: We are undertaking in two methods to dispose of ships that have no military value. One of them is by a scrapping process and the other is by selling the vessels. If the Government can sell these vessels without any legislation, why is it necessary to have legislative authority when you come to scrap them? The only explanation must be that we are preparing to scrap ships under the treaty, and as the treaty has not been ratified by any country except ours, it strikes me that we are entering upon our treaty scrapping entirely too early. The treaty may eventually fail; then where are we?

Mr. PADGETT. It is necessary to have the legislation to dispose of the ships that are valuable. It is not necessary to have the legislation to dispose of those that can be condemned as useless and of no value. But there are a number of these ships that are of value, from a military standpoint, and are useful, and it is to carry out the treaty that comprehends those useful, valuable ships, to give authority to dispose of them, and we call that scrapping.

Mr. MILLER. That would be very nice had the Navy Department any program toward scrapping the vessels that are of military value and which will necessarily have to be scrapped under the treaty.

Mr. PADGETT. It is to name them, every one. They are named in the hearings and in the treaty.

Mr. WALSH. I was going to ask the gentleman if it is not a fact, according to his understanding, that before a naval ship can be sold under existing law by the naval authorities it must have been surveyed by some board of naval officers and found to be unseaworthy and unsafe, or not fit for further use in the Navy?

Mr. MILLER. I understand that generally to be the law.

Mr. WALSH. Otherwise it can not be so condemned. My understanding is that if they have a ship that was built only a few years ago and she is seaworthy and safe and not obsolete, and she is fit for use, that before the department can sell that vessel there must be legislative authority.

Mr. MILLER. That is the point upon which I am undertaking to get information.

Mr. HICKS. If the gentleman will permit, if I remember correctly, some years ago this country sold two ships to Greece.

Mr. MILLER. Yes.

Mr. HICKS. The *Mississippi* and the *Idaho*. Now, those vessels were not condemned, because they were good ships, but we sold them by act of Congress, not because they were obsolete and useless but because we did not need them. No board would have condemned them, and no board would condemn the *Delaware* and *North Dakota*, which are to be scrapped, and so Congress must authorize their destruction.

Mr. MILLER. I understand the transaction well and remember it well, and in that instance there was congressional action taken.

Mr. HICKS. That is exactly what we are going to do now.

Mr. MILLER. So far as I understand, the Navy Department has no program in the world of what ships are to be destroyed and what are to be scrapped under the terms of the treaty, because they have no assurance the treaty is going to be signed by the signatory nations.

Mr. HICKS. There are certain vessels the Navy Department will sell—the obsolete vessels—whether the treaty goes through or not, which ought to be sold, as they have been carrying on the naval list many vessels costing this Government hundreds of thousands of dollars, and I am glad we are to rid ourselves of many useless vessels.

Mr. MILLER. That is why I am wondering at the title of the bill, authorizing the President to scrap certain vessels in conformity with the provisions of the treaty to limit naval armament, not because they are obsolete ships——

Mr. HICKS. I think the gentleman realizes there are certain ships in our Navy which are going to be scrapped not because they were useless or obsolete, and therefore not subject to condemnation, but because we wanted to conform to the curtailment agreement, and the only way to do it is by congressional action.

The CHAIRMAN. The time of the gentleman from Washington has again expired.

The question is on the amendment offered by the gentleman from Massachusetts.

The question was taken, and the Chair announced the noes appeared to have it.

On a division (demanded by Mr. DALLINGER) there were—ayes 14, noes 34.

So the amendment was rejected.

Mr. CARTER. Mr. Chairman, I am, of course, in favor of this bill, as I presume practically everyone else is, but that is not the subject that I desire to discuss. I do not think I shall consume 10 minutes, for the subject I shall touch upon may not perhaps deserve the taking up of that much time of the House. I wish to refer to a matter that occurred yesterday on the floor of this House. On yesterday the Socialist Party in the House of Representatives took occasion to cast a perfectly uncalled for slur on the splendid State of Oklahoma. The gen-

tleman from New York [Mr. LONDON] had the floor, and I read from the RECORD, as follows:

Mr. MICHENER. Did not many of these same prisoners advocate the evading of the draft law?
Mr. LONDON. They have been convicted under section 3 of the espionage law, and that section deals with offenses——
Mr. MICHENER. Like the Kansas rebellion, where they all went up into the hills.
Mr. LONDON. Oh, the gentleman is mixing up the Kansas case with the Oklahoma case.
Mr. MICHENER. Yes; the Oklahoma case.
Mr. LONDON. The Oklahoma case involves only three men, and it is an exception. We can not expect much from Oklahoma, whether it be an Oklahoma Democrat, an Oklahoma Republican, or an Oklahoma Socialist.

It is a lamentable fact that our State has had much undesirable, undeserved, and, in my judgment, unjust adverse advertisement within the last year, but I am not responsible for that. We are a new State. We only came into the Union some 15 years ago, therefore we naturally expect some criticism and faultfinding from those who have had experience in running governmental affairs in older States. But when the entire Socialist Party in Congress holds a caucus with itself and feels called upon to criticize not only the good Democrats and Republicans in our State but Oklahoma Socialists as well, it would seem to me that irresponsible criticism had about reached the limit, and I propose that the Oklahoma Socialists shall know exactly who it is that is criticizing them and why they are being criticized.

The gentleman from New York could have had but two objects in making this uncalled for sling at our State, first, a peculiar desire to cast unjustified and uncalled for aspersions on one of the sister States of this Republic, and, second, to place the offenses committed by the Oklahoma draft evaders in a separate class from all other cases. The gentleman's whole speech was directed toward a plea for amnesty on behalf of certain persons convicted of what he chooses to call political crimes during the war. In other words, the gentleman was pleading for the "higher-ups," for the leading Socialists, only who went to the penitentiary during the war, while placing the rank and file in a separate class not deserving clemency. Why did these "higher-ups" go to the penitentiary? For advising people not to submit to the laws of their country during this critical time, and now the gentleman would separate them from the rank and file, releasing them while holding the poor, misguided fellow who followed their pernicious advice.

I had the good fortune or misfortune, as the case may be, to attend the trial of these draft evaders in Oklahoma, and as I stood there beside the Federal judge trying the case and looked out into the faces of those poor, deluded fellows who were arraigned it occurred to me that some of them were subjects more fit for St. Elizabeths than they were for the penitentiary. Why had these poor fellows committed these crimes? They had no knowledge of the law. They had not sufficient knowledge of the law, perhaps, to even know when they were breaking it. They committed these crimes on account of the bad advice they had received from the very persons whom the gentleman from New York is now defending. They committed these crimes on account of the propaganda sent forth by these very men for whom the distinguished gentleman himself now demands amnesty in one breath and in the next says that these poor, ill-advised Oklahoma farmers who were caught in this draft-evasion net on account of bad advice they took from these very men ought to now be considered in a separate class, from which we are to assume that they are not entitled to amnesty, but the "higher-ups" who advised them to violate the law must be pardoned and restored to liberty. That may be the gentleman's idea of justice; that may be the teachings of the political party at whose shrine our Socialist friend worships, but it is not the belief of the good citizenship of the State of Oklahoma, irrespective of politics, who stand on the eternal principles enunciated by the immortal Jefferson, "Equal rights to all and special privileges to none."

The gentleman undertook to give information concerning the nature and trial of these cases. He attempted to go into the situation in Oklahoma. He spoke in that speech of "amazing ignorance." The gentleman shows just as much amazing ignorance in undertaking to discuss Oklahoma conditions as he does in his hair-brained ideas of government, his misguided conception of economics, and his Utopian advocacy of a great cooperative Commonwealth.

I have high respect for the gentleman from New York, but we all have our shortcomings. The fault of my friend, I think his most grievous shortcoming, is his prodigious presumption, his astounding assumption that he knows more than everybody else about everything on the face of the earth, including government and economics. [Applause.]

Mr. LONDON. Will the gentleman yield?

Mr. CARTER. Yes.

Mr. LONDON. So far as the Oklahoma situation is concerned, I believe I referred in my statement to the evidence given by Mrs. White, who stated before the Committee on the Judiciary that she had made a personal investigation. I believe I referred in my speech to her evidence.

Mr. CARTER. Oh, the gentleman was assuming to advise this House concerning conditions in Oklahoma at that critical time. Among other things, he said that these antidraft organizations were formed before the war for the purpose of protecting tenant farmers against usurious interest, when everybody who knows anything at all about conditions in the State of Oklahoma knows that we have as stringent usury laws as any State in this Union and knows that they are as rigidly enforced as any other.

Now, Mr. Chairman, that is about all, except a dream I had a few nights ago. This beautiful dream took me back to my boyhood days when I made my first trip to the great city of Gotham. As I approached near unto that wonderful city I saw some extraordinary colossal thing rise from the level of the horizon, which I first thought must be the new Statue of Liberty enlightening the world, about which I had heard so much, but upon approaching nearer unto it, I found I had made a gross error and that the wonderful vision I had mistaken for the new statue was nothing more nor less than the highly exalted opinion of the distinguished gentleman from New York of his own intelligence, knowledge of government, conditions, and things in general. I thank you. [Applause.]

The CHAIRMAN. The Clerk will read.

The Clerk resumed and concluded the reading of the bill.

Mr. HICKS. Mr. Chairman, I move that the committee do now rise and report the bill back to the House with the recommendation that it do pass.

The motion was agreed to.

Thereupon the committee rose; and the Speaker having resumed the chair, Mr. HUSTED, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having had under consideration the bill H. R. 11214, had directed him to report the same back to the House with the recommendation that it do pass.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. HICKS, a motion to reconsider the vote by which the bill was passed was laid on the table.

APPROPRIATIONS FOR DEPARTMENTS OF STATE AND JUSTICE, AND FOR THE JUDICIARY—CONFERENCE REPORT (H. REPT. 996).

Mr. HUSTED. Mr. Speaker, I call up the conference report on the bill H. R. 11065, making appropriations for the Departments of State and Justice and for the judiciary for the fiscal year ending June 30, 1923, and for other purposes, and I ask unanimous consent that the statement may be read in lieu of the report.

The SPEAKER. The gentleman from New York asks that the statement may be read in lieu of the report. Is there objection? [After a pause.] The Chair hears none.

The Clerk will report the statement.

The statement was read.

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 11065) making appropriations for the Departments of State and Justice and for the judiciary for the fiscal year ending June 30, 1923, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 21, 27, 34, 35, 37, 38, 51, 52, 59, 63, 64, 68, 69, 74, 75, 77, 78, 85, 87, 88, 93, and 94.

That the House recede from its disagreement to the amendments of the Senate numbered 2, 3, 4, 9, 10, 11, 18, 20, 23, 26, 29, 31, 32, 33, 39, 41, 42, 46, 50, 54, 55, 56, 57, 58, 60, 65, 66, 67, 76, 80, 81, 82, 83, 84, 86, and 97, and agree to the same.

Amendment numbered 1: That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$260,000"; and the Senate agree to the same.

Amendment numbered 12: That the House recede from its disagreement to the amendment of the Senate numbered 12, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$350,000"; and the Senate agree to the same.

Amendment numbered 14: That the House recede from its disagreement to the amendment of the Senate numbered 14, and agree to the same with an amendment as follows: Transpose the matter inserted by said amendment to page 8, line 5, of the bill, to follow the word "of," amended to read as follows: "and rent for"; and the Senate agree to the same.

Amendment numbered 15: That the House recede from its disagreement to the amendment of the Senate numbered 15, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$750,000"; and the Senate agree to the same.

Amendment numbered 16: That the House recede from its disagreement to the amendment of the Senate numbered 16, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$1,900,000"; and the Senate agree to the same.

Amendment numbered 17: That the House recede from its disagreement to the amendment of the Senate numbered 17, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$1,935,000"; and the Senate agree to the same.

Amendment numbered 19: That the House recede from its disagreement to the amendment of the Senate numbered 19, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$1,150,000"; and the Senate agree to the same.

Amendment numbered 22: That the House recede from its disagreement to the amendment of the Senate numbered 22, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$290,000"; and the Senate agree to the same.

Amendment numbered 30: That the House recede from its disagreement to the amendment of the Senate numbered 30, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$49,400"; and the Senate agree to the same.

Amendment numbered 36: That the House recede from its disagreement to the amendment of the Senate numbered 36, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following:

"For the expenses of the arbitration of outstanding pecuniary claims between the United States and Great Britain, in accordance with the special agreement concluded for that purpose August 18, 1910, and the schedules of claims thereunder, including salary and expenses of the tribunal, and of the agent, to be appointed by the President, by and with the advice and consent of the Senate, counsel, joint secretary and other assistants, contingent expenses, and personal services and rent in the District of Columbia and elsewhere, to be expended under the direction of the Secretary of State, $60,000."

And the Senate agree to the same.

Amendment numbered 53: That the House recede from its disagreement to the amendment of the Senate numbered 53, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$479,010"; and the Senate agree to the same.

Amendment numbered 62: That the House recede from its disagreement to the amendment of the Senate numbered 62, and agree to the same with an amendment as follows: Restore the matter stricken out by said amendment, amended to read as follows: "The investigation of the official acts, records, and accounts of marshals, attorneys, and clerks of the United States courts and the territorial courts, and United States commissioners, for which purpose all the official papers, records, and dockets of said officers, without exception, shall be examined by the agents of the Attorney General at any time"; and the Senate agree to the same.

Amendment numbered 72: That the House recede from its disagreement to the amendment of the Senate numbered 72, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$2,275,000"; and the Senate agree to the same.

Amendment numbered 79: That the House recede from its disagreement to the amendment of the Senate numbered 79, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$90,000"; and the Senate agree to the same.

Amendment numbered 89: That the House recede from its disagreement to the amendment of the Senate numbered 89, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$578,500"; and the Senate agree to the same.

Amendment numbered 90: That the House recede from its disagreement to the amendment of the Senate numbered 90, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$37,500"; and the Senate agree to the same.

Amendment numbered 91: That the House recede from its disagreement to the amendment of the Senate numbered 91, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$23,000"; and the Senate agree to the same.

Amendment numbered 92: That the House recede from its disagreement to the amendment of the Senate numbered 92, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$2,000"; and the Senate agree to the same.

Amendment numbered 95: That the House recede from its disagreement to the amendment of the Senate numbered 95, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$149,300"; and the Senate agree to the same.

Amendment numbered 96: That the House recede from its disagreement to the amendment of the Senate numbered 96, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$1,050,000"; and the Senate agree to the same.

The committee of conference have not agreed on Senate amendments numbered 5, 6, 7, 8, 13, 24, 25, 28, 40, 43, 44, 45, 47, 48, 49, 61, 70, 71, and 73.

JAMES W. HUSTED,
GEORGE HOLDEN TINKHAM,
Managers on the part of the House.

CHARLES CURTIS,
F. E. WARREN,
H. C. LODGE,
LEE S. OVERMAN,
G. M. HITCHCOCK,
Managers on the part of the Senate.

STATEMENT.

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 11065) making appropriations for the Departments of State and Justice and the judiciary for the fiscal year ending June 30, 1923, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon by the conference committee and submitted in the accompanying conference report:

On No. 1, relating to the office of the Secretary of State: Appropriates $260,000, instead of $250,000, as proposed by the House, and $275,000, as proposed by the Senate, for temporary employees in the Department of State.

On No. 2: Makes the appropriation for an automobile for the Secretary of State immediately available.

On Nos. 3 and 4, relating to passport bureau: Appropriates $55,000, as proposed by the Senate, instead of $50,000, as proposed by the House, and makes the sum available for the payment of rent outside the District of Columbia.

On Nos. 9, 10, and 11, relating to the embassy to Turkey: Appropriates $5,500 for the Turkish secretary and $4,000 for the Turkish assistant secretary, as proposed by the Senate, instead of $3,600 and $2,000, respectively, as proposed by the House.

On No. 12, relating to clerks at embassies and legations: Appropriates $350,000, instead of $300,000, as proposed by the House, and $394,828, as proposed by the Senate.

On Nos. 14 and 15, relating to contingent expenses, foreign missions: Appropriates $750,000, instead of $700,000, as proposed by the House, and $800,000, as proposed by the Senate; makes the sum available for the payment of rent for dispatch agents, as proposed by the Senate; and changes the said Senate amendment No. 14 so as to read "and rent for" instead of "and rent," and transposes the amended form within the sentence to improve the language.

On Nos. 16 and 17, relating to salaries of the Consular Service: Appropriates $1,900,000, instead of $1,874,500, as proposed by the House, and $1,974,500, as proposed by the Senate, for salaries of consuls general, consuls, and vice consuls.

On No. 18, relating to clerk hire at United States consulates: Appropriates $1,400,000, as proposed by the Senate, instead of $1,350,000, as proposed by the House.

On No. 19, relating to contingent expenses, United States consulates: Appropriates $1,150,000, instead of $1,100,000, as proposed by the House, and $1,200,000, as proposed by the Senate.

On No. 20, relating to relief and protection of American seamen: Appropriates $220,000, as proposed by the Senate, instead of $150,000, as proposed by the House.

On No. 21, relating to salaries of diplomatic and consular officers while receiving instructions and in transit: Appropriates $50,000, as proposed by the House, instead of $65,000, as proposed by the Senate.

On No. 22, relating to transportation of diplomatic and consular officers: Appropriates $290,000, instead of $275,000, as proposed by the House, and $300,000, as proposed by the Senate.

On No. 23, relating to emergencies arising in the Diplomatic and Consular Service: Appropriates $400,000, as proposed by the Senate, instead of $100,000, as proposed by the House.

On Nos. 26 and 27, relating to embassy, legation, and consular buildings and grounds: Appropriates $150,000, as proposed by the Senate, for the alteration, repair, and furnishing of the embassy building in London, and strikes out the language proposed by the Senate reappropriating $300,000 for the acquisition of embassy, legation, or consular buildings and grounds at certain places as provided in the Diplomatic and Consular appropriation act for 1922, and continuing for the fiscal year 1923 the commission therein created to approve such acquisitions.

On No. 29, relating to the International Boundary Commission, United States and Mexico: Eliminates the proviso inserted by the House and stricken out by the Senate that no part of the appropriation for the commission shall be expended for the salary of a commissioner.

On No. 30, relating to the boundary line, Alaska and Canada, and the United States and Canada: Appropriates $49,400, instead of $30,000, as proposed by the House, and $54,400, as proposed by the Senate.

On No. 31, relating to the International Prison Commission: Appropriates $2,550, as proposed by the Senate, instead of $1,500, as proposed by the House.

On No. 32, relating to printing and binding for the Pan American Union: Strikes out, as proposed by the Senate, the word "that," inserted by the House.

On No. 33, relating to the Bureau of Interparliamentary Union for Promotion of International Arbitration: Strikes out, as proposed by the Senate, the phrase "at Brussels, Belgium," inserted by the House.

On Nos. 34 and 35, relating to the International Institute of Agriculture: Appropriates $19,577, as proposed by the House, instead of $8,000, as proposed by the Senate, for payment of the quota of the United States.

On No. 36, relating to the arbitration of outstanding pecuniary claims between the United States and Great Britain: Strikes out the language fixing the salaries and other expenses of the tribunal and agency, as proposed by the House, and adopts the language proposed by the Senate, amended so as to provide that the agent shall be appointed by the President, by and with the advice and consent of the Senate; and appropriates a lump sum of $60,000, instead of a detailed appropriation of $52,770, as proposed by the House, and a lump sum of $72,430, as proposed by the Senate.

On Nos. 37 and 38, relating to the United States section of the Inter-American High Commission: Appropriates $19,600, as proposed by the House, instead of $25,000, as proposed by the Senate, and strikes out the language proposed by the Senate providing that the commission shall complete its labors and submit a final report on or before the 30th day of June, 1923.

On No. 39, relating to the International Research Council: Appropriates $4,030, as proposed by the Senate, instead of $2,658, as proposed by the House.

On No. 41, relating to the World War Foreign Debt Commission: Appropriates $20,000, as proposed by the Senate, for the expenses of the commission.

On No. 42, relating to the International Trade-Mark Registration Bureau: Appropriates $9,600, as proposed by the Senate, for the quota of the United States to said bureau.

On No. 46, relating to transportation of officers of the United States Court for China: Strikes out, as proposed by the Senate, the phrase "of $275,000" inserted by the House.

On Nos. 50, 51, 52, and 53, relating to salaries in the office of the Attorney General: Appropriates $4,200, as proposed by the Senate, instead of $3,600, as proposed by the House, for the attorney in charge of pardons; strikes out the appropriation of $4,000, as proposed by the Senate, for a chief of the division of investigation; and appropriates $3,000, as proposed by the House, instead of $3,500, as proposed by the Senate, for the chief of the division of accounts.

On Nos. 54, 55, 56, and 57, relating to contingent expenses, Department of Justice: Appropriates $6,000, as proposed by the Senate, instead of $5,000, as proposed by the House, for furniture and repairs; appropriates $15,000, as proposed by the Senate, instead of $12,500, as proposed by the House, for stationery; appropriates $40,000, as proposed by the Senate, instead of $37,000, as proposed by the House, for miscellaneous expenditures; and $75,000, as proposed by the Senate, instead of $96,000, as proposed by the House, for rent of buildings in the District of Columbia.

On No. 58, relating to conduct of customs cases: Appropriates $86,100, as proposed by the Senate, instead of $83,000, as proposed by the House.

On Nos. 59 and 60, relating to the enforcement of national prohibition: Retains the language inserted by the House and stricken out by the Senate providing for allotments from other appropriations of $150,000 for the enforcement of prohibition instead of a direct appropriation of a like sum as proposed by the Senate; and eliminates the provision inserted by the House and stricken out by the Senate requiring the Attorney General to make a detailed report to Congress of such allotments and the purposes for which they are being expended.

On Nos. 62 and 63, relating to the investigation of the official acts, records, and accounts of marshals, attorneys, clerks, referees, and trustees of United States and Territorial courts, etc.: Restores the language inserted by the House and stricken out by the Senate, with the words "referees and trustees" omitted, and strikes out the language, inserted by the Senate, making a direct appropriation of $75,000 for such purposes.

On Nos. 64 and 65, relating to the enforcement of antitrust laws: Appropriates $225,000, as proposed by the House, instead of $300,000, as proposed by the Senate; eliminates the language, adopted by the House and stricken out by the Senate, exempting labor organizations and farmers' associations from prosecution under any of the money appropriated by the act, and retains the language, inserted by the Senate, exempting such organizations from prosecution under the appropriation for enforcement of antitrust laws.

On Nos. 66, 67, 68, and 69, relating to the Court of Customs Appeals: Provides for five stenographic clerks at $1,600 each, as proposed by the Senate, instead of three, as proposed by the House, and appropriates $3,965, as provided by the House, instead of $5,385, as provided by the Senate, for the miscellaneous expenses of the court.

On No. 72, relating to salaries, fees, and expenses of United States marshals and their deputies: Appropriates $2,275,000 instead of $2,250,000, as proposed by the House, and $2,300,000, as proposed by the Senate.

On No. 74, relating to salaries of United States district attorneys, etc.: Appropriates $900,000, as proposed by the House, instead of $950,000, as proposed by the Senate.

On Nos. 75 and 76, relating to salaries of regular assistants to United States district attorneys: Appropriates $550,000, as proposed by the House, instead of $600,000, as proposed by the Senate; and fixes the maximum compensation of such assistants at $3,500, as proposed by the Senate, instead of $3,000, as proposed by the House.

On No. 77, relating to salaries of special assistants to the Attorney General and United States district attorneys: Appropriates $850,000, as proposed by the House, instead of $1,000,000, as proposed by the Senate.

On No. 78, relating to the office expenses and the personal compensation of clerks of United States circuit courts of appeals, their deputies, and other assistants: Restores the language adopted by the House and stricken out by the Senate, providing that such compensation and expenses shall be authorized by the Attorney General and fixing the maximum compensation of the clerks of the courts at $5,000. It also provides that all fees received by said clerks shall be paid into the Treasury of the United States, as in the case of clerks of United States district courts. And it further provides that from and after July 1, 1922, the salary of the clerk of the United States district court for Hawaii shall be fixed in the same manner as salaries of clerks of United States district courts.

On No. 79, relating to supplies for United States courts and judicial officers: Appropriates $90,000, instead of $80,000, as proposed by the House, and $100,000, as proposed by the Senate.

On No. 80, relating to the purchase of law books for United States judges, district attorneys, and other judicial officers: Appropriates $25,000, as provided by the Senate, instead of $20,000, as provided by the House.

On Nos. 81, 82, and 83, relating to the Federal prison at Leavenworth, Kans.: Appropriates $4,800, as provided by the Senate, instead of $3,600, as provided by the House, for certain skilled laborers.

On Nos. 84, 85, 86, 87, 88, and 89, relating to the Federal prison at Atlanta, Ga.: Appropriates $200,000, as proposed by the Senate, instead of $175,000, as proposed by the House, for subsistence; appropriates $110,000, as proposed by the House, instead of $120,000, as proposed by the Senate, for clothing, trans-

portation, etc.; appropriates $7,500, as proposed by the Senate, instead of $6,500, as proposed by the House, for hospital supplies; and $92,800, as proposed by the House, instead of $97,980, as proposed by the Senate, for guards.

On Nos. 90, 91, 92, 93, 94, and 95, relating to the Federal prison at McNeil Island, Wash.: Appropriates $37,500, instead of $35,000, as proposed by the House, and $41,000, as proposed by the Senate, for subsistence; appropriates $23,000, instead of $20,000, as proposed by the House, and $26,750, as proposed by the Senate, for clothing, transportation, and traveling expenses; appropriates $2,000, instead of $1,500, as proposed by the House, and $3,500, as proposed by the Senate, for hospital supplies; and $24,000, as proposed by the House, instead of $26,000, as proposed by the Senate, for guards.

On No. 96, relating to support of prisoners: Appropriates $1,050,000, instead of $1,000,000, as proposed by the House, and $1,100,000, as proposed by the Senate.

On No. 97, relating to inspection of prisons and prisoners: Appropriates $12,000, as proposed by the Senate, instead of $11,000, as proposed by the House.

The committee of conference have not agreed upon the following amendments of the Senate:

On Nos. 5, 6, 7, and 8: Striking out the appropriation of $7,500 for agent and consul general at Cairo, authorizing the President to appoint a minister to Egypt at $10,000 per annum and making the necessary appropriation therefor, including the balance of the fiscal year 1922.

On No. 13: Authorizing the employment of translators from the appropriation "Contingent expenses, foreign missions."

On Nos. 24 and 25: Appropriating $3,500 to Daisy Crawford Carroll, widow of B. Harvey Carroll, and $3,000 to Alice Potter, widow of Julian Potter, whose husbands died as a result of illness incurred in the Consular Service, one year's salary in each case.

On No. 28: Appropriating $200,000 for post allowances to diplomatic and consular officers.

On No. 40: Appropriating $3,860 for the International Hydrographic Bureau.

On No. 43: Appropriating $5,000 for the international conference on maritime law.

On No. 44: Appropriating $3,750 for the Commission of Jurists to consider amendments to the laws of war.

On No. 45: Appropriating $75,000 for the Fifth International Conference of American States, at Santiago, Chile.

On No. 47: Appropriating $47,750 for the revision of Chinese customs tariff under the treaty signed February 6, 1922.

On No. 48: Appropriating $21,000 for inquiry into extraterritoriality in China under a resolution adopted by the Conference on Limitation of Armament.

On No. 49: Appropriating $2,200 to pay claims of the Government of Norway on account of the detention of three Norwegian subjects as witnesses to the damage caused the Norwegian vessel *Ingrid* by an explosion at Jersey City February 1, 1911.

On No. 61: Appropriating $1,500 to the estate of W. L. Dunham, deceased, who was killed while acting as a posse man engaged in the enforcement of national prohibition.

On Nos. 70 and 71: Appropriating $5,000, instead of $3,500, as proposed by the House, for the salary of the chief clerk of the Court of Claims.

On No. 73: Authorizing the Secretary of War to deliver to the office of the United States marshal for the District of Columbia, without payment therefor, one passenger-carrying motor vehicle.

JAMES W. HUSTED,
GEORGE HOLDEN TINKHAM,
Managers on the part of the House.

Mr. HUSTED. Mr. Speaker, the majority of the conferees on the part of the Senate and the House came to complete agreement as between themselves on every item in the bill. We were compelled to bring back some of the items to the House which were new legislation, put in by the Senate, or which went out on a point of order in the House.

The amount of the bill as passed by the Senate is $28,699,640.16. The amount of the bill as passed by the House was $26,376,397.16. So that the net added by the Senate was $2,323,243. The amount of recessions by the House in the conference report amounted to $1,014,652. The amount involved in the Senate amendments brought back for action, which the House managers will recommend for adoption by the House, are as follows:

For ambassadors and ministers, $3,100.

That is the difference between the salary of our present representative and the minister, which has now been provided for—an increase of $3,100. Egypt has now been recognized by our Government, and this bill provides for a minister to Egypt. There is a payment to Daisy Crawford Carroll, who is the widow of a consular officer, of $3,500, and the amount represents one year's salary of her husband; and to Alice Potter, of $3,000, which represents one year's salary of her husband, who was also a consular officer. The conference report puts back a paragraph which went out under a point of order for post allowances for diplomatic and consular officers, and also appropriates $3,860 for the International Hydrographic Bureau. It also provides $5,000 for an international conference on maritime law. This is going to be a very important conference, at which are to be taken up questions of maritime law relating to collisions, particularly important to us now on account of our merchant marine. It also provides $3,750 for the expenses of the American representatives on the commission of jurists on the amendments of the laws of war. This commission was provided for by the Limitation of Armament Conference, and it provides $75,000 for the expenses of an American delegation to the fifth international conference of American States at Santiago, Chile. There has not been any conference since 1912, I think. It has been the custom to hold one of these international conferences every three or four years, but the war caused an interruption, and this will be the first conference since 1912. The expenses of the American representatives to the last conference amounted to $133,000, and we are providing $75,000.

Then we are providing $47,750 for the expenses of the American representatives on a commission for the revision of Chinese customs tariffs. That is another commission provided for by the Limitation of Arms Conference. And there is still another one, to inquire into the extraterritoriality in China, for which we have provided expenses of $21,000. There is also an item of $2,200 to pay certain Norwegian claims. These are claims consisting of actual expenses, chiefly legal expenses, of two men who were detained in this country by the Government as witnesses to the explosion of a Norwegian vessel. They were clapped into jail, and were kept in durance vile for about a month. They were put to considerable expense and never received any compensation whatever. We have also provided $1,500 for the estate of W. L. Dunham. This man had his head blown off while acting as a posse officer in the enforcement of the prohibition law. He was compelled to join the forces, and was killed, and while it is rather an exception to the general rule to put an item of this kind on an appropriation bill, I think this is an exception which ought to be made, because in this case the man left a widow and nine children who are penniless.

Mr. SNELL. Mr. Speaker, will the gentleman yield?

Mr. HUSTED. Yes.

Mr. SNELL. I wanted to ask the gentleman in regard to these death claims. It seems to me we should have some fixed policy and not change it around. It is rather unfair for one person having a death claim to have it attached to a conference report and have it go through the House without consideration and another person having a just claim be required to present it to the Committee on Claims and take his chances before the Committee on Claims and perhaps wait two or three years before it is brought into the House.

Mr. HUSTED. I agree with the gentleman as to that, but here is an exceptional case. Here is a man who left a widow and nine little children, and they are penniless. We are providing only $1,500, whereas if they went into court they could certainly get more than $1,500.

Mr. SNELL. Then why not treat them right?

I do not think it is fair to give preferential treatment to a claim in this way because some man has a little more political influence than others. All these claims should be treated in the same way. They should be referred to the Committee on Claims and there either rejected or recommended to the House for payment eventually. It seems to me it is rather unfair to attach some of them to a conference report and in that way get them through quickly, whereas the others have to wait several years for consideration.

Mr. HUSTED. This is not a case where there has been any political influence.

Mr. JOHNSON of Mississippi. I want to add that these people had no political influence exerted in their behalf. This man left a wife and nine children.

Mr. HUSTED. Yes. This man was ordered to perform a certain duty. If he had not gone he would have been punished. As it was, he did go, and he lost his life.

Mr. SNELL. I am only discussing the policy involved. Considering various claims of that kind before the committee of which I am chairman, it seems to me the House should do one thing or the other: Either let all claims to which there is no

opposition be attached to conference reports and brought in in this way or else keep them all out.

Mr. HUSTED. These people are down and out.

Mr. SNELL. I am anxious to get these claims through the House.

Mr. WALSH. Mr. Speaker, will the gentleman yield?

Mr. HUSTED. I yield to the gentleman from Massachusetts.

Mr. WALSH. What does the gentleman propose to do with reference to amendments 70 and 71, increasing the salary of the Chief Clerk of the Court of Claims by $1,500?

Mr. HUSTED. I am going to move to recede and concur and make the salary the same as that of the salary of the clerks of the circuit courts of appeals. The clerk of the Court of Claims gets now only $3,500, and he has really more responsibility and more work to perform than the clerks of the United States circuit courts of appeals.

Mr. WALSH. I do not agree with the gentleman on that. If you are going to make the salary the same as that of the clerk of the United States circuit court of appeals, why not make the salary of the judges of that court the same as that of the judges of the district courts?

Mr. HUSTED. The clerk of the Court of Claims is a very busy clerk. He has manifold duties to perform. I would like to make a statement to the gentleman concerning his work. I read:

The Court of Claims in the period covered by the six years from 1914 to 1919, inclusive, disposed of more than two and one-half times as many cases as the entire nine United States circuit courts of appeals combined, the amount involved therein reaching the enormous sum of $259,147,373.52; and in the past eight years the Court of Claims has disposed of more civil cases than any one of the district courts, whose clerk receives $5,000, and more than the entire five district courts, whose clerks receive $4,750, combined.

Mr. WALSH. Undoubtedly the clerk of the Court of Claims has transacted more business even than the clerk of the Supreme Court of the United States. But would the gentleman for that reason advocate that we pay the salary of the clerk of the Court of Claims on the same basis as the clerk of the Supreme Court?

Mr. HUSTED. I would not do that. I do not think it is a parallel case.

Mr. WALSH. It is just as parallel as it is to cite the analogy between the work of the clerk of the Court of Claims and that of the clerk to the circuit court of appeals.

Mr. HUSTED. Let me give you an idea of the business of the clerk of the Court of Claims:

In addition to the ordinary duties of the office as set forth with those of the clerks of the other United States courts by the Congressional Joint Committee on Reclassification, it is one of the duties of the clerk, by special order of the court, "to execute such references and orders in any case pending in the court and make report thereon as may be referred and directed by the court." (Court order of October 19, 1914.) The performance of the duties and functions prescribed by this order calls for the qualifications of a special master in chancery. It requires experience in the law, ability to accurately analyze the facts, to correctly ascertain the law applicable thereto, to use sound judgment in the application thereof, and the capability to report fully, clearly, and precisely such facts and legal conclusions. For such services this clerk receives no compensation additional to his salary, while the clerks of the other United States courts, when performing the duties of special master, have until the recent increase in their salaries been paid special master's fees in addition to the regular salary of their office. The present incumbent of the office of the clerk of the Court of Claims has had an experience of 30 years in active legal practice before the United States courts, the courts of the State of New York, and other States.

A further condition making it necessary that this clerk shall be a trained and experienced lawyer is that he is constantly required to advise litigants and counsel and to properly inform Members of the Senate and House of Representatives as to pending and contemplated litigation, not only under established law but in connection with the vast mass of special legislation referred to by the Attorney General, which originated in the World War, and which presents new questions both of practice and of substantive law, for which there is no precedent.

I am convinced, Mr. Speaker, that the clerk to the Court of Claims is very much underpaid and that this increase of $1,500 in his salary is fully deserved and justified.

Mr. WALSH. Well, if that is so, what does the gentleman say about the judges of the Court of Claims?.

Mr. HUSTED. Well, that question has not been brought up.

Mr. WALSH. What has the gentleman been reading from?

Mr. HUSTED. I was reading from the report of the Committee on the Judiciary, submitted to the Senate by the chairman, Senator NELSON.

Mr. WALSH. On a bill?

Mr. HUSTED. On a bill for the increase of this salary.

Mr. WALSH. Providing for the increase of salary, and they put it in as an amendment of the Senate, and the conferees on the part of the House, with no further consideration than the reading of the report of the committee, are recommending that the House agree to it.

Mr. HUSTED. Well, that is not an accurate statement. I am very sure that the House subcommittee would have increased the salary in the bill as it was presented to the House if it had not been subject to a point of order; that is, the disposition of the House subcommittee would have been to increase the salary. But we did not bring in any salary increases to the House, because we adhered strictly to the rule, even though we knew the cases were deserving. Though we believed in them, we did not recommend them, because we wanted to keep strictly within the rule of the House.

Mr. WALSH. Does the gentleman think this is still adhering to the rule, where the committee will not permit salary increases to be reported from its subcommittee, but has no objection to the Senate putting in increases and the conferees agreeing to them? That is a practice that we have been trying to eliminate by this new system. It seems to me if we establish the precedent of getting salary increases through in this way it will run all along the line.

Mr. HUSTED. I want to say to the gentleman that the conferees have brought this item back to the House for the sanction of the House.

Mr. WALSH. Yes; with the intention of recommending that the House approve of what the committee did not approve, or the subcommittee did not approve. They are asking the House to approve that now as conferees.

Mr. KINCHELOE. Mr. Speaker, will the gentleman yield?

Mr. HUSTED. Yes.

Mr. KINCHELOE. I would like to inquire about the item covered by the Senate amendment No. 26, appropriating $150,000 for repairing the American embassy in London. Is this the same embassy building for which a bill has been passed through Congress giving Mr. Morgan the opportunity and privilege and power to donate to the United States for the American embassy?

Mr. HUSTED. This is an item for repairing, improving, and furnishing the building donated by Mr. Morgan to the Government for embassy purposes.

Mr. KINCHELOE. Was there any hearing had before the conferees showing why it would take this enormous amount of $150,000 to prepare this building for occupancy?

Mr. HUSTED. This building is not at all suited to embassy purposes. The property, as I understand it, is worth from $250,000 to $300,000, but the chief value is in the land. It is a very good location, and has many advantages from that standpoint, but the buildings do not amount to very much. They must be reconstructed and renovated.

Mr. KINCHELOE. When the bill was pending before Congress to authorize the President to accept this gift from Mr. Morgan, we were told it was an ideal place and an act of great generosity on Mr. Morgan's part. If it is unsuitable for the purpose, I wonder why the Government accepted it.

Mr. HUSTED. It is a valuable site, and the actual value of the gift is close to $300,000, and that is quite a substantial gift, but the building itself is not suited to embassy purposes, and I imagine that no ordinary residence would be. Very substantial structural changes would have to be made in it.

Mr. KINCHELOE. I do not suppose any of this $150,000 is going to be used to improve the land, and I was wondering what improvements would cost $150,000, which, of course, will be converted into English pounds, and the discount on the English pound will make it amount to more than $150,000.

Mr. HUSTED. This is the estimate of the State Department.

Mr. KINCHELOE. I was wondering whether it was contemplated to equip a wine cellar for Mr. Harvey over there as a part of the improvement. [Laughter.] I understand, by reading the newspapers, that his conduct there has been such as to indicate his need for a wine cellar.

Mr. HUSTED. I can give the gentleman the items of the estimate—

Construction work, alterations, etc	$25,498.00
Hot-water heating installation	4,796.00
Electric installation and fittings	16,280.00
Plumbing	1,100.00
Renovation—repairs, replacements, painting, and decorating	33,792.00
Installation of elevator	660.00
Furniture, furnishings, carpets, etc	65,700.80
Other items	1,320.00
Contingencies	4,853.20
Total	154,000.00

Mr. KINCHELOE. Does the gentleman known how large this building is? How many rooms has it?

Mr. HUSTED. I believe there are two buildings on this property, and these two buildings will have to be made into one building in order to make it suitable for our purposes as an embassy.

Mr. KINCHELOE. This administration pretends to be in favor of good business economy. Does not the gentleman think that if they were going to improve it at all it would have been good business economy to build a new house? It seems to me

they could build it and equip it new for $150,000. I was trying to find out whether the gentleman has any information as a conferee.

This being a Senate amendment, I presume was not considered by the gentleman's subcommittee to ascertain what was the real purpose of this, and why it should be repaired at this enormous expense, and whether or not it would be cheaper to build a new one, or whether it would not be still cheaper to hand this property back to Mr. Morgan and buy one, if we were going to own one at all.

Mr. HUSTED. Of course, I have only the statement of the conferees on the part of the Senate and such information as is given in the Senate hearings. The matter was not taken up by our subcommittee.

Mr. KINCHELOE. Was there any statement from Mr. Harvey himself before your subcommittee or the conferees?

Mr. HUSTED. No statement from Mr. Harvey.

Mr. GARNER. Will the gentleman yield for a question?

Mr. HUSTED. I do.

Mr. GARNER. I recall that when we passed the bill authorizing the purchase of embassies and legations we limited the cost to $150,000 at any one point.

Mr. HUSTED. For the acquisition of the embassy.

Mr. GARNER. Yes; I was just wondering if this was not in a way a violation of the spirit of the Lowden Act to appropriate $150,000 for the purpose of repairing.

Mr. HUSTED. This one does not come under the Lowden Act at all.

Mr. GARNER. I know it does not come under the Lowden Act, but suppose some gentleman should be good enough to give us a house in some other place where we had an ambassador and the Senate should put on an amendment providing for an appropriation of $300,000 to repair and equip that building. Would not that be in reality a violation of the spirit of the limitation that Congress placed on that particular activity of the Government?

Mr. HUSTED. I will say to the gentleman that I think we are all agreed that our Government should have adequate embassies at least in London and Paris, and this is a very fine property. It is on Hyde Park, on a corner. It has a garden in the rear of the property. There are two buildings on it. The value of the property is from $250,000 to $300,000 at the present time in American money. It is a very handsome gift. They say it will take $150,000 to fix it up in fine shape so that it will be suitable for our purposes. The idea is to throw these two buildings together.

Mr. GARNER. But it does not seem to be very good public policy on our part to accept as a gift from some wealthy American a property for an embassy and then appropriate $150,000 or $250,000 or $300,000 to repair and fix up that building for an embassy. I do not believe the American people want Congress to indulge in any such performance.

Mr. HUSTED. The gift has been accepted. The President has already accepted the gift. It would be absolutely useless if we do not spend sufficient funds to fix it up.

Mr. GARNER. Has Congress accepted the gift in any act of Congress?

Mr. HUSTED. We authorized the President to accept it, and the President did accept it in the name of the United States Government.

Mr. ROACH. Will the gentleman yield?

Mr. HUSTED. Yes.

Mr. ROACH. Is it proposed to expend more than $150,000 on this property?

Mr. HUSTED. It is not; that is expected to do all the work necessary to remodel the building and furnish the building and make it habitable as an embassy.

Mr. RAYBURN. Will the gentleman yield?

Mr. HUSTED. Certainly.

Mr. RAYBURN. I was here when the item in the bill was passed accepting this property. I thought it was going very far afield then and I think so now for the Congress of the United States. I was very much opposed to it. It seems to me that if I remember correctly, in the debate it was described as a splendid building, in splendid shape, and they were going to save the Government of the United States all this money by accepting this property. In the same bill there was an appropriation or an authorization of $150,000 to buy an embassy building in Paris. Now, you come in, and the first thing after accepting that property supposed to be so well located and in such good shape to be used for an embassy—and that was the principal argument why we should break a precedent and accept this gift from private interests—now you come in with an appropriation of $150,000 to repair it. Does the gentleman think that $150,000 will fix the property up so that it will be fit for habitation as an embassy?

Mr. HUSTED. It is stated by the department that it will be enough to do the necessary work.

Mr. RAYBURN. Does anybody occupy the house?

Mr. HUSTED. I think it is not occupied, and it will not be occupied until it is remodeled.

Mr. RAYBURN. Does not the gentleman think that we could take $150,000 in London now and in all probability buy a better piece of property for that sum?

Mr. HUSTED. No; the property as it stands is worth $250,000 or $300,000 in American money. It is in an advantageous location, a very fine piece of property, especially so from the standpoint of embassy use.

Mr. RAYBURN. Who made the recommendation that we appropriate $150,000?

Mr. HUSTED. It comes from the State Department.

Mr. RAYBURN. Where did they get the information?

Mr. HUSTED. I have already read the details—I do not know whether the gentleman was on the floor at the time—I read the detailed estimate of the cost of reconstruction. It gives the amount in pounds and shillings and also gives the amount in dollars. It comes before us as a business proposition, and I believe as a business proposition pure and simple the thing to do now is to spend enough money on the property to put it in shape.

Mr. RAYBURN. That may be why Mr. Morgan wanted to get rid of it.

Mr. FAIRCHILD. Will the gentleman yield?

Mr. HUSTED. Yes.

Mr. FAIRCHILD. Is $200,000 or $300,000 the value of the land alone?

Mr. HUSTED. It is the value of the property as it stands at the present time. I think it includes the land and the building.

Mr. STAFFORD. Will the gentleman yield?

Mr. HUSTED. I will.

Mr. STAFFORD. From what fund of the diplomatic and consular appropriation does the State Department obtain money to purchase furnishings and furniture for various embassy buildings?

Mr. HUSTED. From the fund for contingent expenses.

Mr. STAFFORD. I notice that $65,000 is provided for furnishing the American Embassy at London; has the gentleman any information as to how much it is costing in any other Government embassy building?

Mr. HUSTED. We have not any other large and important buildings, except that we have made some recent purchases in South America. I do not think any expenditure has been made on that account as yet.

Mr. STAFFORD. When the consideration of this item is concluded, I would like to inquire about some others.

Mr. HUSTED. Mr. Speaker, how much time have I remaining?

The SPEAKER. The gentleman has used 30 minutes.

Mr. HUSTED. I yield five minutes to the gentleman from Maryland [Mr. LINTHICUM].

Mr. LINTHICUM. Mr. Speaker, I would like to say for the benefit of the committee that this matter was taken up by the committee which was created by Congress some two years ago, consisting of the chairman of the Committee on Foreign Relations of the Senate and the ranking minority member, the chairman of the Foreign Affairs Committee in the House, and the ranking minority member, the Secretary of the Treasury, and the Secretary of State. That committee met recently in Senator LODGE'S office and made certain approval of embassy and consular buildings for which Congress had appropriated the money. This London embassy matter was taken up. The property is very valuable, and will make a most desirable embassy when repaired, reconstructed, and furnished, but it was entirely for residential purposes and not for an embassy. It is really two buildings, both entirely devoid of all furniture which is absolutely necessary for an embassy. It was estimated by the Department of State that it would require somewhere in the neighborhood of $150,000 for repair, reconstruction, and furnishing—about $80,000 for repairs and reconstruction and $70,000 for furnishing. This will make a most acceptable embassy, well located, and at a total cost to us of $150,000. Another property so furnished and equipped could not be had for less than $500,000. The property is entirely vacant at the present time. We authorized the President to accept it a year or two ago, and it was accepted, but we were unable to obtain title. Strange as it may seem, the United States can not own any property in England. It is necessary, therefore, to take title in the name of the American ambassador and consul general and to carry it

in that manner. That has only been recently accomplished. In addition a bond in perpetuity has been procured, protecting both the United States and Mr. Morgan. Therefore, it was unnecessary to obtain funds for furnishing it and for remodeling until now that the title has been secured.

It is a very valuable property, and I do not believe from what we could learn that it would be possible for us to obtain in the city of London in such locality as we desire a property for less than half a million dollars.

Mr. STEVENSON. Mr. Speaker, will the gentleman yield?

Mr. LINTHICUM. In just a moment. We tried for many years to get an embassy in London and it was impossible, because, under the Lowden Act, we never had sufficient money with which to get it, and we were devoid of authority to appropriate sufficient money for that purpose. For the same reason we have been unable to obtain an embassy in Paris, because of the cost. This was the one great opportunity for the United States to obtain an embassy in a good location and at a very moderate cost, after considering the furnishings and the equipment, and its absolute completion ready for occupancy. I yield to the gentleman.

Mr. STEVENSON. Is it expected to carry this indefinitely in the name of the ambassador and consul general?

Mr. LINTHICUM. We must carry it indefinitely in that manner unless England changes her laws, because the United States can not own property in England, according to what was said by a representative of the State Department.

I think it is a very good investment, and I am very much in favor of obtaining embassies suitable for the United States Government abroad. This is a great opportunity, and the only opportunity we have ever had to acquire an embassy in the city of London. We must provide embassies if we wish men of moderate means to fill these exalted places abroad. At this time only the rich can afford such offices. I want it possible for men of brains to fill these places, whether poor or rich. [Applause.]

Mr. JONES of Texas. Mr. Speaker, will the gentleman from New York yield me five minutes?

Mr. HUSTED. I yield five minutes to the gentleman from Texas.

Mr. JONES of Texas. Mr. Speaker, in connection with this item about the embassy in London, about one year ago the gentleman from Massachusetts [Mr. ROGERS] was in charge of the bill which authorized the acceptance of the gift of this property from J. P. Morgan. With a flourish the House was assured that this property was suitable for embassy purposes and that it would be suitable as such a residence for years. Ambassador Davis said it was suitable, as did others. Now we are called upon to appropriate $150,000 to put this property in shape. Is it necessary to spend that amount to fix up a building for Mr. Harvey which had been pronounced suitable by others? If it would take that much to put it in shape, why were we not told so a year ago?

I quote from the speech of the gentleman from Massachusetts [Mr. ROGERS] in the House on January 27, 1921:

> There is one matter in connection with this subject which requires special treatment. On May 24, 1919, Mr. J. P. Morgan offered as an unconditional gift to the American Government his residence in London, a freehold. The house faces Hyde Park and is within a few hundred yards of the present embassy offices of the United States. It is described by Ambassador Davis and others as entirely suitable for an embassy. On April 17, 1920, Mr. Morgan wrote a further letter to the Secretary of State asking for an answer to his offer at the earliest convenient moment. On December 31 last he advised the State Department that it would be necessary for him to know by March 4 next whether his offer is accepted or declined, and that he shall feel compelled to withdraw the offer on the latter date if we do not previously accept it.
>
> Acting Secretary Davis, in transmitting Mr. Morgan's latest letter, suggested the great advantage which would accrue to the United States from owning its own embassy building in London. Mr. Davis states that the house is well located and will afford a very satisfactory residence for the American ambassador for many years, and expresses the earnest hope that Congress may be disposed to accept Mr. Morgan's generous gift of this suitable residence for its representative in London.
>
> Manifestly congressional action is a prerequisite to acceptance of the gift. Less than six weeks remain before the offer will be withdrawn. To my mind it would be exceedingly shortsighted for the Congress to allow this opportunity to lapse.
>
> The only objection which can be advanced to the acceptance of such a gift arises from the possible feeling that the United States should not accept gifts from private individuals.

Mr. Harvey has already been enough of a liability to this Government without this additional expenditure of $150,000 to tone up the place where he is to live. If we fix him up a residence like that he will probably make another speech, and surely after reading the ones he has made no one wants him to make another.

Mr. NEWTON of Minnesota. Does the gentleman take exception to the recommendation of the then Acting Secretary of State and the then ambassador, two very distinguished gentlemen, both of whom are members of the gentleman's party?

Mr. JONES of Texas. Of course, I do not object to that statement, but I have objection to the statements made here to-day, that it was known at the time and understood that it would take a lot of money to put this property into condition for use as an embassy. It was represented to the House by men who had the bill in charge that it was entirely suitable for an embassy at that time, and yet to-day they come along asking for an appropriation of $150,000, saying that much is necessary in order to put it in condition for use.

Mr. WALSH. Mr. Speaker, will the gentleman yield?

Mr. JONES of Texas. Yes.

Mr. WALSH. If I recall correctly, it was upon my motion that the diplomatic appropriation bill was amended to carry this item, accepting this for the Government and the Nation, and the information that I had at the time, relying on a communication of the then ambassador, was that the building was then suitable for an embassy, and that such alterations and changes as would be required would not be of very great expense.

Mr. JONES of Texas. It was understood, I think, by everybody in that way. Mr. ROGERS at that time made the further statement that the only objection which could be advanced to the acceptance of such a gift arose from the possible feeling that the United States should not accept gifts from private individuals. Everything said by the gentleman who had the bill in charge tended to convey the information that the property was well located and was entirely suitable for an embassy. If that is true, it seems to me the wildest sort of extravagance in these days of efforts on the part of the American people to secure economy in Government to make an appropriation of $150,000 to put this place into condition for suitable use for the present occupant. It was stated at the time that it was in suitable condition for embassy purposes. Surely Mr. Harvey does not require a building of superior luxuriance.

Mr. ROACH. Mr. Speaker, will the gentleman yield?

Mr. JONES of Texas. Yes.

Mr. ROACH. I am inclined to believe that the gentleman overemphasizes the amount of money being expended to put the property into shape.

Mr. JONES of Texas. I am just taking the statement in the bill.

Mr. ROACH. As I understood the estimate read by the gentleman from New York a moment ago, perhaps half or more of this appropriation is to go into furnishings and fittings to put it into condition to be occupied, that perhaps less than half of the appropriation will actually be used in improving the property itself.

Mr. JONES of Texas. Well, he says a large part of the appropriation, according to the gentleman's statement, is to be used for improvement of the house; and if not, surely they do not need $150,000 for furniture in addition to any that may now be owned by the embassy. I once saw a motto which impressed me very much. It was as follows: "The most expensive things in the world are those that we get for nothing." I think probably that is true with reference to gifts made to the United States Government.

An old philosopher used the expression, "Beware of the Greeks bearing gifts." I do not suppose J. P. Morgan owns any of the property adjacent to the property covered by this gift. I assume that he was governed by the best of motives. But the fact remains that such a policy usually turns out to be an expensive one for the Government.

Mr. HUSTED. Mr. Speaker, I yield 10 minutes to the gentleman from Kentucky [Mr. JOHNSON].

Mr. JOHNSON of Kentucky. Mr. Speaker, as one of the conferees on the part of the House I declined to sign the conference report, for the reason that I could not see my way clear to vote for its adoption. There are many items in the bill which are so far from my approval that I felt compelled to decline to sign the report. For instance, when this bill came to the House it came without any provision whatever for relieving legitimate labor organizations and legitimate farmers' organizations from prosecution. However, the bill on the floor of the House was amended so as to take care of those two propositions. The amended House bill provided that no part of any money appropriated by the act should be used toward either of those purposes. The Senate put on an amendment which provided that no part of "this money" should be used for these prosecutions. The expression "this money" applies to one section only, whereas under the bill as it passed the House, as I have just stated, we provided that no money appropriated by "this act" should be so used. It would have been much better,

in my judgment, if the House language had been adhered to, providing that no money appropriated in any part of the act could be so used, instead of putting the limitation on only one section of the bill—the antitrust section. There are other items more numerous than I can mention in the time which I have at my disposal, and therefore I shall be compelled to let them go, but shall refer to one or two which, in my judgment, should never find their way to this body. They have provided in this bill for a number of "commissions" for which there is absolutely no sort of use. Out of respect to a distinguished American, David Lubin, a "farmers' commission" was provided for at Rome. In my judgment other people got some benefit out of Lubin, but we have received no benefit at all from them. In my judgment it ought to have gone out of the bill, and I should never vote for a bill, I think, that has that in it.

In addition to that I wish to invite particular atteention to one of these "live-forever" commissions. In this bill an appropriation was made by the House of $30,000 for the continuation of the commission to survey the line between the United States and Canada. The Senate increased that amount to $54,000. The conferees have reduced that amount to $49,000. Of course, I approve their cutting down the amount, but I believe it has become an outrage to appropriate any amount whatever for this commission, in view of the fact that this commission has been at work 112 years. One hundred and twelve years ago a commission was authorized to survey the boundary line between the United States and Canada. To-day we are told that if we will appropriate $49,000 for it the work will be completed within three years, and we are told in addition to that that if we do not continue this large annual appropriation the Lord knows when it will ever be completed. Some 12 or 15 years ago the commission was stimulated upon the plea that it was going to become more active and was going to complete this work within a short time. But 12 or 15 years have passed, and yet we do not see the end of it. Just bear in mind, please, that this commission has been in existence for 112 years. It was authorized in 1810. There has been spent on this work more than $3,250,000, and yet the end is not in sight. For the surveying of it every mile has cost more than $800. Where can you find a body of surveyors who can not go into any field and survey a mile or any number of miles for less than $800 a mile?

Mr. STAFFORD. Will the gentleman yield?

Mr. JOHNSON of Kentucky. I will.

Mr. STAFFORD. Will the gentleman inform the committee if it is a resurvey they are now making of this boundary line that has been going on for 112 years——

Mr. JOHNSON of Kentucky. I do not think they are making what the gentleman calls a resurvey.

Mr. STAFFORD. They must be retracing their steps.

Mr. JOHNSON of Kentucky. I will say to the gentleman I do not think some of them have done more than draw salaries.

Mr. STAFFORD. They might be retracing their steps and going over it again——

Mr. JOHNSON of Kentucky. No. That would be too much like work.

Mr. WALSH. Are not they perambulating along the line to see if it is still there?

Mr. JOHNSON of Kentucky. I do not think they are even perambulating. That would require at least some effort.

Mr. KINCHELOE. Will the gentleman yield?

Mr. JOHNSON of Kentucky. I will.

Mr. KINCHELOE. Does the gentleman think this commission is also a good haven for "lame ducks"?

Mr. JOHNSON of Kentucky. I do not think this is the only pool that has been made for lame ducks. On most of these commissions the people's money is to be absolutely wasted, and I can not vote for it; and not being able to vote for it, of course, I could not sign the report.

Mr. STAFFORD. Will the gentleman from New York yield to one inquiry? I desire to ask the gentleman why the conferees have agreed to increase the appropriation for the emergency fund from $100,000 to $400,000, the Senate amendment?

Mr. HUSTED. It was done for this reason: The Secretary of State appeared before the Senate subcommittee, and he stated that he would not assume the responsibility of conducting the State Department unless that appropriation was made. That is in the printed hearings. The Secretary of State did not appear before the House subcommittee, but the Undersecretary of State did, and the Undersecretary of State said that only a very small portion of the appropriation was expended for purposes which could not be disclosed compatibly with the public interest, and for that reason we cut it down to $100,000. But the statement made by Mr. Hughes is apparently in direct contradiction to that. He says it is of the utmost importance to the interests of this country that the appropriation of the full amount should be made, and we did not feel that we should assume the responsibility of reducing the appropriation below the estimate.

Mr. STAFFORD. Is that the position the conferees took with reference to the increased appropriations of the Senate to which the conferees agreed?

Mr. HUSTED. No; that is the only one.

Mr. STAFFORD. The conferees have agreed mostly to the Senate increases.

Mr. HUSTED. No; the Senate recessions are actually greater than the House recessions. On the big items the Senate receded and we receded on a great many of the smaller items. I do not include items which went out on points of order in the House or items put in by the Senate for which the House did not have estimates.

The total amount of the real recessions by the House were $838,880 and by the Senate $937,430.

Mr. STAFFORD. Can the gentleman give us the additional amount to that appropriated by the House to which the conferees have agreed?

Mr. HUSTED. I have already given that.

Mr. STAFFORD. I beg the gentleman's pardon. I was not in the Chamber at the time.

Mr. WALSH. Will the gentleman yield?

Mr. HUSTED. I will yield to the gentleman from Massachusetts.

Mr. WALSH. Is it the intention of the gentleman to move to recede and concur in all the Senate amendments?

Mr. HUSTED. In all of the amendments that we brought back?

Mr. WALSH. Yes.

Mr. HUSTED. Well, with the exception of two amendments, in which cases we recede with amendments.

Mr. WALSH. I was wondering if we could not act upon them all en bloc.

Mr. HUSTED. Now, if there are no further questions, Mr. Speaker, I move the previous question on the adoption of the conference report.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the conference report.

The question was taken, and the Speaker announced that the ayes seemed to have it.

Mr. GARNER. Mr. Speaker, I ask for a division.

The House divided; and there were—ayes 34, noes 8.

Mr. GARNER. Mr. Speaker, I make the point of no quorum.

The SPEAKER. The gentleman from Texas makes the point of no quorum. It is clear there is no quorum present. The Doorkeeper will close the doors; the Sergeant at Arms will bring in absent Members. As many as agree to the conference report will, as their names are called, answer "yea," and those opposed will answer "nay," and the Clerk will call the roll.

The question was taken; and there were—yeas 187, nays 60, not voting 183, as follows:

YEAS—187.

So the conference report was agreed to.

The Clerk announced the following pairs:

Until further notice:

Mr. Treadway with Mr. Cockran.

Mr. Paige with Mr. Sullivan.

Mr. Langley with Mr. Clark of Florida.

Mr. Ansorge with Mr. Byrnes of South Carolina.

Mr. Steenerson with Mr. Woods of Virginia.

Mr. Rossdale with Mr. Buchanan.

Mr. Connell with Mr. Kindred.

Mr. Appleby with Mr. Jacoway.

Mr. Davis of Minnesota with Mr. Driver.

Mr. McArthur with Mr. Gallivan.

Mr. Rodenberg with Mr. Upshaw.

Mr. Petersen with Mr. Jeffers of Alabama.

Mr. Patterson of Missouri with Mr. McClintic.

Mr. Kearns with Mr. Crisp.

Mr. Bixler with Mr. Oliver.

Mr. Chandler of Oklahoma with Mr. Riordan.

Mr. Atkeson with Mr. Stoll.

Mr. Gorman with Mr. Fields.

Mr. Evans with Mr. Wright.

Mr. Kiess with Mr. Logan.

Mr. Kahn with Mr. Humphreys.

Mr. Griest with Mr. Martin.

Mr. Volk with Mr. Pou.

Mr. Knutson with Mr. Deal.

Mr. McPherson with Mr. Cantrill.

Mr. Wyant with Mr. Tague.

Mr. Morin with Mr. Brand.

Mr. Kennedy with Mr. Kitchin.

Mr. Butler with Mr. Kunz.

Mr. Stiness with Mr. Bowling.

Mr. Coughlin with Mr. Wingo.

Mr. Rose with Mr. Campbell of Pennsylvania.

Mr. Graham of Pennsylvania with Mr. Davis of Tennessee.

Mr. Dickinson with Mr. Lyon.

Mr. Darrow with Mr. Mead.

Mr Newton of Missouri with Mr Bulwinkle.

Mr. Strong of Pennsylvania with Mr. Ward of North Carolina.

Mr. Hukriede with Mr. Bankhead.

Mr. Watson with Mr. Dominick.

Mr. Winslow with Mr. Garrett of Tennessee.

Mr. Knight with Mr. Hudspeth.

Mr. Maloney with Mr. Taylor of Colorado.

Mr. Shreve with Mr. Sears.

Mr. Kreider with Mr. Drane.

Mr. Pringey with Mr. Gilbert.

Mr. Volstead with Mr. Hooker.

Mr. Vare with Mr. Collins.

Mr. Johnson of Washington with Mr. Barkley.

Mr. Reber with Mr. Tyson.

Mr. Fess with Mr. Fulmer.

Mr. Snyder with Mr. Griffin.

Mr. Greene of Massachusetts with Mr. Hardy of Texas.

Mr. Ackerman with Mr. Doughton.

Mr. Bland of Indiana with Mr. Rucker.

Mr. McKenzie with Mr. Taylor of Arkansas.

Mr. Madden with Mr. Smithwick.

Mr. Walters with Mr. Rainey of Alabama.

Mr. Zihlman with Mr. Mansfield.

The result of the vote was announced as above recorded.

The SPEAKER. A quorum is present. The Doorkeeper will open the doors.

The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 5, page 5, line 1: After the word "Ecuador" insert the word "Egypt."

Mr. HUSTED. Mr. Speaker, the motion will be to recede and concur upon all the amendments in disagreement except two, and on those two amendments the motion will be to recede and concur with an amendment. The amendments upon which the mofion will be to recede and concur with an amendment are amendments numbered 47 and 61. If there is not any objection, and in order to save time, I would ask unanimous consent that all of the amendments except amendment numbered 47 and amendment numbered 61 be considered as one amendment and acted upon as such.

The SPEAKER. The gentleman from New York asks unanimous consent that all amendments except Nos. 47 and 61 be considered together by one vote. Is there objection?

Mr. HUSTED. There is a third amendment, Mr. Speaker. I was in error. No. 44 will also have to be considered separately.

The SPEAKER. And the gentleman asks that amendment No. 44 also be considered separately.

Mr. STAFFORD. Mr. Speaker, I think there are other amendments that should be considered separately, particularly amendment numbered 40 and amendment numbered 45. I think the amendments should be taken up and considered piecemeal. I object to the gentleman's request.

The SPEAKER. Objection is heard.

Mr. HUSTED. Mr. Speaker, I move that the House recede and concur in amendment No. 5.

The SPEAKER. The question is on the motion of the gentleman from New York [Mr. HUSTED] to recede and concur in Senate amendment No. 5.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Senate amendment No. 6: On page 5, line 6, strike out "$300,000" and insert "$310,000."

The SPEAKER. Without objection, the amendment will be agreed to.

There was no objection.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Senate amendment No. 7: Page 5, strike out line 10, which reads as follows: "Agent and consul general at Cairo, $7,500," and insert in lieu thereof the following:

"The President is hereby authorized to appoint as the representative of the United States an envoy extraordinary and minister plenipotentiary to Egypt, who shall receive as compensation the sum of $10,000 per annum, and there is hereby appropriated for the fiscal year 1922 for said salary the sum of $600 in addition to the unexpended balance of

the amount already appropriated for salary of an agent and consul general, which amount is also made available for the salary of a minister when appointed."

Mr. HUSTED. Mr. Speaker, I move to recede and concur in the Senate amendment.

Mr. STAFFORD. Mr. Speaker, will the gentleman yield?

Mr. HUSTED. Yes.

Mr. STAFFORD. Do I understand that it is the diplomatic policy of our Government to recognize the new condition in Egypt and have an envoy extraordinary sent to that country?

Mr. HUSTED. Egypt has been recognized by our Government, and this provides for the appointment of a minister to Egypt.

Mr. LITTLE. Mr. Speaker, will the gentleman yield?

Mr. HUSTED. Yes.

Mr. LITTLE. Is it minister extraordinary?

Mr. HUSTED. It is envoy extraordinary and minister plenipotentiary, at $10,000.

The SPEAKER. The question is on agreeing to the motion of the gentleman from New York.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Senate amendment No. 8: Page 5, line 23, strike out the figures "$583,500" and insert in lieu thereof "$586,600."

Mr. HUSTED. Mr. Speaker, I move to recede and concur.

Mr. GARNER. Mr. Speaker, I think the RECORD, instead of showing that "Without objection the motion was agreed to," should show that there is a vote.

The SPEAKER. That was the correction of a total. The Chair thought there would be no objection to it.

Mr. HUSTED. Mr. Speaker, I move that the House recede and concur.

The motion was agreed to.

Mr. WALSH. Mr. Speaker, also for the purpose of the RECORD, it should show that the House receded and that the amendment was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Senate amendment No. 13: Page 8, line 15, after the word "interpreters," insert the word "translators."

Mr. HUSTED. Mr. Speaker, I move to recede and concur in the Senate amendment.

The SPEAKER. The gentleman from New York moves to recede and concur in the Senate amendment. The question is on agreeing to that motion.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Senate amendment No. 24: Page 13, after line 10, insert:

"PAYMENT TO DAISY CRAWFORD CARROLL.

"To Daisy Crawford Carroll, widow of B. Harvey Carroll, late counsel to Cadiz, Spain, $3,500, one year's salary of her deceased husband, who died while at his post of duty from illness incurred in the Consular Service."

Mr. HUSTED. Mr. Speaker, I move to recede and concur.

The SPEAKER. The gentleman from New York moves to recede and concur.

Mr. STAFFORD. Mr. Speaker, will the gentleman yield?

Mr. HUSTED. Certainly.

Mr. STAFFORD. Will the gentleman inform the House what is the established policy of the State Department in paying a year's salary to the widows of consular officers who happen to die in the service?

Mr. HUSTED. I am informed that it has been uniformly done for many years.

Mr. STAFFORD. I question whether it has been uniformly done for several years. I think four years ago was the first instance for many years past where the Government ever paid a year's salary to the widow of a consular officer. There were some distressing circumstances connected with that case. The consular representative of our Government at Moscow in the revolutionary period died while in the service. It was contested even in that case whether we should grant a year's salary.

One reason why I objected to having all these amendments voted on en bloc was to bring before the House the question of whether or not it was going to be the policy of Congress, whenever a consular officer happened to die in the service, to award a year's salary to his widow. That has not been the established policy of the Government unless it was established during the two years that I was out of Congress.

Mr. HUSTED. I have been informed that it is the established policy of the Government, and I know that in the current law similar provision was made for two widows of consular officers. One was paid $4,500, the amount of a year's salary, and the other widow, Mary A. Higgins, was paid $4,000, which was also the amount of a year's salary.

Mr. STAFFORD. If it is going to be the established policy, whenever a consular officer dies in the service, that we are to vote a year's salary to his widow, we will next be confronted with the voting of a year's salary to the widows of other officers. I question very much whether it is the established policy of the Government. There may be such a provision in the current law, but I venture to say that it was put in in the other body and agreed to without special mention of it in the House. I do not recall that the question has ever been tested in the House.

Mr. CAMPBELL of Kansas. Mr. Speaker, may I ask whether or not any provision is made, out of the funds under the control of the State Department, for bringing home either the body or the relatives of a deceased consular agent of the Government without special action of Congress?

Mr. HUSTED. Provision is made for bringing home the body of a deceased consular officer, transporting the remains to this country.

Mr. STAFFORD. And I believe the law is broad enough also to provide for the transportation of the members of the family. It is certainly broad enough to provide for the transportation of families going to the post abroad, and for their return while the consul is in the service.

Mr. CAMPBELL of Kansas. That is true before the death of the consular agent, but how is it after his death?

Mr. HUSTED. I think no provision is made for bringing back to the United States the family of a deceased consular officer.

Mr. STAFFORD. Can the gentleman state positively that the department has not uniformly provided transportation for the widow of a deceased representative of the Government?

Mr. HUSTED. They certainly can not do it if they have no fund out of which they can legally pay it. I do not believe they have been doing it in violation of the law.

Mr. STAFFORD. I call the attention of the gentleman who has charge of the bill to the prior provision, which I think provides for that payment:

ALLOWANCE TO WIDOWS OR HEIRS OF DIPLOMATIC OR CONSULAR OFFICERS WHO DIE ABROAD.

For payment under the provisions of section 1749 of the Revised Statutes of the United States to the widows or heirs at law of diplomatic or consular officers of the United States dying in foreign countries in the discharge of their duties, $2,500.

That has been carried for years back, and I assume that it answers the question of the gentleman from Kansas. Now, will the gentleman from New York yield to me two minutes?

Mr. HUSTED. I yield two minutes to the gentleman.

Mr. STAFFORD. I wish to direct attention to the policy, which has not been heretofore the established policy of Congress. Certainly it was not the established policy of Congress until perhaps last year, and I question whether it has ever been tested by a vote of the House. It was tested some years ago in connection with the payment to the widow of a consular officer dying in Moscow under distressing circumstances, and in that case we yielded to the demands of the other body; but this House has never set itself on record by voting a year's salary to the widow of a consular officer or member of the Diplomatic Corps.

Mr. HUDDLESTON. Will the gentleman yield?

Mr. STAFFORD. I yield to the gentleman from Alabama.

Mr. HUDDLESTON. The appropriation not being authorized by statute, is not the item subject to a point of order?

Mr. STAFFORD. Oh, no. The Senate can put anything on an appropriation bill. The conferees have not authority to agree to it in conference, but they have full authority to move concurrence in the House.

I think, Mr. Speaker, we should not now adopt the policy of granting to every widow of a consular officer an amount equal to a year's salary. We pay them good wages. We have increased their wages twofold within the last 10 years. These are not eleemosynary positions. I think we should not adopt the policy of saying that whenever a consular officer happens to die in the service we will grant his widow a year's salary. Suppose the consular officer died a few days after the expiration of his term. His widow would not receive any honorarium from the Government, and why should we now grant this year's salary? I am opposed to concurring in the amendment.

Mr. HUSTED. I ask for a vote, Mr. Speaker.

The SPEAKER. The question is on the motion of the gentleman from New York [Mr. HUSTED] that the House recede from its disagreement and concur in the Senate amendment.

The question being taken, on a division (demanded by Mr. STAFFORD) there were—ayes 57, noes 17.

Mr. STAFFORD. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER. The gentleman from Wisconsin makes the point of order that there is no quorum present. It appears that there is no quorum present. The Doorkeeper will close the doors. The Sergeant at Arms will bring in absent Members. As many as are in favor of receding and concurring in the Senate amendment will, as their names are called, vote yea; those opposed, nay; and the Clerk will call the roll.

The question was taken; and there were—yeas 207, nays 36, answered "present" 2, not voting 185, as follows:

YEAS—207.

So the motion to recede and concur was agreed to.

The following additional pairs were announced:

Mr. Cramton with Mr. Garner.

Mr. Sanders of Indiana with Mr. Bulwinkle.

Mr. Rhodes with Mr. Harrison.

Mr. Larson of Minnesota with Mr. Montague.

Mr. Hukriede with Mr. Sandlin.

Mr. Michaelson with Mr. Woods of Virginia.

Mr. Tilson with Mr. Larsen of Georgia.

Mr. Wheeler with Mr. Hooker.

Mr. Blakeney with Mr. Fields.

Mr. Crowther with Mr. Doughton.

Mr. Wood of Indiana with Mr. Rayburn.

Mr. Focht with Mr. Lanham.

Mr. Johnson of South Dakota with Mr. Gilbert.

Mr. Burke with Mr. Deal.

Mr. Crago with Mr. Garrett of Texas.

The result of the vote was announced as above recorded.

A quorum being present, the doors were opened.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Senate amendment 25: Page 13, after line 15, insert the following: "To Alice Potter, widow of Julian Potter, late consul to Rouen, France, $3,000, one year's salary of her deceased husband, who died as a result of illness incurred in the Consular Service.

Mr. HUSTED. Mr. Speaker, I move that the House recede and concur in the Senate amendment.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Senate amendment 28, page 15, after line 4, insert:

"POST ALLOWANCES TO DIPLOMATIC AND CONSULAR OFFICERS.

"To enable the President, in his discretion, and in accordance with such regulations as he may prescribe, to make special allowances by way of additional compensation to diplomatic and consular officers and consular assistants and officers of the United States Court for China in order to adjust their official income to the ascertained cost of living at the posts to which they may be assigned, $200,000."

Mr. HUSTED. Mr. Speaker, I move that the House recede and concur in the Senate amendment.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment 40: Page 25, after line 22, insert the following:

INTERNATIONAL HYDROGRAPHIC BUREAU.

For the second annual contribution of the United States toward the maintenance of the International Hydrographic Bureau, $3,860.

Mr. HUSTED. Mr. Speaker, I move that the House recede and concur in the Senate amendment.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment 43: At top of page 27 insert the following:

INTERNATIONAL CONFERENCE ON MARITIME LAW.

For expenses necessary for the representation of the United States at the International Conference on Maritime Law to be held at Brussels, Belgium, for the purpose of considering draft conventions relating to collisions, salvage, the liability of shipowners, and cognate subjects, $5,000, or so much thereof as may be necessary, to be made immediately available.

Mr. HUSTED. Mr. Speaker, I move that the House recede and concur in the Senate amendment.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment 44: Page 27, after line 8, insert:

COMMISSION OF JURISTS TO CONSIDER AMENDMENT OF LAWS OF WAR.

For one-half year's salary for a representative of the United States on the commission of jurists to consider the amendment of laws of war in accordance with the resolution adopted by the Conference on the Limitation of Armament on February 4, 1922, $3,750, to be immediately available.

Mr. HUSTED. Mr. Speaker, I move that the House recede and concur in the Senate amendment with an amendment.

The Clerk read as follows:

Mr. HUSTED moves that the House recede, and concur with an amendment as follows: In lieu of the matter inserted by the Senate insert the following: "Commission of jurists to consider amendment of the laws of war: To enable the United States Government to carry out its obligations arising under the resolution adopted by the Conference for the Limitation of Armament February 24, 1922, for appointment of jurists to consider an amendment of the laws of war, $3,750, to be immediately available."

The SPEAKER. The question is on agreeing to the motion.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment 45: Page 27, after line 15, insert:

FIFTH INTERNATIONAL CONFERENCE OF AMERICAN STATES, SANTIAGO, CHILE.

For the expenses of the United States in participating in the Fifth International Conference of American States to be held at the city of Santiago, Chile, in 1923, including the compensation of employees, travel and subsistence (notwithstanding the provisions of any other act), and such miscellaneous and other expenses the President shall deem proper, $75,000.

Mr. HUSTED. Mr. Speaker, I move that the House recede from its disagreement and concur in the Senate amendment.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Amendment 47: Page 28, after line 18, insert:

REVISION OF CHINESE CUSTOMS TARIFF.

To enable the United States Government to carry out its obligations arising under the treaty relating to the Chinese customs tariff signed February 6, 1922, $47,750, to be immediately available.

Mr. HUSTED. Mr. Speaker, I move that the House recede and concur with an amendment.

The Clerk read as follows:

Mr. HUSTED moves that the House recede from its disagreement to the Senate amendment and concur with an amendment as follows: In lieu of the matter inserted by the Senate insert the following:

"Revision of Chinese customs tariff: To enable the United States Government to carry out its obligations arising under the treaty relating to Chinese customs tariff, signed February 6, 1922, including compensation of delegates or other representatives, clerks, and employees, rent of offices, expenses of transportation, subsistence (notwithstanding the provisions of any other act), stationery and supplies, telegraph, and such other objects as the President may deem necessary, to be disbursed under the direction of the Secretary of State, $47,750, to be immediately available."

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Amendment No. 48: Page 28, after line 23, insert:

"INQUIRY INTO EXTRATERRITORIALITY IN CHINA.

"To enable the United States Government to carry out its obligations arising under Resolution No. 4, adopted by the Conference on the Limitation of Armament at the fourth plenary session, December 10, 1921, regarding extraterritoriality in China, including the compensation of delegates or other representatives, clerks, and employees, rent of offices, expenses of transportation and subsistence (notwithstanding the provisions of any other act), stationery and supplies, telegraph, and such other objects as the President may deem necessary, to be disbursed under the direction of the Secretary of State, $21,000, to be immediately available."

Mr. HUSTED. Mr. Speaker, I move to recede and concur in Senate amendment No. 48.

Mr. WALSH. Mr. Speaker, will the gentleman yield?

Mr. HUSTED. Yes.

Mr. WALSH. Just what authority is to be drawn from a resolution adopted by the Conference on the Limitation of Armament as the basis for an appropriation by Congress unless the resolution is included in some treaty which the Government has entered into? The conference passed a lot of resolutions, a great many of which were not later put into the treaty. Is such a resolution authority for Congress to legislate?

Mr. HUSTED. Under the resolution in question our Government committed itself to the prosecution of this investigation.

Mr. WALSH. It may have committed itself by resolution, but has it been incorporated in a treaty?

Mr. HUSTED. I do not contend that there is legal authority for an appropriation, and that is the very reason why the conferees brought this amendment back. If it had not been for that it would have been in the conference report.

Mr. WALSH. That is a very good reason for bringing it back, but I would like to know the reason to recede and concur.

Mr. HUSTED. Because our Government is obligated to do this because of our special interest in China and because the conferees personally thought that our Government should participate in this.

Mr. WALSH. It is rather a sweeping provision. By implication, if not by its plain meaning and intent, it repeals the provisions of any other law relating to compensation of clerks, employees, rents of offices, and transportation and subsistence, and permits these people who are going over there to inquire into the extraterritoriality in China to proceed with these expenditures without restriction. I suppose there is no way of curing this, but it would seem to me, if we are going to recede and concur, we ought to strike out the language contained within the parentheses, "notwithstanding the provisions of any other act."

Mr. HUSTED. If we strike that out, and extraterritoriality was abolished, the gentleman would have a lot of officers drawing salaries for which they were rendering absolutely no service whatever.

Mr. WALSH. Probably we will have a few that will get their pay under those conditions anyway.

Mr. HUSTED. I am sure the gentleman, who has established a great reputation for economy, does not want to continue men in the public pay drawing salaries who are rendering no service to the Government of the United States or to the Government of China or anyone else.

Mr. WALSH. I would like to establish that reputation further in this instance by having the gentleman lead off with a motion that the House insist upon its disagreement, rather than come in here and move that we concur, because I do not recognize that this conference has jurisdiction to pass a whole series of resolutions at its meeting here, not incorporate them within the provisions of any treaty, and then still have gentlemen come to Congress and say that these resolutions have a binding effect.

Mr. HUSTED. I can not please the gentleman in that regard, because it would not be in the interest of economy. It is in the interest of economy to abolish extraterritoriality in China at the earliest possible date, and to abolish this large number of officers which are now being maintained there at great expense to the Government of the United States.

Mr. LITTLE. Is that the court?

Mr. HUSTED. That includes the court and other officers.

Mr. WALSH. Does the gentleman think it is in the interest of economy to abolish the United States Court in China?

Mr. HUSTED. I think it is in the interest of economy to abolish it just as soon as it is safe to do so, because it is a burden upon the United States which the United States does not bear in any other Government.

Mr. WALSH. What would be the situation with the court abolished?

Mr. HUSTED. Of course I do not know what this commission will decide to do. I do not know that the time has yet come when it will be possible to abolish extraterritoriality in China, but it ought to be done just as soon as the circumstances and conditions are such as to warrant it.

Mr. WALSH. Was this matter presented to the subcommittee over which the gentleman from New York presides with such grace and ability?

Mr. HUSTED. It was not submitted to the subcommittee over which the gentleman happens to preside. I can not say that he does so with very much grace and dignity.

Mr. WALSH. I said that, and I believe it, and I think my colleagues will agree with me.

Mr. HUSTED. That is very kind of the gentleman.

Mr. WALSH. I am very much obliged to the gentleman for the information he has furnished with reference to the item, but I still submit that this matter might well be the subject of further inquiry on the part of the conferees.

Mr. HUSTED. This is one of the obligations of the Limitation of Armament Conference, and I think we should carry it out with the other obligations imposed upon us by that conference, which has done so much good, I think, and from the result of whose deliberations much greater good may be expected in the future. This is a desirable object, and the commission has been appointed to investigate into conditions and determine whether or not this can be done, and if they believe such time has arrived to make such recommendations as are necessary to bring that desirable result about. It is not a very large appropriation.

Mr. WALSH. Oh, no; but this is not going to be the only appropriation for this commission. I have no doubt that it is going to wander the length and the breadth and the depth of the Chinese wall, with all its branches. Are other nations represented on any commissions as the result of this Resolution No. 4?

Mr. HUSTED. I think that other nations are represented. I think all the other nations who were at the conference are represented.

Mr. WALSH. Why was it not incorporated in the treaty which was negotiated and submitted between these other nations, which also took into consideration the customs tariff? That was put into a treaty.

Mr. HUSTED. Well, I am rather of the opinion this is a matter very properly omitted from the treaty. I think it should have been carried out by resolution and not by treaty, because there is not anything definite or certain about it. It was not a matter ordinarily that would come within the scope of a definite treaty obligation.

Mr. WALSH. The gentleman states this extraterritoriality is to be abolished. The commission has authority to abolish it, and it seems to me it might as well have been included in the treaty.

Mr. HUSTED. When conditions in China warrant it, extraterritoriality will be abolished. I am inclined to think that conditions at present in China do not warrant immediate action; but I think this commission should carry on the work and we should provide for our share of the expenses. Mr. Speaker, I ask for a vote.

The SPEAKER. The question is on the motion of the gentleman from New York that the House recede and concur in the Senate amendment.

The question was taken, and the motion was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Amendment No. 49: At the top of page 30 insert:

"CLAIMS OF GOVERNMENT OF NORWAY.

"To pay, out of humane consideration without reference to the question of liability therefor, to the Norwegian Government as full indemnity to Trygve Andersen, Sigurd Nilsen, and Arthur Rasmussel for hardships and expenses suffered by them as the result of their detention as witnesses to the damage caused the Norwegian vessel *Ingrid* by an explosion at Jersey City, February 1, 1911, $2,200.

Mr. HUSTED. Mr. Speaker, I move to recede and concur.

Mr. CHINDBLOM. Mr. Speaker, if the gentleman will yield, should not that last name, "Rasmussel," be spelled with the final letter "m" instead of "l"?

Mr. HUSTED. No; I think that is correct as it is.

Mr. STAFFORD. Mr. Speaker, will the gentleman yield?

Mr. HUSTED. I will yield.

Mr. STAFFORD. I assume this is a claim of the Norwegian Government, based upon their protest by reason of some action by our municipal authorities or Government authorities in detaining some of their citizens in this country?

Mr. HUSTED. The claim arose in this way: The vessel was damaged or destroyed at Jersey City by an explosion—a Norwegian vessel. These men were detained by our Government as witnesses. They were clapped into jail and kept there a considerable length of time. I think they were in jail for a month, and this amount we are providing for here is sufficient to cover their actual expenses. This is not in any sense compensation. They expended practically the whole amount for legal expenses.

Mr. STAFFORD. This is virtually a claim to be paid the Norwegian Government to reimburse their nationals. Now, this question further: There have been pending on the Private Calendar numerous, well, several, claims of foreign Governments presented to our Government to reimburse them for slights or infractions of the law committed against their nationals. By recognizing this claim, do not we establish as a precedent that these claims could be carried as riders on this appropriation bill so that other Governments might have stronger grounds for pressing for the consideration of those private claims which Congress has not seen fit to allow?

Mr. HUSTED. It hardly seems to me that it establishes any particular precedent. This is a strikingly hard situation. These men were grabbed and thrown into jail. They were in jail, I think, 30 days. We are not asking for compensation for the hardships that they suffered. They were obliged in order to protect themselves to employ counsel, and it is alleged they expended this amount of money in defending themselves against high-handed methods which, I believe, we had no right to use against the nationals of Norway or of any other country.

Mr. NEWTON of Minnesota. Will the gentleman yield?

Mr. HUSTED. I will.

Mr. NEWTON of Minnesota. When did this incident occur?

Mr. STAFFORD. February 1, 1911, 11 years ago.

Mr. NEWTON of Minnesota. Were these men suspected of being the cause of the explosion?

Mr. HUSTED. Oh, absolutely not; there was not any suspicion of them and there was not any charge against them. They were simply held here as witnesses.

Mr. LITTLE. Will the gentleman yield for a question?

Mr. HUSTED. I will.

Mr. LITTLE. Referring to some paragraphs on the preceding page, have we any prisoners in Smyrna, or Constantinople, or Turkey, or any other part of the world now? I see there are appropriations for three of them, two for $1,000 each, and one appropriation of $9,000, for China and Turkey both.

Mr. HUSTED. I do not know how many men we have confined in foreign prisons at the present time.

Mr. LITTLE. Why should we have any in Constantinople or Smyrna any more than anywhere else?

Mr. HUSTED. Well, we rent a prison there.

Mr. LITTLE. I see we do.

Mr. HUSTED. We have prisoners there; as to how many I do not know.

Mr. LITTLE. I think we ought to put somebody in them or else quit having them.

Mr. HUSTED. We have prisoners; how many I do not know.

Mr. DENISON. Will the gentleman yield?

Mr. HUSTED. I will.

Mr. DENISON. The gentleman from New York has stated that this claim occurred in 1911?

Mr HUSTED. Yes, sir.

Mr. DENISON. Can the gentleman state why something has not been done in these past 10 years to give these men what they ought to have?

Mr. HUSTED. Efforts have been made over and over again, without success. The gentleman well knows it is extremely difficult to get action on a private claim bill.

Mr. DENISON. I have not observed that.

Mr. HUSTED. Well, it is very difficult. The gentleman knows that there are just private claim bills that have been on the calendar for years and years.

Mr. DENISON. Has there been a bill pending for this claim?

Mr. HUSTED. There has been, as I am informed by Senator LODGE. There have been repeated efforts made to secure the payment of this eminently just and reasonable claim.

Mr. DENISON. I think it ought to have been paid 8 or 10 years ago, and I think if they do not get more than the attorney fees that they ought to have gotten more than that.

Mr. HUSTED. The request is very reasonable, and I think it is just.

The SPEAKER. The question is on agreeing to the motion of the gentleman from New York.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Amendment No. 61: Page 35, after line 15, insert: "That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury of the United States of America not otherwise appropriated, the sum of $1,500 to the estate of W. L. Dunham, deceased, of Richton, Miss., on account of the death of said Dunham while in the discharge of his duty as a posse man under the Federal prohibition enforcement officer for the southern district of Mississippi."

Mr. HUSTED. Mr. Speaker, I move to recede and concur with an amendment.

The SPEAKER. The gentleman from New York moves to recede and concur with an amendment, which the Clerk will report.

The Clerk read as follows:

Mr. HUSTED moves that the House recede from its disagreement to the amendment of the Senate No. 61 and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following:

"To pay the estate of W. L. Dunham, deceased, of Richton, Miss., on account of the death of said Dunham while in the discharge of his duty as a posse man under the Federal prohibition-enforcement officer for the southern district of Mississippi, $1,500."

Mr. STAFFORD. Will the gentleman from New York yield?

Mr. HUSTED. I will.

Mr. STAFFORD. I suppose in this instance there can be no question but that this is a private claim against the Government?

Mr. HUSTED. There is not any question about it.

Mr. STAFFORD. And so in the future when this bill is up for consideration we wish to tell the Senators in the other body that they should load the bill down with private claims?

Mr. HUSTED. No. But there are almost always exceptions to every rule, however good that rule may be. And to my mind the fact that this woman is left penniless with nine little children is a sufficient exception to the rule. Mr. Speaker, I ask for a vote.

The SPEAKER. The question is on the motion of the gentleman from New York [Mr. HUSTED].

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Amendment No. 70: Page 41, line 14, strike out the figures "3,500" and insert in lieu thereof the figures "5,000."

Mr. HUSTED. Mr. Speaker, I move to recede and concur.

The SPEAKER. The gentleman from New York moves to recede and concur in the Senate amendment.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Amendment No. 71: Page 41, line 21, strike out the figures "66,580" and insert in lieu thereof the figures "68,080."

Mr. HUSTED. Mr. Speaker, I move to recede and concur in the Senate amendment.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Amendment No. 73: Page 43, line 17, after the figures "2,300,000," insert: "And the Secretary of War is authorized and directed to deliver to the office of the United States marshal for the District of Columbia, without payment therefor, one passenger-carrying motor vehicle."

Mr. HUSTED. Mr. Speaker, I move to recede and concur.

The SPEAKER. The gentleman moves to recede and concur in the Senate amendment.

The motion was agreed to.

VISIT TO QUANTICO.

Mr. HICKS. Mr. Speaker, I ask unanimous consent to be allowed to address the House for three minutes.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

Mr. HICKS. Mr. Speaker, I feel very remiss in taking so much of the time of the House to-day, but I want to speak in regard to this Quantico trip. I sincerely hope that some day we will have it out of the way. Inasmuch as at the present time the clouds make it seem dubious as to what we had better do, I telephoned to Quantico and found out that down there the conditions are approaching normalcy. Although they have had one or two showers to-day the reviewing field is in a pretty fair condition, and at the present time, if conditions do not get worse to-night, they expect to have the show to-morrow. So I hope everybody will endeavor to go down if they can do so; 8.30 at the *Mayflower*.

ORDER OF PROCEDURE.

Mr. MONDELL. Mr. Speaker, I ask unanimous consent to address the House for two minutes on a matter of procedure.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

Mr. MONDELL. Mr. Speaker, I ask unanimous consent that next week Calendar Wednesday business may be in order on Friday instead of Wednesday. I think there is a very good and valid reason for that. The gentleman from Minnesota [Mr. VOLSTEAD], whose committee would have the call on Calendar Wednesday, desires to pay a visit to Milwaukee. [Laughter.]

Mr. STAFFORD. I did not think he would make such an open confession as that he wanted to be converted or wanted some of the wet goods out there.

Mr. MONDELL. I do not anticipate that the gentleman from Minnesota [Mr. VOLSTEAD] will be converted. Let us hope that Milwaukee will. [Laughter.]

Mr. STAFFORD. I am afraid not, either by VOLSTEAD or Volsteadism.

Mr. GARNER. Will the gentleman yield for a question? Friday from Calendar Wednesday is a very short time. Why can you not go over until the next coming Wednesday for Mr. VOLSTEAD'S committee?

Mr. MONDELL. Those who have important matters they desire to have considered on Calendar Wednesday have been somewhat disappointed, and personally I did not feel justified in asking to dispense with Calendar Wednesday next week

Mr. GARNER. That is rather early; this is a week ahead. Why do you not wait?

Mr. MONDELL. It is rather important that several gentlemen who are interested in the matter should know what to expect.

Mr. GARNER. As I understand, the situation is such that the gentleman from Minnesota wants to know whether he can accept the invitation to visit Milwaukee without his rights on Calendar Wednesday being jeopardized?

Mr. MONDELL. That is it.

Mr. BEGG. Mr. Speaker, will the gentleman yield to me?

Mr. MONDELL. Yes.

Mr. BEGG. When are we likely to have a Private Calendar day if the gentleman gets this request?

Mr. MONDELL. Well, I doubt if we could take up the Private Calendar next week, but the following week I am rather hopeful that we can have one or two days—possibly two days—for the Private Calendar.

Mr. BEGG. I think the gentleman knows that some of us are just as much interested in the Private Calendar as in the visit of the gentleman from Minnesota to Milwaukee.

Mr. MONDELL. I am just as much interested; rather more. But my desire is to accommodate all the gentlemen, so far as it is possible to do it. I think the following week we may have two days on the Private Calendar; at least, I shall make the effort.

Mr. BEGG. Another question: Would it be possible to have this on Wednesday or Saturday? I know that some of us have bills on the Private Calendar that have not been reached.

Mr. MONDELL. I am anxious to secure compliance with my request to have Calendar Wednesday business come later in the week, and I thought that some of the gentlemen might be in favor of a recess on Saturday, and they might object. I hope under the circumstances that no one will object.

Mr. SNELL. Mr. Speaker, will the gentleman yield?

Mr. MONDELL. I yield.

Mr. SNELL. The War Claims Committee has several items on the calendar. We are very patient; we have given up every day. It is the regular war claims day. I would like to have an assurance from the leader that we will have time to consider these measures.

Mr. MONDELL. I hope to have two consecutive days on the Private Calendar quite soon, and I shall make an effort to make that arrangement, and at a time when it will be convenient for gentlemen to be here.

Mr. STEENERSON. Mr. Speaker, will the gentleman yield?

Mr. MONDELL. Yes.

Mr. STEENERSON. Would it not be just as well simply to pass the Committee on the Judiciary next Wednesday, with unanimous consent that it should remain at the head of the call of committees on the following day, whatever you would fix?

Mr. MONDELL. I doubt if we could give two days next week to Calendar Wednesday business. Next Friday and Wednesday of the following week will dispose of the business of the Committee on the Judiciary, and then the Committee on the Post Office and Post Roads, of which the gentleman from Minnesota [Mr. STEENERSON] is chairman, will be reached.

Mr. STEENERSON. You can save time by adopting my suggestion.

Mr. MONDELL. We could not dispose of the program for next week if we did that.

Mr. STEENERSON. You are losing Calendar Wednesday next week.

Mr. MONDELL. No; we are putting Calendar Wednesday business over until Friday, and losing nothing so far as Calendar Wednesday business is concerned.

Mr. STEENERSON. Why not take up Calendar Wednesday business next Friday?

Mr. MONDELL. Well, we have a river and harbor bill which will take up the time for the next two days.

The SPEAKER. The gentleman from Wyoming asks unanimous consent that Calendar Wednesday business of next week be transferred from Wednesday to Friday. Is there objection?

There was no objection.

RIVER AND HARBOR BILL.

Mr. SNELL. Mr. Speaker, I submit a privileged report from the Committee on Rules.

The SPEAKER. The gentleman from New York submits a privileged report from the Committee on Rules, which the Clerk will read.

The Clerk read as follows:

House Resolution 348 (Rept. No. 1015).

Resolved, That upon the adoption of this resolution it shall be in order that the House resolve itself into Committee of the Whole House on the state of the Union to consider H. R. 10766, being a bill authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes; that there shall be not to exceed three hours of general debate on said bill, one-half to be controlled by Mr. DEMPSEY, of New York, and one-half to be controlled by Mr. DUPRÉ, of Louisiana. At the conclusion of the general debate the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment the committee shall rise and report the bill back to the House with the amendments, if any. The previous question shall be considered as ordered on the bill and all amendments thereto to final passage, without intervening motion, except one motion to recommit.

Mr. SNELL. Mr. Speaker, this rule simply provides for the consideration, under the general rules of the House, of the bill H. R. 10766, a bill authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes. So far as I know, there is no opposition on either side to the consideration of this bill at this time.

Mr. WALSH. Mr. Speaker, will the gentleman yield?

Mr. SNELL. I yield to the gentleman from Massachusetts.

Mr. WALSH. Has the gentleman any information, provided that this personally conducted tour of the gentleman from New York [Mr. HICKS] occurs to-morrow, that other than general debate will take place on the river and harbor bill?

Mr. SNELL. It is understood that we will finish the general debate to-morrow and begin the reading of the bill on Friday morning.

Mr. LONDON. I understood that under the new system the river and harbor bill came under the Army appropriation bill.

Mr. SNELL. That is the appropriation. This is simply the authorization—the general legislation.

Mr. GARNER. Mr. Speaker, if I understand it, this is a unanimous report from the Committee on Rules?

Mr. SNELL. Yes; a unanimous report from the Committee on Rules, with no opposition on either side, so far as I know.

Mr. RAKER. Mr. Speaker, will the gentleman yield me five minutes?

Mr. SNELL. Does the gentleman want to talk about this rule?

Mr. RAKER. I want to talk about a rule.

Mr. SNELL. I wish you would not. But I yield to the gentleman five minutes if he insists on it.

The SPEAKER. The gentleman from California is recognized for five minutes.

Mr. RAKER. The only thing I want to say, Mr. Speaker and gentlemen of the House, is that I think we should be ready and willing to discuss any matters that are pending on the calendar that affect the public interest where rules are obtained and it is necessary to get a rule to consider a bill before the House. The Committee on Rules have been very lenient in providing for rules, and I am wondering why a rule has not been had for the purpose of considering the bill S. 2919, an act to extend for the period of two years the provisions of title 2 of the food control and the District of Columbia rent act, approved October 22, 1919, which was reported by the gentleman from West Virginia [Mr. REED] and is on the calendar, known as the Ball Rent Act. Right under the shadows of the Capitol and within the shadow and within the reach of the voices of the Members of the House in their offices in the House Office Building, a poor woman was evicted yesterday, whose goods are in the street, who has five children, and who herself is in a delicate condition.

There is not only that case but there are hundreds of cases which will be affected by want of action in the District of Columbia. It has been reported that certain Members have told the people in the District that the realtors and owners of buildings in the District of Columbia were going to be good and kind, and they have told the owners to handle their tenants gently if there was a hiatus between the expiration of the law on the 22d and the 23d. It means more litigation, more trouble, more suffering, more hardship for the people of the District of Columbia who are honestly and legitimately paying their rent and ought to have an opportunity to live in peace and quiet when they pay their rent. Night before last I was told of the case of four young girls who had rented an apartment in the Monmouth who had gone away for two days. The proprietor cut out the lock and went in and took possession, and when the young ladies, working in one of the departments, came back they found a lady there in the doorway trying to keep them out, and she called for the police. The policeman who came turned out to be a gentleman—as most of them in the District of Columbia are—and he said, "Move aside, lady, and let these young women into their room." They raised the rent, stopped the elevator, compelling the people to carry their provisions and things up eight stories. We are legislating here on various matters. This is a municipality belonging to the Government, for which we pass the laws, and there is some occasion for our action, and good, honest, hard-working people have the right to have a law passed so that they may remain in peace and quiet in the apartments where they now are when they are paying a legitimate rent. I want to say to the gentleman that this applies not only to the District of Columbia but it applies elsewhere. If this Congress can not function and is not able to give the ordinary work man and woman an opportunity to remain in the District of Columbia, which is under the jurisdiction of this Congress, what can the people all over the land expect from your attitude on this matter? You ought to pass a rule and you ought to put this bill through the House to-day so that you know it will go over to the Senate in order that they may concur in any amendment that may be adopted, and so that the bill may go to the President and let him sign it. The Senate has passed the bill. The people desire it, the country wants it. Why not pass the bill so that these matters can be amicably and justly settled? [Applause.]

Mr. CURRY. I should like to ask the gentleman a question.

The SPEAKER. The time of the gentleman has expired.

Mr. SNELL. I yield one minute to the gentleman.

The SPEAKER. The gentleman from California is recognized for one minute.

Mr. CURRY. I do not know whether my colleague from California knows the derivation of the word "realtor." It comes from three Spanish words, "real," "royal," and "el toro," the bull. [Laughter.]

Mr. RAKER. And let me tell you, these fellows are giving the people the bull in the District of Columbia.

Mr. CURRY. They certainly are.

Mr. SNELL. Mr. Speaker, I move the previous question.

The SPEAKER. The gentleman from New York moves the previous question.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted—

To Mr. FREAR, indefinitely, on account of important business, to begin Monday, May 22.

To Mr. DRIVER, for three weeks, on account of sickness.

To Mr. FENN, for one week, on account of important business.

To Mr. DUNBAR, for eight days, on account of business.

ENROLLED BILL SIGNED.

The SPEAKER announced his signature to enrolled bill of the following title:

S. 3505. An act to amend the Code of Law for the District of Columbia.

ADJOURNMENT.

Mr. SNELL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

Accordingly (at 4 o'clock and 19 minutes p. m.), the House adjourned until Thursday, May 18, 1922, at 12 o'clock noon.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. MILLSPAUGH: Committee on the District of Columbia. H. R. 7746. A bill to regulate within the District of Columbia the sale of milk, cream, and certain milk products, and for other purposes; with amendments (Rept. No. 1013). Referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. BOX: Committee on Claims. H. R. 1750. A bill for the relief of Fannie M. Higgins; with amendments (Rept. No. 1014). Referred to the Committee of the Whole House.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. SNYDER: A bill (H. R. 11687) to authorize the leasing of unallotted lands on Navajo Indian reservations; to the Committee on Indian Affairs.

By Mr. VOLSTEAD: A bill (H. R. 11688) to amend section 2 of the act of February 22, 1875 (18 Stat. L., ch. 95, Supp. R. S. vol. 1, p. 65); to the Committee on the Judiciary.

By Mr. FITZGERALD: Joint resolution (H. J. Res. 327) proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CAMPBELL: A bill (H. R. 11689) granting a pension to Sarah B. Jewett; to the Committee on Invalid Pensions.

By Mr. CAREW: A bill (H. R. 11690) granting an increase of pension to Eliza J. Creighton; to the Committee on Invalid Pensions.

By Mr. COLE of Ohio: A bill (H. R. 11691) granting a pension to Mary Loretta Pope; to the Committee on Invalid Pensions.

By Mr. HUTCHINSON: A bill (H. R. 11692) for the relief of Burton Tettemer; to the Committee on Claims.

By Mr. KEARNS: A bill (H. R. 11693) granting a pension to Chilton A. Stout; to the Committee on Pensions.

By Mr. RIDDICK: A bill (H. R. 11694) for the relief of Lillie M. Schaeffer; to the Committee on the Public Lands.

By Mr. TUCKER: A bill (H. R. 11695) for the relief of George D. Smith; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5644. By the SPEAKER (by request): Resolution adopted by the Seattle Presbytery at Seattle, Wash., indorsing Senate Joint Resolution 31, relative to uniform laws on the subject of marriage and divorce; to the Committee on the Judiciary.

5645. Also (by request), resolution adopted by the Seattle Presbytery at Seattle, Wash., indorsing House Joint Resolution 131, relative to prohibiting polygamy and polygamous marriages in the United States; to the Committee on the Judiciary.

5646. By Mr. COLE of Ohio: Petition favoring the passage of the Morgan and Bursum pension bills; to the Committee on Pensions.

5647. By Mr. FRENCH: Petition protesting against enactment of House bill 9753 and other Sunday bills; to the Committee on the District of Columbia.

5648. By Mr. FULLER: Petition of Danville (Ill.) Council, No. 754, Knights of Columbus, favoring Senate bill 1565, for retirement of disabled emergency officers of the World War; to the Committee on Military Affairs.

5649. Also, petition of the American Farm Bureau Federation, favoring House Joint Resolution 314, for an amendment to the Federal Constitution prohibiting the issue of tax-exempt securities; to the Committee on Ways and Means.

5650. By Mr. GALLIVAN: Petitions of the Massachusetts Federation of Churches, Boston, and the Frances E. Willard Settlement, Boston, Mass., recommending passage of the Jones-Miller narcotics bill; to the Committee on Ways and Means.

5651. Also, petition of the Woman's Home Missionary Society, Boston, Mass., protesting against enactment into law of Senate bill 3083; to the Committee on the District of Columbia.

5652. By Mr. KISSEL: Petition of the Industrial Materials Co., New York City, N. Y., relative to the tariff; to the Committee on Ways and Means.

5653. Also, petition of Fraternal Order of Eagles No. 769, Homestead, Pa., relative to modifying the Volstead Act; to the Committee on the Judiciary.

5654. Also, petition of New York Chapter, Military Order of the World War, New York City, N. Y., relative to appropriations for the training of reserve officers and enlisted men in camps during the fiscal year 1923; to the Committee on Appropriations.

5655. By Mr. RAKER: Petitions of Mailliard & Schmiedell, of San Francisco, Calif., protesting against the contemplated duty on canned and dried mushrooms of 55 per cent ad valorem, and Bishop & Co., of Los Angeles, Calif., urging increased duties on chocolate and coco; to the Committee on Ways and Means.

5656. Also, petitions of San Joaquin Grocery Co., of Fresno, Calif., protesting against the proposed duty on canned and dried mushrooms of 55 per cent ad valorem, and urging a duty of 2½ cents per pound on mushrooms; and Boldemann Chocolate Co. (Inc.), of San Francisco, Calif., relative to the proposed duty on chocolate and coco, and urging a higher duty on manufactured goods to protect the American manufacturers in coco and chocolate; to the Committee on Ways and Means.

5657. Also, petition of Wells Fargo Nevada National Bank, of San Francisco, Calif., protesting against the changes in the transportation act of 1920 proposed in Senate bill 1150 and House bill 6861; to the Committee on Interstate and Foreign Commerce.

5658. Also, petitions of the Oakland Chamber of Commerce, of Oakland, Calif., urging an amendment to Senate bill 2391 and indorsing it as amended and urging its passage; and the Sacramento Chamber of Commerce, of Sacramento, Calif., opposing any change in the 1920 transportation act until it has been given a fair trial under normal business conditions; to the Committee on Interstate and Foreign Commerce.

5659. Also, petition of D. J. O'Brien, chief of police, San Francisco, Calif., urging an appropriation for the continuation of the work of the interdepartmental social hygiene board under the Department of Justice; to the Committee on Appropriations.

5660. By Mr. SWING: Petition of various citizens of San Diego County, Calif., protesting against a law providing compulsory observance of Sunday (H. R. 9753); to the Committee on the District of Columbia.

SENATE.

THURSDAY, *May 18, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

The VICE PRESIDENT. House bill 7456 is before the Senate and will be proceeded with.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The VICE PRESIDENT. The pending amendment will be stated.

The ASSISTANT SECRETARY. On page 27, line 3——

Mr. JONES of New Mexico. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll and the following Senators answered to their names:

Ashurst	Hale	McNary	Shortridge
Ball	Harris	Myers	Simmons
Borah	Harrison	Nelson	Smoot
Brandegee	Heflin	Newberry	Spencer
Calder	Johnson	Nicholson	Sterling
Capper	Jones, N. Mex.	Norris	Sutherland
Curtis	Jones, Wash.	Oddie	Townsend
Dial	Kellogg	Overman	Underwood
Dillingham	Keyes	Page	Wadsworth
du Pont	Ladd	Pepper	Walsh, Mont.
Elkins	Lodge	Ransdell	Watson, Ga.
Ernst	McCumber	Rawson	Watson, Ind.
Frelinghuysen	McKinley	Robinson	Williams
Gooding	McLean	Sheppard	Willis

Mr. DIAL. I desire to announce that my colleague [Mr. SMITH] is unavoidably absent. I ask that this announcement may continue through the day.

Mr. JONES of New Mexico. I desire to announce that the junior Senator from Wyoming [Mr. KENDRICK] is detained on official business.

The VICE PRESIDENT. Fifty-six Senators having answered to their names, a quorum is present.

Mr. McCUMBER. Mr. President, I desire to give notice at this time that as soon as we complete the first schedule I shall ask the Senate to take up those related paragraphs which are in other schedules and are directly connected with the first schedule. For instance, I suppose that when we consider calomel, it should be considered more or less in connection with quicksilver. It may be necessary, therefore, to go from one schedule to another. So when we get through with the chemical schedule we will have practically settled those things which are directly affected by it. I simply give the notice at this time, so that we may be prepared to take the items up as I have suggested.

Mr. UNDERWOOD. Mr. President, as I have said several times, I think there is no objection on this side of the Chamber to the Senator considering the bill in the way he desires. Of course, he can take up schedules out of their order only by unanimous consent. I do not think there will be any objection to the Senator pursuing the course he desires, except that if he is going to take up the related systems I will ask him to give notice in advance at the desk, so that it may be printed in the RECORD, as to the items which he wants to take up. Then Senators on this side of the Chamber who are interested will know in advance that those items are coming up out of their order.

Mr. McCUMBER. I shall try to do that. I wish to say in addition that I will, just as much as possible, attempt to conform to the convenience and desires of Senators in discussing any particular item or schedule.

Mr. ROBINSON. Mr. President, I inquire of the Senator from North Dakota whether he is in a position now to state what paragraphs of the bill he proposes to take up at the conclusion of the first schedule now under consideration? If he is ready to make a suggestion at this time it will serve the convenience of Senators who, of course, expected that the bill would be proceeded with in regular order.

Mr. McCUMBER. Possibly I can do that some time during the day, let me say to the Senator.

Mr. ROBINSON. Very well.

Mr. McCUMBER. I can then state it better than I can just at the present time.

Mr. ROBINSON. I want the Senator from North Dakota to understand that the right to object is reserved when he proposes to take up out of its order any schedule or paragraph in the bill. I do not want to be understood as having waived the right to object if any substantial reason for that course exists.

Mr. McCUMBER. Of course, my first purpose is to complete the chemical schedule and then to take up those paragraphs which we have passed over in the chemical schedule.

Mr. ROBINSON. If I understand the Senator correctly, he is merely outlining to the Senate the policy he expects to pursue. He is not asking unanimous consent now to waive the regular order of procedure?

Mr. McCUMBER. Oh, no.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. Overhue, its enrolling clerk, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on certain amendments of the Senate to the bill (H. R. 11065) making appropriations for the Departments of State and Justice and for the judiciary for the fiscal year ending June 30, 1923, and for other purposes; that the House receded from its disagreement to certain amendments of the Senate to said bill, and concurred therein; and that the House receded from its disagreement to certain amendments of the Senate and concurred therein each with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed a bill (H. R. 11214) authorizing the President to scrap certain vessels in conformity with the provisions of the treaty to limit naval armaments, and for other purposes, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED.

The message further announced that the Speaker of the House had signed the enrolled bill (S. 3505) to amend the Code of Law for the District of Columbia, and it was thereupon signed by the Vice President.

PETITIONS AND MEMORIALS.

Mr. LODGE presented memorials of sundry citizens of Newburyport and Amesbury, Mass., remonstrating against the enactment of legislation providing for compulsory Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

He also presented the petition of William Monroe Trotter and 3,000 other citizens of the State of Massachusetts, praying for the prompt passage of the so-called Dyer antilynching bill, which was referred to the Committee on the Judiciary, and the body of the petition was ordered to be printed in the RECORD, as follows:

Petition to Senator LODGE, urging Senator H. C. LODGE, as Republican leader, to secure party action for early consideration of the Dyer antilynching bill.

BOSTON, MASS., *April 27, 1922.*

To Hon. HENRY CABOT LODGE,
United States Senate, Washington, D. C.

SIR: We, the undersigned citizens of your own State, acting through the Boston branch of the National Equal Rights League, do most earnestly petition you on this, the centenary of the birth of Ulysses S. Grant, great general who saved the Union for freedom and great President who enforced impartially the Constitution for life protection, to exercise your influence and power as leader of the majority party in control of the Senate to secure party action, by caucus or otherwise, for early consideration of the Dyer antilynching bill, already passed by almost 2 to 1 majority of the House of Representatives, in accordance with the plank and pledge of the last national Republican platform for humanity and national honor.

Mr. GOODING. I present sundry petitions from citizens of Mullan and Burke, in the State of Idaho, praying that the House rates on zinc and lead be maintained in the pending tariff bill. I ask that the body of one of the petitions may be read at the desk and that they all be referred to the Committee on Finance.

The VICE PRESIDENT. Without objection, the Secretary will read, as requested.

The Assistant Secretary read as follows:

The Honorable the Senate of the United States:

The undersigned citizens of Mullan, Idaho, living in a mining district which produces a respectable proportion of the lead mined in the United States, and believing that the maintenance of American standards of living can only be maintained by a protective tariff on the products of American labor, do hereby indorse the action of the Senate Finance Committee in having sustained the Fordney rates on zinc and lead. We especially recognize and commend the efforts for adequate protection of the products of Idaho and the West, that they will be afforded the same care and consideration in the new revenue bill as are the products of other parts of our country.

The VICE PRESIDENT. The petitions will be referred to the Committee on Finance, as requested by the Senator from Idaho.

Mr. JOHNSON presented a memorial of sundry citizens of Chino, Calif., remonstrating against the enactment of legislation providing for compulsory Sunday observance in the District of Columbia, which was referred to the Committee on the District of Columbia.

Mr. ODDIE presented a petition of sundry citizens of Sparks and Reno, in the State of Nevada, praying for the enactment of legislation creating a department of education, which was referred to the Committee on Education and Labor.

Mr. WILLIS presented the petition of Fred C. Dunn and sundry other citizens of Columbus, Ohio, praying for the imposition of only a moderate duty on kid gloves in the pending tariff bill, which was referred to the Committee on Finance.

He also presented the petition of Bert B. Rice and sundry other citizens of Elmore and vicinity, in the State of Ohio, praying for the imposition of a tariff duty of $2 per 100 pounds on Cuban sugar, which was referred to the Committee on Finance.

He also presented letters in the nature of memorials of the Cincinnati Chamber of Commerce, the Davies-Young Soap Co., of Dayton, and the Procter & Gamble Co., of Cincinnati, all in the State of Ohio, remonstrating against inclusion in the pending tariff bill of the proposed duties and provisions relative to vegetable and fish oils, animal fats, and oil seeds, which were referred to the Committee on Finance.

Mr. NICHOLSON presented a petition of sundry citizens of La Junta, Colo., praying for the imposition of only a moderate duty on kid gloves in the pending tariff bill, which was referred to the Committee on Finance.

He also presented a memorial of sundry citizens and commercial organizations of Leadville, Colo., remonstrating against the enactment of legislation amending certain sections of the transportation act of 1920, affecting the powers of the Interstate Commerce Commission, etc., which was referred to the Committee on Interstate Commerce.

Mr. CAPPER presented a resolution adopted by the Fourth Annual Convention of the Mississippi Valley Association, at Kansas City, Mo., which was read and referred to the Committee on Interstate Commerce, as follows:

We regard "Pittsburgh plus" as an undue imposition upon commerce in general, and upon the Mississippi Valley users of steel in particular, and it is our hope the Federal Government will find a way to force the abatement of the practice.

Mr. NEWBERRY presented petitions of sundry citizens of Charlevoix, Ellsworth, Fowlerville, Phelps, Webberville, Williamston, Mason, Eden, Holt, Leslie, Perry, Charlotte, St. Johns, Mearl Beach, Olivet, Vermontville, Potterville, Lansing, Grand Ledge, and Eaton Rapids, all in the State of Michigan, praying for the imposition of a duty of $2 per hundred pounds on Cuban sugar in the pending tariff bill, which were referred to the Committee on Finance.

DR. C. LEROY BROCK.

Mr. HARRELD, from the Committee on Claims, to which was referred the bill (S. 3202) for the relief of Dr. C. LeRoy Brock, reported it without amendment and submitted a report (No. 720) thereon.

ENROLLED BILL PRESENTED.

Mr. SUTHERLAND, from the Committee on Enrolled Bills, reported that May 18, 1922, they presented to the President of the United States the enrolled bill (S. 3505) to amend the Code of Law for the District of Columbia.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. KELLOGG:

A bill (S. 3621) to amend the act of March 4, 1917, for the restoration of the annuities of the Medawakanton and Wahpakoota (Santee) Bands of Sioux Indians; to the Committee on Indian Affairs.

A bill (S. 3622) granting a pension to Hannah Linton; to the Committee on Pensions.

By Mr. STERLING:

A bill (S. 3623) for the relief of certain members of the Sioux Nation of Indians, residing in the State of South Dakota (with accompanying papers); to the Committee on Claims.

By Mr. ODDIE:

A bill (S. 3624) for the relief of Fred E. Jackson; to the Committee on Claims.

By Mr. JOHNSON:

A bill (S. 3625) granting an increase of pension to John Clark; to the Committee on Pensions.

By Mr. ASHURST:

A joint resolution (S. J. Res. 199) reappropriating and making immediately available $150,000 appropriated by section 2 of the act of February 14, 1920 (41 Stats. L., p. 417), for completing construction of dam with bridge superstructure and necessary controlling works for diverting water from Gila River for irrigation of Indian land on the Gila River Indian Reservation, Ariz.; to the Committee on Indian Affairs.

TARIFF BILL AMENDMENTS.

Mr. MCNARY submitted an amendment intended to be proposed by him to House bill 7456, the tariff bill, which was referred to the Committee on Finance and ordered to be printed.

Mr. LODGE submitted two amendments intended to be proposed by him to House bill 7456, the tariff bill, which were ordered to lie on the table, to be printed, and to be printed in the RECORD, as follows:

On page 175, paragraph 310, to strike out lines 16 to 23, inclusive, and the words "per cent ad valorem," in line 24, and to insert in lieu thereof the following:

"PAR. 1310. Unbound books of all kinds, sheets or printed pages of books bound wholly or in part in leather, bound books of all kinds except those bound wholly or in part in leather, including blank books, slate books and pamphlets, engravings, photographs, etchings, maps, charts, music in books or sheets, and printed matter, all the foregoing not specially provided for, if of bona fide foreign authorship, 15 per cent ad valorem; all other, 25 per cent ad valorem; bindings wholly or in part of leather, not specially provided for, 45 per cent ad valorem."

On page 215, paragraph 1529, to strike out lines 12 to 16, inclusive, and the words "years at the date of importation," in line 17, and to insert in lieu thereof the following:

"PAR. 1529. Books, maps, music, engravings, photographs, etchings, lithographic prints, bound or unbound, and charts, which shall have been printed more than 20 years at the time of importation: *Provided*, That where any such books shall have been rebound wholly or in part in leather within said period the binding so placed upon such books shall be dutiable as provided in paragraph 1310."

HOUSE BILL REFERRED.

The bill (H. R. 11214) authorizing the President to scrap certain vessels in conformity with the provisions of the treaty to limit naval armaments, and for other purposes, was read twice by its title and referred to the Committee on Naval Affairs.

PERSONAL EXPLANATION—VINDICATION OF SENATOR FRELINGHUYSEN.

Mr. ODDIE. Mr. President, on yesterday the senior Senator from New Jersey [Mr. FRELINGHUYSEN] rose to a question of personal privilege and called attention to an article in the New York Times referring to him, and denied the statements in that article.

This morning the New York Times published a statement completely vindicating the Senator from New Jersey, the statement being in a very conspicuous place on the first page of the paper. This statement cleared the name of the Senator completely, and leaves his splendid character and reputation untarnished.

I ask unanimous consent to have this statement from the New York Times printed in the RECORD, in the regular RECORD type.

There being no objection, the matter referred to was ordered to be printed in the RECORD, in 8-point type, as follows:

[From the New York Times, May 18, 1922.]

SENATOR FRELINGHUYSEN DENOUNCES CHARGES MADE IN HABANA AND DISPROVED BY RECORDS.

[Special to the New York Times.]

WASHINGTON, May 17.—Senator JOSEPH S. FRELINGHUYSEN, of New Jersey, to-day made an unqualified denial of having had any connection with the affairs of H. Upmann & Co., a Cuban-German banking house that recently failed in Habana, and whose books are alleged to show an expenditure of over $1,000,000 to secure the return of properties held by the Alien Property Custodian here. Examination of records on file at the office of the Alien Property Custodian to-day failed to show any mention of Senator FRELINGHUYSEN in the case.

Rising to a question of personal privilege in the Senate this noon, Senator FRELINGHUYSEN read the following:

"In reference to the article which appeared in the New York Times this morning, in which my name is said to have been mentioned by a Cuban newspaper in connection with the effort to regain the private property of Upmann & Co., I beg to state that I know absolutely nothing about the matter, have never heard of Upmann & Co., and have no interest whatever in their affairs.

"Mr. Larkin, member of a firm of lawyers at 80 Broadway, New York—Larkin, Rathbone & Perry—counsel for Upmann & Co., called me on the telephone this morning, expressing great regret that my name was mentioned and stating that he would do everything in his power to have a correction made.

"I have no interest in any woolen mills in New Jersey whatsoever. The reference to my name in connection with this matter is a perfect outrage, entirely unwarranted, and I make absolute denial of any knowledge of the affair."

Officials of the Alien Property Custodian's office said to-day that the Upmann properties seized by the Government during the war had been returned during the previous administration and that the only knowledge they had of the case was what is contained in the files. The records show that early in 1919 cash and securities held by H. Upmann & Co. in this country, estimated at about $3,000,000, were seized. None of these securities were of any New Jersey corporation or enterprise. There was no mention of woolen mills, Senator FRELINGHUYSEN, or of expenses connected with securing the return of the properties.

On February 17, 1920, Herman Upmann filed a claim for return of properties held by the Alien Property Custodian. The same date, Francis P. Garvin wrote A. Mitchell Palmer, recommending return of the Upmann properties. On March 1 the records show return of the property was approved by Mr. Palmer.

—

Thomas W. Miller, Alien Property Custodian, in a statement made public at the Yale Club last night, declared that "press reports that Senator FRELINGHUYSEN had been interested in the return of property seized belonging to H. Upmann, a German citizen residing in Habana, Cuba, are utterly erroneous and false."

STATE AND JUSTICE DEPARTMENTS APPROPRIATIONS.

The PRESIDING OFFICER (Mr. WILLIS in the chair) laid before the Senate the action of the House of Representatives agreeing to the report of the committee of conference on the disagreeing votes of the two House on the amendments of the Senate to the bill (H. R. 11065) making appropriations for the Departments of State and Justice and for the judiciary for the fiscal year ending June 30, 1923, and for other purposes; receding from its disagreement to certain amendments of the Senate; and receding from its disagreement to the amendments of the Senate numbered 44, 47, and 61, and concurring therein each with an amendment as follows:

That the House recede from its disagreement to the amendment of the Senate No. 44, and concur therein with an amendment, as follows:

In lieu of the matter proposed by said amendment insert:

COMMISSION OF JURISTS TO CONSIDER AMENDMENT OF LAWS OF WAR.

"The enable the United States Government to carry out its obligations arising under the resolution adopted by the Conference on the Limitation of Armament on February 4, 1922, for the appointment of a commission of jurists to consider the amendment of the laws of war, $3,750, to be immediately available."

That the House recede from its disagreement to the amendment of the Senate No. 47, and concur therein with an amendment, as follows: In lieu of the matter proposed by said amendment insert:

REVISION OF CHINESE CUSTOMS TARIFF.

"To enable the United States Government to carry out its obligations arising under the treaty relating to the Chinese customs tariff signed February 6, 1922, including the compensation of delegates or other representatives, clerks, and employees, rent of offices, expenses of transportation and subsistence (notwithstanding the provisions of any other act), stationery and supplies, telegraph, and such other objects as the President may deem necessary to be disbursed under the direction of the Secretary of State, $47,750, to be immediately available."

That the House recede from its disagreement to the amendment of the Senate numbered 61, and concur therein with an amendment as follows: In lieu of the matter proposed by said amendment insert:

"To pay the estate of W. L. Dunham, deceased, of Richton, Miss., on account of the death of said Dunham while in the discharge of his duty as a posse man under the Federal prohibition enforcement officer for the southern district of Mississippi, $1,500."

Mr. CURTIS. I move that the Senate agree to the amendments of the House to the amendments of the Senate numbered 44, 47, and 61. They are virtually slight corrections.

The amendments were agreed to.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes, the pending amendment being in paragraph 69, on page 27, line 3, after the word "Litharge," to insert "2½ cents a pound," so as to read:

PAR. 69. Lead pigments: Litharge, 2½ cents per pound.

Mr. JONES of New Mexico. Mr. President, last evening we were discussing the duty upon lead and manufactures of lead. Much was said during the evening about obtaining a quorum. There is an unusual number of Senators present now, and I trust that they will remain in the Chamber during the discussion of this subject. It is a very important one.

If it will interest Senators at all in the subject, I will state in advance that, in my judgment, it can be demonstrated that there is no necessity for any tariff upon any lead except the ore itself. It may further interest Senators to know that the Tariff Commission has examined this subject with much care and advises the Senate that these duties on the product of the ore are unnecessary.

Now, if I may have the attention of the Senate, I shall endeavor, in as brief way as I can, to present facts which, in my judgment, warrant the conclusion which I have just stated.

This is an important subject, and it affects practically every citizen of the country in a very material degree.

Lead is used in various commodities, and is found in the manufacture of many articles in which the public generally, perhaps, would not think of the lead content; but I want in a brief way to review the conditions of this industry, and I am going to substantiate everything which I say by reference to the report of the Tariff Commission upon this subject. To begin with we are told that the United States is the largest consumer of lead metal. The report proceeds:

For many years prior to the war in Europe, the consumption practically equaled the production from domestic ore. In addition to this production, however, American smelting and refining works produced refined lead derived from foreign (chiefly Mexican) ore and base bullion for export. The output of this lead of foreign origin and destined for foreign consumption amounted to about 25 per cent of the purely domestic business. By virtue of the provision for bonded smelting, this business, although frequently carried on side by side with the smelting of domestic ores, was absolutely distinct as far as the tariff is concerned.

That gives, in the beginning, a general idea of the situation. The United States practically produces the quantity of lead which is needed in domestic consumption.

The next part of the statement is that through a bonded process the United States has been importing very large quantities of foreign ore to an amount of about 25 per cent of the domestic production and has been exporting the product of the imported foreign ores to foreign countries in competition with the world. We are told just where the other supplies of lead come from.

Spain and Mexico are the only important producers of lead ore whose product comes on the world market. Germany, in spite of its large output, has to import lead to meet its own requirements. Only a part of the Spanish ore is exported, although most of the lead produced in Spanish smelters goes to other countries. But almost all of it is consumed in Europe and it is not even a potential factor in the American market. All of the lead ore produced in Australia is smelted and refined in Australian works. Only refined lead is now exported.

Mexico, therefore, is the only country from which large supplies of lead may come into the United States in the form of ore.

Mr. NORRIS. Mr. President——

The VICE PRESIDENT. Does the Senator from New Mexico yield to the Senator from Nebraska?

Mr. JONES of New Mexico. I yield.

Mr. NORRIS. I wish to inquire from what the Senator from New Mexico is reading?

Mr. JONES of New Mexico. I am reading from the Tariff Information Survey on lead. Then the survey states:

Canada, the next largest country of origin of the lead ore imported into the United States, does not produce enough lead for her own needs. Mexico, also, is the only country in which there are large known deposits of lead that are not producing to practically their full economic limit and which can, therefore, largely increase production.

Domestic lead deposits will be able to supply American lead requirements for many years.

That is all that is to be considered so far as the supplies of ore in Mexico are concerned. We are told that there is no danger from any other section of the world. So that is the problem which we are to consider to-day in connection with the lead-bearing ores.

This bill proposes to levy a duty of 1½ cents a pound upon the lead content of foreign lead-bearing ores. That is a question of policy, pure and simple.

Mr. SMOOT. Is the Senator from New Mexico in favor of that policy or is he opposed to it?

Mr. JONES of New Mexico. I think, under the existing circumstances, it is all right to levy that duty upon the lead ores which might be imported. I am not making any objection to that provision of the bill. As I have said, that is a question of policy; but we should bear in mind how that will operate. I have no doubt that every producer of lead-bearing ores in the United States will feel that, by virtue of this provision, he will get a cent and a half per pound on the lead content of his ore. I hope that he will. It is only upon that theory that this duty may be justified. But the producer of that ore must deal with a smelter. In many cases the owners of the ore also own smelters; but I take it that it is for the benefit of the large number of people producing lead-bearing ore that this provision is made. Nevertheless, they are still at the mercy of the smelters of the country, for they are required to sell their ores to the smelters, and I need not call attention to the fact that the smelters can make such bargains for the ore as they see fit to make, and the producers of the ore, therefore, are at the mercy of the smelting companies. They can only get the benefit of this duty provided the smelters are willing to pay it, and in that view of the subject the benefit to the actual producer of the ore is uncertain; it is a precarious situation. There is no question that lead-bearing ores can be produced in Mexico for a less price than they are produced in the United States, owing to the formation in which the lead appears and the labor situation. So it has been decided here that there shall be a duty of 1½ cents per pound upon the lead content of foreign ores. Understand, however, that there is no appreciable amount of those ores imported for the purpose of domestic consumption, the importations being only about 2,000 tons a year, which is a very small amount compared with the American production. Under paragraph 388, which was referred to last night, a provision is made whereby upon copper matte carrying lead there shall be no duty paid upon 2,000 tons brought into this country. So if this bill should pass as it is written there will be no revenue derived from the duty imposed.

Mr. CARAWAY. Mr. President, will the Senator yield?

Mr. JONES of New Mexico. I yield.

Mr. CARAWAY. I tried last night to obtain from the Senator from Utah, who seemed to have the only information possessed on the other side about this schedule, why it was that the committee fixed upon 2,000 tons of this lead ore as the quantity which should come in free. This is equivalent to a present of $60,000 a year to some smelting company, because the duty on other lead is 1½ cents per pound. Why was it, inasmuch as about 2,000 tons represents the average importations, that the committee fixed 2,000 tons to be free. If it is a good thing to bring in copper matte with lead content free, why should there be any limitation at all? Can the Senator tell me how the committee reached the conclusion that it was advisable to import 2,000 tons free and to exclude from the free list all other lead ores that might be offered?

Mr. JONES of New Mexico. Mr. President, the only answer to that question which I have heard came from the senior Senator from Utah [Mr. SMOOT] last night, and I think his most important answer was that that was just about the amount of copper matte which was coming into the United States.

Mr. CARAWAY. Will the Senator yield again?

Mr. JONES of New Mexico. Certainly.

Mr. CARAWAY. Let me read the remarks of the Senator from Utah, and the Senator will see that he gave two answers.

Mr. JONES of New Mexico. Yes; he gave two answers.

Mr. CARAWAY. Let me read from the RECORD. I asked the question:

What was the object of limiting the copper matte, as is provided at the bottom of page 87, as follows:

"*Provided*, That such duty shall not be applied to the lead contained in copper mattes until after 2,000 tons of such lead shall have been imported in any one year, to be allocated under rules and regulations to be prescribed by the Secretary of the Treasury."

Why was the importation limited to 2,000 tons?

The Senator from Utah [Mr. SMOOT] replied:

If there had not been a limit, copper matte could come in any quantity.

The next question asked by me was:

Why would not 4,000 tons be as proper a limit as 2,000? I am trying to get an idea as to what caused the limit to be fixed at 2,000 tons.

Mr. SMOOT. It was fixed at 2,000 tons because of the fact that the amount of copper matte that comes in with lead content so low that it does not pay to take the lead out of it amounts to about that quantity.

The next question I asked was:

Then if it only amounts to about that quantity, why was it necessary to place a limit of 2,000 tons? There would be no occasion to limit it if it did not amount to more than that.

The Senator from Utah answered:

We did not know but that they would put more in, as I have said before.

The next question was:

Mr. CARAWAY. They would put more in? Why should they put any in?

Mr. SMOOT. They do not put it in. It comes in the ore, and can not be separated. The smelter does not separate the lead and copper; it is not separated by the smelter at all.

Mr. CARAWAY. I think I understand that, although I do not understand much about the smelting of ores; but the Senator said "they would put more in." I do not know whether he intended to say that or not.

Mr. SMOOT. If there were no limit, they would.

He said that 2,000 tons was the limit, and he said that if they had not fixed it at 2,000 tons that more would come in; but no suggestion of a reason why it was economically wise to admit 2,000 tons free and to exclude any other quantity was offered by the Senator from Utah. I am curious about the matter, in view of the fact that the Senator from New Mexico read yesterday that certain interests imported about 2,000 tons. In other words, this bill, then, makes some smelter a present of $60,000 a year by admitting 2,000 tons of ore free. Can the Senator from New Mexico offer any justification for that?

Mr. SMOOT rose.

Mr. JONES of New Mexico. Mr. President, the Senator from Utah has risen, and I suppose he desires to reply to the Senator from Arkansas himself.

Mr. SMOOT. Not necessarily. I shall tell the Senate the history of it. I can do it now if the Senator from Arkansas wants it and the Senator from New Mexico desires me to do so.

Mr. JONES of New Mexico. I supposed the Senator from Utah rose for that purpose.

Mr. SMOOT. Mr. President, the American Smelting & Refining Co. have a smelter in Chile. That is the great copper center; and in their works there they produce copper matte, and in that ore there is a little lead. That copper matte comes into the United States free, containing this small percentage of lead, running between 4 and 5 per cent. It does not pay to take that lead out of the copper matte. The expense is greater than the value of the lead. Notwithstanding that, as long as it has that lead in it, they have to pay a duty upon it. I do not know whether 2,000 tons is just the right amount or not, but that is the estimate that is given on the importation of copper matte into this country containing lead in such a percentage that it will not pay to separate the lead from the copper, as I said last night. Why should we penalize the American Smelting Co. or any other company by imposing a duty upon copper matte containing lead that they can not recover at the price of the article in this market, the market of the world?

Mr. CARAWAY. Now, I want to ask the Senator a question. If it is wise to admit, duty free, lead in copper matte, why limit it? Why say "2,000 tons"? Why not say that all copper matte containing lead of a certain per cent shall be admitted free?

Mr. SMOOT. It would be the same thing.

Mr. CARAWAY. Then, why not put it the same way?

Mr. SMOOT. We know, under this limitation, just what is to come in, and we know just exactly what it is.

Mr. CARAWAY. Of course, we know what will get in free, because you say "2,000 tons and no more"; but if it is necessary and right and just to admit free copper matte with a certain per cent of lead ore, why not just say that all copper matte containing a certain percentage of lead shall be admitted free, instead of saying 2,000 tons, which the Senator now says is the product of a certain company—the American Smelting Co.; is that it?

Mr. SMOOT. No; that is their importation of copper from Chile.

Mr. CARAWAY. I understood the Senator to say that the American Smelting Co. owns a smelter in Chile, and that they produce this copper matte, and this provision will permit them to have it imported into this country free.

Mr. SMOOT. Copper of all kinds is free.

Mr. CARAWAY. Well, in the case of copper containing this per cent of lead, the lead comes in free; $60,000 worth a year of duty-free lead gets in. This provision permits 2,000 tons to come in, which at 1½ cents—the duty on lead—would amount to a clear gift to that company of $60,000 a year. If it is a good thing to permit them to introduce theirs free, why not say to everybody: "If you have copper matte that has a per cent of lead no greater than this, it may be imported free of duty"?

Mr. SMOOT. Mr. President, the Treasury Department tells us that this is ample to cover everybody that wants to ship that kind of lead.

Mr. CARAWAY. But if it is right to bring it in, why impose a limitation?

Mr. SMOOT. Mr. President, it is not right to impose a duty upon the lead when the lead is not recovered, and when the percentage in copper matte is not sufficient to justify the expense necessary to recover it.

Mr. CARAWAY. Then why not just say that all copper matte containing lead up to a certain per cent shall be free, and not say that 2,000 tons shall be admitted and all others shall be excluded?

Mr. SMOOT. The House of Representatives decided to put it in this way. This covers it all, and there is no earthly need of making the change. I am sorry the Senator from Arkansas is not satisfied with the action of the House.

Mr. CARAWAY. It may satisfy the Senator from Utah to say now that it was the House that permitted this outrageous thing.

Mr. SMOOT. It is not an outrage.

Mr. CARAWAY. Well, this is true: If one company is permitted to introduce free every year copper matte containing such an amount of lead that the release of the duty will give them $60,000 worth of lead, it ought to apply to everybody.

Mr. SMOOT. It does apply to everybody.

Mr. CARAWAY. Then why do you limit it?

Mr. SMOOT. It is only limited to 2,000 tons.

Mr. CARAWAY. I know it is.

Mr. SMOOT. Any company can ship it in.

Mr. CARAWAY. But there is a reason back of that.

Mr. SMOOT. I have told the Senator the reason.

Mr. CARAWAY. I know; the Senator said the House did it. That was the reason the Senator gave. He said the House did it that way, and therefore it had to stay.

Mr. SMOOT. Oh, no; the Senator did not say that it had to stay.

Mr. CARAWAY. Why did the Senator say he was sorry I was dissatisfied with what the House did, if the Senator was not taking refuge behind what the House had done?

Mr. SMOOT. The Finance Committee of the Senate agreed to the House provision. There is no doubt about that.

Mr. JONES of New Mexico. Mr. President, I do not care to make a statement as an expert upon this subject, and I hesitate to make even an inference opposed to that of the Senator from Utah [Mr. SMOOT], who speaks with such assurance upon the subject; but I have an idea that the people of the country will believe that the release of the duty upon this lead which comes into this country in copper matte is of benefit to somebody, and I believe that the people of the country and the people who are interested in the commodity will feel that that lead comes in here for use and that it is not to be thrown away; that it is not in such small quantity that it will not be recovered and put into some beneficial use.

Mr. SMOOT. The Treasury Department has decided that already, I will say to the Senator. They have a decision as to whether or not the percentage is sufficient to recover at a profit, and that has been held by the Treasury Department time and time again.

If the Senator will read the hearings in the House as to the reason why this was limited to 2,000 tons he will find there that the House limited it to 2,000 tons for everybody for fear that at some time some one from Mexico or somewhere else would undertake to get in more lead than the 2,000 tons through that method, by putting it into copper matte, and they wanted it limited, and that is why it was limited.

Mr. JONES of New Mexico. Mr. President, I do not care what excuses were openly presented for the insertion of this proviso, but I imagine it will be rather difficult to convince the people who are engaged in this trade that the 2,000 tons which will come into the United States in this form will not be added to the American supply of lead and used for commercial purposes.

Mr. SMOOT. I will say to the Senator that none of it is recovered in the shape of lead and used for commercial purposes—none of it—and it does not interfere with the amount of lead used in commercial industry in the United States.

Mr. JONES of New Mexico. Then would not a proper amendment be that some sort of assurance should be given that this lead would not be used in a commercial way in the United States? I imagine that the parties interested in this provision would not be willing to have such an addition made to the proviso in the bill. I hope to be able to test that by an amendment which I shall later offer to that provision of the bill.

But to proceed regarding this industry:

> The United States is the largest producer of lead ore in the world. In 1913, the last year for which complete estimates are available, this country furnished 36 per cent of the world output, as compared with 19.8 per cent produced by Australia, the next largest producer. In 1918 the total production of lead from domestic ore was 550,729 short tons.

The Tariff Commission discusses the form in which this ore is found in the United States, and also the factors bearing upon the cost of production; and I believe the Tariff Commission has made out a case that we can not produce the ore as cheaply in this country as it is produced elsewhere, especially in Mexico. For that reason I am not arguing against the duty which it is proposed to put upon the ore itself bearing the lead. I wish to call attention, however, to the probable number of producers who will be benefited by this provision.

The Tariff Commission tells us about the organization of this industry, and it says:

> The greater part of the lead mined in this country is mined by large and powerful corporations. There are many small operators, but even in the aggregate their production is not very great. Large operators frequently are highly integrated—owning their own smelting works, etc.—and have varied activities in addition to the business of mining lead ore. Small operators, due to limited capital and equipment, are at a distinct disadvantage in the economical extraction of their ore from the ground and of the values from their ore, and are unable to make as favorable contracts with the smelting companies as the larger operators, who can guarantee a steadier and more dependable output.

So we must bear in mind that it is extremely doubtful if any of the small producers of lead ore in the United States are going to get the full benefit or any considerable benefit from the levy of this tax.

Referring to domestic production and consumption the Tariff Commission says:

Since the capacity of furnaces for smelting lead ore is based on the number of tons of charge, the total capacity of the American lead furnaces (5,521,000 tons in 1918) bears no relation to the lead contents, nor even to the number of tons of lead ore that can be treated annually in this country. Under the conditions existing in 1908 to 1911, prior to the outbreak of political troubles in Mexico, the amount of lead produced from foreign ores in American works was about 25 per cent of that produced from domestic ores. On account of the high tariff protection very little of this material was consumed in this country, but was exported under the bonded smelting provision with benefit of drawback. Of this total crude material the proportion of ore was gradually decreasing as compared with the amount of bullion.

That clearly demonstrates that these smelters, during all of this period of time prior to the war, were importing these ores in bond to an amount about the equivalent of 25 per cent of the American production and exporting their products in competition with the world. The various figures are given here on these importations and exports, but I will not take up the time of the Senate to discuss that.

In regard to the imports, this survey says:

Since 1906 imports have greatly increased. The following year the imports for consumption fell to less than 30,000,000 pounds, and in 1908 the imports for consumption amounted to less than 4,000,000.

Four million pounds, it will be recalled, is 2,000 tons. Again that appears as a factor very closely connected with the 2,000 tons which may be admitted free of duty. I continue reading:

The statistics for general imports of lead ore prior to 1910 also include the imports of base bullion. The totals fell from some 207,000,000 pounds in 1905 to about 128,000,000 in 1907 and then increased again to 226,000,000 in 1909. Due to the growing importance of base bullion due to the opening of smelters in Mexico, which in 1906–1909 was rapidly diverting the Mexican lead from American smelters, the general imports of this material were increasing in proportion as those of ore were reduced.

It was coming in as base bullion, and I want to have that kept in mind, because the duty proposed by this bill upon base bullion is greater than the duty upon the lead content of the imported ore. It is 2½ cents per pound, whereas the duty upon the lead content of the imported ore is only 1½, or a difference of five-eighths of a cent per pound, which is an increase of more than one-third of the duty on the lead content of imported ore. I continue reading:

The lead contents of ore imported in the years 1910–1918, inclusive, averaged over 38,000,000 pounds annually. Less than 12.5 per cent of this amount was imported for consumption by payment of duty, and more than one-half of that was exported with benefit of drawback. The average net consumption, therefore, amounted to only slightly more than 2,225,000 pounds of lead.

Which is only a little over 1,000 tons.

Thus we find that in this 9-year period less than 6 per cent of the total lead contents of imported ore was actually used in the United States.

This small percentage, however, is all that yielded any revenue to the Government (neglecting the 1 per cent withheld on drawbacks). The total net revenue in the 9-year period was only $187,766.29, and under the reduced duty of the act of 1913 the average revenue (1915–1918, inclusive) was less than $21,000.

Mr. SMOOT. So the miner and producer of lead in this country got all the protection that was given under the existing law in the years mentioned by the Senator.

Mr. JONES of New Mexico. I do not apply the information to that point, but I apply it to this point, that whereas during all the years referred to we were getting a small revenue, now, with this importation of 2,000 tons free, which will supply the American market with all of its demands, there will be no revenue, and if this duty operates at all, it can only operate as a subsidy to our lead-producing industry. There is no revenue in connection with it. It simply enables these large corporations to which reference has been made to control the American market, and all of it. They are not willing to let anything escape.

That recalls many other provisions in the bill. Whenever it has been shown that even a small quantity of some commodity, which it was sought to bring under the provisions of the bill, was coming in, without further consideration the committee have raised the duty for the purpose of preventing any competition, and also to deprive the Treasury of any revenue.

In regard to prices and to show just how the tariff has affected the American consumer, this survey says:

Except in the Mississippi Valley, lead ores are not quoted on a base price per ton, but are settled for under contract, the price varying with the assay value of the ore and the market price of the lead (and other contained metals), with certain deductions for harmful impurities, etc. The problem of ore buying is discussed at some length in the auxiliary file. On the basis of a New York price of 5 cents per pound for lead, the value to the miner of 1 pound of lead contained in ore varies from less than 2 cents for low-grade ores to about 3 cents for high-grade ore. Since the price paid for ore of a given composition is purely a function of the market price of the metal, and, except in the valley States, there are no fixed standards as to tenor of ore (except that richer ores are worth more per unit of lead content), lists of prices would be valueless.

So the whole question of what the little producer of ore is going to get depends upon the kind of contract he will be able to make with the smelters.

As I have said, I think it is demonstrated that, so far as ore is concerned, there is no question but that it costs more to produce it in this country than in Mexico. They have very much richer mines down there and cheaper labor. As to the tariff consideration, this survey says:

The tariff problem on lead ore is complex. It is closely related to the case of zinc ore, as both lead and zinc are commonly mined together. Both of these metals and their ores have been protected for many years by high duties that have resulted in practical national sufficiency with comparatively small imports or exports except transaction under the bonded smelting provision. This provision permits domestic smelters to import all the special qualities of ore that they may need for the efficient conduct of their operations without the added cost of duty and so far they have had no difficulty in making a profit on the sale of the resultant metal abroad.

Consideration is required of the effect of duties on lead in ore, as on lead metal, in increasing cost to the consumer. In former years the American market differed from the London market by nearly the full amount of the duty. In later years, however, the differential between the two markets narrowed and for a short time, just before the outbreak of the war, the London price was actually higher than the New York price. Temporarily, at least, the duty did not increase the cost of metal to the domestic consumer, and after the war the London and New York markets were for nearly two years practically independent with the foreign price generally higher than domestic quotations. Since the latter part of 1920 European prices have again had a material effect on the American market.

We are given the figures of the production in the different countries, the different States, and so forth, all of which are very illuminating. We are given the total importations, the exports, and so forth.

That is as to the ore. We are to start off, then, in our investigation of this problem with an assumed duty of 1½ cents per pound upon the lead content of the imported ores. Now, let us find the factors, if we can, which justify or fail to justify the importation of any higher duty than that upon the bullion which is produced from the ore or upon the metal which is obtained from the ore.

We are told this:

The smelting and refining industry is centralized in the hands of a few strong companies. The dominant producer is the American Smelting & Refining Co., which controls almost one-half the output of refined metal.

There is one company which, according to the report of the Tariff Commission, is dominant in the smelting industry. It is frequently referred to as the "smelting trust." Those words in quotation marks are used in the report of the Tariff Commission. The Tariff Commission tells us what are the competitive conditions:

Lead is produced more cheaply in Mexico, Europe, and Australia than in the United States only because the supply of raw material (i. e., lead ore) costs more here than it does in those countries. Lead ore can be treated at least as cheaply in this country as anywhere in the world.

Bear in mind the importance of what I have read. That is not my statement. It is the statement of the Tariff Commission after a most exhaustive study of the subject. That Senators may understand just what it means, I read it again:

Lead is produced more cheaply in Mexico, Europe, and Australia than in the United States only because the supply of raw material (i. e., lead ore) costs more here than it does in those countries. Lead ore can be treated at least as cheaply in this country as anywhere in the world.

Mr. NORRIS. Mr. President——

The PRESIDING OFFICER (Mr. LADD in the chair). Does the Senator from New Mexico yield to the Senator from Nebraska?

Mr. JONES of New Mexico. I yield.

Mr. NORRIS. I want to get an understanding of the paragraph which the Senator is discussing. I confess I hardly understand the Senator's position. As I understand it, the pending question is the language to be added after the word "litharge," in line 3, page 27, so as to read: "Litharge, 2½ cents per pound." Is that correct?

Mr. JONES of New Mexico. That is the pending question, but if the Senator will permit me I will explain why. Litharge is made from the lead metal, and it is contended that this is only a proper duty because of the duty levied upon the lead ore and the base bullion which is imported to and produced in this country. It was agreed among all of us who began the discussion of the subject last night that it was necessary to go to paragraphs 388 and 389 of the bill in order to lay the foundation for the discussion of the paragraph to which the Senator has just referred.

Mr. NORRIS. That I have not done, of course. Perhaps it would enlighten me if I would do that. The paragraph as passed by the House would read:

Litharge, orange mineral, red lead, and white lead, 2½ cents per pound.

The Senate committee has divided up those different kinds of lead and reduced all of them except orange mineral, which they have increased one-eighth cent per pound. Is the Senator objecting to the reduction provided for by the committee amendment?

Mr. JONES of New Mexico. The position which I expect to take is that there should be no duty upon these products rather than such duties as would be necessary to equalize the 1½ per cent of the lead content in the particular oxides of lead to which the Senator has referred.

Mr. NORRIS. To get to the specific question, is the Senator opposed to the pending amendment which reduces the tariff on litharge three-eighths of a cent? Is the Senator opposed to that reduction?

Mr. JONES of New Mexico. I expect to move to reduce it still further.

Mr. NORRIS. Oh, yes. What is the difference between litharge and orange mineral?

Mr. JONES of New Mexico. They are produced in two entirely different ways.

Mr. NORRIS. They are both lead?

Mr. JONES of New Mexico. They are all lead pigments.

Reading further regarding the competitive conditions:

The only handicap of the American smelter is the relative high price he must pay for his ore.

I ask Senators to listen:

Given a cheap raw material—either in the form of ore or base bullion—he has, by virtue of the free entry of Mexican ore under the bonded smelting privilege as provided in the tariff laws, demonstrated his ability to compete successfully with foreign producers, even in the European market.

There can be no stronger statement than that. It says, if you put him upon an equal footing with respect to his ore, it has been demonstrated. Mark the use of the word "demonstrated." When a scientist uses that term he means that there is no longer room for equivocation or question. He has demonstrated his ability to compete successfully with foreign producers, even in the Eurpean markets.

Mr. SMOOT. Of course, that, perhaps, would be at the port of New York, but no matter what the record says, we know now that the American Smelting & Refining Co. built their smelting plants in Mexico because of transportation charges in this country. What was the result? They have closed up the Colorado smelters. The Senator is aware of that, is he not? Does he not know that the smelters have been closed up in Colorado for that reason?

Mr. JONES of New Mexico. I will tell the Senator why before I get through.

Mr. SMOOT. I know the reason why. I have already stated the reason why.

Mr. JONES of New Mexico. They are closed nearly all over the country, and the copper mines are closed.

Mr. SMOOT. But the smelters are running in Mexico. Not only that, but all the ores from Mexico used to come into the United States and be smelted in bond, not for local consumption, but for exportation. The Senator knows that. They are now erecting their smelters in Mexico and shipping direct. They do not bring the ore in here any more. No American labor is now employed here in the smelting of these ores. They are smelted by Mexican labor in Mexico, and the product goes abroad to the markets of the world instead of coming in bond to the United States and being smelted here.

Mr. JONES of New Mexico. I am not going to permit the Senator from Utah to lead us astray. I am going to keep on this trail and no anise-seed bags are going to cause a departure from it.

Mr. SMOOT. I beg the Senator's pardon. I thought the Senator wanted to know the facts. Evidently he does not, and, therefore, I am not going to interrupt him any more. He may proceed, and what I have to say I will say when the Senator has concluded.

Mr. JONES of New Mexico. I think that would be much better, because the Senator is unable to give us very much enlightenment on the subject. What we were talking about was the ability of the American smelters to handle this ore as cheaply as any other smelters on earth. I want that proposition to soak into the mind of the Senator from Utah, if possible.

Mr. SMOOT. But the facts in the case demonstrate that that is not the case.

Mr. JONES of New Mexico. That statement is made here, and anything the Senator from Utah has said has not detracted from it one iota. Given the ore at the same price as the smelters elsewhere, it has been demonstrated that these smelters can do and have done all that any other smelter can do, and in competition with the smelters of the world. We do not want to lose sight of that statement.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Mexico yield to the Senator from North Dakota?

Mr. JONES of New Mexico. I yield to the Senator.

Mr. McCUMBER. I do not know much about the mining of lead, and my question is one simply for information. I think we all admit that the depressed times have had very much to do with closing down a great many businesses in the United States. We can assume that that has been the partial cause, at least, of closing down the smelters in the United States. But what I would like information upon is this: If we can smelt our ores in the United States just as cheaply as it can be done in Mexico, why is it that notwithstanding the depressed times the Mexican smelters are still running while ours are closed down? I confess I can not quite understand that situation.

Mr. JONES of New Mexico. If I had the assurance which the Senator from Utah has manifested regarding these matters, I would state that the smelters in Mexico are themselves crippled for production. Even though one or two may be running, they are running at a very reduced capacity.

Mr. SMOOT. I want to say to the Senator that the fact is they are very prosperous at this time and running full capacity. Really, if the Senator wants to get at the facts I would like to tell him why, if he wants to know right now.

Mr. JONES of New Mexico. I prefer that the Senator should tell us why, and I hope he will, in his own time.

Mr. SMOOT. I will tell the Senator why.

Mr. JONES of New Mexico. Thus far what the Senator has told us has been confusing rather than enlightening. He persists in departing from the question under discussion.

Mr. SMOOT. It must be very confusing to say that their smelters are running and ours are closed up.

Mr. JONES of New Mexico. While the Senator is telling about the smelters of Mexico running, I would like to have him tell us where the product goes or enters into consumption.

Mr. SMOOT. I can tell the Senator, but I will do it in my own time, as the Senator does not desire to be interrupted.

Mr. WALSH of Montana. Mr. President, I am moved to say a word by reason of the inquiry of the chairman of the committee as to why the smelters in this country are closed down while the smelters in Mexico are operating. The smelter at Helena handles all the products of the Coeur d'Alene field. The Coeur d'Alene field produces, as is known, nearly 25 per cent of the entire output of the country. It ranks next to the Missouri field. The production in other sections of the country is inconsequential. The tri-State region, as well as the southeastern Missouri region, and the Coeur d'Alene produce the lead of America. The East Helena smelter has operated without interruption and is going now. It has not been shut down, while all the copper smelters were shut down. I have no information about the Missouri smelters, but I am not advised that they are shut down. So we must proceed upon the facts. The copper smelters are shut down and the lead smelters have been operating.

Mr. SMOOT. Those smelters are not operating in Colorado.

Mr. WALSH of Montana. That may be. There may be a lead smelter in Colorado that is shut down.

Mr. SMOOT. There are three of them that are shut down.

Mr. WALSH of Montana. I would not like to have it understood to be the situation that all of the lead smelters in the United States are shut down while the lead smelters in Mexico are operating.

Mr. SMOOT. There was no such statement made.

Mr. JONES of New Mexico. Further replying to the Senator from North Dakota [Mr. McCUMBER], I shall later read from this report to the effect that there are no large supplies of lead on hand anywhere in the world. I have no doubt what the Senator from Montana has just told us applies to the lead industry. So far as I am personally concerned, as I have intimated, I am not advised as to the activity of the industry at the present time; but, in view of what the Senator from Montana has told us, it seems to me that the distinguished Senator from Utah should be willing to modify the very broad statement which he made a while ago.

Mr. SMOOT. I say now that there are three great smelters in the United States which operate on lead which are closed to-day and which have been closed for months and months. Not only that, but their business has been transferred to Mexico where the smelters are running full.

Mr. WALSH of Montana. Will the Senator tell us where the smelters to which he refers get their supply of ore?

Mr. SMOOT. I will say to the Senator that there is one at Denver, one at Pueblo——

Mr. WALSH of Montana. But where do they get their ores?

Mr. SMOOT. They get them from the Intermountain States.

Mr. WALSH of Montana. From what Intermountain States?

Mr. SMOOT. They get a great deal of ore from Colorado.

Mr. WALSH of Montana. They do not get any of it from the Coeur d'Alene.

Mr. SMOOT. But they get it from Colorado.

Mr. WALSH of Montana. Colorado produces an inconsequential amount of lead. It is not even listed in the "Mineral Resources of the United States" as a lead-producing State. The Coeur d'Alene produces 23.9 per cent of all the lead produced in the United States. Its smelters are operating. Joplin produces 13.1 per cent; southeastern Missouri produces 31.2.

In addition there is Tintic and Valley City and West Mountain. Those are Utah producers. Leadville, Colo., produces only 1.9 per cent of the copper produced in the United States, and Ophir and Rush Valley produce 1.1 per cent. That is just 3 per cent of the total lead of the United States, which goes to the Denver smelter.

Mr. JONES of New Mexico. And I understand that the smelter at Denver only produces lead in the smelting of gold and silver ores.

Mr. SMOOT. It is the same in Utah and the same everywhere else.

Mr. JONES of New Mexico. It has been using what little lead was produced there as a flux in treating the so-called dry ores bearing other metals, and that particular smelter has an output of lead only as a by-product. The lead ore which it can get is used as a flux in smelting the gold and silver ores which do not contain lead, but which is a necessary constituent element in the smelting of the so-called dry metallic ores.

I may add that that is one advantage which the American smelters in the West have in the smelting of dry metallic ores. It was for the purpose of encouraging that industry that the law provided that foreign lead-bearing ores might be brought into the United States in bond, so that they might be obtained by these smelters in smelting the dry ores; and they so use that lead. Frequently a rich-bearing lead ore is smelted for nothing, because it is used as a flux in the smelting of the drier ores. I apprehend, however, from this discussion that the lead industry is not in such a depressed condition after all, and that the reason the smelters in Colorado are closed down is because of the depression in the gold and silver industries.

As to the domestic consumption, I do not know that I need dwell upon that very much, but we are told just how it has increased in this country until we consume more than any other country in the world, and so forth. As to exports, the survey states:

> Since the price of lead in New York averaged 1½ cents per pound higher than the price of the metal in London for 10 years prior to 1914, exports of domestic pig lead should be expected under only temporary and unusual circumstances. There are no records of any exports during that period. However, domestic smelters were treating and exporting a considerable tonnage of foreign (chiefly Mexican) lead.

They were exporting that to the rest of the world. There were some exports of domestic lead during the war.

Now, as to foreign production:

> Next to the United States the most important countries in order of production are Spain, Germany, Australia, and Mexico. These countries, together with the United States, account for more than 80 per cent of the world output. * * *
>
> It will be noted that Germany, although a very large producer of ore and metal, does not quite supply its own needs, and is therefore not a factor in the world market except as a minor consumer.

I am glad that we have finally reached one article in this bill upon which it is not proposed to put a tariff because of imports from Germany. It seems that most of this bill is framed with the idea of excluding the possibility of any imports from Germany of anything, but here happens to be one item which it can not be said is affected by imports from or production in Germany.

> The most important factor in the domestic lead-smelting industry is Mexican lead. A large part of the lead ore produced in Mexico is smelted in that country, and comes to the United States in the form of base bullion. Appreciable amounts of ore, however, are also imported. The amount of Mexican lead treated in United States works normally amounts to about 25 per cent of the domestic output. Almost all of it is smelted or refined in bond and exported.

The Senator from Utah a short time ago was undertaking to draw a distinction between the importation of ore and bullion. Mind you, Mr. President, when bullion is imported for further refining it is imported in bond and then is exported in competition with the world. So this article says:

> The amount of Mexican lead treated in United States works normally amounts to about 25 per cent of the domestic output. Almost all of it is smelted or refined in bond and exported.

Mr. SMOOT. That is just what I have said.

Mr. JONES of New Mexico. Again, we have the statement of the Tariff Commission, as to lead bullion which is imported into the United States, that our smelters can import it in bond, refine it, and export it in competition with the world, and they are doing this to an amount equivalent to 25 per cent of the American production.

Thus we have, Mr. President, the clear statement from the Tariff Commission that, whether the lead is imported as ore or whether it is imported as bullion, the refiners of the United States are able to bring it in, refine it, and ship it abroad in competition with the world.

I hope the Senator from North Dakota will bear in mind not what I have said but what the Tariff Commission reports. I do not want the committee or Senators to act solely upon what I say; but this is the evidence not of one witness but it is the deliberate finding and judgment of a commission created by Congress for the express purpose of ascertaining just such facts. I read further:

> The art of smelting is as far advanced in the United States as in any part of the world, and the industry is better organized than in any other country. In spite of the generally high wage scale, the cost of smelting per ton of charge is probably as low as it is anywhere in the world. Careful design of plant and efficient management result in greater effectiveness of labor and plant than in most other countries.

So far as this industry is concerned, let there not be an appeal for this duty upon the ground that it is needed for the benefit of labor. We have the deliberate report that American labor at the high wages paid under the great organization of the industry in the United States is more effective per dollar than labor anywhere else in the world; that this industry is better organized, and can not only compete with the rest of the world, but in some particulars has distinct advantages over any other smelters in the world. That is the report of your Tariff Commission. Then, I ask, upon what theory does the majority of the Finance Committee demand a duty beyond that which is levied upon the ore?

The same thing may be said with respect to the other branches of the industry. This report tells us, also, that there is no danger of an influx of lead from anywhere. The cheap ore of Mexico is the only exception to that rule. They can not smelt it down there any cheaper than we can, but they get cheaper ore; and if we equalize by a compensatory duty the amount of duty which we levy by this bill upon the lead content, why have we not done all that is necessary? Upon what theory can we do otherwise?

I have listened here to the reasons given for the framing of this bill. I have heard it said that the duty should be levied only to equalize the difference in the cost of production at home and abroad. From that standpoint you do not need any duty, because there is no difference. I have heard it said that it should equalize prices here and abroad. There is no difference in prices to equalize, because these commodities are sold in the world market on a free-trade basis. The price is fixed world-wide, except in so far as it is interfered with by artificial barriers of taxation. I have heard it said here that this bill should be framed so as to equalize the difference in competition in trade. From that standpoint how much tax will you have?

Here we have no difference in competition in trade; and from whatever angle this situation is viewed we come back to the inevitable conclusion that if you levy a duty upon the articles mentioned in this paragraph—upon the base bullion, upon the metal, upon any of these oxides, upon any of the pigments, or upon any other commodity into which lead enters—beyond the 1½ cents per pound of lead content, you are only making a gift of that amount to the Smelting Trust of this country. They control absolutely the American market. They supply it all, and under this bill not even a few pounds will escape from their control. In this view of the case, how can this duty beyond the compensatory duty be justified?

As to all of the other commodities—lead bars, pipes, shot, and so forth—the same situation exists. I will read just one further paragraph:

> Aside from the handicap carried by the domestic manufacturer due to the lower price of lead abroad, there is very little difference between the cost of manufacture in the United States and in England or Germany. The manufacturing processes are all ones in which the production per man is high, and this minimizes the foreign advantage due to cheap labor. In fact, the export trade in lead manufactures made from foreign metal indicates that the manufacturing industry is able to compete actively in neutral markets.

That is as to the manufactures of lead. I again emphasize that that is not my statement, but it is a judicial finding of the Tariff Commission. It is its report. It was prepared for the express purpose of guiding the Congress in tariff legislation. Do you now abandon it? I ask Republicans in this Chamber if they dare abandon it. Do those Republicans dare say to the people of the United States: "Some years ago there was created through legislation a Tariff Commission for the purpose of taking the tariff out of politics. That commission has been functioning. That commission has obtained data. It has made a thorough investigation of this subject. It has deliberately told the Finance Committee and the Congress that upon these

articles the United States is big enough and efficient enough to compete with the world." In the face of that deliberate finding I ask again if you dare to impose these excessive taxes? My humble judgment is that as certainly as you do there will be another judgment backed by the American people. When you build up your Tariff Commission and appropriate the money derived from the taxpayers of the country for the express purpose of getting such information as this, and then, when it comes in, when duties are imposed, instead of applying the information you deliberately defy it and ignore it, I do not believe your action will be tolerated.

Mr. President, that brings us to the consideration of sections 388 and 389.

Mr. NORRIS. Mr. President, may I ask the Senator a question?

Mr. JONES of New Mexico. I yield.

Mr. NORRIS. Since I interrupted the Senator before I have been reading what is said here, and personally I can not quite understand how we can intelligently deal with section 69 until after we have disposed of or reached an agreement on sections 388 and 389.

Mr. JONES of New Mexico. I think the Senator is quite right. I think the only action which the Senate could take would be either to take up for final disposition paragraphs 388 and 389 at the present time, out of order, or else to defer further consideration of paragraph 69.

Mr. NORRIS. It seems to me, in other words, that paragraphs 388 and 389, speaking in a general way, as I understand the matter, deal with the raw products. These others deal with a product that is manufactured or partially manufactured. It is conceded, I think, on all tariff schedules, that the proper way is to start with the raw product if it is going to have any tariff at all, because the tariff on the manufactured product depends to a great extent on what is done with the raw material.

Mr. JONES of New Mexico. The Senator from Nebraska is clearly right about that; and I have presented the matter at this time upon the theory that we would dispose of the whole question at this time, which necessarily involves these forward paragraphs, 388 and 389. In that view of the matter, I desire to call attention to the language of section 388.

Last evening the Senator from Utah made the statement that the increase of duty on the lead bullion or base bullion as compared with the duty on the lead content of the ore was because of the loss in smelting.

I think that should be thoroughly understood. I believe, from the way the Senator expressed himself last evening, that he only wanted us to understand that he was merely estimating or guessing at the subject. I do not recall that he pretended to be absolutely accurate about it. I find that in paragraph 388 there is a further proviso, which reads as follows:

> That on all importations of lead-bearing ores and mattes of all kinds the duties shall be estimated at the port of entry and a bond given in double the amount of such estimated duties for the transportation of the ores or mattes by common carriers bonded for the transportation of appraised or unappraised merchandise to properly equipped sampling or smelting establishments, whether designated as bonded warehouses or otherwise. On the arrival of the ores or mattes at such establishments they shall be sampled according to commercial methods under the supervision of Government officers, who shall be stationed at such establishments, and who shall submit the samples thus obtained to a Government assayer, designated by the Secretary of the Treasury, who shall make a proper assay of the sample and report the result to the proper customs officers, and the import entries shall be liquidated thereon. And the Secretary of the Treasury is authorized to make all necessary regulations to enforce the provisions of this paragraph.

I desire to call attention particularly to an amendment which was made by the Senate last evening to that paragraph. As that paragraph read when it came from the House we find these words regarding the assay:

> who shall make an assay of the sample by wet assay without deduction.

Yesterday evening that was changed. I thought the change was a proper one. It was a change which put it beyond any doubt that the importer of ore would be able to extract from it all of the lead on which he paid duty. It is to be assayed according to commercial methods, just the same as any other assay is made when ore is taken to the smelter, and when the smelter buys the lead content of that ore. It can not mean anything else; and when the Senator from Utah says that there is a loss in smelting which is not allowed for when the ore is imported, with all respect to his great learning, I think he is mistaken. During all the years when the smelters of this country have been importing ores in bond, or lead in bond, paying a duty on it, refining it, shipping the product abroad in competition with the world, getting a drawback of 99 per cent of the duty paid, I do not believe they would ever have submitted to any sort of an arrangement whereby they would lose a half cent per pound on the imported content. There is no reason why they should do it, and I do not believe they did it. This proviso is carefully worded, in my judgment, so that they will not do it. Therefore nothing should be allowed by reason of that factor, in addition to the duty upon the lead content itself.

Under paragraph 389 the duty on the lead bullion is 2½ cents per pound. If the smelters of the United States can get their bullion upon an equal footing with the rest of the world, according to the Tariff Commission's report they can compete with the rest of the world, not only in the refining of the ore but in the manufacture of the ore into fabrics and commodities for export in competition with the world. I wish again to emphasize that point. The Tariff Commission has not confined its statement to the mere smelting process. It extends beyond that. It specifically mentions litharge and says:

> Aside from the handicap carried by the domestic manufacturer due to the lower price of lead abroad there is very little difference between the cost of manufacture in the United States and in England or Germany. The manufacturing processes are all ones in which the production per man is high, and this minimizes the foreign advantage due to cheap labor. In fact, the export trade in lead manufactures made from foreign metals indicates that the manufacturing industry is able to compete actively in neutral markets.

Mr. NORRIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Mexico yield to the Senator from Nebraska?

Mr. JONES of New Mexico. I yield.

Mr. NORRIS. The Senator's contention, as I understand it, is that there ought to be a tariff on the importations of the lead ore?

Mr. JONES of New Mexico. The lead content of ore or bullion.

Mr. NORRIS. I presume bullion is all lead, is it not?

Mr. JONES of New Mexico. Oh, no; not by any means.

Mr. NORRIS. What is the difference between the ore and the bullion?

Mr. JONES of New Mexico. One might be called concentrated ore, roughly speaking, using very unscientific but expressive language.

Mr. NORRIS. Bullion has been manufactured to some extent, we might say, as compared with the ore?

Mr. JONES of New Mexico. It has. The silica and certain other substances which the rock or ore carries have been eliminated by one process of smelting.

Mr. NORRIS. I notice that paragraph 389 refers to lead bullion, or base bullion, and lead in pigs and bars. Would not that be pure lead?

Mr. JONES of New Mexico. The bars are probably pure lead.

Mr. NORRIS. If lead bullion is not pure lead, should there not be a difference between lead bullion and lead bars?

Mr. JONES of New Mexico. The tariff is only on the lead content of the bullion.

Mr. NORRIS. Paragraph 389 provides as follows:

> Lead bullion or base bullion, lead in pigs and bars, lead dross, reclaimed lead, scrap lead, antimonial lead, antimonial scrap lead, type metal, Babbitt metal, solder, all alloys or combinations of lead not specially provided for, 2½ cents per pound.

The duty seems to be levied on all these articles without regard to the content. In paragraph 388 a tariff of 1½ cents a pound is levied on the lead content of lead-bearing ores and mattes of all kinds, but after reading paragraph 389 I think the Senator is mistaken when he says the tariff is levied on the lead content. I may be wrong, and if I am I wish the Senator would correct me.

Mr. JONES of New Mexico. On line 2, page 89, the Senator will find the language "on the lead contained therein."

Mr. NORRIS. That is right.

Mr. JONES of New Mexico. The next item is "lead in sheets, pipe, shot, glazier's lead, and lead wire." Of course, that is pure lead, and on that the rate is fixed at 2½ cents per pound.

Mr. NORRIS. I was wrong about that. I did not read far enough, and I am obliged to the Senator for correcting me. The very fact that I was wrong leads me to another question, which I wish the Senator would answer if he can.

Why is it that in paragraph 388 we have a tariff of 1½ cents per pound on the lead content in the ore, and in paragraph 389, on lead bullion, base bullion, lead in pigs, and so forth, we have a tariff of 2½ cents per pound on the lead content in the ore? It seems to me that if we are going to levy a tax on the lead content in it, it ought to be the same, no matter what the material is. We are going to pay the tariff only on the lead that is contained in the substance.

Mr. JONES of New Mexico. I think the Senator's observation is sound, indeed. Doubtless the theory on which that increase was made is that there was further manufacture, that in the treatment of the ore, to put the lead into the form of

pigs and bars, there was a manufacturing process which ought to have some protection; but what I have been contending is that so far as the manufacturing process is concerned, we can compete with the world, and are doing it.

Mr. NORRIS. I understand that is the Senator's contention. If that is the idea of those who drafted these two provisions, then it seems to me that if I were importing lead I would import it in the shape of the lead ore and get the reduced duty on it, because I would pay the duty only on the lead content, and if I imported in the other form I would pay a good deal higher duty, and still have to pay on the lead that is contained in it.

Mr. JONES of New Mexico. The Senator means with this increased duty?

Mr. NORRIS. Yes.

Mr. JONES of New Mexico. Of course, that would be an inducement to import the ores rather than the bullion.

Mr. NORRIS. Why would it not operate that way in practice?

Mr. JONES of New Mexico. It makes no difference, so far as the economic situation is concerned, whether it is one or the other. The truth is that very largely the importation of the ores into the United States is for fluxing purposes, as I related awhile ago, and that is why they want to import the ore; but when they do that, we can put it into the form of base bullion or pigs just as cheaply as it can be done elsewhere. The reason why it is not being imported in ore altogether is, as the Senator will see, that there is an economic loss in transportation. They refine it to the extent of putting it into bars, and so on, but it does seem to me that we should not put a bounty upon an economic loss in the process of refining metal in this country and shipping it abroad. In other words, why should the United States pay a bounty upon that? The same smelter that would handle the ore would handle the bullion. They can do it in competition with the world. Why should we levy this additional tax upon the American people in order to support an economic loss?

Mr. NORRIS. Mr. President, may I interrupt the Senator further?

Mr. JONES of New Mexico. I am glad to yield to the Senator from Nebraska.

Mr. NORRIS. If the same smelter operates on the bullion that operates on the ore, is it the same operation?

Mr. JONES of New Mexico. It is handled in a different way, of course.

Mr. NORRIS. For instance, if we were equipped to handle bullion to get the ore out of it, would we be equipped to handle the ore and get the lead out of it?

Mr. JONES of New Mexico. I am sorry to say that I can not reply to the Senator with certainty.

Mr. NORRIS. I am trying to get information. My questions, perhaps, may not be intelligent to an expert, but I am trying to find, if I can, just what the facts are. I must confess that I am confused a good deal by the two paragraphs levying a tax which in its amount would show a great difference in the tariff as between the ore and the bullion. I supposed when I read it that bullion was pure lead, as we speak of gold bullion, meaning pure gold. The Senator informs me that it is not, but that it has to go through some operation to purify it further.

Mr. JONES of New Mexico. It must be further purified. My understanding of the situation is that the two processes are not similar.

Mr. NORRIS. When we speak of bullion as applying to lead, does it always mean a mineral that has the same percentage of lead in it?

Mr. JONES of New Mexico. Not always.

Mr. NORRIS. It seems to me if that were true, and there was a great variance, it would lead to great difficulty in administering the tariff law. If we had in operation a smelter to purify the ore as it came out of the ground, would the product be bullion then, regardless of how much of the impurities were taken out?

Mr. JONES of New Mexico. Bullion is the output of the smelting process. There are concentrators and other means of separating the ore to some degree from the other elements which are found in it.

Mr. NORRIS. While I am on my feet, I want to ask the Senator another question. He can discuss it now or later in his remarks: Is the tariff fixed in paragraph 388 on the ore too high in his judgment?

Mr. JONES of New Mexico. Mr. President, there is really no way by which we can measure that. It is necessarily a guess, more or less.

Mr. NORRIS. That is where we ought to start in fixing the tariff if we are going to have any tariff on it.

Mr. JONES of New Mexico. The Senator is quite right about that. It is really a mere guess. There is really no way by which it can be estimated scientifically. The cost of production in the same locality may be quite different as between adjacent or contiguous mines.

Mr. NORRIS. If we take the bullion, would a further manufacture of that get it into pigments?

Mr. JONES of New Mexico. Yes.

Mr. NORRIS. The lead pigments provided for in paragraph 69 are a further manufacture of lead bullion which is provided for in section 389?

Mr. JONES of New Mexico. The lead bullion can be converted into many different forms of lead products.

Mr. NORRIS. What I am trying to find out is whether the lead provided for in paragraph 69 is a further manufactured article coming from the items mentioned in paragraph 389.

Mr. JONES of New Mexico. Mr. President, I presume I had better at this point discuss the items in paragraph 69.

Under the present law all the items in paragraph 69 are treated alike, and an ad valorem duty of 25 per cent is levied. The committee has seen fit to segregate those and make specific duties of so much per pound, not leaving it to an ad valorem calculation. I may say that the House in its bill also placed a specific duty upon litharge and a different duty upon orange mineral and a still different duty on red lead. The duty on white lead was the same as on litharge. These are all very important pigments of lead.

The Senate committee have made changes somewhat in the figures, but not so very much different from those fixed by the House and not very different from those in the old Payne-Aldrich law. They have practically carried them along in the same way they were then, and when there was a duty of 1½ cents a pound on the lead content of the ore.

The Summary of Tariff Information says:

> Litharge is the commercial name given to the yellow monoxide of lead which is formed when melted lead is heated to about 900° C. and oxidized in a current of air. It is used in the manufacture of paints; as a drier for drying oils, such as linseed oil; in glass and pottery manufacture; in the preparation of numerous lead salts, such as lead acetate; and for various other purposes.

So it can be seen that it is the direct product of metallic lead. We have given information about the production of that and about the imports of it. I have some information as to the prices of it. As to production the Tariff Commission says:

> Litharge is made by melting lead in rotating drums or reverberatory furnaces and blowing air through it. The melted litharge is allowed to run over iron plates, when it is chilled with water; this produces the "yellow" litharge of commerce. Slow cooling favors the formation of a red flaky variety. The flakes are separated from the lumps by sifting and are sold as "flake." The solid material is ground wet, settled in water, and dried. It is marketed as "levigated" or "buff" litharge. Production in the United States has been steadily increasing—37,739 short tons, valued at $5,853,543, in 1916; 46,739 pounds, valued at $6,431,801, in 1919; and 62,329 tons, valued at $12,386,185, in 1920.

Mr. NORRIS. Are there any importations?

Mr. JONES of New Mexico. I come now to the imports.

Mr. NORRIS. Those are the values produced here?

Mr. JONES of New Mexico. The figures I have given are the values of the domestic production of litharge under existing law.

The average annual import for 1910 to 1916 was 35,500 pounds, valued at $1,787, yielding a revenue of $782. I give the statistics now for a later year. That was up to 1916, inclusive. In 1918 there were 100 pounds imported, at a value of $12, a unit value of 12 cents, with a duty of $3, which is at the 25 per cent ad valorem rate. In 1919 there was no importation. In 1920 there were 21,002 pounds, valued at $2,647, at a unit price of 13 cents per pound, the duty being $662. In the first nine months of 1921 there were imported 100 pounds, valued at $7, with a unit value of 7 cents.

Mr. NORRIS. What was the tariff all those years as compared with what is proposed now to levy?

Mr. JONES of New Mexico. Twenty-five per cent ad valorem.

Mr. NORRIS. And the House provided for 30 per cent ad valorem?

Mr. JONES of New Mexico. Yes. The 30 per cent ad valorem provided by the House is on the metals not otherwise provided for, but on litharge there is a rate of 2½ cents per pound. The present price of litharge is about 10 cents per pound in New York.

Mr. NORRIS. Let me ask the Senator another question. I want to get this straight about the present bill. If we take out the committee amendment, litharge as the bill came from the House had a tariff of 30 per cent ad valorem levied on it?

Mr. JONES of New Mexico. No; it was 2⅞ cents per pound.

Mr. NORRIS. The Senator is correct—2⅞ cents per pound. What I would like to find out—I know it can not be given

definitely, but approximately—is whether the 2¾ is higher as compared with the 25 per cent ad valorem?

Mr. JONES of New Mexico. According to my information, the prices of the litharge in New York are about 10 cents per pound, or less than 10 cents per pound.

Mr. NORRIS. That would not make very much difference.

Mr. JONES of New Mexico. No; it would not.

Mr. NORRIS. It would be about the same.

Mr. JONES of New Mexico. Yes.

Mr. NORRIS. The Senate committee proposes to reduce that.

Mr. JONES of New Mexico. Yes; it is reduced from 2¾ to 2½ cents per pound, but 2½ cents per pound, as I have it on my memorandum, is about 35 per cent ad valorem.

Mr. NORRIS. According to the Senator's figures, as I understand it, it would be about the same.

Mr. JONES of New Mexico. That would be quite true, but levied on the foreign price it would be about 35 per cent.

Mr. NORRIS. As I understand, the Senate committee put the duty on litharge at 2½ cents a pound, while the House imposed a duty of 2¾ cents a pound. The Senate committee, therefore, proposes a reduction. From the figures which the Senator gave in reference to imports under a tariff that provided for a 25 per cent ad valorem duty, it seemed to me that we could well provide for a reduction, because those figures show there are practically no importations under the present rate.

Mr. JONES of New Mexico. That is quite true. Under the 25 per cent ad valorem duty the importations have been negligible.

Mr. SMOOT. May I suggest to the Senator also that in the pending bill the duty upon lead in the ore—that is, the lead content of the ore—is 1½ cents per pound, and in the existing law it is three-fourths of a cent a pound, with the 25 per cent ad valorem. So the Senator must see what an immense difference that makes.

Mr. NORRIS. That is all true. I understand; that is true; but importations of this particular lead item and others similar to it were so slight as to indicate to me that the tariff on the ore is too high, and it ought to be cut down.

Mr. JONES of New Mexico. The difference between the tariff on the ore and these specific products here is not, of course, so very great, and yet in the percentage it is quite large.

Mr. SMOOT. It is nine-tenths of a cent a pound.

Mr. JONES of New Mexico. It is nine-tenths of a cent a pound; but when it is realized that the price of ore, so far as the producer is concerned, is only 2 or 3 cents a pound, one can see what it amounts to as a differential. So much for the litharge.

Orange mineral is more expensive than some of the other lead products; it requires more care in its preparation. It is used as a pigment, but is also utilized in the manufacture of rubber. I want to read about the production of orange mineral:

Orange mineral is made by heating white lead in the presence of air. It is usually made from the scum which collects on the surface of wash waters used in levigating white lead. The production figures of orange mineral in the United States have been included with the figures for red lead since 1915.

So we have no data regarding orange mineral since 1915, the production figures having been included with those of red lead, although its production is a little more expensive than the production of red lead.

Prior to 1915 the production of orange mineral averaged about 600 short tons.

Imports: The average annual import for 1910–1917 was 317,205 pounds, valued at $20,098, yielding a revenue of $9,373.

Since that time the imports are given for three years; and we find that in 1919 the value of the imported orange mineral was a little over $5,000, that in 1920 it was a little over $5,000, and for nine months of 1921 the value was a little over $7,000—a very insignificant amount of imports.

The present prices are from about 13 to 15 cents a pound. I do not believe that under existing law this country is being flooded with any imports of orange mineral. Now I will read about red lead:

Red lead, the name given to the tetraoxide of lead, is a heavy, orange-red pigment having good covering power. Red lead is used in the manufacture of flint glass and cut-glass tableware, in the manufacture of preservative paints, and for various other purposes, including the manufacture of rubber goods and storage batteries, and as a lute in pipe fittings.

Production: Red lead is made by heating litharge under carefully controlled conditions to about 375° C. Production has steadily increased in the United States, amounting to 23,035 short tons of red lead and orange mineral, valued at $3,933,566, in 1916, and in 1918 and also in 1919 to an excess of 30,000 tons, valued at more than $5,000,000. In 1920 the output was 34,431 tons, valued at $7,523,089.

That is our production here—over seven and one-half million dollars. Now, as to our imports:

Imports: The average annual import for 1910–1917 was 370,351 pounds, valued at $16,075, yielding a revenue of $9,743.

Later statistics show that in 1918 we imported 5 pounds, valued at $1; in 1919 we imported 7,199 pounds, valued at $1,136; in 1920 we imported 2,307 pounds, valued at $1,789, and during nine months of 1920 we imported 6,176 pounds, valued at $339.

Now, as to exports of red lead: In 1918 we exported 5,739,819 pounds, in 1919 over 6,000,000 pounds, in 1920 over 3,000,000 pounds, and for nine months of 1921 about 1,000,000 pounds.

That is the condition with regard to red lead. It does not indicate, it seems to me, that this country is being flooded at the present time with red lead, and why, may I ask, at the present time should the duty be increased when we are manufacturing red lead, doubtless out of imported ore or bullion, and shipping it abroad in competition with the world?

Mr. SMOOT. What is the price of it?

Mr. JONES of New Mexico. The figures are given as to the value of the exportations for each year, but I have not ascertained the value per pound. The 5,739,819 pounds exported in 1918 were valued at $662,584.

Mr. SMOOT. That would indicate a price of about 11 cents.

Mr. JONES of New Mexico. And the shipments in 1919 were valued at $735,000. That would indicate a value of about 11 or 12 cents a pound, I should judge.

Mr. SMOOT. And 25 per cent of that would be from 2¾ to 3 cents a pound.

Mr. JONES of New Mexico. But the point I hope to emphasize is that we are exporting the commodity in competition with the world, and the present duty can have no effect upon that item when we are exporting it. We are bringing in our bullion in bond from Mexico; we are refining it in our smelters; we are manufacturing it into red lead, and we are exporting the red lead in competition with the world.

Mr. WILLIAMS. But still the Senator must admit that the proposed duty will have one effect; it may increase the price to the American consumer and thereby make him reverence his Government.

Mr. JONES of New Mexico. The Senator from Mississippi is quite right, and in the remarks which I have made to-day I hope I have demonstrated that the American consumers as to the entire consumption of lead and lead products are at the mercy of the protected interests in the United States.

Mr. SMOOT. Will the Senator state to the Senator from Mississippi that the rate proposed is lower than the rate provided in the present law?

Mr. JONES of New Mexico. The rate upon red lead is put at 2¾ cents per pound.

Mr. SMOOT. Yes.

Mr. JONES of New Mexico. And on orange mineral at 3 cents a pound, which, according to my figures, would equal about 55 per cent ad valorem, or double the present ad valorem rate.

Mr. SMOOT. The price indicated is from 11 to 12 cents a pound, and 25 per cent of that figure would be from 2¾ to 3 cents a pound. The proposed rate is 2¾ cents, while the duty which the Senator approves on the lead content of ore has been doubled, and nine-tenths of a cent represents a compensatory duty on account of the lead alone.

Mr. WILLIAMS. Mr. President, as I understand the dispute is as to what amount a suggested specific duty would come to ad valorem. I suppose the different experts have given various opinions about it before the committee. I did not hear them; but it reminds me a little in its uncertainty of what occurred yesterday, when we were first told that certain ores were landed by Germans at New York for $5.20, and then later that those figures were a mistake and that the correct figure was $10. The information which the Senator from Utah wanted the Senator from New Mexico to give to the Senator from Mississippi will be regarded by the last-named Senator as having been given to the full extent of the quarrel now existing between the Senator from Utah and the Senator from New Mexico as to what this specific duty will amount to ad valorem.

Mr. SMOOT. Mr. President, all I said was that the figures which the Senator from New Mexico himself gave showed that on the importations of red lead into the United States the price was 11½ cents a pound, and 25 per cent of 11½ cents is more than the rate proposed by the bill notwithstanding the fact that the duty on lead has been increased 100 per cent.

Mr. President, I myself think that red lead not in the oil is not that high in price, but the importations which come in are in the oil, and it is the 25 per cent duty on that character of

red lead of which the Senator is speaking and of which I am speaking also.

Mr. JONES of New Mexico. I have here the foreign prices for 1914 prior to the war, and for litharge the foreign price was 5 cents.

Mr. SMOOT. That was the pre-war price.

Mr. JONES of New Mexico. Certainly.

Mr. SMOOT. That is quite a different thing.

Mr. JONES of New Mexico. And 2½ cents on 5 cents a pound, the price prior to the war, would be 50 per cent, or double the present rate, representing an increase of 100 per cent of the present duty.

Mr. SMOOT. The Senator might as well have given the figures for 100 years ago.

Mr. NORRIS. Mr. President, to those of us who are just trying to get what the real truth is about this matter I think the Senator's statement is hardly fair in saying that this would be such an increase, because the ad valorem duty under existing law being 25 per cent, as I understand, would be computed upon the value now, not upon the value of 1914.

Mr. JONES of New Mexico. Yes; the observation of the Senator is fully justified.

Mr. NORRIS. And of course the tariff fixed specifically here is one that we consider now. If the Senator is going to give the prices, I wish he would include one article, the most interesting of all, which the Senator has not yet discussed, and that is white lead.

Mr. JONES of New Mexico. I am coming to that, but I will give first the 1914 prices for these different pigments.

The litharge was 5 cents per pound; the orange metal, 7 cents per pound; the red lead, 5 cents per pound; the white lead, 7 cents per pound. Those were the 1914 prices.

I want to make this observation: While these specific duties which the majority of the committee propose to impose amount to about 25 or 30 per cent, or say 35 per cent—their blanket clause is 30 per cent, and I suppose they did not intend that any of these should be less than that—while that amounts to about 30 per cent of the existing prices, it must be recalled that existing prices are much higher than prices before the war; and in my humble judgment the very purpose of making this change from an ad valorem rate to a specific rate is to increase the duty levied upon importations when the prices may fall; or, in other words, it is designed to maintain to the consumers of the country existing high prices, and counteract any possible fall.

Mr. SMOOT. Does the Senator expect that lead is going to fall in price from what it is to-day?

Mr. JONES of New Mexico. It is higher than it was normally. It is about 5½ cents a pound, and its normal price is from 4 to 4½ cents a pound.

Mr. SMOOT. The Senator expects lead to fall to 4½ cents a pound, then? I will simply say that if that happens there will be no lead mines running in the intermountain country, and I think the Senator knows that.

Mr. JONES of New Mexico. That may be quite true. Again the Senator has his anise-seed bag here. What we are talking about is the effect upon this commodity of the change from an ad valorem to a specific duty.

Mr. SMOOT. The Senator was claiming that the prices of this commodity were going to fall, and therefore that the specific duty would be a higher equivalent ad valorem rate than it is to-day. The price of lead to-day is from 5 to 5½ cents, and the Senator knows that the mines of the West under existing conditions can not produce lead for any lower price than that, and under this there is a compensatory duty of 1.9 cents per pound upon the lead. The price can not fall very much without closing the mines of the West.

Mr. JONES of New Mexico. Yes; and if the mines of the West are closed, the smelting concern which is so near to the heart of the Senator from Utah will import its lead ores in bond and refine them and export them in competition with the world.

Mr. SMOOT. Mr. President, when lead is imported in bond and refined and sent to the world it never enters into the litharge that we make in this country, so that it would not make any difference.

Mr. NORRIS. Mr. President, I should like to make just one observation there, and yet I do not want to detain the Senator, because he is now reaching a commodity in which I think the people are more directly interested than they are in these other lead substances.

Something has been said back and forth about what is going to happen to the lead industry if the price of lead goes down. I do not want the opportunity to pass without observing that the lead industry must take its chances with every other industry, including agriculture. We are in an abnormal condition now, and that applies to the lead industry as well as it does to every other industry. We all hope that we are going to get down to the earth. I should like to get down without injuring any of the industries, if possible; but we can not sustain any industry in the position that has been brought about by war conditions unless we sustain all of them. If we do that, we will have to remodel every activity in commercial life. I do not want to make an exception; and that is the reason why I am afraid that in this bill both the Senators on the other side and those on this side, with a fear which probably comes about naturally that the lead industry is going to be injured, have put a tariff upon the raw material—that is, the ore that comes from Mexico—so high that the lead men of the country will be able to keep their industry up above normal conditions; in other words, they will be sustained in their war conditions while the balance of the country goes back to normal conditions.

That is something that we do not want to bring about. You can pick out an industry and put a tariff on it so high that you will sustain it. We are all alarmed, and of course the people in the various industries are alarmed, when anything strikes their particular industry. It is natural that it should be so. I am not complaining about it. At the same time, these abnormal conditions must be wiped out in a way that will apply to everything, and make no exception.

I am not an expert on this subject; I know nothing about the lead business, but I am getting a whole lot of information now, and it seems to me that I can see now that at the bottom of it all we have placed a tariff that is too high. These compensatory duties that we have been discussing so far in some instances are a little lower than the existing law, perhaps, where the tariff on the ore is only one-half of a cent a pound, or three-fourths of a cent. While we are going at it backward, taking the manufactured article first and coming down later to the raw material, when we apply the duties that even the committee have put here, I think in some instances they are too high. It seems to me we will have to lower the duty on the ore when we get down to it, or we will be taking a step that will have a tendency to sustain in war conditions the lead industry, and which does not apply to other industries.

Mr. JONES of New Mexico. Mr. President, the question raised by the Senator from Nebraska is undoubtedly a very important one and probably will receive some further consideration. As to that, however, I have not any great hope or fear; but I have not felt like discussing that question, because much can be said in favor of doing something which will bring some sort of life to the lead-producing mines of the country, and what shall be done can not be measured mathematically. It is in effect a guess, an estimate, as to how much it should be.

Mr. NORRIS. If the Senator will permit another interruption, taking his own figures that he has offered here as to these various products of lead, it seems to me that what they demonstrate is that this industry is not injured by foreign importations. The importations that the Senator has given are practically negligible in most instances, and therefore it seems to me that the industry does not need very much of a tariff to be sustained.

Mr. JONES of New Mexico. I think, just as the Tariff Commission has found, that if you put the American smelters upon a parity with the smelters of the world so far as the ore is concerned, you do not need any tariff as to the base metal or as to any manufactures of that metal. That is what the Tariff Commission finds, and I think all the figures corroborate the finding of the Tariff Commission.

As the Senator very pertinently suggested a while ago, white lead is the most important of all these articles. White lead is in general use all over the country, and I want now to give the statistics regarding that production.

I suppose everybody knows what white lead is, and what it is used for, and I shall not take the time of the Senate in reading that, but I will read about the production and the imports and the exports.

The average annual domestic production for 1910–1916 was 142,986 short tons, valued at $18,260,727. The output in 1919 and 1920 was about 140,000 tons.

Now as to the imports:

Prior to the war the imports were about 700,000 pounds—less than 1 per cent of the domestic production—and yielded a revenue averaging about $4,000. They were negligible during the war, and have since been as follows:

In 1919, 21,213 pounds, valued at $2,490, with a unit value of 12 cents per pound, and a duty of $623.

In 1920 the imports were 159,977 pounds, valued at $19,449, with a unit value of 12 cents again, and a duty of $4,862.

In the first nine months of 1921 the imports were reduced to 123,616 pounds, valued at $12,545, and a unit value of 10 cents.

The exports since 1913 have averaged about 7 or 10 per cent of the domestic production. We imported less than 1 per cent prior to the war, and were exporting from 7 to 10 per cent of the domestic production, and in 1918 we exported 15,588,916 pounds, valued at $1,786,739. In 1919 we exported 28,033,485 pounds, valued at $3,037,292. In 1920 we exported 29,801,557 pounds, at a value of $3,195,101. In the first nine months of 1921 we exported 8,647,947 pounds, at a value of nearly a million dollars.

Does not that demonstrate that as to all these pigments, whether we get the metal in the form of ore, whether we get it in the form of base bullion, in pigs, or in any other form, we are taking it in this country and manufacturing from it white lead, and, with the drawback, are exporting these large quantities of white lead to the world, and in competition with the world? Tell me, if you will, upon what theory you can justify any sort of a duty except a compensatory duty for that which is imposed upon the imported lead?

Mr. NORRIS. Why should we impose even a compensatory duty? Why not reduce the duty on lead ore itself? If the Senator's figures demonstrate anything, and I think they do, they demonstrate that a tariff upon white lead is absolutely unnecessary, and while the committee amendment reduces the tariff on white lead a little, it seems to me it could well cut much deeper; but we should then follow it up by reducing the figures provided in the bill on the lead ore. When we talk about lead, we are coming to a product in which every man, woman, and child in the United States is directly interested. The owner of every home has a direct interest in it, and it seems to me, from the figures the Senator has given us as to our production, our exports, and our imports, that this is an industry which does not need any artificial support.

Mr. JONES of New Mexico. It certainly does not, unless you put a duty upon the ore, because the producers of the ore in this country are at a disadvantage with the foreign countries in the production of ore; but that is the only disadvantage which can be found anywhere along the line.

In regard to the Senator's remark that this is a reduction, it may not be an increase——

Mr. NORRIS. I would like to explain that a little further. I did not mean a reduction from the rates of existing law, because I have made no computation in regard to that.

Mr. JONES of New Mexico. It is a reduction of the figures adopted by the House.

Mr. NORRIS. It is a reduction from the figures of the House. That is what I had reference to.

Mr. JONES of New Mexico. The duty imposed by the House on white lead was 2⅞ cents per pound, and the Finance Committee has reduced that to 2½ cents per pound. Having imposed a specific duty of 2½ cents per pound upon white lead, let us assume that the time will come when the price of white lead shall be lower in the world market. By the way, the fact that we are discussing the possibility of the price being lowered will not have a tendency to lower the price, as the remarks of the Senator from Utah would seem to indicate, but I think in the passage of legislation we should take into consideration all probabilities, and when we observe that the price of white lead prior to the war was invariably lower than it is now, we at least ought to consider that as a factor when we are imposing duties, and provide for the contingency of a decrease in price. If prices should fall, then the imposition of this specific duty would increase the ad valorem duty upon white lead.

Mr. NORRIS. How much is white lead now per pound in excess of what it cost before the war?

Mr. JONES of New Mexico. I will get that information for the Senator.

Mr. NORRIS. As I remember the figures the Senator gave, it has fallen 2 cents in the last year. The Senator gave 12 cents as the unit price for 1919 and 10 cents as that for 1921.

Mr. JONES of New Mexico. That was the import price for the first nine months of 1921. The Senator will bear in mind that that 10 cents was the foreign price, without transportation charges and landing charges and without the duty on it; so the domestic price must have been pretty high to warrant the importation of white lead at that time at that foreign price of 10 cents, because when you add the transportation charges and add the duty of 25 per cent to that, together with the profits of the importers, you see that the American price must have been very high to warrant the importation of any foreign lead at a foreign price of 10 cents.

The duty is 25 per cent; but it was brought in here and, of course, entered the market, and it would not have been brought in if it could not have been sold at a profit. Perhaps the little that was brought in then had an effect upon the American price and brought back this very needful commodity to more nearly a reasonable price than it was bringing.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER (Mr. BURSUM in the chair). Does the Senator from New Mexico yield to the Senator from North Dakota?

Mr. JONES of New Mexico. I yield to the Senator.

Mr. McCUMBER. The Senator made a suggestion a short time ago to the effect that the imposition of these rates will keep high the prices of products in the United States and prevent their going down, and he seems to think that we should have made the tariff on the theory that we would return to pre-war prices. Taking the bill as a whole, I think none of the rates would allow the continuation of the present high prices of commodities. Generally I would say that is true. It may be that in some specific instances there is a possibility that the prices will be held up to nearly the present levels, but on the whole we have given a tariff much less than what would measure the difference between what the product can be purchased for, in all probability, in the foreign market and what it can be purchased for in the United States. What I wanted to ask the Senator is whether he believes that there is even a remote possibility that the cost of production in the United States will return, as a rule, to the pre-war cost of production.

There are two elements which go into the cost of production. The principal one, generally, is the labor cost, either reflected directly in what the manufacturer pays to the labor which he employs or indirectly in what the manufacturer pays for what to him is the raw product, and which is produced again by the higher-priced labor. We have assumed in making these rates that we would not get back to pre-war conditions in the cost of production. The wages of labor on the whole are to-day about 105 per cent higher than they were in 1914.

The product of the manufacturer is sold to-day in the markets on an average between 40 and 50 per cent higher than it was sold for in 1914. We do not want to pull down the laborer's wages if we can help it, and while in some instances they have to go down, if we continue in business we are designing to hold them up as nearly as possible to a good level, and very much in excess of those paid in 1914.

Therefore, does the Senator think we ought to have made this tariff upon the assumption that the cost of production would in any reasonable length of time reach a pre-war basis?

Mr. JONES of New Mexico. Mr. President, the tax imposed upon the American people should not be greater than is necessary for the objects sought to be attained by the imposition of the tax. The Senator time and again has said that the purpose of levying a duty is to equalize these differences. If the cost of production should be lowered in this country, does the Senator feel that we should maintain a duty which would more than equalize that difference? He has talked about the difference time and again, and said that he wants a duty only for that purpose; and should you not levy your rates with that in view? If there is really any sincerity in the proposition that you mean by your taxes—I hope the Senator will pardon me for using that term, because I know the Senator from South Dakota is always sincere in what he does and says, and I mean no criticism of him; I do not use the term in an offensive sense at all—to equalize this difference, if your costs are lowered you do not want to keep up your tax, but that is precisely what will happen from converting an ad valorem duty into a specific duty. You increase the rate of tax, and have a higher rate of protection, as you would call it, as against what would be a lower rate of protection if the value of the commodity were decreased.

But, Mr. President, that question does not enter here, because there is no difference between the cost of production here and abroad. As to this commodity it has been demonstrated, as the Tariff Commission says, that the concerns in the United States can compete with the world.

I would like to know upon what theory any tax is levied. There is no difference in the cost of production. How can a thing be measured which does not exist? How can it be said it is 2½ cents per pound or 1 cent per pound or 10 cents per pound when there is nothing of it and the Tariff Commission so advises?

Mr. President, in conclusion, I again ask the Republican Senators in this Chamber to reflect upon what this means. You are deliberately flouting the Tariff Commission. The people of the country have looked to the work of that commission as relieving the very embarrassing political situation in which the tariff finds itself. They paid their money to establish that commission.

The commission has employed very intelligent and efficient help. It has labored for years in gathering this specific data, and it comes to you to-day and it tells you that its deliberate finding is that there is no difference here, that the smelting interests of the United States can compete with the world; not

only that they can, but that they do it. It deliberately tells us and advises us that there is no necessity for any duty upon these products except to equalize the duty which we impose upon the raw lead-bearing ore.

Mr. WATSON of Georgia obtained the floor.

Mr. HARRISON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. MOSES in the chair). The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Glass	McCumber	Robinson
Ball	Gooding	McKinley	Sheppard
Borah	Hale	McLean	Shields
Brandegee	Harreld	McNary	Simmons
Broussard	Harris	Moses	Smoot
Bursum	Harrison	Myers	Spencer
Calder	Heflin	Nelson	Stanley
Capper	Johnson	New	Sterling
Caraway	Jones, N. Mex.	Newberry	Swanson
Colt	Jones, Wash.	Norris	Townsend
Culberson	Kellogg	Oddie	Underwood
Curtis	Kendrick	Overman	Wadsworth
Dial	Keyes	Page	Walsh, Mont.
Dillingham	King	Pepper	Watson, Ga.
Elkins	Ladd	Phipps	Watson, Ind.
Fletcher	Lenroot	Pomerene	Willis
France	Lodge	Ransdell	
Frelinghuysen	McCormick	Rawson	

The PRESIDING OFFICER. Seventy Senators having answered to their names, a quorum is present. The Senator from Georgia will proceed.

CAPT. R. A. MALONE.

Mr. WATSON of Georgia. Mr. President, only for a few moments will I ask the attention of the Senate, while I lay before it a matter which ought to interest everyone who has an interest in common humanity.

Last night I was asked over the telephone if I would meet Congressman PARK of Georgia at the State Department this morning at 10 o'clock. Without asking him what he wanted, I gave him the promise and kept it. Not until I went into the office of the Assistant Secretary of War did I know the purpose of our visit.

A few words there uttered by my colleague [Mr. HARRIS] developed the fact that Capt. R. A. Malone, of Georgia, had been court-martialed in France and sentenced to 20 years in the penitentiary for having taken the life of another officer who had broken up the home of Captain Malone by ruining his wife and taking not only the wife but his three children.

I at once said to the Assistant Secretary of War that if I had been trying the case in Georgia, I would not have wanted more than 10 minutes to have cleared him before a jury. I said:

> Furthermore, Mr. Secretary, a court-martial has no right to try a man for murder, no jurisdiction over a case of that kind, no machinery with which to try it.

His view was different, but I violate no confidence in saying that the department is investigating the question.

I call the attention of the War Department and the Department of Justice, as well as the attention of the President of the United States, to what I conceive to be the law of the land, and of all English-speaking lands; and if I am wrong about it, I invite correction and will accept it cheerfully.

One of the very first amendments which the States demanded should be made to the Constitution is No. 5, which reads:

> No person shall be held to answer for a capital or otherwise infamous crime unless on a presentation or indictment of a grand jury, except in cases arising in the land or naval forces or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be put twice in jeopardy, * * * nor be deprived of life, liberty, or property, without due process of law. * * *

Mr. President, the Revised Statutes are very full upon the jurisdiction of a court-martial. Such a court has no jurisdiction whatever, except over a purely military offense, such as mutiny, desertion, cowardice in the face of the enemy, striking an officer, or threatening to do it by gesture, having communications with the enemy, absence without leave, and similar offenses, all military in their nature.

There are many of these statutes. I have gone over them, and I find no provision whatever giving to a court-martial the right to try either a private or an officer because, in a private feud, not in the hours of duty nor in the line of duty, he takes the life of another soldier or officer. Every one of the 59 articles of war preceding that which I now shall read specifies a distinctly military offense, as every Senator can see for himself, if he will send for the volume; just as the Department of Justice can see, just as the War Department can see, and just as the President can see. I read article 59, which is as follows:

> ART. 59. When any officer or soldier is accused of a capital crime, or of any offense against the person or property of any citizen of any of the United States, which is punishable by the laws of the land, the commanding officer, and the officers of the regiment, troop, battery, company, or detachment, to which the person so accused belongs, are required, except in time of war, upon application duly made by or in behalf of the party injured, to use their utmost endeavors to deliver him over to the civil magistrate, and to aid the officers of justice in apprehending and securing him, in order to bring him to trial. If, upon such application, any officer refuses or willfully neglects, except in time of war, to deliver over such accused person to the civil magistrates, or to aid the officers of justice in apprehending him, he shall be dismissed from the service.

I call attention to the fact that complete sense is made by the first sentence of article 59, when any officer or soldier is accused of a capital crime he is excepted from the jurisdiction of a court-martial and must be turned over to the civil authorities for trial. An exception is made in case of war, but that does not give jurisdiction to the court-martial to try him. It simply gives the Army authorities an exemption from the requirement to deliver him at once. They would have to hold him in custody until they could deliver him without interference with military operations.

When did anybody ever hear of a sailor, marine, or naval officer on the deck of one of our battleships, which, of course, is a part of our territory, being tried by a court-martial or an admiralty court and condemned, either to death or to penal servitude, for an offense not committed in his line of duty, not committed against an officer in the way specified in these statutes, but in a mere private feud, sailor to sailor, marine to marine, officer to officer, in a private quarrel? Who ever heard of an admiralty court taking jurisdiction over the capital crime of murder when one officer kills another because of alleged ruin of his home? It never happened. The terrain which is occupied by an American Army on foreign soil is for the time being a part of the United States territory, but no more so than the deck of a battleship. Therefore, Mr. President, I submit to the high authorities, for their most earnest and immediate consideration, the question as to whether all of these court-martials are not null and void.

Captain Malone, sentenced for 20 years, has served more than three years. In my judgment he never was legally convicted, and had he had a trial, with compulsory process to bring his witnesses from this country, no jury would have been out 10 minutes in his case, because they would have given him the benefit of the unwritten law.

Even if there were a statute authorizing a court-martial to take jurisdiction over cases of ordinary murder, such a statute would be unconstitutional.

When the fifth amendment exempted the Army, Navy, and militia from the law requiring indictment by grand jury, nothing more was meant than that soldiers, Navy men, and militiamen could be court-martialed for military offenses. The Constitution never meant to give Army officers the right to try each other, or their men, for such crimes as bigamy, seduction, forgery, incest, bestiality, rape, embezzlement, and so forth.

Those who contend that officers can try all cases of crime should realize that their logic carries them to the untenable position that when a man joins the Army he loses the protection of the civil power. Courts-martial have no machinery suitable to the proper trial of such cases.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. KING. Mr. President, the Senator from New Mexico [Mr. JONES], who has been presenting this matter, asked me to offer an amendment in his behalf, and I do so. In line 3, page 27, I move to strike out the numeral "2" and insert in lieu thereof the numeral "1," so as to read:

> Litharge, 1½ cents per pound.

On that amendment I ask for the yeas and nays.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from Utah on behalf of the Senator from New Mexico to the amendment of the committee.

Mr. WALSH of Montana. Mr. President, I wish to make an inquiry of the Senator from Utah [Mr. SMOOT]. I should like to have the Senator to give me his idea as to why there should be a heavier duty on lead in lead bullion than on lead in lead ore?

Mr. SMOOT. Mr. President, the reason is this: If there is not a greater duty imposed upon bullion, then the bullion will come in at the same rate as will the lead content in the ore. The Senator from Montana knows that the transportation cost on 3 pounds of ore equals 1 cent a pound on the lead; that is the differential. If there is not a differential given, no matter whether or not our smelters could work the lead just as cheaply

as it could be worked in Mexico, the transportation here makes a difference which we have got to make up, or else all that would come here would be in the shape of bullion rather than in the shape of ore. If we do not give the differential we might just as well have a lower rate upon the ore. It is my idea, and, I think, it is also the idea of the Senator from Montana, that the ore should be protected, and the only way in which that may be done so as to get the benefit of the duty of 1½ cents is to make the differential in this case between the ore and the bullion.

I have figures here which were furnished me by the Tariff Commission showing that what I have indicated would be the result if the same rate were placed upon bullion as upon the lead content in the ore. In other words, the Senator knows that it takes 3 pounds of very good lead ore to make 1 pound of lead, and the transportation charge for the 1 pound of bullion would be no more in proportion named than the transportation charge for 3 pounds of ore. So this increase was allowed for the purpose of equalizing the difference which I have stated.

I will say to the Senator further that that is why the American Smelting Co. went to Mexico and erected a smelter there and to-day are smelting their ores there instead of smelting them in this country. If the Senator wants protection upon the ore—and I think he does—of 1½ cents, we have got to allow this differential or else the protection will not be afforded upon the lead in the ore.

Mr. WALSH of Montana. Mr. President, the explanation made by the Senator from Utah may be perfectly clear to every other Senator in the Chamber, but it does not signify anything at all to me; I do not comprehend it at all. This is the situation: The American Smelting & Refining Co. has a smelter in Mexico and it has a smelter on the American side of the line at El Paso. If a Mexican miner has his ore smelted at the Mexican smelter and gets his product in bullion and brings that bullion into this country, he pays a duty on it of 2⅛ cents a pound. If, however, he transports his ore across the Rio Grande to the smelter at El Paso he pays only 1½ cents a pound duty on the lead content of the ore. I can not see anything in it whatever except to give an advantage to the American smelter. The only smelter, so far as I know, which would be affected would be the smelter at El Paso. I can not see why there should be the slightest difference between the duty on lead bullion and the duty on lead ore. Lead bullion is lead with impurities in it which would afterwards be eliminated by some process of refining.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Utah?

Mr. WALSH of Montana. Let me remark before we get through that the present law—the Underwood law—imposes a duty of three-fourths of 1 cent on lead ore and 25 per cent on the bullion. If the current price is 4½ to 5 cents—and 5 cents, I think, is about right—that would be the equivalent of 1¼ cents upon the bullion to three-fourths of 1 cent on the lead ore.

Mr. SMOOT. Mr. President, let me tell the Senator the facts of the case as to the price of bullion and what the differential is under the Underwood law. On importations of 3,559,071 pounds, at a cost of $180,070, a rate of 25 per cent is equivalent to 5⅛ cents, or 5.66 cents, per pound. A 25 per cent duty on that 5.66 cents per pound is 1.41 cents per pound; 1.41 cents per pound under the present law and three-fourths of a cent on the ore makes a difference of sixty-six one-hundredths of a cent.

Now, let us see what the differential is under the pending bill. The Senator will find that it is a little less, but the figures are so nearly the same as to make the difference hardly appreciable. Under this bill the duty is 2⅛ cents; that is 2.12½ cents; the duty on the ore content is 1.5 cents, which makes a difference of sixty-two and one-half one-hundredths of a cent. The differential under the present law is sixty-six one-hundredths of a cent, while the rate which we propose between the ore and bullion is sixty-two one-hundredths of a cent. So, Mr. President, the differential under the bill as reported to the Senate—not the House rate, but the Senate committee rate—is sixty-two one-hundredths of a cent as against sixty-six one-hundredths of a cent under existing law.

Now, Mr. President, I wish to say just a word in relation to the amendment which has been offered.

Mr. WALSH of Montana. Before the Senator passes from the matter which he has been discussing I wish to make a further remark, and possibly the Senator from Utah may care to say something in answer to it. The impression is gained from what the Senator has said that in the case of copper ore carrying lead in an amount less than 25 per cent——

Mr. SMOOT. Less than 10 per cent.

Mr. WALSH of Montana. I understood the Senator to say that in ore carrying less than 25 per cent the lead is not recoverable.

Mr. SMOOT. I did not say 25 per cent; I said 10 per cent.

Mr. WALSH of Montana. My understanding about the matter is that that is the case with the smelter at El Paso, which is not equipped for the separation of lead from copper matte. The smelter at El Paso is the property of the American Smelting & Refining Co.; but the subject has been receiving the very careful investigation of the Bureau of Mines, which has recently issued a bulletin showing that metallurgical processes have so far developed as that now the lead content in matte is separated economically and profitably practically without regard to its amount. I have sent for the bulletin.

Mr. SMOOT. The Senator should state that it is demonstrated now that if they make the improvements and secure the same results that are obtained in laboratory tests, copper matte carrying lead up to 10 per cent can be separated at about the same price as the lead itself, and therefore that lead will not be wasted, but it will go into commerce; but it has to be 10 per cent even under the very best formula that is known or expected to be a success.

Mr. WALSH of Montana. Before we get through with this subject I will have the bulletin of the Bureau of Mines, so that we will have definite information on that point. Meanwhile, assuming that the facts are as the Senator states—that in the case of copper matte containing less than 10 per cent of lead the lead can not be economically saved and therefore is lost—why should not then the provision with respect to that matter stipulate that in the case of copper matte containing lead not to exceed 10 per cent the matte may be admitted free? Of course, I think the Senator must concede that it is a dead easy thing for an owner of lead bullion in Mexico just to run it into a copper smelter and bring the copper matte into this country with 30 per cent or 40 per cent or 50 per cent of lead in it, which comes in free.

Mr. SMOOT. That could be done, Mr. President, but the Treasury Department stand in the way of it.

Mr. WALSH of Montana. How do they stand in the way?

Mr. SMOOT. By the decisions that they have rendered, time and time again; and it can not get in here, under a decision as to what copper matte is, if it contains more than 10 per cent of lead. It is not then copper matte.

Mr. WALSH of Montana. Can the Senator refer me to decisions to that effect?

Mr. SMOOT. I have not them here, but I have been told by experts that that is the decision.

Mr. WALSH of Montana. Copper matte, as we understand it, is matte that contains a majority percentage of copper. That is the usual understanding.

Mr. SMOOT. All that I say is that if it contains more than 10 per cent of copper it would not be classed as copper matte.

Mr. WALSH of Montana. Of course, if there are adjudications on it, the legislation is deemed to be drawn with reference to that; but otherwise this is to my mind a provision for the free admission of lead into this country. But, leaving that out of consideration entirely, we are now facing the question of what duty shall be imposed upon white lead, for instance.

Mr. SMOOT. I yielded to the Senator, and if he will just let me proceed, I should like to make a statement, which will be very brief, indeed. I should like to have some of the Senators here to hear it, because I should like to have them know what this amendment means.

Mr. KING. With the Senator's permission, I will suggest the absence of a quorum.

Mr. SMOOT. No; I will ask the Senator not to do that now.

The pending amendment is to strike out 2½ and insert 1½ cents a pound as a duty on litharge. The Senator who made that motion is in favor of the duty of 1½ cents a pound upon lead contained in ores. I want to say this: I care not where an industry is in the United States, when I know that there is a duty imposed upon the raw material from which it makes its products, I want a compensatory duty given to that manufacturer. I do not care where he is or what he makes.

Mr. President, with a rate of duty of 2½ cents upon the bullion that goes into the manufacture of litharge, in order that the manufacturers shall be compensated for that article that is contained in the litharge the product of litharge must have a rate of duty of 1.9 cents. We are asked now to vote a duty of 1.5 cents, less than the compensatory duty on the lead contained in the ore. I know that the Senator from New Mexico will vote for the duty of 1½ cents on the lead content of ore. I know that the Senator who offered this amendment will vote for it, and I am for it; but the difference is that I want the manufacturer who purchases the raw material on which there

is a duty to be compensated for it, and under the prices that exist to-day the rates proposed in this paragraph are lower than the rates in the present law, notwithstanding the fact that on the lead from which these articles are produced the rate has been increased from three-fourths of a cent to 1½ cents a pound. We want to be fair; I certainly do; and we can not be fair unless we give them that compensatory duty. Let me follow what I have said upon this item right down the line of everything in this paragraph, so that I will not have to repeat it.

On orange mineral the compensatory duty is 1.9 cents per pound. On red lead it is 1.0 cents per pound. On white lead it is 1.7 cents per pound. So when we vote upon these duties we must take that into consideration, whereas under existing law the compensatory duty is ninety-five one-hundredths of 1 cent a pound on litharge, ninety-five one-hundredths of a cent a pound on orange mineral, ninety-five one-hundredths of a cent a pound on red lead, and eighty-five one-hundredths of a cent a pound on white lead. Therefore I am positive that if Senators understood this matter there would not be a vote against it, even on the other side of the Chamber.

Mr. WALSH of Montana. Mr. President, before we vote on this amendment I want to ask the Senator, because I have not been able to get the information myself, what is the consumption of white lead in the United States?

Mr. SMOOT. One hundred and forty thousand tons.

Mr. WALSH of Montana. One hundred and forty thousand tons. Two and a half cents a pound is $50 a ton, so that this tax is 50 times 140,000. That is the little item that is added to the cost of building and keeping up properties in the United States by this item.

What is the consumption of red lead?

Mr. SMOOT. Thirty-four thousand four hundred and thirty-one tons.

Mr. WALSH of Montana. Make it 34,000. I have figured out that the tax imposed by this duty on building operations in the United States is $70,000,000.

Mr. SMOOT. I think the Senator has made a mistake in his figures, but I am not going to deny them, because I have not——

Mr. WALSH of Montana. That is easy enough—1,400,000 tons, $50 a ton, 2½ cents a pound.

Mr. SMOOT. I said 140,000 tons.

Mr. WALSH of Montana. Oh! I understood the Senator to say 1,400,000.

Mr. SMOOT. That is only ten times too much.

Mr. WALSH of Montana. Very well; $7,000,000.

Mr. SMOOT. That is all; that is only ten times too much.

Mr. WALSH of Montana. I took the figures that the Senator gave me.

Mr. SMOOT. If I gave them, I will apologize to the Senator. I misstated myself if I did.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from Utah [Mr. KING] to the amendment offered by the committee on page 27, line 3. On that question the Senator from Utah has demanded the yeas and nays. Is the demand seconded?

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. JONES of New Mexico (when his name was called). I transfer my pair with the Senator from Maine [Mr. FERNALD] to the Senator from Missouri [Mr. REED] and vote "yea."

Mr. NEW (when his name was called). I transfer my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Oregon [Mr. STANFIELD] and vote "nay."

Mr. OVERMAN (when his name was called). Again announcing my pair with the senior Senator from Wyoming [Mr. WARREN] and transferring that pair to the Senator from Rhode Island [Mr. GERRY], I vote "yea."

Mr. STERLING (when his name was called). Transferring my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Pennsylvania [Mr. CROW], I vote "nay."

Mr. WATSON of Georgia (when his name was called). I transfer my pair with the junior Senator from Arizona [Mr. CAMERON] to the senior Senator from Nebraska [Mr. HITCHCOCK] and vote "yea."

Mr. WATSON of Indiana (when his name was called). I have a general pair with the senior Senator from Mississippi [Mr. WILLIAMS], which I transfer to the senior Senator from Iowa [Mr. CUMMINS] and vote "nay."

The roll call was concluded.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER]; and

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN].

Mr. COLT. I transfer my general pair with the Senator from Florida [Mr. TRAMMELL] to the Senator from Washington [Mr. POINDEXTER] and vote "nay."

Mr. ROBINSON (after having voted in the affirmative). I inquire whether the Senator from West Virginia [Mr. SUTHERLAND] has voted.

The PRESIDING OFFICER. He has not voted.

Mr. ROBINSON. I transfer my pair with that Senator to the Senator from Massachusetts [Mr. WALSH] and allow my vote to stand.

Mr. SIMMONS (after having voted in the affirmative). I have a general pair with the junior Senator from Minnesota [Mr. KELLOGG], who is absent from the Chamber. I transfer that pair to the Senator from Nevada [Mr. PITTMAN] and allow my vote to stand.

The result was announced—yeas 21, nays 45, as follows:

YEAS—21.

Ashurst	Heflin	Pomerene	Underwood
Caraway	Jones, N. Mex.	Robinson	Walsh, Mont.
Dial	King	Sheppard	Watson, Ga.
Glass	Myers	Simmons	
Harris	Norris	Stanley	
Harrison	Overman	Swanson	

NAYS—45.

Borah	Frelinghuysen	McKinley	Rawson
Brandegee	Gooding	McLean	Shortridge
Broussard	Hale	McNary	Smoot
Bursum	Harreld	Moses	Spencer
Calder	Johnson	Nelson	Sterling

Colt	Kendrick	Newberry	Wadsworth
Curtis	Keyes	Nicholson	Watson, Ind.
Dillingham	Ladd	Oddie	Willis
Elkins	Lodge	Page	
Ernst	McCormick	Pepper	
France	McCumber	Phipps	

NOT VOTING—30.

Ball	Fletcher	Owen	Sutherland
Cameron	Gerry	Pittman	Trammell
Crow	Hitchcock	Poindexter	Walsh, Mass.
Culberson	Kellogg	Ransdell	Warren
Cummins	La Follette	Reed	Weller
du Pont	Lenroot	Shields	Williams
Edge	McKellar	Smith	
Fernald	Norbeck	Stanfield	

So Mr. KING's amendment to the committee amendment was rejected.

The PRESIDING OFFICER. The question recurs on the amendment proposed by the committee on page 27, line 3.

The amendment was agreed to.

The next amendment of the committee was, on page 27, line 4, after the words "orange mineral" and the comma, to insert "3 cents per pound" and a semicolon.

Mr. KING. In behalf of the Senator from New Mexico [Mr. JONES] I move to amend on line 4, after the word "mineral," by striking out "3" and inserting in lieu thereof "1½," so that it would read:

Orange mineral, 1½ cents per pound.

The amendment to the amendment was rejected.

The amendment of the committee was agreed to.

The next amendment of the committee was, on page 27, line 4, to strike out the word "and" and to insert "2¾ cents per pound" and a semicolon, so as to read:

Red lead, 2¾ cents per pound.

Mr. JONES of New Mexico. Mr. President, I think I demonstrated to-day in my argument that there is no justification for any duty upon these lead pigments beyond the compensatory duty for the duty upon lead. The Tariff Commission so recommends, and I agree that by reducing the duties here to 1½ cents per pound upon the lead content a conflict will be caused to some extent with the duty which is proposed in a later paragraph upon lead bullion, but I assume that if we should reduce these figures to the figures which I named, then when we reach the paragraph regarding lead bullion the duties there would be likewise reduced to that on the lead content in the imported ores.

I want to call to the attention of Senators who are here now, and who were not here when I was making my argument, that the Tariff Commission specifically finds that there is no justification or necessity for anything more than a compensatory duty, and to maintain these duties which the Senate Finance Committee recommends, or which the House recommends, is to flout the Tariff Commission. It simply means that although we may have a Tariff Commission to ascertain facts for us, we deliberately decline to follow their findings, and I want Senators who vote for these duties recommended by the committee to realize that. You are destroying the usefulness of the Tariff Commission.

When we created that commission and appropriated money for its operation, presumably, at least, it was done in good faith; at any rate, the country so understood. Many people to-day are

asking that the tariff be taken out of politics. If there is any way by which that can be done, it should be done. Whether it is to be taken out of politics or not, here is a very concrete thing to do. Your Tariff Commission makes a finding, it makes a recommendation, and according to that no duties are justified beyond a compensatory duty.

The only object I have in expressing myself now is that the country must understand that what you do here you do deliberately. I have read from the Tariff Commission report. It not only says that no duties are justified beyond a compensatory duty, but it says it with regard to each one of these items; it says it in discussing the question of a duty upon lead oxide and upon other manufactures of lead. It says it in discussing the question of a duty upon lead bullion, and there is no mistaking the fact that you are deliberately acting in defiance of the judgment of the Tariff Commission, which you had a hand in creating, a commission to which the people of this country have been looking. They have been looking to the time when there shall be some reasons offered for the levying of these taxes, and not merely excuses. I have sat here day after day during the discussion of this tariff, and no reasons have been given, but mere excuses have been furnished. No reason has been suggested which can be sustained upon any theory on which such bills are supposed to be based, but excuses galore have been hunted up since the report of the committee came in.

I submit that now when the people are burdened with taxation, when business is depressed, when we are all struggling to reach better conditions, it is no time simply to levy taxes and increase taxation for the sweet privilege of doing so and catering to somebody or some enterprise which will be expected to contribute to the Republican campaign fund.

Mr. President, I move to amend the committee amendment by striking out "2¾ cents per pound" and inserting in lieu thereof "1½ cents per pound upon the lead content thereof," so as to read:

Red lead, 1½ cents per pound upon the lead content thereof.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from New Mexico to the amendment proposed by the committee.

Mr. KING. Mr. President, will the Senator from New Mexico yield for a question?

Mr. JONES of New Mexico. I yield.

Mr. KING. Would the effect of the committee amendment be to increase the price of this important pigment to the consumers of the United States, and will the Senator briefly state the character of use which is made of the product embraced within the amendment?

Mr. JONES of New Mexico. This particular item is red lead. It is used largely in the rubber industry. The tariff rate proposed by the committee unquestionably increases the price of red lead to the rubber industry of the country. At some length I have dwelt upon the fact that the industry is controlled by the duties which are levied. Under existing conditions and ordinarily the price of the commodity to the consumers in the United States is increased by the amount of the duty above the price of the commodity in world commerce.

Mr. SMOOT. Mr. President, for the record I desire to say that the compensatory duty on lead, as imposed in paragraph 389 of the bill on this item, is 1.9 cents per pound. The amendment is to reduce it to 1½ cents, not even giving the industry a compensatory duty.

I also want to state that the Tariff Commission has at no time and no place stated that the foreign bullion imported into this country as bullion would be equal to the import of ores into this country and refined into bullion.

The Tariff Commission does say that if the lead ores are delivered to the smelter they can smelt them as cheaply as at any other place in the world; but the effect of what the Senator from New Mexico wants would be to allow bullion to come in instead of ore. It takes 3 pounds of Mexican ore to make 1 pound of bullion, and the freight rates, so the commission says, make a difference of 1 cent a pound. If that is carried out the effect would be to reduce the rate on the lead content of the ore from 1½ cents to about one-half of 1 cent.

I desire to say also that the rate of 2¾ cents is about the same as the ad valorem rate now existing of 25 per cent, and instead of a duty of three-fourths of a cent per pound on the lead content of the ore, the bill carries 1½ cents.

Mr. JONES of New Mexico. It is true the Tariff Commission does not use the language which the Senator from Utah has just said it does not use, but I remind Senators of what the Tariff Commission does say regarding bullion.

Mr. SMOOT. I have not said anything about the bullion other than as to freight rates and that they will affect the lead in the ore. That is what I said. If it were shipped here in the ore there would have to be 3 pounds of it in order to make 1 pound of bullion. The effect of it would be that they would take their ores and smelt them in Mexico and ship in the bullion instead of the ore, if the Senator's ideas were carried out.

Mr. JONES of New Mexico. Mr. President, there are none so deaf as those who do not want to hear. I made a statement earlier in the day to the effect that the lead ores which are imported into the United States are used as fluxing ores in the smelting of other commodities. Bullion is imported under existing law. The Tariff Commission says that the smelters of the United States are now importing the metal in those forms, converting them into the manufactured product and exporting and selling in competition with the world as much of it as would equal 25 per cent of the entire American production. I read the language:

The most important foreign factor in the domestic lead-smelting industry is Mexican lead. A large part of the lead ore produced in Mexico is smelted in that country and comes to the United States in the form of base bullion. Appreciable amounts of ore, however, are also imported. The amount of Mexican lead treated in United States works normally amounts to about 25 per cent of the domestic output. Almost all of it is smelted or refined in bond and exported. Most of it always, and all of it since the early part of 1918, has gone to Great Britain.

Mexico is the only country on earth to-day which has any appreciable supply of ore for export. That ore must come through the United States or be transported across the water to some other country, but as a matter of fact it is coming to the United States or the bullion from it is coming, and our smelters are taking it and further refining it and manufacturing it, and then shipping it abroad and competing with the world.

Mr. SMOOT. And not paying a cent of duty.

Mr. JONES of New Mexico. Of course, not paying any duty because of the bonding provision or the drawback provision of the existing law and as provided in the bill. The only possible excuse for levying additional duties upon these manufactures of lead is to enable the producers in the United States to make the consumers of lead in the United States pay precisely that much more for their product. It is a gift, a subsidy, to the huge smelting industries of this country.

I have no complaint to make against them. If they can get the bill through here they are justified in charging the American people more for this commodity, because you legalize the levying of that tribute upon the American people. It is purely and simply a tribute, a gift, a subsidy, and you are levying it upon the American people, not for the benefit of the United States Government, because you do not derive any revenue from it, but you are doing it for the specific purpose of turning over to the smelting concerns of the country who do not need it, according to the report of the Tariff Commission.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from New Mexico to the amendment of the committee.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question now recurs on the amendment proposed by the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will report the next amendment.

The ASSISTANT SECRETARY. The next amendment of the committee is, on page 27, line 5, after the words "white lead" and the comma, to strike out "2¾" and insert "2½," so as to read:

White lead, 2½ cents per pound.

Mr. JONES of New Mexico. Mr. President, I move that the words "2½ cents per pound" be stricken out and that there be inserted the words "1½ cents per pound upon the lead content thereof."

The PRESIDING OFFICER. The question is upon agreeing to the amendment proposed by the Senator from New Mexico to the amendment of the committee.

Mr. JONES of New Mexico. Upon that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. NORRIS. Mr. President, I want to ask the Senator from New Mexico why he adds the words "lead content"? Is it not all lead?

Mr. JONES of New Mexico. My recollection is that a pound of actual lead produces 1½ pounds of white lead.

Mr. NORRIS. That is sufficient. I have the information I wanted.

Mr. JONES of New Mexico. That is why I propose to put the duty upon the lead content.

The reading clerk proceeded to call the roll.

Mr. COLT (when his name was called). Making the same announcement as before, I vote "nay."

Mr. JONES of New Mexico (when his name was called). Transferring my pair with the senior Senator from Maine [Mr. FERNALD] to the Senator from Missouri [Mr. REED], I vote "yea."

Mr. NEW (when his name was called). Making the same announcement as before with reference to my pair and its transfer, I vote "nay."

Mr. OVERMAN (when his name was called). Transferring my general pair as previously announced, I vote "yea."

Mr. ROBINSON (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Massachusetts [Mr. WALSH], and vote "yea."

Mr. STERLING (when his name was called). Making the same announcement as on the last vote, I vote "nay."

Mr. WATSON of Georgia (when his name was called). Making the same announcement as before, I vote "yea."

Mr. WALSH of Montana (when his name was called). Making the same announcement as before, I vote "yea."

The roll call was concluded.

Mr. CARAWAY. I have a general pair with the junior Senator from Illinois [Mr. MCKINLEY]. I transfer that pair to the senior Senator from Texas [Mr. CULBERSON], and vote "yea."

Mr. DILLINGHAM. I have a general pair with the junior Senator from Virginia [Mr. GLASS], which I transfer to the junior Senator from Maryland [Mr. WELLER], and vote "nay."

Mr. ERNST (after having voted in the negative). Transferring my pair with the senior Senator from Kentucky [Mr. STANLEY] to the junior Senator from South Dakota [Mr. NORBECK], I will let my vote stand.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON]; and

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN].

The result was announced—yeas 19, nays 47, as follows:

YEAS—19.

Ashurst	Heflin	Overman	Swanson
Caraway	Jones, N. Mex.	Pomerene	Underwood
Dial	King	Robinson	Walsh, Mont.
Fletcher	Myers	Sheppard	Watson, Ga.
Harris	Norris	Simmons	

NAYS—47.

Ball	France	Lodge	Pepper
Borah	Frelinghuysen	McCormick	Phipps
Brandegee	Gooding	McCumber	Rawson
Broussard	Hale	McLean	Shortridge
Bursum	Harreld	McNary	Smoot
Calder	Johnson	Moses	Spencer
Capper	Jones, Wash.	Nelson	Sterling
Colt	Kellogg	New	Townsend
Curtis	Kendrick	Newberry	Wadsworth
Dillingham	Keyes	Nicholson	Watson, Ind.
du Pont	Ladd	Oddie	Willis
Ernst	Lenroot	Page	

NOT VOTING—30.

Cameron	Glass	Pittman	Sutherland
Crow	Harrison	Poindexter	Trammell
Culberson	Hitchcock	Ransdell	Walsh, Mass.
Cummins	La Follette	Reed	Warren
Edge	McKellar	Shields	Weller
Elkins	McKinley	Smith	Williams
Fernald	Norbeck	Stanfield	
Gerry	Owen	Stanley	

So the amendment of Mr. JONES of New Mexico to the committee amendment was rejected.

The PRESIDING OFFICER. The question recurs on the amendment proposed by the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will report the next amendment.

The ASSISTANT SECRETARY. On page 27, paragraph 70, line 10, before the word "of," it is proposed to strike out "one-fourth" and to insert "one-eighth," so that, if amended, it will read:

Ochers, siennas, and umbers, crude or not ground, one-eighth of 1 cent per pound.

The PRESIDING OFFICER. The question is on the amendment reported by the Committee on Finance.

Mr. KING. I understood the Senator from North Dakota [Mr. MCCUMBER] to state that we were to recur to paragraph 67, and I shall be glad if he will do that, as I shall be compelled to leave the Chamber in the course of an hour, and I should like to have that item now disposed of.

Mr. MCCUMBER. Very well.

Mr. SMOOT. It is intended to recur to both paragraph 67 and paragraph 68.

The PRESIDING OFFICER. The amendment referred to by the junior Senator from Utah will be stated.

The ASSISTANT SECRETARY. On page 26, paragraph 67, line 23, before the words "per centum," it is proposed to strike out "25" and to insert "30," so that if amended the paragraph will read:

PAR. 67. Chrome yellow, chrome green, and other colors containing chromium, in pulp, dry, or ground in or mixed with oil or water, 30 per cent ad valorem.

Mr. MCCUMBER. I ask that the Senate disagree to the committee amendment; and if that be done it will, of course, leave the rate the same as fixed in the bill as it came from the other House, but the rate will be based upon the foreign valuation and not upon the American valuation.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the Committee on Finance.

Mr. KING. Mr. President, I have the floor and I yielded to the Senator from North Dakota [Mr. MCCUMBER]. I supposed he desired to address the Chair.

Mr. MCCUMBER. No; I simply stated that I asked the Senate to disagree to the committee amendment, which would leave the rate the same as the House rate, but based upon the foreign valuation and not upon the American valuation.

Mr. KING. Mr. President, I move to amend the committee amendment by striking out the numerals "30" and inserting in lieu thereof the numerals "20."

In support of the motion which I have tendered, I desire to invite the attention of the Senate briefly to some of the facts relating to the important items embraced within this paragraph.

The Payne-Aldrich law provided a rate of 4½ cents a pound on this commodity, the rate fixed in the Underwood law was 20 per cent ad valorem, while the rate fixed in the bill as it came from the other House is 25 per cent ad valorem.

The Senate committee have reported an amendment increasing the House rate from 25 per cent ad valorem to 30 per cent ad valorem; but the chairman of the committee has now advised us that the committee recede from that recommendation and adopt the House rate. As I have indicated, I move to fix the rate at 20 per cent ad valorem.

Mr. President, the importance of these products will be apparent to Senators when they learn, if they do not now know, that these colors or pigments are used in the manufacture of paints, which are used in a multitude of activities and enterprises. Chrome green is used in the manufacture of lithographic inks. These colors are sold dry, in pulp, or ground in or mixed with oil or water. One of these products, chromium lead, is sometimes known as vermilion red. It is a basic lead chromate, made by digesting chrome yellow with caustic soda.

Mr. President, there is no reason, as I view the situation, for the imposition of any rate whatever on this commodity; but I have suggested a rate of 20 per cent ad valorem, which I regard as a very high rate, in view of the fact that there is practically no competition in the production of the commodities which are embraced within this paragraph.

Let me call attention, Mr. President, to the production. In 1914 the United States produced 5,747,317 pounds of chrome yellow. Bear in mind that under this paragraph there are the chrome-yellow pigments and the chrome-green pigments and also the orange pigments. The production of orange and green pigments, including chrome orange and green, in the same year was $8,024,409 pounds. The output of chrome yellow, orange, and green in 1919, according to the preliminary figures, was 9,431,870 pounds.

It will be observed, Mr. President, that the domestic production was very large. What are the imports?

Prior to 1915 they averaged only about 155,000 pounds. That stands against a production of 8,000,000 pounds plus during the period. I might add that the production of chrome yellow and green together in 1913 aggregated nearly 14,000,000 pounds.

I have not been able to obtain the figures for both chrome orange, green, and yellow during all of those years, and I am not able to state whether the figure thirteen million seven hundred thousand and odd pounds has been exceeded; but, as against that immense domestic production, in 1918 the imports were 37 pounds; in 1919 they were 6,791 pounds; in 1920, 70,868 pounds; and in nine months of 1921, 28,957 pounds.

Mr. President, it will be observed that the domestic producers have now almost a monopoly; the importations are so unimportant as to have but little if any effect upon the domestic production.

I wish to read briefly from the Tariff Information Survey dealing with chrome pigments. I read from page 53:

The United States is very nearly self-supporting as regards its supply of chrome colors. Only about 11 per cent of the consumption in 1914 was imported—

As I figure it, the quantity imported was less than that—

and this consisted in large part of chrome green. During the war period the imports, formerly derived chiefly from Germany and England, dwindled to practically nothing.

I have shown that in 1918 we imported only 37 pounds.

About 75 per cent of the chrome yellow and 60 per cent of the chrome orange and chrome green produced in the United States in 1914 was made in New Jersey and in New York. Illinois, which is the third largest producing State, manufactured 21 per cent of yellow and 25 per cent of orange and green. The total output of chrome yellow in that year was 5,747,317 pounds.

About 70 per cent of the cost of chrome yellow is represented in the cost of raw materials.

We produce the raw materials. I need not add, because Senators are familiar with the fact, that our country is rich in all of the constituent elements that enter into this product.

Under pre-war and postwar conditions raw material cost is about evenly divided between lead acetate * * * and bichromate * * *. Chromium chemicals, however, are now manufactured on a large scale in this country.

Then a summary of domestic production and the imports is given.

As to the raw materials, on page 56 it is stated that acetate or nitrate of lead and potassium or sodium bichromate are the raw materials for the production of chrome yellow. I mention that for the purpose of emphasizing what the Senators doubtless know, that those two products are produced in the United States in very great abundance.

The 1914 census reports show that 15 establishments were engaged in the manufacture of chrome yellow and 14 establishments in the manufacture of chrome orange and chrome green. The imports of chrome colors have never been large. The Tariff Commission further report that the average annual imports for the five years immediately preceding the outbreak of the war in Europe were only 151,447 pounds, and during the war they fell to the vanishing point.

As to prices, it is stated in the Tariff Commission report that during the war, due to the increase in the cost of bichromate, the price fluctuations were very great. In July of that year the quotations ranged between 40 and 65 cents per pound, as compared with 11 to 13 cents in 1914; and in July, 1919, the quotations were 24 and 25 cents per pound, or almost exactly double the pre-war prices.

The present prices, Mr. President—that is, the prices on April 24, 1922, as I obtained them from current publications—were as follows:

Chrome yellow, light, 16½ to 17 cents per pound.
Chrome yellow, medium, 16½ to 17 cents per pound.
Chrome yellow, dark, 16½ to 17 cents per pound.
Chrome green, light, 30 to 32 cents per pound.
Chrome green, 35 to 36 cents per pound.
Chrome green, dark, 36 to 45 cents per pound.

The pre-war prices were less than one-half of the prices which I have just presented to the Senate.

Let me say now that the prices abroad for these products in 1921 were 57 cents per pound, showing that Germany and England, which manufactured some of these products before the war, are unable to compete with the United States, obviously for the reason that they are compelled to come to the United States or to other countries for the raw material. No matter what the prices are there for labor or for domestic products, they are compelled to obtain gold in order to buy the raw materials in this and other countries, if other countries furnish any of the raw materials, in order to manufacture the raw product; so the foreign prices are higher than the domestic price, showing that if there ever was any reason for the imposition of a tariff it does not exist here. Moreover, as I have indicated, the prices in the United States now are double the pre-war prices.

There are a large number of plants that are engaged in the production of these pigments, among them being the Imperial Color Works, the Seimon & Elting Co., the Kentucky Color & Chemical Co., the Harmon Color Works (Inc.), and many others.

In view of the fact that the domestic production is so immense and the foreign production is so small, and in view of the fact that even before the war, when Germany and other countries were at the acme of their chemical prowess and of their chemical production, the importations were insignificant, I can not understand the reason for the imposition of this tariff. No revenue can be obtained from it.

There is no serious competition to be feared. It is not a new industry. It is not a war industry, but it is an industry which has been in existence in the United States for many years. It has grown up in the past and flourished and prospered. With a 20 per cent tariff imposed in the Underwood bill there seemed to be no diminution in the vigor and in the prosperity of the corporations engaged in the manufacture of these pigments; so it is clear that the purpose is to maintain these war prices, double or more than double the pre-war prices, and to impose additional burdens upon the thousands and millions of people who directly or indirectly are interested in the products of this paragraph.

If there is any justification for this increase in the rates I have been unable to perceive it.

Mr. McCUMBER. Mr. President, I simply want to present in the RECORD some figures that I think have a most direct bearing upon this subject.

The Underwood tariff bill gave a duty of three-fourths of 1 cent per pound upon the lead content of the ore imported, and gave a duty of 20 per cent ad valorem upon chrome yellow and other colors. The Senate committee have given a duty of 1½ cents per pound upon the lead, and have only increased the ad valorem to 25 per cent; so the real increase in the ad valorem under the proposed Senate amendment as now proposed is less than in the Underwood bill.

Now, let us take some prices.

In 1914 chrome yellow of home production was 11 cents per pound. In 1914 chrome orange was 8 cents a pound. In 1919 chrome yellow was 22 cents per pound. Now, let us suppose that chrome yellow or chrome orange will go back to the pre-war price. Chrome yellow is now 22 cents; but suppose it goes back to the pre-war price. We have 65 per cent of lead to a pound of chrome yellow. The duty on lead being 1½ cents, that would be equivalent to 13 per cent upon the lead content of a pound of chrome yellow, and that would leave, in addition to the compensatory duty, a 12 per cent protection, and that is all. On the chrome orange, if we could go back to the price of 8 cents, with 1.4 cents differential upon the lead, we would have 17 per cent duty, and that would leave only 7 or 8 per cent ad valorem for the protection.

With those figures, I think we have been most reasonable in asking for the very slight increase in the ad valorem, especially when it is considered that we have practically doubled the duty upon the lead.

Mr. KING. Mr. President, I am not quite able to understand the attitude of the Senator. The fact that the tariff indicated has been given upon lead does not, it seems to me, warrant the rate which the Senator has suggested for the items under consideration. A cent and a half on lead, assuming that 65 per cent of the content of these chrome pigments consists of lead, would not justify, with the pre-war prices of 8 and 11 cents, respectively, the enormous prices now, nor would it justify, it seems to me, a tariff of 25 per cent.

Mr. McCUMBER. What it would indicate would be this: Sixty-five per cent of 2½ would be 1.4. You would have to add 1.4 cents per pound for the increase in the duty upon the lead alone; and that would be equivalent, as I have given it, to about 13 per cent, leaving 12 per cent for the protective feature, in addition to the differential.

Mr. KING. Mr. President, in view of the prices in Germany and in England to-day, the price of the product being 57 cents, how is it possible for there to be any competition whatever with this product?

Mr. McCUMBER. I am not arguing now the possibilities of competition. There have always been some importations; and if we should levy a duty upon the lead itself, necessarily that would open up a field for competition, and a big field, unless we gave the differential in the duty upon the product of the lead.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the junior Senator from Utah yield to his colleague?

Mr. KING. I yield.

Mr. SMOOT. I want to call my colleague's attention to the fact that 57 cents a pound is not only the average price of chrome yellow but it includes chrome green and other colors containing chromium, and it is dry or ground, mixed with oil or water. So from the reports we can not tell just what the dry chrome yellow may be, and the 16½ cents quoted by my colleague is for the dry chrome yellow. In the oil it is 24 cents and the green is 30 cents a pound to-day.

Mr. KING. Yes; I understand.

Mr. SMOOT. So when you take the other colors containing chromium, when you get into that you get into the question of the quality, as to how much there may be, and it covers quite a number of articles. As far as the average price is concerned, the 57 cents referred to can hardly be taken as a criterion of any pre-war price on chrome yellow.

Mr. KING. Mr. President, I am not quite sure that my colleague is right in the last deduction which he made. I thought I stated some time ago, when I was giving the imports for the various calendar years, that it embraced chrome yellow and

green, and that the average unit value was 57 cents. Before the war the average value of those products was from 12 to 20 cents a pound. Now, it is proposed to levy a tariff upon them, when at no time were the imports greater than 10 or 11 per cent, and, as I figure, most of the time 1 per cent or less, getting down to as low as 37 pounds, and we have produced more than 13,000,000 per annum.

Of course, there is no possible show of competition, and with no competition, with the United States rich in the primary elements of which these products are composed, we propose to impose a duty of 25 per cent ad valorem, which means, obviously, that the domestic producers may profit to that extent. Indeed, I will say now, as the record is before us, there is no possibility of any competition if present prices were preserved, the present prices being practically double the pre-war prices.

So you are giving these manufacturers a license to prey upon the people, and to maintain these prices, which are double pre-war prices, with no possible show of competition.

The PRESIDING OFFICER. The question is upon agreeing to the amendment offered by the Senator from Utah [Mr. KING] to the amendment of the committee.

Mr. KING. I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. OVERMAN (when his name was called). Again announcing my general pair and transfer as on the previous vote, I vote "yea."

Mr. ROBINSON (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Massachusetts [Mr. WALSH] and vote "yea."

Mr. SIMMONS (when his name was called). Making the same announcement as to my pair and its transfer as on the previous vote, I vote "yea."

Mr. STERLING (when his name was called). Making the same announcement as on the last vote, I vote "nay."

Mr. WATSON of Georgia (when his name was called). Making the same announcement as before, I vote "yea."

The roll call was concluded.

Mr. NEW. Transferring my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Oregon [Mr. STANFIELD], I vote "nay."

Mr. DILLINGHAM. Making the same announcement as before, I vote "nay."

Mr. COLT. Making the same announcement as before, I vote "nay."

Mr. HARRISON. I transfer my general pair with the junior Senator from West Virginia [Mr. ELKINS] to the senior Senator from Texas [Mr. CULBERSON], and vote "yea."

Mr. JONES of New Mexico. Making the same announcement as to the transfer of my pair as on the previous vote, I vote "yea."

Mr. MCKINLEY. I transfer my pair with the junior Senator from Arkansas [Mr. CARAWAY] to the senior Senator from Iowa [Mr. CUMMINS], and vote "nay."

The result was announced—yeas 20, nays 46, as follows:

YEAS—20.

Ashurst	Heflin	Pomerene	Swanson
Dial	Jones, N. Mex.	Robinson	Underwood
Fletcher	King	Sheppard	Walsh, Mont.
Harris	Myers	Simmons	Watson, Ga.
Harrison	Overman	Stanley	Williams

NAYS—46.

Culberson	La Follette	Ransdell	Warren
Cummins	McKellar	Reed	Weller
Edge	Nicholson	Shields	
Fernald	Norbeck	Smith	

So Mr. KING's amendment to the committee amendment was rejected.

The PRESIDING OFFICER. The question recurs on the amendment proposed by the committee.

Mr. MCCUMBER. I ask that the Senate disagree to the committee amendment.

The amendment was rejected.

Mr. MCCUMBER. The next amendment is on page 27, line 1.

The PRESIDING OFFICER. Does the Senator propose to call that amendment up? It was passed over.

Mr. MCCUMBER. Yes; I would like to have that amendment taken up.

The PRESIDING OFFICER. The Secretary will state the amendment.

The ASSISTANT SECRETARY. On page 27, line 1, the committee proposes to strike out "20" and to insert in lieu thereof "30," so as to read:

Par. 68. Gas black, lampblack, and all other black pigments, by whatever name known, dry or ground in or mixed with oil or water, and not specially provided for, 30 per cent ad valorem.

Mr. MCCUMBER. The Payne-Aldrich law gave a 25 per cent ad valorem under this paragraph. The Underwood law gave 15 per cent. We now ask that the Senate disagree to the Finance Committee amendment, leaving the rate at 20 per cent. That would be midway between the Payne-Aldrich and the Underwood rate.

Mr. KING. Mr. President, I move to amend the committee amendment by striking out "30" and inserting "15."

As a matter of fact, this item ought to be on the free list. Notwithstanding the laying of a 15 per cent ad valorem rate in the Underwood-Simmons law, there has been a remarkable development in the production of the elements or compounds of which the products found in this paragraph are composed or formed, since the date when the Underwood-Simmons law was enacted. I want briefly to call attention to the facts in regard to the matter to show that if we were logical and consistent we would put this item on the free list. There would be no necessity for imposing any tariff at all, because the revenue would be inconsequential, and the competition is negligible, so that for any purpose which might be denominated rational or justifiable no tariff should be imposed.

The Senator from North Dakota has correctly stated the rate under the Aldrich law was 25 per cent and that the rate under the Underwood law was 15 per cent. The Senate committee recommended 30 per cent and the House 20 per cent.

Gas black is made from natural gas, of which the United States, as everybody knows, possesses inexhaustible quantities. No country in the world compares with the United States in the richness of its possessions with respect to this particular commodity.

The importance of this product will be recognized when we call attention to the fact that the lampblack and carbon black, the principal products embraced within this section, are used in the manufacture of rubber and black paints. The paints manufactured from these products are quite universally used throughout the United States. One manufacture using them is stove polish. So that by placing any tariff at all on these articles we would be imposing a burden upon the great mass of the American people for the benefit of some very rich and important manufacturing concerns which are not new, which are not war industries. This industry has been established in the United States for many years, and it has developed because of the importance of the natural gas and because of the inexhaustible quantities of that product found in our country.

The production of bone, carbon, and lampblack increased from $1,464,000, by 27 firms, in 1914, to $6,194,000, by 36 firms, in 1919. Of course, bone is not included in this paragraph, but the survey mentions it in connection with the figures which I am giving.

In 1914 the output of bone black was $1,532,000; of carbon black, $918,000; and of lampblack, $503,856. The output in 1919 of carbon black from natural gas was 52,056,940 pounds, and in 1920 it was 51,321,892 pounds.

The survey shows that imports have been small as compared with the domestic production, the average value for the five years preceding the war being about $26,000. Compare that with the $3,816,000, the value of the products in 1920, and it will show how little has been the competition and how insignificant have been the imports.

Since 1915 the imports have been quite small. The statistics show that in 1919 there were only 67,617 pounds imported, in 1920 there were 609,000, and in the first nine months of 1921 there were 205,000 pounds imported.

We have exported carbon, bone, and lampblack and the exports have been much larger than the imports, reaching a value of $1,111,265 in 1918. Since 1918 the exports have increased to $2,288,884, and during the first nine months of 1921 they were valued at $905,608. So here we have a product, the production

of which is so great that we export approximately one-fourth of it and we imported only about 200,000 pounds in 1921 and 67,000 pounds in 1919. There is no possible competition. There is no revenue of importance to be derived. It is simply a gift to the manufacturing concerns of thousands and tens of thousands of dollars per annum which must be collected from the people by increased charges upon their products.

Let us see to what extent the domestic manufacturers have profited by the tariff and by the conditions to which I have referred. Before the war the price of gas black was only 6 cents a pound, while now it is 12 to 24 cents per pound. Lampblack at the present time is from 17 to 45 cents per pound. So it is obvious that the domestic manufacturers are charging all the way from 100 to 300, 400, and 500 per cent above the pre-war prices. The foreign value of the imports during the last year was 8 cents per pound. The domestic manufacturers, not satisfied with that or with pre-war prices, were charging all the way from 12 to 48 cents per pound.

I repeat, there can be no justification for the imposition of any tariff at all. When we lay any rate upon this article we are putting it into the power of the domestic manufacturer to increase the price above a rate that would be fair. There being but slight chance of any competition, it permits him to charge up to that level where it would invite foreign competition.

In view of our superior resources in the production of this commodity and in view of the difficulties to be encountered in the production of it abroad, it simply means the perpetuation of a situation where the prices will be increased from 100 to 200 or 300 per cent. The farmers, the people who buy black paints, those engaged in using all sorts of polishes, those engaged in the production of rubber used in the tires which are constructed throughout the country, are compelled to pay tribute to these manufacturers. So I submit that the motion which I have made ought to appeal even to those who indorse the Payne-Aldrich law and who want the tariff rates so high that they kiss the skies.

Mr. WALSH of Montana. Mr. President, although it touches a matter which we have passed, it relates in a way to the question before us. I have just secured the last monthly summary of foreign commerce of the United States, from which it appears that there were exportations of white lead from this country during the nine months ending March, 1921, of 16,202,099 pounds, worth $1,681,786. During the nine months ending March, 1922, there were exportations of 6,192,490 pounds, worth $472,880, being practically $1,700,000 during 1921 and $500,000 during 1922. That is the item upon which we have just imposed a duty of 2¾ cents per pound.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from Utah [Mr. KING] to the amendment proposed by the committee.

Mr. KING. I call for the yeas and nays.

The yeas and nays were ordered and the reading clerk proceeded to call the roll.

Mr. ROBINSON (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Massachusetts [Mr. WALSH] and vote "yea."

Mr. SIMMONS (when his name was called). Making the same announcement as on the previous vote, as to my pair and its transfer, I vote "yea."

Mr. STERLING (when his name was called). Transferring my pair with the Senator from South Carolina [Mr. SMITH] to the senior Senator from Pennsylvania [Mr. CROW], I vote "nay."

Mr. WATSON of Georgia (when his name was called). Making the same announcement as before, I vote "yea."

The roll call was concluded.

Mr. NEW. Making the same announcement as on the previous vote, I vote "nay."

Mr. COLT. Making the same announcement as before, I vote "nay."

Mr. OVERMAN. Making the same announcement as on the previous vote, I vote "yea."

Mr. JONES of New Mexico. Making the same announcement as on the previous vote as to my pair and transfer, I vote "yea."

Mr. CARAWAY. Making the same announcement as before, I vote "yea."

Mr. ELKINS (after having voted in the negative). I transfer my pair with the Senator from Mississippi [Mr. HARRISON] to the senior Senator from Iowa [Mr. CUMMINS] and let my vote stand.

Mr. WALSH of Montana (after having voted in the affirmative). I observe that the Senator from New Jersey [Mr. FRELINGHUYSEN], with whom I am paired, has not voted. I transfer my pair with that Senator to the senior Senator from Texas [Mr. CULBERSON] and allow my vote to stand.

The result was announced—yeas 20, nays 44, as follows:

YEAS—20.

Caraway	Jones, N. Mex.	Pomerene	Swanson
Dial	King	Robinson	Underwood
Fletcher	Myers	Sheppard	Walsh, Mont.
Glass	Norris	Simmons	Watson, Ga.
Harris	Overman	Stanley	Williams

Edge	Ladd	Rawson	Warren
Fernald	La Follette	Reed	Weller

So Mr. KING's amendment to the committee amendment was rejected.

Mr. McCUMBER. Mr. President, I ask that the Senate disagree to the committee amendment.

The amendment was rejected.

The next amendment of the committee was, on page 27, line 10, to strike out "¼" and insert "⅛," so as to read:

PAR. 70. Ochers, siennas, and umbers, crude or not ground, one-eighth of 1 cent per pound.

Mr. UNDERWOOD. Mr. President, I desire to say something about this paragraph, but as the first amendment in it is a reduction, I will let it be agreed to and then make the remarks which I have to offer on the second amendment in the paragraph, which is an increase.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment just stated.

The amendment was agreed to.

The next amendment of the committee was, on page 27, line 12, to strike out "20" and insert "25," so as to read:

Iron-oxide and iron-hydroxide pigments not specially provided for, 25 per cent ad valorem.

Mr. McCUMBER. Will the Senator from Alabama allow me to state that I am going to ask that the Senate disagree to the committee amendment, so as to leave the rate as the House provided?

Mr. UNDERWOOD. I am glad the Senator is going to agree to reduce the Senate committee rate, but I desire to move to amend by striking out "25" and inserting "10."

The PRESIDING OFFICER. The amendment proposed by the Senator from Alabama to the committee amendment will be stated.

The ASSISTANT SECRETARY. On page 27, paragraph 70, line 13, before the words "per cent," it is proposed to strike out the numerals "25" and to insert the numerals "10," so that it will read:

Iron-oxide and iron-hydroxide pigments not specially provided for, 10 per cent ad valorem.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from Alabama to the committee amendment.

Mr. UNDERWOOD. Mr. President, I am not sure I am altogether right in moving merely to insert "10" instead of a lower figure. Ten per cent is the rate on this commodity provided in the present law, and I will let my amendment go at that; but I am inclined to think that even the rate in the present law is too high on the commodity and that it ought to be lowered. The paragraph as proposed to be amended by the committee reads:

PAR. 70. Ochers, siennas, and umbers, crude or not ground, one-eighth of 1 cent per pound; washed or ground, three-eighths of 1 cent per pound; iron-oxide and iron-hydroxide pigments not specially provided for, 25 per cent ad valoreum.

As the bill came from the other House a duty of 20 per cent on the commodity was provided for. The Senator from North Dakota, in charge of the bill, has stated that he is going to move to recede on the committee amendment and to accept the

House rate. Under the present law, now on the statute books, the paragraph reads:

PAR. 55. Ocher and ochery earths, sienna and sienna earths, and umber and umber earths, 5 per cent ad valorem; Spanish brown, Venetian red, Indian red, and colcothar or oxide of iron, not specially provided for in this section, 10 per cent ad valorem.

When the opportunity affords itself to offer amendments by individual Senators, and when we are not confined to committee amendments, as we are now limited by order of the Senate, I think further amendments ought to be proposed to this paragraph. I think if there are any paragraphs in the pending bill under which a protective or prohibitive tariff is unjustified, they are the paragraphs relating to paints. This is no ordinary case. It has been repeatedly stated on the floor of the Senate while the chemical schedule has been under discussion that the issues involved did not go directly to the American people; that the tax was so small that the consumer did not feel it. Proponents of the bill have justified the increased taxation by stating that they thought the consumer would not know that he would pay the tax; that it was indirect taxation, and although a large amount of money would be collected because it would be distributed among thousands or millions of consumers it would not come directly home to them.

This tax, however, does come home. It comes to the home itself. The colors which are embraced in this paragraph are the basic colors for paints, and they go to the house itself. When the present tariff law was written it was remembered that a tariff is a tax and differs from the ordinary tax in this essential feature, that the ordinary tax is levied only for the benefit of the Government, while a tariff tax is levied sometimes partly for the Government and partly for some special interest that is protected by it. Sometimes the tax is so exclusive and creates such an embargo that the taxes that are indirectly collected go entirely to the benefit of some specially protected interest. If an excise tax be levied, such as the tax which is now levied on the sale of certain commodities in stores, all of that tax goes to the Government; but when a tax is levied at the customhouse, it succeeds or is intended to succeed, if it is levied for the sake of protection and is a protective tax, in raising the price of the commodity. The Government may get some of the taxation if any of the commodity is allowed to cross the border, but the protected manufacturer or producer behind the tariff wall gets the balance.

Nine years ago, when the present tariff law was framed, the committee having the bill in charge gave some consideration as to how the taxes should be levied. They did not reach the conclusion that everything should be taxed, and that the only thing to be considered was protection to those behind the tariff wall who were engaged in manufacturing or producing, and that there was no occasion for regard being had to the man who had to pay the tax. When the pending tariff bill, however, was framed the Committee on Finance concluded that there should be some distinction made as to who should pay the tax and upon what articles taxation should be imposed. For instance, under the present law Congress put on the free list all of the component parts that went into the manufacture of fertilizer and also fertilizers themselves. The Committee on Finance has reversed that policy and has taxed fertilizers.

When the present tariff law was framed the committee, believing that there was something sacred about the home, that the home was a part of the life of the Nation, placed many of the articles entering into the construction of homes upon the free list. Shingles and certain grades of lumber were placed on the free list. Under the pending bill those commodities are returned to the tax list.

Mr. SMOOT. Shingles do not bear a duty under this bill.

Mr. UNDERWOOD. The Senator from Utah corrects me, and perhaps I am mistaken about shingles, but in the framing of the present law the plan which was followed was to remove taxes from the home so far as possible. Many items, such as lumber, iron, and steel, were placed upon the free list, in order that the home might not be taxed in its building, and the duties on many articles, such as paints, where not absolutely put on the free list were greatly reduced. Among others, the duty on the item we have in question was reduced. In the act of 1909, known as the Payne-Aldrich Act, the ad valorem percentage was 30. The specific taxation was the same as now proposed in the pending bill, one-eighth of 1 cent a pound. Under the present law the tax is 5 per cent ad valorem on ocher and ochery earths, and so forth, and on Spanish browns and other pigments of that description it is 10 per cent. Both of those rates are much lower than those in the Payne-Aldrich law or in the bill now pending. Of course, a 10 per cent ad valorem rate is easily understood as being a lower rate than a 25 or 20 per cent ad valorem rate, whichever it may be. I find the values as of April 24 on many of these products to be such that the ad valorem rate of 5 per cent in most cases is less than a rate of one-eighth of 1 cent specific, as is provided in the bill now before us. I mean, of course, computing the tax on the normal basis of prices under which the present law was written, and not the increased prices following the Great War.

Mr. President, the Congress should consider the fact that this is an article of prime necessity to all of the people of the United States. Not only in the building of the home but in the preservation of the home and in industry generally, to preserve that which we have made we must use paint; and when you levy an increased tax such as is proposed in this bill you are taxing all of the people of the United States, from the humble home to the great metropolitan palace. It is well, then, to consider from what standpoint this committee believes it can justify this increased tax. From a Treasury standpoint, I think I can show that it can not be justified, because to-day, with the low taxes under existing law, a very small revenue is derived, and infinitely small in proportion to the amount of the American production and consumption. Can it be justified because the industry needs it to thrive and succeed? No; because the industry has succeeded and has thriven under existing law at the lower rates.

I am sure that at this time what I say will not produce an effect. The majority party in the Senate, or most of them, have made up their minds to take this bill as the committee have written it. They are not going to consider the various items as they are presented, and the only jury to which we can appeal is the jury of those who must pay the tax themselves. My only justification for taking the time of the Senate now in presenting these items is to let the RECORD show what is being done, in the hope that when the issue goes to the country this will be one of the items that the American people can understand, and realize that the increased taxes are being levied without benefit to them or their Government, and only to build up a protective tariff wall to increase the profits of the producer. I therefore want to go into some detail in putting into the RECORD what these articles are.

Ocher, sienna, and umber are natural pigments, consisting essentially of clay colored by the hydrated oxides of iron and manganese. Ordinary ocher rarely contains more than 30 per cent of the hydrated oxide of iron. The composition of sienna and umber is similar to that of ocher, although they invariably contain manganese and frequently more iron. Ocher is the cheapest of the common yellow pigments. Umber and sienna are of brown color, due to their manganese content.

Coarse ocher is used as a filler for linoleum, the finer grade as a pigment in tinted paints or as a stain for the pulp of brown paper. Siennas and umbers are used principally as paint pigments. Ground sienna is used in lithographic printing, and widely as a stain and filler for wood. Umber paints have good covering power, and umber is an essential ingredient in many weatherproof paints.

That is the composition of the materials in the first part of the paragraph, where the tax is increased from 5 per cent ad valorem to one-eighth of a cent per pound specific. I want you to consider the production at home and abroad in determining or not whether it is necessary that this tariff wall should be builded at this time.

France provides the world's greatest output of ocher. Large quantities are also mined in England and the United States. The French colors are considered more brilliant and finer than those from other countries and are generally recognized as standard grades. Prior to the war the United States annually consumed between 20,000 and 25,000 tons of ocher, of which about two-thirds was of domestic origin. Georgia, Pennsylvania, and Florida furnished most of the American product.

Neither sienna nor umber is produced in large amounts in the United States, the average domestic output before the war being less than 1,000 tons annually.

Imports of ocher prior to the war were 6,000 to 9,000 tons annually. Approximately three-fourths came from France. Sienna and umber are imported in three forms: (1) Crude or unpulverized, (2) powdered or washed, and (3) paste. Imports have been principally in crude form. Imports of umber of all classes in 1914, which is a fairly representative year, amounted to 2,303 short tons, valued at $35,570; imports of sienna during the same period were 3,245 tons, with a value of $55,925.

Imports of these materials since 1917 are as follows. I shall give merely the imports for the year 1920, the unit value, and the duty:

In 1920 there were imported 29,595,091 pounds of crude ocher, valued at $375,672. The unit value was 1 cent a pound and the duty was $18,784, at 5 per cent ad valorem. There was a falling off in importations in 1921; but I do not regard the figures in 1921 as being as reliable as those of 1920, because in 1921 the Fordney tariff bill had already been proposed in the House; it was expected that it would become a law that year, and in many cases I note that imports were rushed to the American market to try to get in before the higher tax was levied. In this particular case the market seems to have been glutted, and the imports fell off for 1921, instead of increasing, as they are shown to do in many cases.

In the case of crude sienna, the imports for 1920 amounted to 5,414,477 pounds, valued at $145,480, with a unit value of 3 cents and revenue of $7,274, at 5 per cent ad valorem.

In the case of crude umber, the imports for 1920 amounted to 7,643,235 pounds, valued at $85,424; the unit value per pound amounted to 1 cent and the revenue derived was $4,271.

The total revenue derived from the items under this paragraph, therefore, was a little less than $30,000 for that year, as shown by the statistics that I have in hand.

The next items that we come to are taxed under the second part of the paragraph, the amendment that is now pending before the Senate. They are the iron-oxide and iron-hydroxide pigments, another class of raw material for paints. Of course, when I say "raw material for paints" it practically means the paints themselves, because the mixing of oil—if it is good oil for paint it is usually linseed oil—with the pigment makes the paint, and the cost of mixing and preparation is very small compared with the cost of the raw material.

So that when you tax these pigments, which are the basis of paint, you are taking the only means of placing a duty on paint outside of putting a tax on linseed oil. The linseed oil, the other ingredient, was placed on the free list, if I recall rightly, in the present law. I imagine this bill has greatly increased the tax on the other necessary ingredient in the mixing of paints, to wit, linseed oil.

Mr. SMOOT. Linseed oil carries a duty of 10 cents a gallon in the existing law, and the Finance Committee has proposed a rate of 3½ cents a pound.

Mr. UNDERWOOD. I thank the Senator. I have the figures here. In the bill as it passed the House the rate on linseed oil or flaxseed oil, raw, boiled or oxidized, is 2½ cents a pound. Under the Payne-Aldrich law it was taxed at 15 cents per gallon. I think the Senate committee has increased the rate suggested by the House.

Mr. SMOOT. One cent a pound.

Mr. UNDERWOOD. The law now on the statute books taxes it at 10 cents a gallon of 7½ pounds. I just refer to that incidentally. We have not reached that item yet, but the rate on the other ingredient in paint, which is a necessity in the building of homes, has been very largely increased.

The rates on the pigments in the second clause of this paragraph are increased, under the proposal of the Senate committee, from 10 per cent ad valorem to 25 per cent ad valorem, which the chairman of the committee wishes to have stand at 20 per cent ad valorem, or a doubling of the present rate. In order that those who are interested may have a complete understanding, I shall put the description of them in the RECORD:

These pigments, consisting chiefly of red and brown oxides of iron, are known by the general term metallic paint. They were described in the act of 1913 as "Spanish brown, Venetian red, Indian red, and colcothar or oxide of iron." Commercially, the brown colors are called metallic browns to distinguish them from ochers, umbers, and siennas. Spanish brown is the product imported from Spain. The nomenclature of the reds is much more involved, and describes shade and quality rather than origin or methods of production.

Venetian red has been loosely applied to a variety of red pigments, but is correctly applicable only to a combination of iron oxide and calcium sulphate. All Venetian reds are of the familiar brick color, are paler than other iron reds, and not so brilliant, are permanent, work well with oil, can be mixed with other pigments, and are cheap.

That is what I want to impress upon the RECORD—I am sure I can not impress it upon the Senate—that the pigments out of which paint for the house is made are the cheap pigments, raw material out of which the poor man's paint is made. You are doubling the tax on them—doubling the tax on the paint used to paint the home.

I have in my hand the description of the other component pigments covered under this paragraph, but I will not take the time of the Senate to read them unless some one desires to have me do so. They fall substantially under the description I have already read. They are the foundation from which the cheap paints of America are made; and you are going to add a tax which, in my judgment, is already too high, an addition which will double the present tax.

The production of these paints in this country may be of some interest to those who are interested in the matter. I read from the Summary of Tariff Information:

The chief source of natural-iron paints in the United States is the Clinton hematite, found in various places throughout the Appalachian region. There is also a small output from the Lake Superior district. Accurate statistics of production are practically impossible to secure because of the diversity of the products and the difficulty of classification. Data reported by the United States Geological Survey for the years 1907 to 1914 show an average domestic output of about 25,000 short tons, valued at approximately $180,000. These figures do not include material of similar composition used as mortar colors or all of the oxide paints from the metallurgical waste liquors. The marketed production of Venetian red in 1914 was 7,445 short tons, valued at $119,895.

It is true that there has been in the past a fair amount of importation under existing law. Of Venetian red, in 1920, the importations amounted to something over 300,000 tons, valued at $4,802, with a unit value of 2 cents. The duty collected amounted to the large and munificent sum of $480 on the Venetian red. Of Spanish browns the importation value amounted to $483,000, the unit value was 3 cents, and the duty amounted to $48,000.

So the collections under this particular item for 1920, which fell off in 1921, amounted to about $50,000 at the customhouse, and on the other part of the item something like $30,000, or $80,000 in all, collected for the Government under the present law. The rate suggested will become more prohibitive, and is builded to keep out importation, a statement that will not be denied by the committee—builded in this way to dam back the importation and therefore cut off revenue in order that the taxes going to the producers of these pigments may be increased on the American people.

I do not intend to take up the time of the Senate very much longer on this particular item, but I want to read to the Senate in this connection a statement of one of the witnesses who came before the Finance Committee of the Senate in regard to paints and varnishes, showing the burden which would be placed on the American people from the taxes on items of this kind in the bill. The pigments, the last to which I referred, are made out of waste ores in America. I know in my home city there is an iron ore deposit, from which class of ores many of the pigments come, which reaches for miles and miles, but I remember in the early days those who did not know of what value it was or realize its value as a producer of iron, used to call the outcrop of the ore "paint rock." They probably at some time used it for the local manufacture of paint, without realizing its great value in iron production.

The raw material is practically unlimited, and the labor cost of reducing it into a pigment is very small; as a rule, it is a matter of cleaning and grinding the ore. I want the RECORD to show what this means to the American people after you combine these articles, which are the bases of paint, with linseed oil, and then sell them to the American people to preserve their homes.

Mr. H. E. Miles, of Racine, Wis., who describes himself as the chairman of the Fair Tariff League, whose testimony has been referred to before, made this statement to the committee:

Paints and varnishes: The production increased from $146,000,000 in 1914 to $351,000,000 in 1919, being largely an increase in prices only.

That is, the production in pounds or gallons remained substantially the same, but on account of the pyramiding of war prices, the production, measured in dollars, increased from $146,000,000 to $351,000,000, being only an increase in prices.

The exports in 1920—that is, the carrying of this paint across the seas to foreign countries and selling it to other people with which to paint their houses—amounted to $28,600,000.

The imports which came from other countries across the seas and sold to the American people for the painting of their houses amounted to only $3,200,000, or 9 per cent.

Now, Mr. President, I want to impress this on the record. I know there is no possibility of impressing it on the Senate. I want to refer especially to this article, which is used for the preservation of the homes of America, the little red schoolhouses of America. The manufacturer, for whom this tariff tax is levied—because the Government will get very little of it when it is carried into its last analysis in paints, and that is where the American people pay for it—had a production before the war in 1914 of $146,000,000, and immediately after the war, in 1919, he had increased his prices, but not the production, to $351,000,000. As against that he exported and sold abroad $28,600,000 worth of it in foreign free-trade markets, while the imports into this country amounted only to $3,200,000.

Mr. POMERENE. Mr. President——

The VICE PRESIDENT. Does the Senator from Alabama yield to the Senator from Ohio?

Mr. UNDERWOOD. Certainly.

Mr. POMERENE. Assuming that the production would amount to the same after this bill is enacted into law and goes into effect, if it ever does go into effect, to what extent would the tariff rates in the bill increase the cost to the consumer?

Mr. UNDERWOOD. On this particular item it is very easy to estimate it; that is, if it goes through the way the chairman of the committee now proposes. He reported the rate in the bill at 25 per cent ad valorem. The present rate is 10 per cent. The chairman of the committee says he is going to ask to reduce the rate in the bill to 20 per cent ad valorem, so that the tax will be double on the one class of article, on the first

bracket, the tax proposed being one-eighth of 1 cent per pound. It was first reported at one-fourth of 1 cent per pound, but the committee proposed the lower rate and made it one-eighth of 1 cent per pound as against 5 per cent ad valorem.

As I read into the RECORD awhile ago, as shown by the statistics for which the Tariff Commission is sponsor, the unit value of most of it is 1 cent per pound, and of some of it 2 cents per pound. At 1 cent per pound the rate would be one-twentieth of 1 cent instead of one-eighth of 1 cent, and at 2 cents a pound it will be one-tenth of 1 cent instead of one-eighth of 1 cent.

Mr. POMERENE. I suppose the increases in the various rates on paints, and so forth, which will increase the cost of painting to the farmer when he paints his house and barn, are compensated for by the duty of 15 cents a bushel on corn.

Mr. UNDERWOOD. Oh, undoubtedly. At least that is the basis on which the farmer is expected to approve the bill, that they give him a protection of 15 cents a bushel on corn where none could ever come into this country, and does not come in even when it is on the free list. While the middle western farmer in the Corn Belt must accept as a boon and a great privilege that he has a protective duty at the customhouse of 15 cents a bushel on corn, he is to pay double the present tax on the paint that is necessary for him to preserve his barns and his house.

Mr. POMERENE. I suppose the farm bloc can demonstrate to the satisfaction of the farmers how they have been benefited in that way.

Mr. UNDERWOOD. Perhaps they think they can.

Mr. SMOOT. Of course, corn has nothing to do with this item.

Mr. POMERENE. Oh, no, nothing at all.

Mr. SMOOT. On flaxseed and linseed there is a duty of 45 cents, and I think the farmer wants that. Linseed oil has a compensatory duty upon what is imposed on flaxseed, and that is a very material component part of the item which the Senator is discussing. At least 75 per cent of linseed oil is composed of flaxseed.

Mr. POMERENE. The farmers who raise flax are comparatively small in number compared with those who use paint.

Mr. UNDERWOOD. Undoubtedly.

Mr. SMOOT. Small or large, they think their lives depend upon it, and, of course, the tax is carried on through linseed oil.

Mr. UNDERWOOD. I do not deny that there are a few special interests which are protected under the bill and will make money out of it. The Senator from Utah is right. He makes the right confession. He confesses on the record that these taxes are levied for the benefit of some special interests. He says that in the duties on paint goes linseed oil, which I will discuss at a later date, and that there are a few producers in agriculture of the flax, out of which it is made, who will be benefited under the bill. I am not sure that they will, but I am accepting his argument, because I know that there are special interests which will get the benefit of the money you are wringing from the people.

But what has that to do with the men in the corn belt who raise corn? They constitute the great bulk of the American farmers. What has that to do with the man in the cotton belt who raises cotton and the man throughout the country engaged in agriculture? You can pick here and there a lemon grower in California or a sheep raiser in the far Northwest who may get some benefit out of the bill, but you are going to give him this bounty which you are wringing from the people of the United States as you lay your tax on the homes of America. I do not deny that, but I want the RECORD to show what you are doing.

As I said, when we come to the item of paint, the rate on pigments is doubled and you are doubling the tax on the linseed oil and will double the tax on the paints. The dangerous competition which was coming from abroad under the present law in 1919 amounted to $3,200,000 as compared with the value of the production amounting to $351,000,000. Of course, I suppose it took a doubling of the tax to keep that $3,200,000 out of America entirely. They can not say they did it for the protection of wages. As a rule we hear the cry, when a tax is levied for the special interests, that the wages of labor are going to be protected by it. But this witness, Mr. Miles, from whose testimony I have been reading and whose statement I have not seen contradicted in the testimony, said that the per cent of wages in the industry is only 6.9 per cent of the price of the product.

The total wage value amounts to 6.9 per cent of the value of the product, and yet on this item you are increasing a tax that already amounts in percentage to 10 per cent to more than the total wage by doubling it and making it 20 per cent, with a wage of 6.9 per cent to protect, if you were going to protect the entire wage.

Mr. Miles goes on to say that with a wage so small there can be substantially no difference in cost of production here and abroad; that the present tariff on paint is 11.4 per cent, giving the industry in 1919, $36,000,000 of protection and costing consumers, if used, up to $72,000,000, against which the custom rates were $100,000 in 1919 and $400,000 in 1920.

As I said a moment ago, although I was responsible for the present law and reduced the tax on these items by one-half, believing that I could give the benefit to the American people by so doing, and get some additional revenue for the Treasury, working on the schedule has clearly demonstrated that the tax which my committee placed on these articles was too high. Yet in the pending bill it is proposed to double that tax rate instead of halving it, as you ought to do if you want to make this product sufficiently competitive to produce some revenue for the Government and relieve the American people of the burden which rests on them due to class combinations in the paint trade.

Now, Mr. President, you may say that Mr. Miles does not know what he is talking about. I have known Mr. Miles a good many years. He came before the Ways and Means Committee of the House, of which I happened to be chairman when the present law was under consideration, and he made a very illuminating statement at that time to the committee on this question. But Mr. Miles does not stand with those who believe in high protection. He calls himself a protectionist, he says he is a protectionist, but he does not believe in that kind of protection which gouges, that kind of protection which is only building up the wall so that the special interests may enjoy the situation by largely increasing the burdens of taxation without the Government getting any benefit from it, while the American people are suffering four and ten fold the amount of taxes levied at the customhouse.

Mr. Miles is a manufacturer himself, or he was at that time. I do not know what he is doing now, because I have not seen him for a number of years—at least, I do not remember having met him for a number of years. He was a substantial business man. He conducted his business along successful lines at that time, and he wanted an opportunity under a fair field to develop his own business, but he did not want to be throttled with taxation nor did he want to throttle anybody else with taxation. Here is what he says about himself before the committee that reported this bill:

> I operated a paint factory for 15 years to supply my carriage factory.

He was in the carriage business at that time, and operated a paint factory for 15 years to supply his carriage factory. That ought to have given him some experience.

> There was so little labor in it that I never stopped to figure it. The percentage of wages in the paint and varnish industry is, all told, 6.9 per cent. Protection is 11.4 per cent.

That is, under the present law; but it is proposed to be doubled under the committee amendments which are now pending in the Senate. Then, referring to those engaged in the paint business, he says:

> They did not care enough about any protection to pay their respects to either tariff committee of Congress.

I have not verified that statement, and I shall be glad to have Mr. Miles's statement contradicted, if any paint manufacturers did come here and ask for this rate, and to hear what they said about it. Mr. Miles, however, says:

> They did not care enough about any protection to pay their respects to either tariff committee of Congress.
> Asking for nothing, the paint and varnish people were surprised—

Now, this is what this witness says:

> Asking for nothing, the paint and varnish people were surprised to find the House bill giving them 25 per cent, and American valuation further increasing this to from 50 to 80 per cent. A little like the soap people, who said they didn't mind particularly, but would be content to have 5 per cent, so the House bill gave them 20 per cent American valuation.

I do not know what witnesses appeared on this subject, but I do know that of paints—and I am now speaking merely on one of the raw materials from which it is proposed to build up the tax on paints—that the imports amount to very little; that the exports exceeded the imports; and yet it is proposed by the committee to double the tariff wall behind which these producers may operate and levy their increased prices on the American people. Do Senators on the other side say that would not increase their prices? How about the situation during the World War? Their prices then increased in the industry from $146,000,000 to $351,000,000 when they had the opportunity to increase them; they then more than doubled.

Mr. President, I have gone somewhat into detail on a small item because I want the record to be here for the man who desires to read it, so that he may know the facts. We have been told that there is no use discussing acids and other things in the chemical schedule about which the people do not know anything, but this item affords a good illustration of the character of the pending Republican bill, and I am sure that the final jury who want to understand, who are willing to understand, can understand that it is proposed to start right here in this case with pigments—one of the raw materials—and to double the tax; that it is proposed to go to linseed oil and the other raw materials and double the tax; and when it comes to paints the Republican Party is going again to double the tax without any opportunity of getting any material substantial revenue, for Mr. Miles says that on an industry, the production of which in 1919 was valued at $351,000,000, the receipts at the customhouse by the Government were only $100,000—less than one-third of 1 per cent—and in 1920 they were only $400,000, hardly 1 per cent.

Yet for some reason these increased duties are proposed. I do not understand why, because I know very well this industry does not need protection, and I know very well the increased tax is not going to bring more revenue. I know that Republicans are going to make the tariff wall so high that they will entirely stop the flow of imports; that they are getting ready to build a prohibitive tariff wall about these items, and yet they are necessities of life. They go into every household in America; they are used to preserve the homes from the storms of winter and the blasts of heaven; and yet, without compunction, the Committee on Finance are willing to double the tax on these articles.

Mr. President, I know discussion of this bill is futile; I know we can not accomplish anything here; but I believe there is a jury that will consider this question if we give them the facts. If I recollect aright, there never has been a congressional election—I say a congressional election, not a presidential election—when the difference between the Republican Party, in favor of high protection, and the Democratic Party, in favor of a revenue tariff, has ever been presented to the American people when they did not decide in favor of the revenue tariff. That has been true in congressional elections, but I know in presidential elections a great many Republicans who will vote for a Democratic Representative will not under any circumstances vote for a Democratic President.

However, I want the record so clear that this bill may be the issue in the fall campaign and that the people of America may pass judgment upon it. I have tried to make the record clear as to this particular item of cheap paints, which are necessary to preserve the homes; and, as I desire a record vote on this particular item, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The roll was called, and the following Senators answered to their names:

Ashurst	Hale	McNary	Sheppard
Ball	Harris	Moses	Shortridge
Brandegee	Heflin	Myers	Simmons
Broussard	Johnson	Nelson	Smoot
Bursum	Jones, N. Mex.	New	Spencer
Capper	Jones, Wash.	Newberry	Stanley
Colt	Kellogg	Nicholson	Swanson
Curtis	Kendrick	Norris	Townsend
Dial	Keyes	Oddie	Underwood
Dillingham	Ladd	Overman	Watson, Ind.
Elkins	Lenroot	Pepper	Williams
Ernst	Lodge	Phipps	Willis
Fletcher	McCumber	Pomerene	
Frelinghuysen	McKinley	Rawson	
Gooding	McLean	Robinson	

The VICE PRESIDENT. Fifty-seven Senators have answered to their names. A quorum of the Senate is present.

The question is on the amendment offered by the Senator from Alabama [Mr. UNDERWOOD] to the amendment reported by the committee.

Mr. SMOOT. Mr. President, before voting I want to make a short statement for the record.

Paragraph 70 has two divisions: First, the crude ochers and siennas and umbers; second, the oxides of these articles, or pigments.

The House passed the bill with a rate on the articles in the first division of one-quarter of a cent a pound. The Senate committee reported to the Senate a rate of one-eighth of a cent, just one-half of the House rate. The rate of the Payne-Aldrich law was one-quarter of a cent, and we reported one-eighth of a cent. The rate of the Underwood bill was 5 per cent ad valorem; and now I want to call attention to what one-eighth of a cent is in equivalent ad valorem duty, so that you can see what increase there is over existing law.

The price of ocher, crude, is 2 cents a pound. One-eighth of a cent equals 6¼ per cent ad valorem. The price of sienna is 4 cents a pound. One-eighth of a cent equals 3 per cent, or 2 per cent less than the existing law. The price of umbers is 1 cent a pound, and one-eighth of a cent equals 12½ per cent.

That is the first bracket, which covers the crude materials.

In the case of the second bracket, where we deal with the pigments, the Underwood rate to-day is 10 per cent; the Payne-Aldrich rate was three-eighths of 1 cent a pound. The committee desire to make this 20 per cent. You may ask why that is increased. Under the Underwood tariff bill linseed oil had a duty of 10 cents a gallon. Under the bill as reported to the Senate linseed oil has a duty of 3½ cents a pound, which equals 23 cents a gallon. That is brought about, of course, by the duty of 45 cents a bushel on flaxseed, which the farmers of North Dakota and the other States raising flaxseed say is absolutely essential to give them protection in order that they may live in this country.

Mr. UNDERWOOD. Mr. President, will the Senator allow me to ask him a question? Of course, I know that you increase the duty on linseed oil, but how does the differential on pigments affect the duty on linseed oil?

Mr. SMOOT. I say the duty upon linseed oil affects the pigments indirectly.

Mr. UNDERWOOD. But you have increased the duty on linseed oil to more than take care of that proposition.

Mr. SMOOT. The chairman of the committee, as I say, has already asked that the Senate reject the committee amendment, and that will leave a duty of 20 per cent on all of the pigments in this section.

Mr. UNDERWOOD. Mr. President, I realize that what the Senator has said is correct. They are not going to insist on 25 per cent; and the issue in the Senate now is as to whether you are going to double the tax on the pigment out of which the paint is made, along with the balance of the schedule.

The Senator from Utah says that we should double the tax to take care of some farmers who live in one State along the border. Of course I know, as I said before, that you are writing this bill for certain special interests. That special interest in this case is a very small one to cause the levying of this enormous tax on all of the people of the United States; and the increased cost of linseed oil has nothing to do with this part of the tax. That might be appealed to when you got to paints, but this is the red pigment, dirt or ore dug out of the ground where there are millions of tons of it, and ground up and cleaned, and where the labor cost amounts to very little in comparison with the product.

If there is any justification for doubling this tax on the American people I have failed to see any indication of it or to realize it from the statement of the Senator from Utah.

Mr. SMOOT. Mr. President, I also call attention to the fact that importations are increasing, and have been increasing, as the Senator said in his statement.

Mr. UNDERWOOD. Yes; they did increase along about the time of the war, but——

Mr. SMOOT. No; after the war they decreased.

Mr. UNDERWOOD. In 1920 they reached the maximum.

Mr. SMOOT. That is true.

Mr. UNDERWOOD. And after 1920 they commenced falling off.

Mr. McCUMBER. Very little.

Mr. SMOOT. That was on account of the demand, and I will say to the Senator the importations referred to were only for nine months.

Mr. UNDERWOOD. But the rate for nine months would not have averaged the production of the previous year.

Mr. SMOOT. No; because of the business conditions.

Mr. UNDERWOOD. Of course, there may be a thousand reasons, but this business was not destroyed under the present tax. It has not been injured under the present tax. It grew under the present tax, and in fact there is no reason for a tax at all. There is no labor cost to amount to anything to protect. The man who brings the material into this country has a long haul and a freight rate to pay, and the tax that I am proposing now of 10 per cent ad valorem, in my judgment, is excessive. I am only proposing it because it is the present rate. If I had the writing of this bill again, I think I would lower this particular rate instead of leaving it where it is, and you propose to double it.

Mr. SMOOT. Mr. President, of course the producer of this material in Georgia and the other States has a freight rate to pay equal to the rate that the foreigner has to pay.

Mr. UNDERWOOD. Where to—to Chicago, or what point?

Mr. SMOOT. Wherever it is manufactured.

Mr. UNDERWOOD. It is manufactured all over the country.

Mr. SMOOT. The Senator knows that a great deal of it is manufactured in Illinois and in the State of New Jersey.

Mr. UNDERWOOD. Mr. President, there is nothing in the world that is more fallacious than the argument that you have to protect the producers of something against a freight rate because you want to figure on New York Harbor for every proposition that comes up. The American producer who makes paint in Wheeling, W. Va., or Cincinnati, or Chicago, has a large territory where the American freight rate protects him, as well as the foreign freight rate.

Mr. SMOOT. The Senator spoke of foreign freight rates. I simply wanted to call attention to the fact that I said it protected him, but I wanted to call attention also to the fact that the producer of this material in Georgia, where the greater part of it is produced, has to pay a freight rate also. None of it is manufactured there.

Mr. UNDERWOOD. He has a domestic freight rate to pay, of course, but you pick some point on the eastern seaboard that is farthest away from him; but when you go to estimate your freights you do not count the territory that is west of him, where he has the advantage of the local freight rate, the American freight rate, as well as the overseas freight rate.

Mr. McCUMBER. Mr. President, I want to put into the record the fact that in 1920 the United States production of these iron-oxide pigments was about 65,000,000 pounds. The importations were 15,500,000 pounds, or about 25 per cent, and the ratio for 1921, based upon nine months, is practically the same thing; so while the Payne-Aldrich rate was 30 per cent and while the Underwood rate was 10 per cent, we have placed it at 20 per cent, and with one-fourth of the entire consumption in the United States being imported there is sufficient competition to regulate prices.

The VICE PRESIDENT. The question is on the amendment of the Senator from Alabama [Mr. UNDERWOOD] to the amendment of the committee, which will be stated by the Secretary.

The READING CLERK. On page 27, line 13, it is proposed to strike out "25," and in lieu thereof to insert "10."

Mr. UNDERWOOD. I call for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. COLT (when his name was called). Making the same announcement as before, I vote "nay."

Mr. NEW (when his name was called). Making the same announcement as on the previous roll call, I vote "nay."

Mr. OVERMAN (when his name was called). Making the same announcement as to my general pair and its transfer, I vote "yea."

The roll call was concluded.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON]; and

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH].

Mr. JONES of New Mexico. Making the same announcement as to my pair and its transfer, I vote "yea."

Mr. ROBINSON. I transfer my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Massachusetts [Mr. WALSH], and vote "yea."

Mr. DILLINGHAM (after having voted in the negative). I observe that the junior Senator from Virginia [Mr. GLASS] has not voted. Having a general pair with that Senator, I transfer it to the junior Senator from Maryland [Mr. WELLER], and allow my vote to stand.

Mr. FRELINGHUYSEN. I transfer my pair with the Senator from Montana [Mr. WALSH] to the Senator from Vermont [Mr. PAGE], and vote "nay."

Mr. McCUMBER. I transfer my general pair with the Senator from Utah [Mr. KING] to the Senator from Maryland [Mr. FRANCE], and vote "nay."

The result was announced—yeas 21, nays 42, as follows:

YEAS—21.

Ashurst	Heflin	Pittman	Swanson
Caraway	Jones, N. Mex.	Pomerene	Underwood
Dial	Kendrick	Robinson	Williams
Fletcher	Myers	Sheppard	
Harris	Norris	Simmons	
Harrison	Overman	Stanley	

NAYS—42.

Ball	Colt	Gooding	Ladd
Brandegee	Curtis	Hale	Lenroot
Broussard	Dillingham	Johnson	Lodge
Bursum	Elkins	Jones, Wash.	McCormick
Calder	Ernst	Kellogg	McCumber
Capper	Frelinghuysen	Keyes	McKinley
McLean	Newberry	Rawson	Wadsworth
McNary	Nicholson	Shortridge	Watson, Ind.
Moses	Oddie	Smoot	Willis
Nelson	Pepper	Spencer	
New	Phipps	Townsend	

NOT VOTING—33.

Borah	Gerry	Page	Trammell
Cameron	Glass	Poindexter	Walsh, Mass.
Crow	Harreld	Ransdell	Walsh, Mont.
Culberson	Hitchcock	Reed	Warren
Cummins	King	Shields	Watson, Ga.
du Pont	La Follette	Smith	Weller
Edge	McKellar	Stanfield	
Fernald	Norbeck	Sterling	
France	Owen	Sutherland	

So Mr. UNDERWOOD'S amendment to the committee amendment was rejected.

Mr. McCUMBER. I request now that the Senate disagree to the committee amendment.

The amendment was rejected.

Mr. McCUMBER. I ask that the committee amendment in paragraph 72—that is, the provision for 35 per cent ad valorem, on page 27, line 17—be disagreed to, and also that the amendment in lines 19 and 20, down to the words "ad valorem," in line 20, be also disagreed to, and I will ask that the balance of the amendments in that paragraph be agreed to.

The VICE PRESIDENT. The Secretary will state the first amendment in the paragraph.

The READING CLERK. In paragraph 72, on page 27, line 17, the committee proposes to strike out "25" and insert in lieu thereof "35," so as to read.

Spirit varnishes containing less than 5 per cent of methyl alcohol, $2.20 par gallon, and 35 per cent ad valorem.

Mr. JONES of New Mexico. Mr. President, that is quite a concession, and it is rather gratifying to some of us that the committee is finally seeing the error of its ways and coming to more reasonable terms. Notwithstanding that, however, the duty provided for by the House is much greater than the rate in the present law, and I am a little anxious to know why we should increase the duty provided in existing law.

There are no imports of this commodity of any consequence. On the other hand, we are exporting about three times as much as we are importing. Does any member of the majority of the Finance Committee desire to give any reason why the present duty should be increased? I do not care to take up the time of the Senate, but varnish is a very important commodity, is in very general use, and I desire to call attention to the facts with regard to the domestic production.

In 1914 there were engaged primarily in the manufacture of varnishes 215 establishments, with a capital of $29,000,000 plus, and an output valued at more than $33,000,000, an increase of about $3,000,000 over 1909. In 1919 the output in the United States was over $83,000,000.

From 1910 to 1917, inclusive, the imports ranged from a minimum of $55,000 in 1913 to a maximum of $70,000 in 1916. In 1914 the imports were less than two-tenths of 1 per cent of the domestic production, and I observe that in later years the importations were nominal.

Of the varnish which contains less than 10 per cent of methyl alcohol, in 1918 the importations amounted to 867 gallons, in 1919 to 48 gallons, in 1920 they were 86 gallons, in nine months of 1921, 341 gallons; and of the varnishes containing 10 per cent or more of methyl alcohol the importations were as follows:

	Gallons.
1918	91
1919	380
1920	798
1921	161

Taking these statistics into consideration, I can not see why we should increase the duty on those varnishes. The imports are but a fraction of 1 per cent of the domestic production; the exports were 3 per cent of the domestic production. The output was over $83,000,000 and the imports one or two thousand dollars.

I think we are entitled to some explanation of that. The Sherwin-Williams Co. is a large producer of these varnishes, and I have some data here regarding that concern, and I just wondered if the purpose of increasing this duty is to help out that concern. It has plants at Cleveland, Ohio; Chicago, Ill.; Newark and Boundbrook, N. J.; Detroit, Mich.; San Francisco, Calif.——

Mr. WALSH of Montana. Can the Senator tell us who asked for this rate?

Mr. JONES of New Mexico. I have been trying to find out about that, but so far I have not been able to get a rise from the other side regarding this item.

Mr. SMOOT. This side will explain it when the Senator gets through.

Mr. JONES of New Mexico. I asked for some explanation.

Mr. SMOOT. What is the use of our giving an explanation to the Senator, and then have him go on and make a speech which he has prepared? I will wait until the Senator gets through, and then I will tell the Senate why these rates were imposed and the reason for the changes from the existing law.

Mr. JONES of New Mexico. I wish I did have a prepared speech on this item. I think I could perhaps make a more effective appeal to the distinguished Senator from Utah than I can in this extemporaneous way. I know that the Senator from Utah is very susceptible to strong argument, and I only wish that I might have prepared such a speech, so that I might appeal to him. The Senator is usually so informative about these things that I am glad to get the assurance from him that at some time he is going to offer an explanation for the increase in the duty on this item. I good-humoredly inquired if anyone desired to give us any information about it, and I could not get a rise from anybody over there. I am gratified to know that the Senator from Utah now promises to give us this very much-desired information.

I had commenced to read this memorandum regarding the Sherwin-Williams Co., which probably will be the chief beneficiary of this additional duty, and I think we may very well consider the distressful financial condition in which it finds itself, the poverty which has attended its great efforts in the past.

I will read a little further. I was reading about where it had plants. It seems to cover practically the whole country, from New Jersey, at any rate, to California; and from Massachusetts to Dallas, Tex.; Lincoln, Nebr.; a zinc smelter at Coffeyville, Kans.; zinc mines at Magdalena, N. Mex.; linseed oil mills at Cleveland, Ohio; lead corroding works, lithopone works, dye color and chemical works, and tin-can plants at Chicago, Ill. The company owns the Sherwin-Williams Co., of Canada, and through it the Lewis, Berger & Sons (Ltd.), of London, with branches in Liverpool, Paris, Calcutta, Bombay, Durban, Johannesburg, and Shanghai; also the United Paint & Varnish Co., which in turn owns the Acme White Lead & Color Works, of Detroit, and the Hemingway Co., of New Jersey.

The capital stock authorized is $60,000,000, $20,000,000 common and $40,000,000 preferred; outstanding, $14,868,000 of common and $15,000,000 of preferred. The profits reported in 1916 were $3,040,337; in 1917, $2,875,982; in 1918, $2,539,722; in 1919, $3,159,756; and in 1920, $4,532,637.

The company is reported to have assets in 1920 amounting to $42,942,067, and working capital in the same year amounting to $21,043,123. The company paid stock dividends in 1911 of 33⅓ per cent, in 1915 of 10 per cent, and in 1920 of 50 per cent.

Mr. NORRIS. Mr. President——

The PRESIDING OFFICER (Mr. WILLIS in the chair). Does the Senator from New Mexico yield to the Senator from Nebraska?

Mr. JONES of New Mexico. I yield.

Mr. NORRIS. My attention was diverted. What was the name of the company that the Senator has been discussing?

Mr. JONES of New Mexico. The Sherwin-Williams Co., which is one of the chief producers of varnish and the other materials under discussion.

Here is another company which seems to extend over a great part of the country and which appears to be exceedingly prosperous. I believe there are only three concerns which would probably be beneficiaries of the bill.

Mr. NORRIS. What is the name of the other company?

Mr. JONES of New Mexico. The other companies are the Glidden Varnish Co. and the De Voe & Reynolds Co. I might state something of the nature of the business of the Glidden Co. It is rather a recent organization entering into this business. It was incorporated December 22, 1917, as a consolidation of certain companies engaged in the manufacture of varnishes, japans, enamels, lacquers, paints, dry colors, kalsomine, linseed oil, insecticides, and fungicides. The company also produces nut margarine and refined edible oils. Here is the reorganization of some companies. If the Attorney General would find out about this, he might inquire into the question as to whether or not a monopoly was sought to be created here. I find that this is a consolidation of the following companies:

The Glidden Co., Cleveland, Ohio.
The Glidden Co. of Texas, Dallas, Tex.
The Glidden Co. of Massachusetts, Boston, Mass.
Linseed Oil Mill of St. Louis, St. Louis, Mo.
Glidden Nut Butter Co., Chicago, Ill.
Adams & Elton, Chicago, Ill.
American Paint Works, New Orleans, La.
T. L. Blood & Co., St. Paul, Minn.
Campbell Glass & Paint Co., St. Louis, Mo.
The Forest City Paint & Varnish Co., Cleveland, Ohio.
Nubian Paint & Varnish Co., Chicago, Ill.
The Glidden Co. of California, San Francisco, Calif.
The Glidden Co. (Ltd.), Toronto, Ontario.
The Heath & Milligan Manufacturing Co., Chicago, Ill.
The Twin City Varnish Co., St. Paul, Minn.
The A. Wilhelm Co., Reading, Pa.
The Glidden Co., chemicals and pigments division, St. Helena, Md.

The company also carries on a paint trade in South America and other foreign countries.

The authorized capital is 360,000 shares of common without par value and $7,500,000 of 7 per cent preferred. The balance sheet of the company for December 31, 1920, showed assets of $21,156,098.

I observe that the concern has adopted the modern device of issuing shares without any par value. So far as I am able to learn about that, the purpose is to cover up the question of the earnings which it may make or the valuation of the stock. We know nothing, from the fact of it having no par value, as to how much money is intended to be put into it, whether it is all water or whether it has some real substance in it. The public is left entirely in the dark. It would seem to be a very convenient device for a concern intending to monopolize various institutions and industries. I have read the names of 17 different concerns consolidated on the reorganization of the Glidden Co. in 1919.

The other one concern engaged in the manufacture of paints and varnishes is the DeVoe & Reynolds Co. It manufactures paints and varnishes, brushes, artists' materials, and so forth. It has plants located at Newark, N. J., Brooklyn, N. Y., and Chicago, Ill. Its authorized capital is $4,000,000 with $1,000,000 of 7 per cent accumulated preferred. The balance sheet of the company for December 31, 1920, shows assets amounting to $8,840,448.

Those are the concerns which are going to be the beneficiaries of this increased duty, if indeed anybody is to be benefited by it. Here is quite an increase in the duty on this commodity, only a fraction of 1 per cent of which is imported. We are actually exporting to the rest of the world more than three times as much as we are importing. The probabilities are that the limited importations are shipments merely sent from one branch house of the parent concern to another in the United States. The suggestion has just been made to me that the importations consist of special varnishes; that is, peculiar or special or unusual kinds of varnishes. Clearly there is no competition from the rest of the world with the concerns in the United States regarding these commodities.

Mr. NORRIS. Mr. President, I would like to ask the Senator in regard to some of the names comprising the second company to which he referred. I did not understand him always, but as I heard the Senator some of them were engaged in some other line of business. There was one of them which I would judge dealt in butter.

Mr. JONES of New Mexico. Yes.

Mr. NORRIS. Can the Senator tell whether they use the butter to grease the varnish or the varnish to smooth the butter?

Mr. JONES of New Mexico. It is mixed in with the vegetable oils which are used in connection with paint, and so on. When they once get into the oil industry, then the various ramifications suggest themselves and so they start out.

Mr. NORRIS. Do they deal in butter? Do they sell butter or manufacture butter?

Mr. JONES of New Mexico. It is butterine or oleomargarine.

Mr. NORRIS. Oh! I was going to follow that up. I supposed from the name which the Senator read that it was going to develop that they had a farm and had cows and milked them and made butter.

Mr. JONES of New Mexico. No.

Mr. NORRIS. I thought that would perhaps explain why the committee is going to be backed up by the farm bloc on this proposition of increasing the tariff.

Mr. JONES of New Mexico. I am quite certain from what appears on the surface that milking cows is too modest a business for these concerns. I think that would be too slow a process of trying to make millions in dividends on their capital stock. The suggestion has just been made sotto voce that instead of milking the cows they have been milking the public. I would not be surprised if that were so.

Mr. NORRIS. It is a very good thing, I think—at least the name indicates it—that when they start out to milk the public they do it under the name of a corporation that would indicate they were milking cows.

Mr. JONES of New Mexico. Now, Mr. President, if the Senator from Utah [Mr. SMOOT] has some information which he would like to give us on this matter, I am sure we would all be pleased to have it.

Mr. SMOOT. Mr. President, paragraph 58 of the Underwood Act of 1913 provides:

> That spirit varnishes containing less than 10 per cent of methyl alcohol of the total alcohol contained therein shall be dutiable at $1.32 per gallon and 15 per cent ad valorem.

The pending bill provides:

> Spirit varnishes containing less than 5 per cent of methyl alcohol, $2.20 per gallon and 25 per cent ad valorem.

Wherever less than 5 per cent of methyl alcohol, which is wood alcohol, is contained in varnishes they are termed spirit varnishes; the alcohol contained in spirit varnishes is not denatured unless it contains 5 per cent or more of wood alcohol. At the time of the passage of the Underwood bill and also the Payne-Aldrich bill 10 per cent of wood alcohol was necessary under Treasury regulations to denature pure alcohol. That is the reason for the 5 per cent limitation, while the two bills to which I have referred contained a 10 per cent limitation of wood alcohol. It will be noticed that in the Underwood law and also in the Payne-Aldrich law the duty imposed was $1.32 a gallon, while in the pending bill it is $2.20 a gallon. The duty of $2.20 per gallon is a compensatory rate, equivalent to the internal-revenue tax on the proof gallon.

Under the Underwood law the internal-revenue tax on the proof gallon was $1.10; but instead of making the duty $1.10, equivalent to the internal-revenue tax which was imposed, 22 cents was added. That virtually amounted to a specific duty of 22 cents; and the same duty was imposed under the Payne-Aldrich law. The Committee on Finance, however, merely provided a rate equivalent to the internal-revenue tax of $2.20 per gallon. They have imposed no specific duty whatever.

Then we allowed a duty of 25 per cent ad valorem, which is the straight duty imposed upon the commodity, outside of the compensatory duty imposed to take care of the internal-revenue tax. The 25 per cent ad valorem duty applies not only to the spirit varnishes but it also applies to varnishes which contain 5 per cent or more of methyl alcohol. Whenever these varnishes contain 5 per cent or more of alcohol they are shellac and are not spirit varnishes at all, and we provide a rate of 25 per cent, but impose no specific duty of 22 cents, such as was provided in the Underwood law.

Mr. President, spirit varnishes are used for the purpose of lining the inside of containers of candy and of foodstuffs. Wherever a food container is lined the varnish must have less than 5 per cent methyl alcohol, because if there were over 5 per cent it would be denatured, and consequently poisonous. Therefore it is necessary that varnishes used in such containers should be made of pure alcohol. So we impose a duty of $2.20 a gallon upon the varnish to compensate for the internal-revenue tax, but no more.

In the two preceding tariff laws there was imposed what amounted to a specific duty of 22 cents per gallon, as I have stated, and under the Payne-Aldrich law there was an additional ad valorem duty of 35 per cent and under the Underwood law there was an ad valorem duty of 15 per cent.

The 22 cents per gallon specific duty that has heretofore been given to the manufacturers of spirit varnishes, and of shellac as well, is entirely eliminated from this bill, which provides for a straight ad valorem duty of 25 per cent, and that is all.

Mr. JONES of New Mexico. May I inquire why should there be that 25 per cent duty?

Mr. SMOOT. Mr. President, in all of this bill, in the basket clauses, and wherever they have been necessary, there has been imposed an equivalent duty of 25 per cent, and we carried that policy out in this item. Of course, shellac is used upon floors and on furniture, but I do not think a 25 per cent duty upon it is going to be very burdensome upon those who use the article, when the present duty is 15 per cent ad valorem and 22 cents per gallon.

I am somewhat surprised at complaints being made each day on duties of less amount than the Underwood rates. It does not make a particle of difference whether the proposed duty is the same as that provided by the existing law; in fact, if we put every rate in the bill as it stands in the Underwood law, it would still meet with the same kind of criticism. It is not a question of rates, but it is a question of criticizing and finding fault and holding up action upon the bill.

Mr. NORRIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Nebraska?

Mr. SMOOT. Certainly.

Mr. NORRIS. I did not quite understand as to the application of the $2.20 per gallon duty when there is less than 5 per cent of methyl alcohol in the commodity, and no such duty is imposed when the methyl alcohol content exceeds 5 per cent.

Mr. SMOOT. The reason is that if there is less than 5 per cent methyl alcohol it is regarded as pure alcohol, and if the methyl alcohol content is over that it is then considered denatured.

Mr. NORRIS. But the alcohol mentioned in this paragraph of the bill is the same in both cases.

Mr. SMOOT. No; it is methyl alcohol, that is, wood alcohol, and wherever it goes into the lining of containers for food there has to be a limit, not to exceed 5 per cent, because now, under the ruling of the Treasury Department, if there is more than 5 per cent of methyl alcohol then it is poisonous.

Mr. NORRIS. I understand that.

Mr. SMOOT. And if it is less than 5 per cent it is not wholly denaturized and may be used. That is the standard which has been established by the Internal Revenue Department.

Mr. NORRIS. But $2.20 is levied on the entire product, and not merely on the 5 per cent of alcohol in it.

Mr. SMOOT. But the manufacturers have to pay $2.20, that being the internal-revenue tax, and we do not give them any more than that.

Mr. NORRIS. I think I understand the Senator.

Mr. SMOOT. I call attention to the fact that at the time of the enactment of the Payne-Aldrich law and also the Underwood law the standard as determined by the Internal Revenue Bureau was 10 per cent, and both of those laws incorporated the 10 per cent limitation. At that time the internal-revenue tax upon the alcohol was only $1.10 per proof gallon, but they gave a duty of $1.32; in other words, they allowed a 22-cent differential. In this bill, however, we do not do that, but provide a duty of $2.20. All the protection the manufacturers receive in any way, shape, or form is 25 per cent ad valorem.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

Mr. NORRIS. Mr. President, it seems to me there ought to be no duty on this commodity, and I do not believe any man can defend the imposition of a duty on any theory of protection which protectionists have ever advocated anywhere or at any time. I may be entirely wrong; but if a revenue duty is desired here is a place to get it. It does not appeal to me that the rate proposed to be fixed is greater or less than the rate fixed by the Underwood law; I do not care anything about the Underwood law; I did not vote for it, and did not believe in it. It was a revenue measure.

Mr. McCUMBER. That is all this duty is.

Mr. NORRIS. I presume that is true, for it certainly can not be considered as a protective duty. It seems to me, Mr. President, that as to the duty of 25 per cent ad valorem on varnishes and as to the duties on ingredients of paints on which we have been voting, such as white lead and the coloring matter that goes into paints, in almost every instance there has been no question of protection involved. As I look at it no man can defend those duties on the ground of protecting any industry. I myself can not understand how those who want to reduce the cost of living can levy a tariff upon a commodity which is universally used by all classes of people, and of which, as demonstrated by the figures in almost every instance in case of paint ingredients, there are practically no imports, but, on the contrary, large exports. The figures given as to varnishes show that the imports are practically nothing, while the exports run into the millions, and yet it is proposed to levy a tariff duty of 25 per cent.
